PROCONSUL AND PROPRÆTOR, Roman.—"If a Consul was pursuing his operations ever so successfully, he was liable to be superseded at the year's close by his successor in the Consulship: and this successor brought with him new soldiers and new officers; everything, it would seem, had to be done over again. This was always felt in times of difficulty, and the constitutional usages were practically suspended. . . . In the year 328 B. C. the Senate first assumed the power of decreeing that a Consul or Prætor might be continued in his command for several successive years, with the title of Proconsul, or Proprætor, the power of these officers being, within their own district, equal to the power of the Consul or Prætor himself. The Proconsul also was allowed to keep part of his old army, and would of course continue his Tribunes and Centurions in office. . . . Almost all the great successes of Marcellus and Scipio were gained in Proconsular commands."—H. G. Liddell, *Hist. of Rome, bk.* 4, *ch.* 35.

PROPHESYINGS.—In the early part of the reign of Queen Elizabeth, among those English reformers who were subsequently known as Puritans, "the clergy in several dioceses set up, with encouragement from their superiors, a certain religious exercise, called prophesyings. They met at appointed times to expound and discuss together particular texts of Scripture, under the presidency of a moderator appointed by the bishop, who finished by repeating the substance of their debate, with his own determination upon it. These discussions were in public, and it was contended that this sifting of the grounds of their faith, and habitual argumentation, would both tend to edify the people, very little acquainted as yet with their religion, and supply in some degree the deficiencies of learning among the pastors themselves." The prophesyings, however, were suppressed by the queen and Archbishop Parker. —H. Hallam, *Const. Hist. of Eng., ch.* 4 (*v.* 1).

PROPHETS, The Hebrew.—"The Hebrew word 'Nabi' is derived from the verb 'naba.' . . . The root of the verb is said to be a word signifying 'to boil or bubble over,' and is thus taken from the metaphor of a fountain bursting forth from the heart of man, into which God has poured it. Its actual meaning is 'to pour forth excited utterances,' as appears from its occasional use in the sense of 'raving.' Even to this day, in the East, the ideas of prophet and madman are closely connected. The religious sense, in which, with these exceptions, the word is always employed, is that of 'speaking' or 'singing under a divine afflatus or impulse,' to which the peculiar form of the word, as just observed, lends itself. . . . It is this word that the Seventy translated by a Greek term not of frequent usage in classical authors, but which, through their adoption of it, has passed into all modern European languages; namely, the word . . . Prophet. . . . The English words 'prophet,' 'prophecy,' 'prophesying,' originally kept tolerably close to the Biblical use of the word. The celebrated dispute about 'prophesyings,' in the sense of 'preachings,' in the reign of Elizabeth, and the treatise of Jeremy Taylor on 'The Liberty of Prophesying,' i. e. the liberty of preaching, show that even down to the seventeenth century the word was still used, as in the Bible, for 'preaching,' or 'speaking according to the will of God.' In the seventeenth century, however, the limitation of the word to the sense of 'prediction' had gradually begun to appear. . . . The Prophet then was 'the messenger or interpreter of the Divine will.'"—Dean Stanley, *Lect's on the Hist. of the Jewish Church, lect.* 19 (*v.* 1).

PROVENCE: Roman origin.—"The colonization of Narbo [Narbonne, B. C. 118] may be considered as the epoch when the Romans finally settled the province of southern Gallia, which they generally named Gallia Provincia, and sometimes simply Provincia. From the time of Augustus it was named Narbonensis Provincia, and sometimes Gallia Braccata. It comprehended on the east all the country between the Rhone and the Alps. The most northeastern town in the Provincia was Geneva in the territory of the Allobroges. Massilia, the ally of Rome, remained a free city. On the west side of the Rhone, from the latitude of Lugdunum (Lyon), the Cevenna, or range of the Cévennes, was the boundary of the Provincia. . . . The limits of the Provincia were subsequently extended to Carcaso (Carcassone) and Tolosa (Toulouse); and it will appear afterwards that some additions were made to it even on the other side of the Cévennes. This country is a part of France which is separated by natural boundaries from the rest of that great empire, and in climate and products it is Italian rather than French. In the Provincia the Romans have left some of the noblest and most enduring of their great works."—G. Long, *Decline of the Roman Republic, v.* 1, *ch.* 22.—The Provincia of the Romans became the Provence of mediæval times.

Cession to the Visigoths.—"The fair region which we now call Provence, nearly the earliest formed and quite the latest lost 'Provincia' of Rome, that region in which the Latin spirit dwelt so strongly that the Roman nobles thought of migrating thither in 401, when Alaric first invaded Italy, refused to submit to the rule of the upstart barbarian [Odovacar, or Odoacer, who subverted the Western Empire in 476]. The Provençals sent an embassy to Constantinople to claim the protection of Zeno for the still loyal subjects of the Empire." But Zeno "inclined to the cause of Odovacar. The latter, however, who perhaps thought that he had enough upon his hands without forcing his yoke on the Provençals, made over his claim to Euric king of the Visigoths, whose influence was at this time predominant in Gaul."—T. Hodgkin, *Italy and Her Invaders, bk.* 4, *ch.* 4 (*v.* 3).—See, also, ARLES: A. D. 508–510.

A. D. 493-526.—Embraced in the Ostrogothic kingdom of Theodoric. See ROME: A. D. 488–526.

A. D. 536.—Cession to the Franks.—Out of the wreck of the Visigothic kingdom in Gaul, when it was overthrown by the Frank king, Clovis, the Ostrogothic king of Italy, Theodoric, seems to have secured Provence. Eleven years after the death of Theodoric, and on the eve of the subversion of his own proudly planted kingdom, in 536, his successor Witigis, or Vitigis, bought the neutrality of the Franks by the cession to them of all the Ostrogothic possessions in Gaul, which were Provence and part of Dauphiné.—T. Hodgkin, *Italy and Her Invaders, bk.* 4, *ch.* 9 (*v.* 3), *and bk.* 5, *ch.* 3 (*v.* 4).

A. D. 877-933.—The Kingdom. See BURGUNDY: A. D. 843–933.

A. D. 943-1092.—The Kings become Counts.—The Spanish connection.—"Southern France, . . . after having been the inheritance of several of the successors of Charlemagne, was elevated in 879 to the rank of an independent kingdom, by Bozon, who was crowned at Mantes under the title of King of Arles, and who reduced under his dominion Provence, Dauphiny, Savoy, the Lyonnese, and some provinces of Burgundy. The sovereignty of this territory exchanged, in 943, the title of King for that of Count, under Bozon II.; but the kingdom of Provence was preserved entire, and continued in the house of Burgundy, of which Bozon I. was the founder. This noble house became extinct in 1092, in the person of Gilibert, who left only two daughters, between whom his possessions were divided. One of these, Faydide, married Alphonso, Count of Toulouse; and the other, Douce, became the wife of Raymond Berenger, Count of Barcelona. . . . The accession of Raymond Berenger, Count of Barcelona and husband of Douce, to the throne of Provence, gave a new direction to the national spirit, by the mixture of the Catalans with the Provençals. . . . Raymond Berenger and his successors introduced into Provence the spirit both of liberty and chivalry, and a taste for elegance and the arts, with all the sciences of the Arabians. The union of these noble sentiments gave birth to that poetical spirit which shone out, at once, over Provence and all the south of Europe, like an electric flash in the midst of the most palpable darkness, illuminating all things by the brightness of its flame."—J. C. L. S. de Sismondi, *Literature of the South of Europe, ch.* 3 (*v.* 1).—See, also, BURGUNDY: A. D. 1032.

A. D. 1179-1207.—Before the Albigensian Crusade.—"At the accession of Philippe Auguste [crowned as joint-king of France, 1179, succeeded his father, 1180], the greater part of the south of France was holden, not of him, but of Pedro of Arragon, as the supreme suzerain [see SPAIN: A. D. 1035–1258]. To the Arragonese king belonged especially the counties of Provence, Forcalquier, Narbonne, Beziers, and Carcassonne. His supremacy was acknowledged by the Counts of Bearn, of Armagnac, of Bigorre, of Comminges, of Foix, of Roussillon, and of Montpellier; while the powerful Count of Toulouse, surrounded by his estates and vassals, maintained with difficulty his independence against him. To these extensive territories were given the names sometimes of Provence, in the larger and less exact use of that word, and sometimes of Languedoc, in allusion to the rich, harmonious, picturesque, and flexible language which was then vernacular there [see LANGUE D'OC]. They who used it called themselves Provençaux or Aquitanians, to indicate that they were not Frenchmen, but members of a different and indeed of a hostile nation. Tracing their descent to the ancient Roman colonists and to the Gothic invaders of Southern Gaul, the Provençaux regarded with a mixture of contempt, of fear, and ill will, the inhabitants of the country north of the Loire, who had made far less progress than themselves, either in civil liberty, or in the arts and refinements of social life. . . . Toulouse, Marseilles, Arles, Beziers, and many other of their greater cities, emulous of the Italian republics, with whom they traded and formed alliances, were themselves living under a government which was virtually republican. Each of these free cities being, however, the capital of one of the greater lords among whom the whole of Aquitaine was parceled out, became the seat of a princely and luxurious court. A genial climate, a fertile soil, and an active commerce,

rendered the means of subsistence abundant even to the poor, and gave to the rich ample resources for indulging in all the gratifications which wealth can purchase. . . . They lived as if life had been one protracted holiday. Theirs was the land of feasting, of gallantry, and of mirth. . . . They refined and enhanced the pleasures of appetite by the pleasures of the imagination. They played with the stern features of war in knightly tournaments. They parodied the severe toils of justice in their courts of love. They transferred the poet's sacred office and high vocation to the Troubadours, whose amatory and artificial effusions posterity has willingly let die, notwithstanding the recent labours of MM. Raynouard and Fauriel to revive them."—Sir J. Stephen, *Lect's on the Hist. of France, lect.* 7.—"In the south of France, more particularly, peace, riches, and a court life, had introduced, amongst the nobility, an extreme laxity of manners. Gallantry seems to have been the sole object of their existence. The ladies, who only appeared in society after marriage, were proud of the celebrity which their lovers conferred on their charms. They were delighted with becoming the objects of the songs of their Troubadour; nor were they offended at the poems composed in their praise, in which gallantry was often mingled with licentiousness. They even themselves professed the Gay Science, 'el Gai Saber,' for thus poetry was called; and, in their turn, they expressed their feelings in tender and impassioned verses. They instituted Courts of Love, where questions of gallantry were gravely debated and decided by their suffrages. They gave, in short, to the whole south of France the character of a carnival, affording a singular contrast to the ideas of reserve, virtue, and modesty, which we usually attribute to those good old times."—J. C. L. S. de Sismondi, *Literature of the South of Europe, ch.* 3 (*v.* 1).

PRUSA: A. D. 1326.—The first capital of the Ottomans. See TURKS (OTTOMANS): A. D. 1240-1326.

PRUSSIA: The original country and its name.—"Five-hundred miles, and more, to the east of Brandenburg, lies a Country then [10th century] as now called Preussen (Prussia Proper), inhabited by Heathens, where also endeavours at conversion are going on, though without success hitherto. . . . Part of the great plain or flat which stretches, sloping insensibly, continuously, in vast expanse, from the Silesian Mountains to the amber-regions of the Baltic; Preussen is the seaward, more alluvial part of this,—extending west and east, on both sides of the Weichsel (Vistula), from the regions of the Oder river to the main stream of the Memel. 'Bordering-on-Russia' its name signifies: Bor-Russia, B'russia, Prussia; or—some say it was only on a certain inconsiderable river in those parts, river Reussen, that it 'bordered,' and not on the great Country, or any part of it, which now in our days is conspicuously its next neighbour. Who knows?—In Henry the Fowler's time, and long afterwards, Preussen was a vehemently Heathen country; the natives a Miscellany of rough Serbic Wends, Letts, Swedish Goths, or Dryasdust knows not what;—very probably a sprinkling of Swedish Goths, from old time, chiefly along the coasts. Dryasdust knows only that these Preussen were a strong-boned, iracund herdsman-and-fisher people; highly averse to be interfered with, in their religion especially. Famous otherwise, through all the centuries, for the amber they had been used to fish, and sell in foreign parts. . . . Their knowledge of Christianity was trifling; their aversion to knowing anything of it was great."—T. Carlyle, *Frederick the Great, bk.* 2, *ch.* 2.

13th Century.—Conquered and Christianized by the Teutonic Knights.—The first Christian missionary who ventured among the savage heathen of Prussia Proper was Adalbert, bishop of Prague, who fell a martyr to his zeal in 997. For two centuries after that tragedy they were little disturbed in their paganism; but early in the 13th century a Pomeranian monk named Christian succeeded in establishing among them many promising churches. The heathen party in the country, however, was enraged by the progress of the Christians and rose furiously against them, putting numerous converts to the sword. "Other agencies were now invoked by Bishop Christian, and the 'Order of Knights Brethren of Dobrin,' formed on the model of that which we have already encountered in Livonia, was bidden to coerce the people into the reception of Christianity. But they failed to achieve the task assigned them, and then it was that the famous 'Order of Teutonic Knights,' united with the 'Brethren of the Sword' in Livonia, concentrated their energies on this European crusade. Originally instituted for the purpose of succouring German pilgrims in the Holy Land, the 'Order of Teutonic Knights,' now that the old crusades had become unpopular, enrolled numbers of eager adventurers determined to expel the last remains of heathenism from the face of Europe. After the union of the two Orders had been duly solemnized at Rome, in the presence of the Pope, in the year A. D. 1238, they entered the Prussian territory, and for a space of nearly fifty years continued a series of remorseless wars against the wretched inhabitants. Slowly but surely they made their way into the

very heart of the country, and secured their conquests by erecting castles, under the shadow of which rose the towns of Culm, Thorn, Marienwerder, and Elbing, which they peopled with German colonists. The authority of the Order knew scarcely any bounds. Themselves the faithful vassals of the Pope, they exacted the same implicit obedience, alike from the German immigrant, or colonist, and the converted Prussians. . . . In A. D. 1243 the conquered lands were divided by the Pope into three bishoprics, Culm, Pomerania, and Ermeland, each of which was again divided into three parts, one being subject to the bishop, and the other two to the brethren of the Order."—G. F. Maclear, *Apostles of Mediæval Europe, ch.* 16.—"None of the Orders rose so high as the Teutonic in favour with mankind. It had by degrees landed possessions far and wide over Germany and beyond, . . . and was thought to deserve favour from above. Valiant servants, these; to whom Heaven had vouchsafed great labours and unspeakable blessings. In some fifty or fifty-three years they had got Prussian Heathenism brought to the ground; and they endeavoured to tie it well down there by bargain and arrangement. But it would not yet lie quiet, nor for a century to come; being still secretly Heathen; revolting, conspiring ever again, ever on weaker terms, till the Satanic element had burnt itself out, and conversion and composure could ensue."—T. Carlyle, *Hist. of Frederick the Great, bk.* 2, *ch.* 6 (*v.* 1).—See, also, LIVONIA: 12–13TH CENTURIES.

A. D. 1466-1618.—Conquest and annexation to the Polish crown.—Surrender by the Teutonic Knights.—Erection into a duchy.—Union with the electorate of Brandenburg. See POLAND: A. D. 1333–1572; and BRANDENBURG: A. D. 1417–1640.

A. D. 1618-1700.—The rise of the Hohenzollern State.—"The whole territory of the new duchy of Prussia was alienated ecclesiastical land; the pope's anathema and the emperor's ban fell on the head of the renegade prince. Never was the Roman See willing to recognize such robbery. In uniting the ducal crown of their Prussian cousins with their own electoral hat the Hohenzollerns of the Mark broke forever with the Roman church. Their state stood and fell henceforward with the fortunes of protestantism. At the same time John Sigismund adopted the reformed creed. . . . At the same time of thus gaining a firm footing on the Baltic John Sigismund acquired the duchy of Cleve together with the counties of Mark and Ravensberg, — a territory narrow in circumference but highly important for the internal development as well as for the European policy of the state. They were lands which were strongholds of old and proven peasant and civic freedom, richer and of higher capacities for culture than the needy colonies of the East, outposts of incalculable value on Germany's weakest frontier. In Vienna and Madrid it was felt as a severe defeat that a new evangelical power should establish itself there on the Lower Rhine where Spaniards and Netherlanders were struggling for the existence or non-existence of protestantism — right before the gates of Cologne which was the citadel of Romanism in the empire. . . . A power so situated could no longer have its horizon bounded by the narrow circle of purely territorial policy; it was a necessity for it to seek to round off its widely scattered provinces into a consistent whole; it was compelled to act for the empire and to strike for it, for every attack of strangers on German ground cut into its own flesh. . . . For the House of Brandenburg, too, tempting calls often sounded from afar, . . . but a blessed providence, which earnest thinkers should not regard as a mere chance, compelled the Hohenzollerns to remain in Germany. They did not need the foreign crowns, for they owed their independent position among other states to the possession of Prussia, a land that was German to the core, a land the very being of which was rooted in the mother-country, and yet at the same time one that did not belong to the political organization of the empire. Thus with one foot in the empire, the other planted outside of it, the Prussian state won for itself the right to carry on a European policy which could strive for none but German ends. It was able to care for Germany without troubling itself about the empire and its superannuated forms. . . . The state of the Hohenzollerns . . . was on the sure road to ruin so long as John Sigismund's successor looked sleepily into the world out of his languid eyes. . . . It was at this juncture that the elector Frederick William, the greatest German man of his day, entered the chaos of German life as a prince without land, armed only with club and sling, and put a new soul into the slumbering forces of his state by the power of his will. From that time on the impulse of the royal will, conscious of its goal, was never lost to the growing chief state of the Germans. One can imagine English history without William III, the history of France without Richelieu; the Prussian state is the work of its princes. . . . Already in the first years of the rule of the Great Elector the peculiar character of the new political creation shows out sharply and clearly. The nephew of Gustavus Adolphus who leads his army to battle with the old protestant cry of 'with God' resumes the church policy of his uncle. He it is who first among the strife of churches cries out the saving word and demands general and unconditional amnesty for all three creeds. This was the program of the Westphalian peace. And far beyond the provisions of this treaty of peace went the tolerance which the Hohenzollerns allowed to be exercised within their lands. . . . While Austria drives out its best Germans by force, the confines of Brandenburg are thrown open with unequalled hospitality to sufferers of every creed. How many thousand times has the song of praise of the Bohemian exiles sounded forth in the Marks! . . . When Louis XIV revokes the Edict of Nantes the little Brandenburg lord steps forth boldly against him as the spokesman of the protestant world, and offers through his Potsdam Edict shelter and protection to the sons of the martyred church. . . . Thus year after year an abundance of young life streamed over into the depopulated East Marks; the German blood that the Hapsburghs thrust from them fructified the land of their rivals, and at the death of Frederick II about a third of the inhabitants of the state consisted of the descendants of immigrants who had come there since the days of the Great Elector. . . . The particularism of all estates and of all territorial districts heard with horror how the Great Elector . . . supported his throne on the two

columns of monarchical absolutism: the miles perpetuus and permanent taxation. In the minds of the people troops and taxes still passed for an extraordinary state burden to be borne in days of need. But Frederick William raised the army into a permanent institution and weakened the power of the territorial estates by introducing two general taxes in all his provinces. On the country at large he imposed the general hide-tax (generalhufenschoss), on the cities the accise, which was a multiform system of low direct and indirect imposts calculated with full regard for the impoverished condition of agriculture and yet attacking the taxable resources at as many points as possible. In the empire there was but one voice of execration against these first beginnings of the modern army and finance system. Prussia remained from the beginning of its history the most hated of the German states; those imperial lands that fell to this princely dynasty entered, almost all of them, with loud complaints and violent opposition into this new political combination. All of them soon afterwards blessed their fate. . . . Frederick William's successor by acquiring the royal crown gained for his house a worthy place in the society of the European powers and for his people the common name of Prussians. Only dire need, only the hope of Prussia's military aid, induced the imperial court to grant its rival the new dignity. A spasm of terror went through the theocratic world: the electorate of Mainz entered a protest; the Teutonic Order demanded back again its old possession, which now gave the name to the heretical monarchy, while the papal calendar of states, for nearly a hundred years to come, was to know only a 'margrave of Brandenburg.'" —H. von Treitschke, *Deutsche Geschichte im 19ten Jahrhundert* (*trans. from the German*), *v.* 1, *pp.* 26–36.

A. D. 1700.—The Dukedom erected into a Kingdom.—In the last year of the 17th century, Europe was on the verge of the great War of the Spanish Succession. The Emperor was making ready to contest the will by which Charles II. of Spain had bequeathed his crown to Philip, Duke of Anjou, grandson of Louis XIV. of France (see Spain: A. D. 1698–1700). "He did not doubt that he would speedily involve England, Holland, and the Germanic diet in his quarrel. Already several German princes were pledged to him; he had gained the Duke of Hanover by an elector's hat, and a more powerful prince, the Elector of Brandenburg, by a royal crown. By a treaty of November 16, 1700, the Emperor had consented to the erection of ducal Prussia into a kingdom, on condition that the new King should furnish him an aid of 10,000 soldiers. The Elector Frederick III. apprised his courtiers of this important news at the close of a repast, by drinking 'to the health of Frederick I. King of Prussia'; then caused himself to be proclaimed King at Königsberg, January 15, 1701."—H. Martin, *Hist. of France: Age of Louis XIV.* (*tr. by M. L. Booth*), *v.* 2, *ch.* 5.

PRUSSIAN LANGUAGE, The Old.—"The Old Prussian, a member of the Lithuanic family of languages, was spoken here as late as the 16th century, remains of which, in the shape of a catechism, are extant. This is the language of the ancient Æstyi, or 'Men of the East,' which Tacitus says was akin to the British, an error arising from the similarity of name, since a Slavonian . . . would call the two languages by names so like as 'Prytskaia' and 'Brytskaia,' and a German . . . by names so like as 'Pryttisc' and 'Bryttisc.' The Guttones, too, of Pliny, whose locality is fixed from the fact of their having been collecters of the amber of East Prussia and Courland, were of the same stock." —R. G. Latham, *The Ethnology of Europe*, *ch.* 8.

PRYDYN. See Scotland: The Picts and Scots.

PRYTANES.—PRYTANEUM.—The Council of Four Hundred, said to have been instituted at Athens by Solon, "was divided into sections, which, under the venerable name of prytanes, succeeded each other throughout the year as the representatives of the whole body. Each section during its term assembled daily in their session house, the prytaneum, to consult on the state of affairs, to receive intelligence, information, and suggestions, and instantly to take such measures as the public interest rendered it necessary to adopt without delay. . . . According to the theory of Solon's constitution, the assembly of the people was little more than the organ of the council, as it could only act upon the propositions laid before it by the latter."—C. Thirlwall, *Hist. of Greece*, *ch.* 11.—"Clisthenes . . . enlarged the number of the senate, 50 being now elected by lot from each tribe, so as to make in all 500. Each of these companies of 50 acted as presidents of both the senate and the assemblies, for a tenth part of the year, under the name of Prytanes: and each of these tenth parts, of 35 or 36 days, so as to complete a lunar year, was called a Prytany."—G. F. Schömann, *Dissertation on the Assemblies of the Athenians*, *p.* 14.—See, also, Athens: B. C. 594.

PRYTANIS.—A title frequently recurring among the Greeks was that of Prytanis, which signified prince, or supreme ruler. "Even Hiero, the king or tyrant of Syracuse, is addressed by Pindar as Prytanis. At Corinth, after the abolition of the monarchy, a Prytanis, taken from the ancient house of the Bacchiadæ, was annually appointed as supreme magistrate [see Corinth: B. C. 745–725]. . . . The same title was borne by the supreme magistrate in the

Corinthian colony of Corcyra. . . . In Rhodes we find in the time of Polybius a Prytany lasting for six months."—G. Schömann, *Antiq. of Greece: The State, pt.* 2, *ch.* 5.

PUNIC.—The adjective Punicus, derived from the name of the Phœnicians, was used by the Romans in a sense which commonly signified "Carthaginian,"—the Carthaginians being of Phœnician origin. Hence "Punic Wars," "Punic faith," etc., the phrase "Punic faith" being an imputation of faithlessness and treachery.

PUNIC WARS, The First.—When Pyrrhus quitted Italy he is said to have exclaimed, "How fair a battle-field are we leaving to the Romans and Carthaginians." He may easily have had sagacity to foresee the deadly struggle which Rome and Carthage would soon be engaged in, and he might as easily have predicted, too, that the beginning of it would be in Sicily. Rome had just settled her supremacy in the whole Italian peninsula; she was sure to covet next the rich island that lies so near to it. In fact, there was bred quickly in the Roman mind such an eagerness to cross the narrow strait that it waited only for the slenderest excuse. A poor pretext was found in the year 264 B. C. and it was so despicably poor that the proud Roman senators turned over to the popular assembly of the Comitia the responsibility of accepting it. There came to Rome from Messene, in Sicily—or Messana, as the Romans called the city—an appeal. It did not come from the citizens of Messene, but from a band of freebooters who had got possession of the town. These were mercenaries from Campania (lately made Roman territory by the Samnite conquest) who had been in the pay of Agathocles of Syracuse. Disbanded on that tyrant's death, they had treacherously seized Messene, slain most of the male inhabitants, taken to themselves the women, and settled down to a career of piracy and robbery, assuming the name of Mamertini,—children of Mamers, or Mars. Of course, all Sicily, both Greek and Carthaginian, was roused against them by the outrages they committed. Being hard pressed, the Mamertines invoked, as Italians, the protection of Rome; although one party among them appears to have preferred an arrangement of

terms with the Carthaginians. The Roman Senate, being ashamed to extend a friendly hand to the Mamertine cutthroats, but not having virtue enough to decline an opportunity for fresh conquests, referred the question to the people at large. The popular vote sent an army into Sicily, and Messene, then besieged by Hiero of Syracuse on one side and by a Carthaginian army on the other, was relieved of both. The Romans thereon proceeded, in two aggressive campaigns, against Syracusans and Carthaginians alike, until Hiero bought peace with them, at a heavy cost, and became their half-subject ally for the remainder of his life. The war with the Carthaginians was but just commenced. Its first stunning blow was struck at Agrigentum, the splendid city of Phalaris, which the Carthaginians had destroyed, B. C. 405, which Timoleon had rebuilt, and which one of the Hannibals ("son of Gisco") now seized upon for his stronghold. In a great battle fought under the walls of Agrigentum (B. C. 262) Hannibal lost the city and all but a small remnant of his army. But the successes of the Romans on land were worth little to them while the Carthaginians commanded the sea. Hence they resolved to create a fleet, and are said to have built a hundred ships of the quinquereme order and twenty triremes within sixty days, while rowers for them were trained by an imitative exercise on land. The first squadron of this improvised navy was trapped at Lipara and lost; the remainder was successful in its first encounter with the enemy. But where naval warfare depended on good seamanship the Romans were no match for the Carthaginians. They contrived therefore a machine for their ships, called the Corvus, or raven, by which, running straight on the opposing vessel, they were able to grasp it by the throat, so to speak, and force fighting at close quarters. That accomplished, they were tolerably sure of victory. With their corvus they half annihilated the Carthaginian fleet in a great sea-fight at Mylæ, B. C. 260, and got so much mastery of the sea that they were able to attack their Punic foes even in the island of Sardinia, but without much result. In 257 B. C. another naval battle of doubtful issue was fought at Tyndaris, and the following year, in the great battle of Ecnomus, the naval power of the Carthaginians, for the time being, was utterly crushed. Then followed the invasion of Carthaginian territory by Regulus, his complete successes at first, his insolent proposal of hard terms, and the tremendous defeat which overwhelmed him at Adis a little later, when he, himself, was taken prisoner. The miserable remnant of the Roman army which held its ground at Clypea on the African coast was rescued the next year (B. C. 255) by a new fleet, but only to be destroyed on the voyage homeward, with 260 ships, in a great storm on the south coast of Sicily. Then Carthaginians reappeared in Sicily and the war in that unhappy island was resumed. In 254 B. C. the Romans took the strong fortified city of Panormus. In 253, having built and equipped another fleet, they were robbed of it again by a storm at sea, and the Carthaginians gained ground and strength in Sicily. In 251 the Roman consul, Cæcilius Metellus, drove them back from the walls of Panormus and inflicted on them so discouraging a defeat, that they sent Regulus, their prisoner, on parole, with an embassy, to solicit peace at Rome. How Regulus advised his countrymen against peace, and how he returned to Carthage to meet a cruel death — the traditional story is familiar to all readers, but modern criticism throws doubt upon it. In 250 B. C. the Romans undertook the siege of Lilybæum, which, with the neighboring port of Drepana, were the only strongholds left to the Carthaginians. The siege then commenced was one of the most protracted in history, for when the First Punic War ended, nine years later, Lilybæum was still resisting, and the Romans only acquired it with all the rest of Sicily, under the terms of the treaty of peace. Meantime the Carthaginians won a bloody naval victory at Drepana (B. C. 249) over the Roman fleet, and the latter, in the same year, had a third fleet destroyed on the coast by relentless storms. In the year 247 B. C. the Carthaginian command in Sicily was given to the great Hamilcar, surnamed Barca, who was the father of a yet greater man, the Hannibal who afterwards brought Rome very near to destruction. Hamilcar Barca, having only a few mutinous mercenary soldiers at his command, and almost unsupported by the authorities at Carthage, established himself, first, on the rocky height of Mount Ercte, or Hercte, near Panormus, and afterwards on Mount Eryx, and harassed the Romans for six years. The end came at last as the consequence of a decisive naval victory near the Ægatian Isles, which the Romans achieved, with a newly built fleet, in March B. C. 241. The Carthaginians, discouraged, proposed peace, and purchased it by evacuating Sicily and paying a heavy war indemnity. Thus Rome acquired Sicily, but the wealth and civilization of the great island had been ruined beyond recovery.—R. B. Smith, *Carthage and the Carthaginians, ch.* 4–7.

Also in: W. Ihne, *Hist. of Rome, bk.* 4, *ch.* 3. —Polybius, *Histories, bk.* 1.—A. J. Church, *The Story of Carthage, pt.* 4, *ch.* 1–3.—See, also, Rome: B. C. 264–241.

The Second.—Between the First Punic War and the Second there was an interval of twenty-three years. Carthage, meantime, had been brought very near to destruction by the Revolt of the Mercenaries (see Carthage: B. C. 241–238) and had been saved by the capable energy of Hamilcar Barca. Then the selfish faction which hated Hamilcar had regained power in the Punic capital, and the Barcine patriot could do no more than obtain command of an army which he led, on his own responsibility, into Spain, B. C. 237. The Carthaginians had inherited from the Phœnicians a considerable commerce with Spain, but do not seem to have organized a control of the country until Hamilcar took the task in hand. Partly by pacific influences and partly by force, he established a rule, rather personal than Carthaginian, which extended over nearly all southern Spain. With the wealth that he drew from its gold and silver mines he maintained his army and bought or bribed at Carthage the independence he needed for the carrying out of his plans. He had aimed from the first, no doubt, at organizing resources with which to make war on Rome. Hamilcar was killed in battle, B. C. 228, and his son-in-law, Hasdrubal, who succeeded him, lived only seven years more. Then Hannibal, the son of Hamilcar, in his twenty-sixth year, was chosen to the command in Spain. He waited two years, for

PUNIC WARS.

the settling of his authority and for making all preparations complete, and then he threw down a challenge to the Romans for the war which he had sworn to his father that he would make the one purpose of his life. The provocation of war was the taking of the city of Saguntum, a Greek colony on the Spanish coast, which the Romans had formed an alliance with. It was taken by Hannibal after a siege of eight months and after most of the inhabitants had destroyed themselves, with their wealth. When Rome declared war it was with the expectation, no doubt, that Spain and Africa would be the battle grounds. But Hannibal did not wait for her attack. He led his Spanish army straight to Italy, in the early summer of B. C. 218, skirting the Pyrenees and crossing the Alps. The story of his passage of the Alps is familiar to every reader. The difficulties he encountered were so terrible and the losses sustained so great that Hannibal descended into Italy with only 20,000 foot and 6,000 horse, out of 50,000 of the one and 9,000 of the other which he had led through Gaul. He received some reinforcement and co-operation from the Cisalpine Gauls, but their strength had been broken by recent wars with Rome and they were not efficient allies. In the first encounter of the Romans with the dread invader, on the Ticinus, they were beaten, but not seriously. In the next, on the Trebia, where Scipio, the consul, made a determined stand, they sustained an overwhelming defeat. This ended the campaign of B. C. 218. Hannibal wintered in Cisalpine Gaul and passed the Apennines the following spring into Etruria, stealing a march on the Roman army, under the popular consul Flaminius, which was watching to intercept him. The latter pursued and was caught in ambush at Lake Trasimene, where Flaminius and 15,000 of his men were slain, while most of the survivors of the fatal field were taken prisoners and made slaves. Rome then seemed open to the Carthaginian, but he knew, without doubt, that his force was not strong enough for the besieging of the city, and he made no attempt. What he aimed at was the isolating of Rome and the arraying of Italy against her, in a great and powerfully handled combination of the jealousies and animosities which he knew to exist. He led his troops northward again, after the victory of Lake Trasimene, across the mountains to the Adriatic coast, and rested them during the summer. When cooler weather came he moved southward along the coast into Apulia. The Romans meantime had chosen a Dictator, Q. Fabius Maximus, a cautious man, whose plan of campaign was to watch and harass and wear out the enemy, without risking a battle. It was a policy which earned for him the name of "The Cunctator," or Lingerer. The Roman people were discontented with it, and next year (B. C. 216) they elected for one of the consuls a certain Varro who had been one of the mouthpieces of their discontent. In opposition to his colleague, Æmilius Paullus, Varro soon forced a battle with Hannibal at Cannæ, in Apulia, and brought upon his countrymen the most awful disaster in war that they ever knew. Nearly 50,000 Roman citizens were left dead on the field, including eighty senators, and half the young nobility of the state. From the spoils of the field Hannibal was said to have sent three bushels of golden rings to Carthage, stripped from the fingers of Roman knights. Rome reeled under the blow, and yet haughtily refused to ransom the 20,000 prisoners in Hannibal's hands, while she met the discomfited Varro with proud thanks, because "he had not despaired of the Republic." Capua now opened its gates to Hannibal and became the headquarters of his operations. The people of Southern Italy declared generally in his favor; but he had reached and passed, nevertheless, the crowning point of his success. He received no effective help from Carthage; nor from his brother in Spain, who was defeated by the elder Scipios, that same year (B. C. 216) at Ibera, just as he had prepared to lead a fresh army into Italy. On the other hand, the energies of the Romans had risen with every disaster. Their Latin subjects continued faithful to them; but they lost at this time an important ally in Sicily, by the death of the aged Hiero of Syracuse, and the Carthaginians succeeded in raising most of the island against them. The war in Sicily now became for a time more important than that in Italy, and the consul Marcellus, the most vigorous of the Roman generals, was sent to conduct it. His chief object was the taking of Syracuse and the great city sustained another of the many dreadful sieges which it was her fate to endure. The siege was prolonged for two years, and chiefly by the science and the military inventions of the famous mathematician, Archimides. When the Romans entered Syracuse at last (B. C. 212) it was to pillage and slay without restraint, and Archimides was one of the thousands cut down by their swords. Meantime, in Italy, Tarentum had been betrayed to Hannibal, but the Romans still held the citadel of the town. They had gained so much strength in the field that they were now able to lay siege to Capua and Hannibal was powerless to relieve it. He attempted a diversion by marching on Rome, but the threat proved idle and Capua was left to its fate. The city surrendered soon after (B. C. 211) and the merciless conquerors only spared it for a new population. For three or four years after this the war in Italy was one of minor successes and reverses on both sides, but Hannibal lost steadily in prestige and strength. In Spain, Hannibal's brother, Hasdrubal, had opportunely beaten and slain (B. C. 212) both the elder Scipios; but another and greater Scipio, P. Cornelius, son of Publius, had taken the field and was sweeping the Carthaginians from the peninsula. Yet, despite Scipio's capture of New Carthage and his victories, at Bæcula, and elsewhere, Hasdrubal contrived, in some unexplained way, in the year 208, B. C., to cross the Pyrenees into Gaul and to recruit reinforcements there for a movement on Italy. The next spring he passed the Alps and brought his army safely into Cisalpine Gaul; but his dispatches to Hannibal fell into the hands of the Romans and revealed his plans. The swift energy of one of the consuls, C. Claudius Nero, brought about a marvellous concentration of Roman forces to meet him, and he and his army perished together in an awful battle fought on the banks of the Metaurus, in Umbria. The last hopes of Hannibal perished with them; but he held his ground in the extreme south of Italy and no Roman general dared try to dislodge him. When Scipio returned next year (B. C. 206) and reported the complete conquest of Spain, he was

chosen consul with the understanding that he would carry the war into Africa, though the senate stood half opposed. He did so in the early months of the year 204 B. C. crossing from Sicily with a comparatively small armament and laying siege to Utica. That year he accomplished nothing, but during the next winter he struck a terrible blow, surprising and burning the camps of the Carthaginians and their Numidian allies and slaughtering 40,000 of their number. This success was soon followed by another, on the Great Plains, which lie 70 or 80 miles to the southwest of Carthage. The Numidian king, Syphax, was now driven from his throne and the kingdom delivered over to an outlawed prince, Massinissa, who became, thenceforth, the most useful and unscrupulous of allies to the Romans. Now pushed to despair, the Carthaginians summoned Hannibal to their rescue. He abandoned Italy at the call and returned to see his own land for the first time since as a boy he left it with his father. But even his genius could not save Carthage with the means at his command. The long war was ended in October of the year 202 B. C. by the battle which is called the battle of Zama, though it was fought at some distance westward of that place. The Carthaginian army was routed utterly, and Hannibal himself persuaded his countrymen to accept a peace which stripped them of their ships and their trade, their possessions in Spain and all the islands, and their power over the Numidian states, besides wringing from them a war indemnity of many millions. On those hard terms, Carthage was suffered to exist a few years longer.—R. B. Smith, *Carthage and the Carthaginians.*

PUNJAB, OR PUNJAUB, OR PANJAB, The.—"Everything has a meaning in India, and the Panjab is only another name for the Five Rivers which make the historic Indus. They rise far back among the western Himalayas, bring down their waters from glaciers twenty-five miles in length, and peaks 26,000 feet high, and hurl their mighty torrent into one great current, which is thrown at last into the Arabian Sea. It is a fertile region, not less so than the Valley of the Ganges. This Panjab is the open door, the only one by which the European of earlier days was able to descend upon the plains of India for conquest and a new home. . . . In the Panjab every foot of the land is a romance. No one knows how many armies have shivered in the winds of the hills of Afghanistan, and then pounced down through the Khaibar Pass into India, and overspread the country, until the people could rise and destroy the stranger within the gates. Whenever a European invader of Asia has reached well into the continent, his dream has always been India. That country has ever been, and still is, the pearl of all the Orient. Its perfect sky in winter, its plenteous rains in summer, its immense rivers, its boundless stores of wealth, and its enduring industries, which know no change, have made it the dream of every great conqueror."—J. F. Hurst, *Indika, ch.* 75.—"In form, the country is a great triangle, its base resting on the Himalayan chain and Cashmere, and its apex directed due south-west. . . . The five streams which confer its name, counting them from north to south, are the Upper Indus, the Jhelum, the Chenab, the Ravee and the Sutlej, the Indus and Sutlej constituting respectively the western and eastern boundary. . . . The four divisions enclosed by the five convergent streams are called doabs—lands of two waters. . . . Besides the territory thus delineated, the Punjab of the Sikhs included Cashmere, the Jummoo territory to Spiti and Tibet, the trans-Indus frontier and the Hazara highlands in the west; and to the east the Jullundhur Doab with Kangra and Noorpoor. These last, with the frontier, are better known as the cis- and trans-Sutlej states."—E. Arnold, *The Marquis of Dalhousie's Administration of British India, ch.* 2 (*v.* 1).—The Sikhs established their supremacy in the Punjab in the 18th century, and became a formidable power, under the famous Runjet Singh, in the early part of the 19th century (see SIKHS). The English conquest of the Sikhs and annexation of the Punjab to British India took place in 1849. See INDIA: A. D. 1845–1849.

PUNT, Land of.—"Under the name of Punt, the old inhabitants of Kemi [ancient Egypt] meant a distant land, washed by the great ocean, full of valleys and hills, abounding in ebony and other rich woods, in incense, balsam, precious metals, and costly stones; rich also in beasts, as cameleopards, hunting leopards, panthers, dog-headed apes, and long-tailed monkeys. . . . Such was the Ophir of the Egyptians, without doubt the present coast of the Somauli land in sight of Arabia, but separated from it by the sea. According to an old obscure tradition, the land of Punt was the original seat of the gods. From Punt the holy ones had travelled to the Nile valley, at their head Amon, Horus, Hathor."—H. Brugsch, *Hist. of Egypt under the Pharaohs, ch.* 8.

PURCHASE IN THE ARMY, Abolition of. See ENGLAND: A. D. 1871.

PURITANS: The movement taking form. See ENGLAND: A. D. 1559–1566.

First application of the Name. See ENGLAND: A. D. 1564–1565 (?).

In distinction from the Independents or Separatists.—"When, in 1603, James I. became king of England, he found his Protestant subjects divided into three classes,—Conformists, or High Ritualists; Nonconformists, or Broad-Church Puritans; and Separatists, popularly called Brownists [and subsequently called Independents]. The Conformists and the Puritans both adhered to the Church of England, and were struggling for its control. . . . The Puritans objected to some of the ceremonies of the Church, such as the ring in marriage, the sign of the cross in baptism, the promises of godparents, the showy vestments, bowing in the creed, receiving evil-livers to the communion, repetitions, and to kneeling at communion as if still adoring the Host, instead of assuming an ordinary attitude as did the apostles at the Last Supper. The majority of the lower clergy and of the middle classes are said to have favored Puritanism. . . . Dr. Neal says that the Puritan body took form in 1564, and dissolved in

1644. During that term of eighty years the Puritans were ever 'in and of the Church of England'; as Dr. Prince says in his Annals (1736), those who left the Episcopal Church 'lost the name of Puritans and received that of the Separatists.'. . . The Separatists, unlike the Puritans, had no connection with the National Church, and the more rigid of them even denied that Church to be scriptural, or its ministrations to be valid. . . . The Pilgrim Fathers, the founders of our Plymouth, the pioneer colony of New England, were not Puritans. They never were called by that name, either by themselves or their contemporaries. They were Separatists, slightingly called Brownists, and in time became known as Independents or Congregationalists. As Separatists they were oppressed and maligned by the Puritans. They did not restrict voting or office-holding to their church-members. They heartily welcomed to their little State all men of other sects, or of no sects, who adhered to the essentials of Christianity and were ready to conform to the local laws and customs. . . . Though their faith was positive and strong, they laid down no formal creed."—J. A. Goodwin, *The Pilgrim Republic, ch.* 2 *and* 1.—"The reader of this history must have remarked that 'Puritan' and 'Separatist' were by no means convertible terms; that, in point of fact, they very often indicated hostile parties, pitted against each other in bitter controversies. And the inquiry may have arisen — How is this? Were not the Separatists all Puritans? . . . The term 'Puritan' was originally applied to all in the church of England who desired further reformation — a greater conformity of church government and worship to primitive and apostolic usages. But after awhile the term became restricted in its application to those who retained their respect for the church of England, and their connection with it, notwithstanding its acknowledged corruptions; in distinction from those who had been brought to abandon both their respect for that church and their connection with it, under the conviction that it was hopelessly corrupt, and could never be reformed. The Separatists, then, were indeed all Puritans, and of the most thorough and uncompromising kind. They were the very essence — the oil of Puritanism. But the Puritans were by no means all Separatists; though they agreed with them in doctrinal faith, being all thoroughly Calvinistic in their faith." —G. Punchard, *Hist. of Congregationalism, v.* 3, *app., note F.*

PYRAMID. — "The name 'pyramid'—first invented by the ancients to denote the tombs of the Egyptian kings, and still used in geometry to this day — is of Greek origin. The Egyptians themselves denoted the pyramid — both in the sense of a sepulchre and of a figure in Solid Geometry — by the word 'abumir;' while, on the other hand, the word 'Pir-am-us' is equivalent to the 'edge of the pyramid,' namely, the four edges extending from the apex of the pyramid to each corner of the quadrangular base."—H. Brugsch, *Hist. of Egypt, ch.* 7.

PYRAMIDS, Battle of the. See France: A. D. 1798 (May—August).

PYRENEES, Battles of the (1813). See Spain: A. D. 1812–1814.

PYRENEES, Treaty of the. See France: A. D. 1659–1661.

PYRRHIC DANCE. — A spirited military dance, performed in armor, which gave much delight to the Spartans, and is said to have been taught to children only five years old. It was thought to have been invented by the Cretans.—G. Schömann, *Antiq. of Greece: The State, pt.* 3.

PYRRHUS, and his campaigns in Italy and Sicily. See Rome: B. C. 282–275.

PYTHIAN GAMES. See Delphi.

PYTHIAS, Knights of. See Insurance.

PYTHO, The Sanctuary of. — According to the Greek legend, a monstrous serpent, or dragon, Pytho, or Python, produced from the mud left by the deluge of Deucalion, lived in a great cavern of Mount Parnassus until slain by the god Apollo. The scene of the exploit became the principal seat of the worship of Apollo, the site of his most famous temple, the home of the oracle which he inspired. The temple and its seat were originally called Pytho; the cavern, from which arose mephitic and intoxicating vapors was called the Pythium; the priestess who inhaled those vapors and uttered the oracles which they were supposed to inspire, was the Pythia; Apollo, himself, was often called Pythius. Subsequently, town, temple and oracle were more commonly known by the name of Delphi. See Delphi.

QUADI, The: Early place and history. See MARCOMANNI.

Campaigns of Marcus Aurelius against. See SARMATIAN AND MARCOMANNIAN WARS OF MARCUS AURELIUS.

A. D. 357-359. — War of Constantius. See LIMIGANTES.

A. D. 374-375. — War of Valentinian. — A treacherous outrage of peculiar blackness, committed by a worthless Roman officer on the frontier, in 374, provoked the Quadi to invade the province of Pannonia. They overran it with little opposition, and their success encouraged inroads by the neighboring Sarmatian tribes. In the following year, the Emperor Valentinian led a retaliatory expedition into the country of the Quadi and revenged himself upon it with unmerciful severity. At the approach of winter he returned across the Danube, but only to wait another spring, when his purpose was to complete the annihilation of the offending Quadi. The latter, thereupon, sent ambassadors to humbly pray for peace. The choleric emperor received them, but their presence excited him to such rage that a blood-vessel was ruptured in his body and he died on the spot. — E. Gibbon, *Decline and Fall of the Roman Empire, ch.* 25.

Probable Modern Representatives of. See BOHEMIA: ITS PEOPLE.

QUADRILATERAL, The.—A famous military position in northern Italy, formed by the strong fortresses at Peschiera, Verona, Mantua, and Legnano, bears this name. "The Quadrilateral . . . fulfils all the requirements of a good defensive position, which are to cover rearward territory, to offer absolute shelter to a defending army whenever required, and to permit of ready offensive: first, by the parallel course of the Mincio and Adige; secondly, by the fortresses on these rivers; thirdly, by passages offered at fortified points which insure the command of the rivers."—Major C. Adams, *Great Campaigns in Europe from* 1796 *to* 1870, *p.* 232.

QUADRUPLE ALLIANCE (A. D. 1718). See SPAIN: A. D. 1713-1725; also, ITALY: A. D. 1715-1735.

QUÆSTIO PERPETUA. See CALPURNIAN LAW.

QUÆSTOR, The Imperial.—In the later Roman empire, "the Quaestor had the care of preparing the Imperial speeches, and was responsible for the language of the laws. . . . His office is not unlike that of the Chancellor of a mediaeval monarch."—T. Hodgkin, *Italy and Her Invaders, bk.* 1, *ch.* 3 (*v.* 1).

QUÆSTORS, Roman.—"Probably created as assistants to the consuls in the first year of the republic. At first two; in 421 B. C., four; in 241, eight; in 81, twenty; in 45, forty. Thrown open to plebeians in 421 B. C. Elected in the Comitia Tributa. The quæstor's office lasted as long as the consul's to whom he was attached."—R. F. Horton, *Hist. of the Romans, app. A.*—"We have seen how the care of the city's treasures had been intrusted to two city quæstors, soon after the abolition of the monarchy. In like manner, soon after the fall of the decemvirate, the expenditures connected with military affairs, which had hitherto been in the hands of the consuls, were put under the control of new patrician officers, the military quæstors, who were to accompany the army on its march." —A. Tighe, *Development of the Roman Const., ch.* 6.

ALSO IN: W. Ihne, *Researches into the Hist. of the Roman Const., pp.* 75–84.

QUÆSTORS OF THE FLEET. See ROME: B. C. 275.

QUAKERS: Origin of the Society of Friends.—George Fox and his early Disciples.—"The religious movement which began with the wandering preacher George Fox . . . grew into the Society of Friends, or, as they came to be commonly called, 'The Quakers.' George Fox was born in 1624, the year before Charles I. came to the throne; and he was growing up to manhood all through the troubled time of that king's reign, while the storms were gathering which at last burst forth in the civil wars. It was not much that he knew of all this, however. He was growing up in a little out-of-the-way village of Leicestershire — Fenny Drayton — where his father was 'by profession a weaver.'" While he was still a child, the companions of George Fox "laughed at his grave, sober ways, yet they respected him, too; and when, by-and-by, he was apprenticed to a shoemaker, his master found him so utterly trustworthy, and so true and unbending in his word, that the saying began to go about, 'If George says "verily" there is no altering him.'. . . He was more and more grieved at what seemed to him the lightness and carelessness of men's lives. He felt as if he were living in the midst of hollowness and hypocrisy. . . . His soul was full of great thoughts of something better and nobler than the common religion, which seemed so poor and worldly. . . . He wandered about from place to place — Northampton, London, various parts of Warwickshire — seeking out people here and there whom he could hear of as very religious, and likely to help him through his difficulties. . . . After two years of lonely, wandering life, he began to see a little light. It came to his soul that all these outward forms, and ceremonies, and professions that people were setting up and making so much ado about as 'religion,' were nothing in themselves; that priestly education and ordination was nothing — did not really make a man any nearer to God; that God simply wanted the hearts and souls of all men to be turned to Him, and the worship of their own thought and feeling. And with the sense of this there arose within him a great loathing of all the formalism, and priestcraft, and outward observances of the Churches. . . . But he did not find peace yet. . . . He writes: 'My troubles continued, and I was often under great temptations; I fasted much and walked abroad in solitary places many days.'. . . It was a time like Christ's temptations in the wilderness, or Paul's three years in Arabia, before they went forth to their great life-mission. But to him, as to them, came, at last, light and peace and an open way. . . . A voice seemed to come to him which said, 'There is one, even Christ Jesus, that can speak to thy condition.' 'And when I heard it,' he says, 'my heart did leap for joy.' Fixing his mind upon Christ, all things began to be clearer to him; he saw the grand simple truth of a religion of

spirit and life. . . . It was at Dukinfield, near Manchester, in 1647, that he began to speak openly to men of what was in his heart. . . . In those days, when he was wandering away from men, and shrinking with a sort of horror from the fashions of the world, he had made himself a strong rough suit of leather, and this for many years was his dress. Very white and clean indeed was the linen under that rough leather suit, for he hated all uncleanness either of soul or body; and very calm and clear were his eyes, that seemed to search into men's souls, and quailed before no danger, and sometimes lighted up with wonderful tenderness. A tall, burly man he was, too, of great strength. . . . Everywhere he saw vanity and worldliness, pretence and injustice. It seemed laid upon him that he must testify against it all. He went to courts of justice, and stood up and warned the magistrates to do justly; he went to fairs and markets, and lifted up his voice against wakes, and feasts and plays, and also against people's cozening and cheating. . . . He testified against great things and small, bade men not swear, but keep to 'yea' and 'nay,' and this in courts of justice as everywhere else; he spoke against lip-honour — that men should give up using titles of compliment, and keep to plain 'thee' and 'thou'; 'for surely,' he said, 'the way men address God should be enough from one to another.' But all this was merely the side-work of his life, flowing from his great central thought of true, pure life in the light of the Spirit of God. That was his great thought, and that he preached most of all; he wanted men to give up all their forms, and come face to face with the Spirit of God, and so worship Him and live to Him. Therefore he spoke most bitterly of all against all priestcraft. . . . Gradually followers gathered to him; little groups of people here and there accepted his teachings — began to look to him as their leader. He did not want to found a sect; and as for a church — the Church was the whole body of Christ's faithful people everywhere; so those who joined him would not take any name as a sect or church. They simply called themselves 'friends'; they used no form of worship, but met together, to wait upon the Lord with one another; believing that His Spirit was always with them, and that, if anything was to be said, He would put it into their hearts to say it." From the first, Fox suffered persecution at the hands of the Puritans. They "kept imprisoning him for refusing to swear allegiance to the Commonwealth; again and again he suffered in this way: in Nottingham Castle, in 1648; then, two years later, at Derby, for six months, at the end of which time they tried to force him to enter the army; but he refused, and so they thrust him into prison again, this time into a place called the Dungeon, among 30 felons, where they kept him another half-year. Then, two years later, in 1653, he was imprisoned at Carlisle, in a foul, horrible hole. . . . He was again imprisoned in Launceston gaol, for eight long months. After this came a quieter time for him; for he was taken before Cromwell, and Cromwell had a long conversation with him. . . . During Cromwell's life he was persecuted no more, but with the restoration of Charles II. his dangers and sufferings began again. . . . His followers caught his spirit, and no persecutions could intimidate them. . . . They made no secret of where their meetings were to be, and at the time there they assembled. Constables and informers might be all about the place, it made no difference; they went in, sat down to their quiet worship; if any one had a word to say he said it. The magistrates tried closing the places, locked the doors, put a band of soldiers to guard them. The Friends simply gathered in the street in front, held their meetings there; went on exactly as if nothing had happened. They might all be taken off to prison, still it made no difference. . . . Is it wonderful that such principles, preached with such noble devotion to truth and duty, rapidly made way? By the year 1665, when Fox had been preaching for 18 years, the Society of Friends numbered 80,000, and in another ten years it had spread more widely still, and its founder had visited America, and travelled through Holland and Germany, preaching his doctrine of the inward light, and everywhere founding Meetings. Fox himself did not pass away until [1690] he had seen his people past all the days of persecution."— B. Herford, *The Story of Religion in England, ch.* 27.—"At a time when personal revelation was generally believed, it was a pardonable self-delusion that he [Fox] should imagine himself to be commissioned by the Divinity to preach a system which could only be objected to as too pure to be practised by man. This belief, and an ardent temperament, led him and some of his followers into unseasonable attempts to convert their neighbours, and unseemly intrusions into places of worship for that purpose, which excited general hostility against them, and exposed them to frequent and severe punishments. . . . Although they, like most other religious sects, had arisen in the humble classes of society, . . . they had early been joined by a few persons of superior rank and education. . . . The most distinguished of their converts was William Penn, whose father, Admiral Sir William Penn, had been a personal friend of the King [James II.], and one of his instructors in naval affairs."— Sir J. Mackintosh, *Hist. of the Revolution in Eng. in* 1688, *ch.* 6.— "At one of the interviews between G. Fox and Gervas Bennet — one of the magistrates who had committed him at Derby — the former bade the latter 'Tremble at the word of the Lord'; whereupon Bennet called him a Quaker. This epithet of scorn well suited the tastes and prejudices of the people, and it soon became the common appellation bestowed on Friends."— C. Evans, *Friends in the 17th Century, ch.* 2.

QUEEN, Origin of the word. See KING.

QUEEN ANNE'S BOUNTY.—The First Fruits and Tenths formerly collected in England by the Popes (see ANNATES) were swept into the royal treasury by Henry VIII., but given to the nation, in 1704, by Queen Anne, for the benefit of the poorer clergy, forming a fund called "Queen Anne's Bounty."

QUEEN ANNE'S WAR.—The wide-ranging conflict which is known in European history as the War of the Spanish Succession, appears in American history more commonly under the name of Queen Anne's War. See NEW ENGLAND: A. D. 1702–1710.

QUEENSBERRY PLOT, The. See SCOTLAND: A. D. 1703–1704.

QUEENSLAND.—"The Colony of Queensland embraces all that part of the eastern side of the Australian Continent which lies to the northward of New South Wales, having a seaboard which extends from the parallel of 28° 10′ northward to Cape York, and from that point southward and westward along fully one half the shore line of the Gulf of Carpentaria. . . . A chain of coral reefs, known as a whole under the name of the Great Barrier Reef, extends from Torres Strait southward to the latitude of 24° 30′. Between this reef and the shore, a distance varying from 10 miles to 100 miles, is a channel affording a safe passage for ships. There are a few openings in the reef by which vessels may pass from one side of it to the other, but the navigation is somewhat dangerous. . . . The northern shores in the Gulf of Carpentaria are flat and uninteresting, and the interior swampy. The area of Queensland is not less than 670,000 square miles (about the size of Great Britain, France, Germany and Italy combined), and it has a coast line of some 2,500 miles. The surface of Queensland may be divided into three portions: 1. A coast district, consisting of a narrow strip of country lying along the coast and traversed by numerous rivers; 2. A highland region, comprising a range of mountains with numerous offshoots, which, under the general name of the Coast Range, extends from York Peninsula to within a short distance of Brisbane; 3. Level, or nearly level, tracts of country, which extend from the mountain region to the western boundary of the Colony. . . . In the southern portion of the Colony the breadth of the elevated region, from east to west, is upwards of 200 miles. The plains of the interior, which were long thought to be sterile, have been found to be for the most part well grassed and moderately watered regions, affording good grazing grounds for cattle."—*Her Majesty's Colonies* (*Colonial and Indian Exhibition*, 1886), *pp.* 213–14.—Queensland was known as the Moreton Bay District of New South Wales until 1859. See AUSTRALIA: A. D. 1859; also, NEW SOUTH WALES.

QUIDS, The.—John Randolph of Virginia "had been one of the Republican leaders while the party was in opposition [during the second administration of Washington and the administration of John Adams, as Presidents of the United States], but his irritable spirit disqualified him for heading an Administration party. He could

attack, but could not defend. He had taken offense at the President's [Jefferson's] refusal to make him Minister to England, and immediately took sides with the Federalists [1805] followed by a number of his friends, though not sufficient to give the Federalists a majority. . . . The Randolph faction, popularly called 'Quids,' gave fresh life to the Federalists in Congress, and made them an active and useful opposition party."—A. Johnston, *Hist. of Am. QUIPU.—WAMPUM.—"The Peruvians adopted a . . . unique system of records, that by means of the quipu. This was a base cord, the thickness of the finger, of any required length, to which were attached numerous small strings of different colors, lengths, and textures, variously knotted and twisted one with another. Each of these peculiarities represented a certain number, a quality, quantity, or other idea, but what, not the most fluent quipu reader could tell unless he was acquainted with the general topic treated of. Therefore, whenever news was sent in this manner a person accompanied the bearer to serve as verbal commentator, and to prevent confusion the quipus relating to the various departments of knowledge were placed in separate storehouses, one for war, another for taxes, a third for history, and so forth. On what principle of mnemotechnics the ideas were connected with the knots and colors we are totally in the dark; it has even been doubted whether they had any application beyond the art of numeration. Each combination had, however, a fixed ideographic value in a certain branch of knowledge, and thus the quipu differed essentially from the Catholic rosary, the Jewish phylactery, or the knotted strings of the natives of North America and Siberia, to all of which it has at times been compared. The wampum used by the tribes of the North Atlantic coast was, in many respects, analogous to the quipu. In early times it was composed chiefly of bits of wood of equal size, but different colors. These were hung on strings which were woven into belts and bands, the hues, shapes, sizes, and combinations of the strings hinting their general significance. Thus the lighter shades were invariable harbingers of peaceful or pleasant tidings, while the darker portended war and danger. The substitution of beads or shells in place of wood, and the custom of embroidering figures in the belts were, probably, introduced by European influence."—D. G. Brinton, *The Myths of the New World, ch.* 1.—See, also, Wampum.

QUIRINAL, The.—"The Palatine city was not the only one that in ancient times existed within the circle afterwards enclosed by the Servian walls; opposite to it, in its immediate vicinity, there lay a second city on the Quirinal. . . . Even the name has not been lost by which the men of the Quirinal distinguished themselves from their Palatine neighbours. As the Palatine city took the name of 'the Seven Mounts,' its citizens called themselves the 'mount-men' ('montani'), and the term 'mount,' while applied to the other heights belonging to the city, was above all associated with the Palatine; so the Quirinal height—although not lower, but on the contrary somewhat higher, than the former—as well as the adjacent Viminal, never in the strict use of the language received any other name than 'hill' ('collis'). . . . Thus the site of the Roman commonwealth was still at this period occupied by the Mount-Romans of the Palatine and the Hill-Romans of the Quirinal as two separate communities confronting each other and doubtless in many respects at feud. . . . That the community of the Seven Mounts early attained a great preponderance over that of the Quirinal may with certainty be inferred."—T. Mommsen, *Hist. of Rome, bk.* 1, *ch.* 4.—See, also, Palatine Hill, and Seven Hills of Rome.

QUIRITES.—In early Rome the warrior-citizens, the full burgesses, were so-called. "The king, when he addressed them, called them 'lance-men' (quirites). . . . We need not . . . regard the name Quirites as having been originally reserved for the burgesses on the Quirinal. . . . It is indisputably certain that the name Quirites denoted from the first, as well as subsequently, simply the full burgess."—T. Mommsen, *Hist. of Rome, bk.* 1, *ch.* 4 *and* 5.—The term quirites, in fact, signified the citizens of Rome as a body. Whether it originally meant "men of the spear," as derived from a Sabine word, is a question in some dispute.—H. G. Liddell, *Hist. of Rome, bk.* 1, *ch.* 5.

RACHISIUS, King of the Lombards, A. D. 744–750.

RADAGAISUS, OR RADAGAIS, OR RODOGAST; Invasion of Italy by.—"In the year 406, Italy was suddenly overrun by a vast multitude composed of Vandals, Sueves, Burgunds, Alans, and Goths, under the command of a king named Radagais. To what nation this king belonged is not certain, but it seems likely that he was an Ostrogoth from the region of the Black Sea, who had headed a tribe of his countrymen in a revolt against the Huns. The invading host is said to have consisted of 200,000

warriors, who were accompanied by their wives and families. These barbarians were heathens, and their manners were so fierce and cruel that the invasion excited far more terror than did that of Alaric. . . . Stilicho [the able minister and general of the contemptible Emperor of the West, Honorius] found it hard work to collect an army capable of opposing this savage horde, and Radagais had got as far as Florence before any resistance was offered to him. But while he was besieging that city, the Roman general came upon him, and, by surrounding his army with earthworks, compelled him to surrender. The barbarian king was beheaded, and those of the captives whose lives were spared were sold into slavery." — H. Bradley, *Story of the Goths, ch.* 10.

RÆTIA. See RHÆTIA.

RAGA, RAGHA, OR RHAGES.—"The Median city next in importance to the two Ecbatanas was Raga or Rhages, near the Caspian Gates, almost at the extreme eastern limits of the territory possessed by the Medes. The great antiquity of this place is marked by its occurrence in the Zendavesta among the primitive settlements of the Arians. Its celebrity during the time of the Empire is indicated by the position which it occupies in the romances of Tobit and Judith. . . . Rhages gave name to a district; and this district may be certainly identified with the long narrow tract of fertile territory intervening between the Elburz mountain-range and the desert, from about Kasvin to Khaar, or from long. 50° to 52° 30′. The exact site of the city of Rhages within this territory is somewhat doubtful. All accounts place it near the eastern extremity; and, as there are in this direction ruins of a town called Rhei or Rhey, it has been usual to assume that they positively fix the locality. But . . . there are grounds for placing Rhages very much nearer to the Caspian Gates."—G. Rawlinson, *Five Great Monarchies: Media, ch.* 1.—See, also, CASPIAN GATES.

RAJA, OR RAJAH.—MAHARAJA.—Hindu titles, equivalent to king and great king.

RAJPOOTS, OR RAJPUTS.—RAJPOOTANA.—"The Rajpoots, or sons of Rajas, are the noblest and proudest race in India. . . . They claim to be representatives of the Kshatriyas; the descendants of those Aryan warriors who conquered the Punjab and Hindustan in times primeval. To this day they display many of the characteristics of the heroes of the Maha Bharata and Ramayana. They form a military aristocracy of the feudal type. . . . The Rajpoots are the links between ancient and modern India. In days of old they strove with the kings of Magadha for the suzerainty of Hindustan from the Indus to the lower Gangetic valley. They maintained imperial thrones at Lahore and Delhi, at Kanouj and Ayodhya. In later revolutions their seats of empire have been shifted further west and south, but the Rajpoot kingdoms still remain as the relics of the old Aryan aristocracy. . . . The dynasties of Lahore and Delhi faded away from history, and perchance have reappeared in more remote quarters of India. The Rajpoots still retain their dominion in the west, whilst their power and influence have been felt in every part of India; and to this day a large Rajpoot element characterizes the populations, not only of the Punjab and Hindustan, but of the Dekhan and Peninsula. The Rajpoot empire of a remote antiquity is represented in the present day by the three kingdoms of Meywar, Marwar, and Jeypore. Meywar, better known as Chittore or Udaipore, is the smallest but most important of the three. It forms the garden of Rajpootana to the eastward of the Aravulli range. Westward of the range is the dreary desert of Marwar. Northward of Meywar lies the territory of Jeypore, the intermediate kingdom between Meywar and the Mussulmans. . . . In former times the sovereigns of Meywar were known as the Ranas of Chittore; they are now known as the Ranas of Udaipore. They belong to the blue blood of Rajpoot aristocracy."—J. T. Wheeler, *Hist. of India, v.* 3, *ch.* 7.—"Everywhere [in the central region of India] Rajput septs or petty chiefships may still be found existing in various degrees of independence. And there are, of course, Rajput Chiefs outside Rajputana altogether, though none of political importance. But Rajputana proper, the country still under the independent rule of the most ancient families of the purest clans, may now be understood generally to mean the great tract that would be crossed by two lines, of which one should be drawn on the map of India from the frontier of Sind Eastward to the gates of Agra; and the other from the Southern border of the Punjab Government near the Sutlej Southward and South-Eastward until it meets the broad belt of Maratha States under the Guicowar, Holkar, and Scindia, which runs across India from Baroda to Gwalior. This territory is divided into nineteen States, of which sixteen are possessed by Rajput clans, and the Chief of the clan or sept is the State's ruler. To the Sesodia clan, the oldest and purest blood in India, belong the States of Oodeypoor, Banswarra, Pertabgarh, and Shahpura; to the Rathore clan, the States of Jodhpoor and Bikanir; Jeypoor and Ulwar to the Kuchwaha, and so on."—Sir A. C. Lyall, *Asiatic Studies, ch.* 8.

RAMBOUILLET, The Hôtel de.—The marquise de Rambouillet, who drew around herself, at Paris, the famous coterie which took its name from her hospitable house, was the daughter of a French nobleman, Jean de Vivonne, sieur de Saint-Gohard, afterwards first marquis de Pisani, who married a Roman lady of the noble family of the Strozzi. Catherine de Vivonne was born of this union in 1588, and in 1600, when less than twelve years old, became the wife of Charles d'Angennes, vidame du Mans afterwards marquis de Rambouillet. Her married life was more than half a century in duration; she was the mother of seven children, and she

survived her husband thirteen years. During the minority of the husband the ancient residence of his family had been sold, and from 1610 to 1617 the marquis and marquise were engaged in building a new Hôtel de Rambouillet, which the latter is credited with having, in great part, designed. Her house being finished, she opened it "to her friends and acquaintances, and her receptions, which continued until the Fronde (1648), brought together every evening the choicest society of the capital, and produced a profound influence upon the manners and literature of the day. The marquise ceased attending court some years before the death of Henry IV., her refinement and pure character finding there an uncongenial atmosphere. The marquise was not alone a woman of society, but was carefully educated and fond of literature. Consequently the reunions at the Hôtel de Rambouillet were distinguished by a happy combination of rank and letters. Still more important was the new position assumed by the hostess and the ladies who frequented her house. Until the XVIIth century the crudest views prevailed as to the education and social position of woman. It was at the Hôtel de Rambouillet that her position as the intellectual companion of man was first recognized, and this position of equality, and the deferential respect which followed it, had a powerful influence in refining the rude manners of men of rank whose lives had been passed in camps, and of men of letters who had previously enjoyed few opportunities for social polish. The two classes met for the first time on a footing of equality, and it resulted in elevating the occupation of letters, and imbuing men of rank with a fondness for intellectual pursuits. The reunions at the Hôtel de Rambouillet began, as has been said, about 1617, and extend until the Fronde (1648) or a few years later. This period Larroumet ('Précieuses Ridicules,' p. 14) divides into three parts: from 1617 to about 1629; from 1630 to 1640; and from 1640 to the death of the marquise in 1665. During the first period the habitués of the Hôtel de Rambouillet were": the marquis du Vigean, the maréchal de Souvré, the duke de la Tremoïlle, Richelieu (then bishop of Luçon), the cardinal de la Valette, the poets Malherbe, Racan, Gombauld, Chapelain, Marino, the preacher Cospeau, Godeau, the grammarian Vaugelas, Voiture, Balzac, Segrais, Mlle. Paulet, the princesse de Montmorency, Mlle. du Vigean, and the daughters of the marquise de Rambouillet, "of whom the eldest, Julie d'Angennes, until her marriage in 1645 to the marquis de Montausier, was the soul of the reunions of the Hôtel de Rambouillet. The second period was that of its greatest brilliancy. To the illustrious names just mentioned must be added": the great Condé, the marquis de Montausier, Saint-Évremond, La Rochefoucald, Sarrasin, Costar, Patru, Conrart, Georges de Scudéry, Mairet, Colletet, Ménage, Benserade, Cotin, Desmarets, Rotrou, Scarron, P. Corneille, Bossuet, Mlle. de Bourbon, later duchesse de Longueville, Mlle. de Coligny, Mme. Aubry, and Mlle. de Scudéry, "yet unknown as a writer. After 1640 the Hôtel de Rambouillet began to decline; but two names of importance belong to this period: Mme. de la Fayette, and Mme. de Sévigné. . . . Voiture died in 1648, the year which witnessed the outbreak of the Fronde, after which the reunions at the Hôtel de Rambouillet virtually ceased. . . . Until the time of Roederer ['Mémoire pour servir à l'histoire de la société polie en France'] it was generally supposed that the word 'Précieuse' was synonymous with Hôtel de Rambouillet, and that it was the marquise and her friends whom Molière intended to satirize. Roederer endeavored to show that it was not the marquise but her bourgeois imitators, the circle of Mlle. de Scudéry . . . ; Victor Cousin attempts to prove that it was neither the marquise nor Mlle. de Scudéry, but the imitators of the latter. . . . The editor of Molière in the 'Grands Écrivains de la France,' M. Despois (v. 2, p. 4) believes that the Hôtel de Rambouillet, including Mlle. de Scudéry, was the object of Molière's satire, although he had no intention of attacking any particular person among the 'Précieuses,' but confined himself to ridiculing the eccentricities common to them all. It is with this last view that the editor of the present work unhesitatingly agrees, for reasons which he hopes some day to give in detail in an edition of the two plays of Molière mentioned above ['Précieuses Ridicules,' and 'Les Femmes Savantes']. From Paris the influence of the 'Précieuses' spread into the provinces, doubtless with all the exaggerations of an unskilful imitation."—T. F. Crane, *Introd. to "La Société Française au Dix-Septième Siècle."*

RANTERS.—MUGGLETONIANS.— "'These [the Ranters] made it their business,'

says Baxter, 'to set up the Light of Nature under the name of Christ in Man, and to dishonour and cry down the Church, the Scripture, and the present Ministry, and our worship and ordinances; and called men to hearken to Christ within them. But withal they conjoined a cursed doctrine of Libertinism, which brought them to all abominable filthiness of life. They taught, as the Familists, that God regardeth not the actions of the outward man, but of the heart, and that to the pure all things are pure.' . . . Of no sect do we hear more in the pamphlets and newspapers between 1650 and 1655, though there are traces of them of earlier date. . . . Sometimes confounded with the Ranters, but really distinguishable, were some crazed men, whose crazes had taken a religious turn, and whose extravagances became contagious.—Such was a John Robins, first heard of about 1650, when he went about, sometimes as God Almighty, sometimes as Adam raised from the dead. . . One heard next, in 1652, of two associates, called John Reeve and Ludovick Muggleton, who professed to be 'the two last Spiritual Witnesses (Rev. xi.) and alone true Prophets of the Lord Jesus Christ, God alone blessed to all eternity.' They believed in a real man-shaped God, existing from all eternity, who had come upon earth as Jesus Christ, leaving Moses and Elijah to represent him in Heaven." Muggleton died in 1698, "at the age of 90, leaving a sect called The Muggletonians, who are perhaps not extinct yet."—D. Masson, *Life of John Milton, v.* 5, *pp.* 17–20.

RAPPAREES.—TORIES.—"Ejected proprietors [in Ireland, 17th and 18th centuries] whose names might be traced in the annals of the Four Masters, or around the sculptured crosses of Clonmacnoise, might be found in abject poverty hanging around the land which had lately been their own, shrinking from servile labour as from an intolerable pollution, and still receiving a secret homage from their old tenants. In a country where the clan spirit was intensely strong, and where the new landlords were separated from their tenants by race, by religion, and by custom, these fallen and impoverished chiefs naturally found themselves at the head of the discontented classes; and for many years after the Commonwealth, and again after the Revolution, they and their followers, under the names of tories and rapparees, waged a kind of guerrilla war of depredations upon their successors. After the first years of the 18th century, however, this form of crime appears to have almost ceased; and although we find the names of tories and rapparees on every page of the judicial records, the old meaning was no longer attached to them, and they had become the designations of ordinary felons, at large in the country."—W. E. H. Lecky, *Hist. of Eng., 18th Century, ch.* 7 (*v.* 2).—"The distinction between the Irish foot soldier and the Irish Rapparee had never been very strongly marked. It now disappeared [during the war in Ireland between James II. and William of Orange—A. D. 1691]. Great part of the army was turned loose to live by marauding."—Lord Macaulay, *Hist. of Eng., ch.* 17 (*v.* 4).—"The Rapparee was the lowest of the low people. . . . The Rapparee knew little difference between friend and foe; receiving no mercy, they gave none."—Sir J. Dalrymple, *Memoirs of Gt. Britain and Ireland, pt.* 2, *bk.* 5 (*v.* 3).—"Political disaffection in Ireland has been the work, on the one hand, of the representatives of the old disinherited families—the Kernes, and Gallowglasses of one age, the Rapparees of the next, the houghers and ravishers of a third; on the other, of the restless aspirations of the Catholic clergy."—J. A. Froude, *The English in Ireland, bk.* 9, *ch.* 1 (*v.* 3).

RAVENIKA, The Parliament of.—Henry, the second emperor of the Latin empire of Romania, or empire of Constantinople, convened a general parliament or high-court of all his vassals, at Ravenika, in 1209, for the determining of the feudal relations of all the subjects of the empire. Ravenika is in ancient Chalkidike, some fifty miles from Thessalonica.—G. Finlay, *Hist. of Greece from its Conquest by the Crusaders, ch.* 4, *sect.* 4.

RAVENNA: B. C. 50.—Cæsar's advance on Rome. See ROME: B. C. 52–50.

A. D. 404.—Made the capital of the Western Empire.—"The houses of Ravenna, whose appearance may be compared to that of Venice, were raised on the foundation of wooden piles. The adjacent country, to the distance of many miles, was a deep and impassable morass; and the artificial causeway which connected Ravenna with the continent might be easily guarded, or destroyed, on the approach of a hostile army. These morasses were interspersed, however, with vineyards; and though the soil was exhausted by four or five crops, the town enjoyed a more plentiful supply of wine than of fresh water. The air, instead of receiving the sickly and almost pestilential exhalations of low and marshy grounds, was distinguished, like the neighbourhood of Alexandria, as uncommonly pure and salubrious; and this singular advantage was ascribed to the regular tides of the Adriatic. . . . This advantageous situation was fortified by art and labour; and, in the twentieth year of his age, the Emperor of the West [Honorius, A. D. 395–423] anxious only for his personal safety, retired to the perpetual confinement of the walls and morasses of Ravenna. The example of Honorius was imitated by his feeble successors, the Gothic kings, and afterwards the exarchs, who occupied the throne and palace of the emperors; and till the middle of the eighth century Ravenna was considered as the seat of government and the capital of Italy."—E. Gibbon, *Decline and Fall of the Roman Empire, ch.* 30.

REBECCAITES.—DAUGHTERS OF REBECCA.—Between 1839 and 1844, a general outbreak occurred in Wales against what were thought to be the excessive tolls collected on the turnpike roads. Finding that peaceful agitation was of no avail the people determined to destroy the turnpike gates, and did so very extensively, the movement spreading from county to county. They applied to themselves the Bible promise given to the descendants of Isaac's wife, that they should possess the "gate" of their enemies, and were known as the Daughters, or Children of Rebecca, or Rebeccaites. Their proceedings assumed at last a generally riotous and lawless character, and were repressed by severe measures. At the same time Parliament removed the toll-gate grievance by an amended law.—W. N. Molesworth, *Hist. of Eng.*, 1830–1874, *v.* 2, *p.* 131.

RECESS.—Certain decrees of the Germanic diet were so called. See PAPACY: A. D. 1530–1531.

RECHABITES, The.—An ascetic religious association, or order, formed among the Israelites, under the influence of the prophet Elijah, or after his death. Like the monks of a later time, they mostly withdrew into the desert. "The vow of their order was so strict that they were not allowed to possess either vineyards or corn-fields or houses, and they were consequently rigidly confined for means of subsistence to the products of the wilderness."—H. Ewald, *Hist. of Israel, bk.* 4, *sect.* 1 (*v.* 4).

RED CROSS, The.—"A confederation of relief societies in different countries, acting under the Geneva Convention, carries on its work under the sign of the Red Cross. The aim of these societies is to ameliorate the condition of wounded soldiers in the armies in campaign on land or sea. The societies had their rise in the conviction of certain philanthropic men, that the official sanitary service in wars is usually insufficient, and that the charity of the people, which at such times exhibits itself munificently, should be organized for the best possible utilization. An international public conference was called at Geneva, Switzerland, in 1863, which, though it had not an official character, brought together representatives from a number of Governments. At this conference a treaty was drawn up, afterwards remodeled and improved, which twenty-five Governments have signed. The treaty provides for the neutrality of all sanitary supplies, ambulances, surgeons, nurses, attendants, and sick or wounded men, and their safe conduct, when they bear the sign of the organization, viz: the Red Cross. Although the convention which originated the organization was necessarily international, the relief societies themselves are entirely national and independent; each one governing itself and making its own laws according to the genius of its nationality and needs. It was necessary for recognizance and safety, and for carrying out the general provisions of the treaty, that a uniform badge should be agreed upon. The Red Cross was chosen out of compliment to the Swiss Republic, where the first convention was held, and in which the Central Commission has its headquarters. The Swiss colors being a white cross on a red ground, the badge chosen was these colors reversed. There are no 'members of the Red Cross,' but only members of societies whose sign it is. There is no 'Order of the Red Cross.' The relief societies use, each according to its convenience, whatever methods seem best suited to prepare in times of peace for the necessities of sanitary service in times of war. They gather and store gifts of money and supplies; arrange hospitals, ambulances, methods of transportation of wounded men, bureaus of information, correspondence, &c. All that the most ingenious philanthropy could devise and execute has been attempted in this direction. In the Franco-Prussian war this was abundantly tested. . . . This society had its inception in the mind of Monsieur Henri Dunant, a Swiss gentleman, who was ably seconded in his views by Monsieur Gustave Moynier and Dr. Louis Appia, of Geneva."—*Hist. of the Red Cross* (*Washington*, 1883).

REDEMPTIONERS.—"Redemptioners, or term slaves, as they were sometimes called, constituted in the early part of the 18th century a peculiar feature of colonial society. They were recruited from among all manner of people in the old world, and through this channel Europe emptied upon America, not only the virtuous poor and oppressed of her population, but the vagrants, felons, and the dregs of her communities. . . . There were two kinds of redemptioners: 'indented servants,' who had bound themselves to their masters for a term of years previous to their leaving the old country; and 'free-willers,' who, being without money and desirous of emigrating, agreed with the captains of ships to allow themselves and their families to be sold on arrival, for the captain's advantage, and thus repay costs of passage and other expenses."—A. D. Mellick, Jr., *The Story of an Old Farm, ch.* 11.

REDEMPTORISTS, The.—The members of the congregation of the Most Holy Redeemer, founded by St. Alphonsus Maria de Liguori, in 1732, are commonly known as Redemptorists. The congregation is especially devoted to apostolic work among neglected classes of people.

REFERENDARIUS. See CHANCELLOR.

REFERENDUM AND INITIATIVE, The Swiss.—"A popular vote under the name Referendum was known in the valleys of Graubünden and Wallis as early as the 16th century. Here existed small federations of communities who regulated certain matters of general concern by means of assemblies of delegates from each village. These conventions were not allowed to decide upon any important measure finally, but must refer the matter to the various constituencies. If a majority of these approved, the act might be passed at the next assembly. This

primitive system lasted till the French invasion of 1798, and was again established in Graubünden in 1815. The word Referendum was also used by the old federal diets, in which there were likewise no comprehensive powers of legislation. If not already instructed the delegates must vote 'ad referendum' and carry all questions to the home government. The institution as now known is a product of this century. It originated in the canton of St. Gallen in 1830, where at the time the constitution was undergoing revision. As a compromise between the party which strove for pure democracy and that desiring representative government, it was provided that all laws should be submitted to popular vote if a respectable number of voters so demanded. Known at first by the name Veto, this system slowly found its way into several of the German-speaking cantons, so that soon after the adoption of the federal constitution five were employing the optional Referendum. Other forms of popular legislation were destined to find wider acceptance, but at present [1891] in eight states, including three of the Romance tongue, laws must be submitted on request. . . . The usual limit of time during which the petition must be signed is 30 days. These requests are directed to the Executive Council of the state, and that body is obliged, within a similar period after receiving the same, to appoint a day for the vote. The number of signers required varies from 500 in the little canton Zug to 6,000 in St. Gallen, or from one-tenth to one-fifth of all the voters. Some states provide that in connection with the vote on the bill as a whole, an expression may be taken on separate points. Custom varies as to the number of votes required to veto a law. Some fix the minimum at a majority of those taking part in the election, and others at a majority of all citizens, whether voting or not. In case the vote is against the bill, the matter is referred by the Executive Council to the legislature. This body, after examining into the correctness of the returns, passes a resolution declaring its own act to be void. By means of the Initiative or Imperative Petition, the order of legislation just described is reversed, since the impulse to make law is received from below instead of above. The method of procedure is about as follows: Those who are interested in the passage of a new law prepare either a full draft of such a bill or a petition containing the points desired to be covered, with the reasons for its enactment, and then bring the matter before the public for the purpose of obtaining signatures. Endorsement may be given either by actually signing the petition or by verbal assent to it. The latter form of consent is indicated either in the town meetings of the communes, or by appearing before the official in charge of the petition and openly asking that his vote be given for it. If, in the various town meetings of the canton taken together, a stated number of affirmative votes are given for the petition, the effect is the same as if the names of voters had been signed. . . . The number of names required is about the same in proportion to the whole body of voters as for the Optional Referendum. The requisite number of signatures having been procured, the petition is carried to the legislature of the canton. This body must take the matter into consideration within a specified time (Solothurn, two months), and prepare a completed draft in accordance with the request. It may also at the same time present an alternate proposition which expresses its own ideas of the matter, so that voters may take their choice. In any case the legislature gives an opinion on the project, as to its desirability or propriety, and the public has thus a report of its own select committee for guidance. The bill is then submitted to the voters, and on receiving the assent of a majority, and having been promulgated by the executive authority, becomes a law of the land."—J. M. Vincent, *State and Federal Gov't in Switzerland, ch.* 13.—"Between 1874 and 1886, the federal legislature passed 113 laws and resolutions which were capable of being submitted to the referendum. Of these only 19 were subjected to the popular vote, and of these last 13 were rejected and 6 adopted. The strong opposing views, which are held in Switzerland regarding the expediency of the referendum, indicate that this is one of the features of the government which is open to future discussion."—B. Moses, *The Federal Gov't of Switzerland, p.* 119.—See, also, SWITZERLAND: A. D. 1848–1890.—"A plébiscite is a mass vote of the French people by which a Revolutionary or Imperial Executive obtains for its policy, or its crimes, the apparent sanction or condonation of France. Frenchmen are asked at the moment, and in the form most convenient to the statesmen or conspirators who rule in Paris, to say 'Aye' or 'No' whether they will, or will not, accept a given Constitution or a given policy. The crowd of voters are expected to reply in accordance to the wishes or the orders of the Executive, and the expectation always has met, and an observer may confidently predict always will meet, with fulfilment. The plébiscite is a revolutionary, or at least abnormal, proceeding. It is not preceded by debate. The form and nature of the question to be submitted to the nation is chosen and settled by the men in power. Rarely, indeed, when a plébiscite has been taken, has the voting itself been either free or fair. Taine has a strange tale to tell of the methods by which a Terrorist faction, when all but crushed by general odium, extorted from the country by means of the plébiscite a sham assent to the prolongation of revolutionary despotism. The credulity of partisanship can nowadays hardly induce even Imperialists to imagine that the plébiscites which sanctioned the establishment of the Empire, which declared Louis Napoleon President for life, which first re-established Imperialism, and then approved more or less Liberal reforms, fatal at bottom to the Imperial system, were the free, deliberate, carefully considered votes of the French nation given after the people had heard all that could be said for and against the proposed innovation. . . . The essential characteristics, however, the lack of which deprives a French plébiscite of all moral significance, are the undoubted properties of the Swiss Referendum. When a law revising the Constitution is placed before the people of Switzerland, every citizen throughout the land has enjoyed the opportunity of learning the merits and demerits of the proposed alteration. The subject has been 'threshed out,' as the expression goes, in Parliament; the scheme, whatever its worth, has received the deliberately given approval of the elected Legislature; it comes before the people with as much authority in its favour as a Bill

which in England has passed through both Houses."—A. V. Dicey, *The Referendum*, (*Contemporary Review, April*, 1890).—"A judgment of the referendum must be based on the working of the electoral machinery, on the interest shown by the voters, and on the popular discrimination between good and bad measures. The process of invoking and voting on a referendum is simple and easily worked, if not used too often. Although the Assembly has, in urgent cases, the constitutional right to set a resolution in force at once, it always allows from three to eight months' delay so as to permit the opponents of a measure to lodge their protests against it. Voluntary committees take charge of the movement, and, if a law is unpopular, little difficulty is found in getting together the necessary thirty thousand or fifty thousand signatures. Only thrice has the effort failed when made. When, as in 1882, the signatures run up to 180,000, the labor is severe, for every signature is examined by the national executive to see whether it is attested as the sign manual of a voter; sometimes, in an interested canton, as many as 70 per cent. of the voters have signed the demand. The system undoubtedly leads to public discussion: newspapers criticise; addresses and counter addresses are issued; cantonal councils publicly advise voters; and of late the federal Assembly sends out manifestoes against pending initiatives. The federal Executive Council distributes to the cantons enough copies of the proposed measure, so that one may be given to each voter. The count of the votes is made by the Executive Council as a returning-board. Inasmuch as the Swiss are unfamiliar with election frauds, and there has been but one very close vote in the national referenda, the count is not difficult, but there are always irregularities, especially where more than one question is presented to the voters at the same time. What is the effect of the popular votes, thus carried out? The following table, based on official documents, shows the results for the twenty years, 1875–1894:

	Passed.	Rejected.	Total.
(*a.*) Constitutional amendments proposed by the Assembly (referendum obligatory)	1	6	7
(*b.*) Constitutional amendments proposed by popular initiative (50,000 signatures)	2	1	*4
(*c.*) Laws passed by the Assembly (referendum demanded by 30,000)	14	6	20
	17	13	31

* One measure still pending.

Making allowances for cases where more than one question has been submitted at the same time, there have been twenty-four popular votes in twenty years. In addition, most of the cantons have their own local referenda; in Zurich, for example, in these twenty years, more than one hundred other questions have been placed before the sovereign people. These numbers are large in themselves, but surprising in proportion to the total legislation. Out of 158 general acts passed by the federal Assembly from 1874 to 1892, 27 were subjected to the referendum; that is, about one-sixth are reviewed and about one-tenth are reversed. Constitutional amendments usually get through sooner or later, but more than two-thirds of the statutes attacked are annulled. To apply the system on such a scale in any State of our Union is plainly impossible; thirty-nine-fortieths of the statute-book must still rest, as now, on the character of the legislators. Nevertheless it may be worth while to excise the other fortieth, if experience shows that the people are more interested and wiser than their representatives, when a question is put plainly and simply before them. I must own to disappointment over the use made by the Swiss of their envied opportunity. On the twenty referenda between 1879 and 1891 the average vote in proportion to the voters was but 58.5 per cent.; in only one case did it reach 67 per cent.; and in one case — the patent law of 1887 — it fell to about 40 per cent. in the Confederation, and to 9 per cent. in Canton Schwyz. On the serious and dangerous question of recognizing the right to employment, this present year, only about 56 per cent. participated. In Zurich there is a compulsory voting law, of which the curious result is that on both national and cantonal referenda many thousands of blank ballots are cast. The result of the small vote is that laws, duly considered by the national legislature and passed by considerable majorities, are often reversed by a minority of the voters. The most probable reason for this apathy is that there are too many elections — in some cantons as many as fifteen a year. Whatever the cause, Swiss voters are less interested in referenda than Swiss legislators in framing bills. . . . 'I am a friend of the referendum,' says an eminent member of the Executive Council, 'but I do not like the initiative.' The experience of Switzerland seems to show four things: that the Swiss voters are not deeply interested in the referendum; that the referendum is as likely to kill good as bad measures; that the initiative is more likely to suggest bad measures than good; that the referendum leads straight to the initiative. The referendum in the United States would therefore probably be an attempt to govern great communities by permanent town meeting."—Prof. A. B. Hart, *Vox Populi in Switzerland* (*Nation, Sept.* 13, 1894).

RENAISSANCE, The.—"The word Renaissance has of late years received a more extended significance than that which is implied in our English equivalent—the Revival of Learning. We use it to denote the whole transition from the Middle Ages to the Modern World; and though it is possible to assign certain limits to the period during which this transition took place, we cannot fix on any dates so positively as to say—between this year and that the movement was accomplished. To do so would be like trying to name the days on which spring in any particular season began and ended. Yet we speak of spring as different from winter and from summer. . . . By the term Renaissance, or new birth, is indicated a natural movement, not to be explained by this or that characteristic, but to be accepted as an effort of humanity for which at length the time had come, and in the onward progress of which we still participate. The history of the Renaissance is not the history of arts, or of sciences, or of literature, or even of nations. It is the history of the attainment of self-conscious freedom by the human spirit manifested in the European races. It is no mere political mutation, no new fashion of art, no restoration of classical standards of taste. The arts and the inventions, the knowledge and the books which suddenly became vital at the time of the Renaissance, had long lain neglected on the shores of the Dead Sea which we call the Middle Ages. It was not their discovery which caused the Renaissance. But it was the intellectual energy, the spontaneous outburst of intelligence, which enabled mankind at that moment to make use of them. The force then generated still continues, vital and expansive, in the spirit of the modern world. . . . The reason why Italy took the lead in the Renaissance was, that Italy possessed a language, a favourable climate, political freedom, and commercial prosperity, at a time when other nations were still semi-barbarous. . . . It was . . . at the beginning of the 14th century, when Italy had lost indeed the heroic spirit which we admire in her Communes of the 13th, but had gained instead ease, wealth, magnificence, and that repose which springs from long prosperity, that the new age at last began. . . . The great achievements of the Renaissance were the discovery of the world and the discovery of man. Under these two formulæ may be classified all the phenomena which properly belong to this period. The discovery of the world divides itself into two branches—the exploration of the globe, and the systematic exploration of the universe which is in fact what we call Science. Columbus made known America in 1492; the Portuguese rounded the Cape in 1497; Copernicus explained the solar system in 1507. It is not necessary to add anything to this plain statement. . . . In the discovery of man . . . it is possible to trace a twofold process. Man in his temporal relations, illustrated by Pagan antiquity, and man in his spiritual relations, illustrated by Biblical antiquity: these are the two regions, at first apparently distinct, afterwards found to be interpenetrative, which the critical and inquisitive genius of the Renaissance opened for investigation. In the former of these regions we find two agencies at work, art and scholarship. . . . Through the instrumentality of art, and of all the ideas which art introduced into daily life, the Renaissance wrought for the modern world a real resurrection of the body. . . . It was scholarship which revealed to men the wealth of their own minds, the dignity of human thought, the value of human speculation, the importance of human life regarded as a thing apart from religious rules and dogmas. . . . The Renaissance opened to the whole reading public the treasure-houses of Greek and Latin literature. At the same time the Bible in its original tongues was rediscovered. Mines of Oriental learning were laid bare for the students of the Jewish and Arabic traditions. What we may call the Aryan and the Semitic revelations were for the first time subjected to something like a critical comparison. With unerring instinct the men of the Renaissance named the voluminous subject-matter of scholarship 'Litteræ Humaniores,' the more human literature, the literature that humanises [hence the term Humanism]. . . . Not only did scholarship restore the classics and encourage literary criticism; it also restored the text of the Bible, and encouraged theological criticism. In the wake of theological freedom followed a free philosophy, no longer subject to the dogmas of the Church. . . . On the one side

Descartes, and Bacon, and Spinoza, and Locke are sons of the Renaissance, champions of new-found philosophical freedom; on the other side, Luther is a son of the Renaissance, the herald of new-found religious freedom."—J. A. Symonds, *Renaissance in Italy: Age of the Despots, ch.* 1.—"The Renaissance, so far as painting is concerned, may be said to have culminated between the years 1470 and 1550. These dates, it must be frankly admitted, are arbitrary; nor is there anything more unprofitable than the attempt to define by strict chronology the moments of an intellectual growth so complex, so unequally progressive, and so varied as that of Italian art. All that the historian can hope to do, is to strike a mean between his reckoning of years and his more subtle calculations based on the emergence of decisive genius in special men. An instance of such compromise is afforded by Lionardo da Vinci, who belongs, as far as dates go, to the last half of the fifteenth century, but who must on any estimate of his achievement, be classed with Michael Angelo among the final and supreme masters of the full Renaissance. To violate the order of time, with a view to what may here be called the morphology of Italian art, is, in his case, a plain duty. Bearing this in mind, it is still possible to regard the eighty years above mentioned as a period no longer of promise and preparation but of fulfilment and accomplishment. Furthermore, the thirty years at the close of the fifteenth century may be taken as one epoch in this climax of the art, while the first half of the sixteenth forms a second. Within the former falls the best work of Mantegna, Perugino, Francia, the Bellini, Signorelli, Fra Bartolommeo. To the latter we may reckon Michael Angelo, Raphael, Giorgione, Correggio, Titian, and Andrea del Sarto. Lionardo da Vinci, though belonging chronologically to the former epoch, ranks first among the masters of the latter; and to this also may be given Tintoretto, though his life extended far beyond it to the last years of the century."—The same, *Renaissance in Italy: The Fine Arts, ch.* 4–6.—"It would be difficult to find any period in the history of modern Europe equal in importance with that distinguished in history under the name of the Renaissance. Standing midway between the decay of the Middle Ages and the growth of modern institutions, we may say that it was already dawning in the days of Dante Alighieri, in whose immortal works we find the synthesis of a dying age and the announcement of the birth of a new era. This new era — the Renaissance — began with Petrarch and his learned contemporaries, and ended with Martin Luther and the Reformation, which event not only produced signal changes in the history of those nations which remained Catholic, but transported beyond the Alps the centre of gravity of European culture."—P. Villari, *Niccolo Machiavelli and his Times, v.* 1, *ch.* 1.—J. REPARTIMIENTOS.—ENCOMIENDAS.—Columbus, as governor of Hispaniola (Hayti), made an arrangement "by which the caciques in their vicinity, instead of paying tribute, should furnish parties of their subjects, free Indians, to assist the colonists in the cultivation of their lands: a kind of feudal service, which was the origin of the repartimientos, or distributions of free Indians among the colonists, afterwards generally adopted, and shamefully abused, throughout the Spanish colonies; a source of intolerable hardships and oppressions to the unhappy natives, and which greatly contributed to exterminate them from the island of Hispaniola. Columbus considered the island in the light of a conquered country, and arrogated to himself all the rights of a conqueror, in the name of the sovereigns for whom he fought."—W. Irving, *Life and Voyages of Columbus, bk.* 12, *ch.* 4 (*v.* 2).—"The words 'repartimiento' and 'encomienda' are often used indiscriminately by Spanish authors; but, speaking accurately, 'repartimiento' means the first apportionment of Indians,—'encomienda' the apportionment of any Spaniard's share which might become 'vacant' by his death or banishment."—Sir A. Helps, *Spanish Conquest in Am., bk.* 6, *ch.* 2, *foot-note* (*v.* 1).—"'Repartimiento,' a distribution; 'repartir,' to divide; 'encomienda,' a charge, a commandery; 'encomendar,' to give in charge; 'encomendero,' he who holds an encomienda. In Spain an encomienda, as here understood, was a dignity in the four military orders, endowed with a rental, and held by certain members of the order. It was acquired through the liberality of the crown as a reward for services in the wars against the Moors. The lands taken from the Infidels were divided among Christian commanders; the inhabitants of those lands were crown tenants, and life-rights to their services were given these commanders. In the legislation of the Indies, encomienda was the patronage conferred by royal favor over a portion of the natives, coupled with the obligation to teach them the doctrines of the Church, and to defend their persons and property. . . . The system begun in the New World by Columbus, Bobadilla, and Ovando was continued by Vasco Nuñez, Pedrarias, Cortés, and Pizarro, and finally became general."—H. H. REPRESENTATION OF THE PEOPLE ACT, 1884. See England: A. D. 1884–1885.

REPRESENTATIVE GOVERNMENT.—"This [representative government] is the great distinction between free states of the modern

type, whether kingly or republican, and the city-commonwealths of old Greece. It is the great political invention of Teutonic Europe, the one form of political life to which neither Thucydides, Aristotle, nor Polybios ever saw more than the faintest approach. In Greece it was hardly needed, but in Italy a representative system would have delivered Rome from the fearful choice which she had to make between anarchy and despotism."—E. A. Freeman, *Hist. of Federal Gov't, ch.* 2.—"Examples of nearly every form of government are to be found in the varied history of Greece: but nowhere do we find a distinct system of political representation. There is, indeed, a passage in Aristotle which implies a knowledge of the principles of representation. He speaks of 'a moderate oligarchy, in which men of a certain census elect a council entrusted with the deliberative power, but bound to exercise this power agreeably to established laws.' There can be no better definition of representation than this: but it appears to express his theoretical conception of a government, rather than to describe any example within his own experience. Such a system was incompatible with the democratic constitutions of the city republics: but in their international councils and leagues, we may perceive a certain resemblance to it. There was an approach to representation in the Amphictyonic Council, and in the Achaian League; and the several cities of the Lycian League had a number of votes in the assembly, proportioned to their size — the first example of the kind — being a still nearer approximation to the principles of representation. But it was reserved for later ages to devise the great scheme of representative government, under which large States may enjoy as much liberty as the walled cities of Greece, and individual citizens may exercise their political rights as fully as the Athenians, without the disorders and perils of pure democracy."—Sir T. E. May, *Democracy in Europe, v.* 1, *ch.* 3.—"The most interesting, and on the whole the most successful, experiments in popular government, are those which have frankly recognised the difficulty under which it labours. At the head of these we must place the virtually English discovery of government by Representation, which caused Parliamentary institutions to be preserved in these islands from the destruction which overtook them everywhere else, and to devolve as an inheritance upon the United States."—Sir H. S. Maine, *Popular Government, p.* 92.—"To find the real origin of the modern representative system we must turn to the assemblies of the second grade in the early German states. In these the freemen of the smaller locality — the Hundred or Canton — came together in a public meeting which possessed no doubt legislative power over matters purely local, but whose most important function seems to have been judicial — a local court, presided over by a chief who suggested and announced the verdict, which, however, derived its validity from the decision of the assembly, or, in later times, of a number of their body appointed to act for the whole. Those local courts, probably, as has been suggested, because of the comparatively restricted character of the powers which they possessed, were destined to a long life. On the continent they lasted until the very end of the middle ages, when they were generally overthrown by the introduction of the Roman law, too highly scientific for their simple methods. In England they lasted until they furnished the model, and probably the suggestion, for a far more important institution — the House of Commons. How many grades of these local courts there were on the continent below the national assembly is a matter of dispute. In England there was clearly a series of three. The lowest was the township assembly, concerned only with matters of very slight importance and surviving still in the English vestry meeting and the New England town-meeting. Above this was the hundred's court formed upon a distinctly representative principle, the assembly being composed, together with certain other men, of four representatives sent from each township. Then, third, the tribal assembly of the original little settlement, or, the small kingdom of the early conquest, seems to have survived when this kingdom was swallowed up in a larger one, and to have originated a new grade in the hierarchy of assemblies, the county assembly or shire court. At any rate, whatever may have been its origin, and whatever may be the final decision of the vigorously disputed question, whether in the Frankish state there were any assemblies or courts for the counties distinct from the courts of the hundreds, it is certain that courts of this grade came into existence in England and were of the utmost importance there. In them, too, the representative principle was distinctly expressed, each township of the shire being represented, as in the hundred's court, by four chosen representatives. These courts, also, pass essentially unchanged through the English feudal and absolutist period, maintaining local self-government and preserving more of the primitive freedom than survived elsewhere. We shall see more in detail, at a later point, how the representative principle originating in them is transferred to the national legislature, creating our modern national representative system."—G. B. Adams, *Civilization during the Middle Ages, ch.* 5.

RHÆTIA.—Rhætians, Vindelicians, etc.—"The Alps from the Simplon pass to the sources of the Drave were occupied by the Rhætians. Beyond the Inn and the Lake of Constance, the plain which slopes gently towards the Danube was known by the name of Vindelicia. Styria, the Kammergut of Salzburg, and the southern half of the Austrian Archduchy, belonged to the tribes of Noricum, while the passes between that country and Italy were held by the Carnians." The Roman conquest of this Alpine region was effected in the years 16 and 15 B. C. by the two stepsons of the Emperor Augustus, Tiberius and Drusus. In addition to the people mentioned above, the Camuni, the Vennones, the Brenni and the Genauni were crushed. "The free tribes of the eastern Alps appear then for the first time in history, only to disappear again for a thousand years."—C. Merivale, *Hist. of the Romans, ch.* 35.—See, also, TYROL.

RHEGIUM, Siege of (B. C. 387).—Rhegium, an important Greek city, in the extreme south of Italy, on the strait which separates the peninsula from Sicily, incurred the hostility of the tyrant of Syracuse, the elder Dionysius, by scornfully refusing him a bride whom he solicited. The savage-tempered despot made several attempts without success to surprise the town, and finally laid siege to it with a powerful army and fleet. The inhabitants resisted desperately for eleven months, at the end of which time (B. C. 387) they were starved into surrender. "Dionysius, on entering Rhegium, found heaps of unburied corpses, besides 6,000 citizens in the last stage of emaciation. All these captives were sent to Syracuse, where those who could provide a mina (about £3.17s.) were allowed to ransom themselves, while the rest were sold as slaves. After such a period of suffering, the number of those who retained the means of ransom was probably very small."—G. Grote, *Hist. of Greece, pt.* 2, *ch.* 83.

RHINE LEAGUE, The.—The Rhine League was one of several Bunds, or confederations formed among the German trading towns in the middle ages, for the common protection of their commerce. It comprised the towns of southwest Germany and the Lower Rhine provinces. Prominent among its members were Cologne, Wessel and Munster. Cologne, already a large and flourishing city, the chief market of the trade of the Rhine lands, was a member, likewise, of the Hanseatic League (see HANSA TOWNS).—J. Yeats, *Growth and Vicissitudes of Commerce, p.* 158.—See, also, CITIES, IMPERIAL AND FREE, OF GERMANY; and FEDERAL GOVERNMENT.

A. D. 1631-1636.—Roger Williams in Massachusetts. — His offenses against Boston Puritanism.—His banishment.— On the 5th of February, 1631, "the ship Lyon arrived at Nantasket, with twenty passengers and a large store of provisions. Her arrival was most timely, for the [Massachusetts] colonists were reduced to the last exigencies of famine. Many had already died of want, and many more were rescued from imminent peril by this providential occurrence. A public fast had been appointed for the day succeeding that on which the ship reached Boston. It was changed to a general thanksgiving. There was another incident connected with the arrival of this ship, which made it an era, not only in the affairs of Massachusetts, but in the history of America. She brought to the shores of New England the founder of a new State, the exponent of a new philosophy, the intellect that was to harmonize religious differences, and soothe the asperities of the New World; a man whose clearness of mind enabled him to deduce, from the mass of crude speculations which abounded in the 17th century, a proposition so comprehensive, that it is difficult to say whether its application has produced the most beneficial result upon religion, or morals, or politics. This man was Roger Williams, then about thirty-two years of age. He was a scholar, well versed in the ancient and some of the modern tongues, an earnest inquirer after truth, and an ardent friend of popular liberty as well for the mind as for the body. As a 'godly minister,' he was welcomed to the society of the Puritans, and soon invited by the church in Salem to supply the place of the lamented Higginson, as an assistant to their pastor Samuel Skelton. The invitation was accepted, but the term of his ministry was destined to be brief. The authorities at Boston remonstrated with those at Salem against the reception of Williams. The Court at its next session addressed a letter to Mr. Endicott to this effect: 'That whereas Mr. Williams had refused to join with the congregation at Boston, because they would not make a public declaration of their repentance for having communion with the churches of England, while they lived there; and, besides, had declared his opinion that the magistrate might not punish the breach of the Sabbath, nor any other offence, as it was a breach of the first table; therefore they marvelled that they would choose him without advising with the council, and withal desiring him, that they would forbear to proceed till they had conferred about it.' This attempt of the magistrates of Boston to control the election of a church officer at Salem, met with the rebuke it so richly merited. The people were not ignorant of the hostility their invitation had excited; yet on the very day the remonstrance was written, they settled Williams as their minister. The ostensible reasons for this hostility are set forth in the letter above cited. That they were to a great extent the real ones cannot be questioned. The ecclesiastical polity of the Puritans sanctioned this interference. Their church platform approved it. Positive statute would seem to require it. Nevertheless, we cannot but think that, underlying all this, there was a secret stimulus of ambition on the part of the Boston Court to strengthen its authority over the prosperous and, in some respects, rival colony of Salem. . . . As a political measure this interference failed of its object. The people resented so great a stretch of authority, and the church disregarded the remonstrance. . . . What could not as yet be accomplished by direct intervention of the Court was effected in a surer manner. The fearlessness of Williams in denouncing the errors of the times, and especially the doctrine of the magistrate's power in religion, gave rise to a system of persecution which, before the close of the summer, obliged him to seek refuge beyond the jurisdiction of Massachusetts in the more liberal colony of the Pilgrims. At Plymouth 'he was well accepted as an assistant in the ministry to Mr. Ralph Smith, then pastor of the church there.' The principal men of the colony treated him with marked attention. . . . The opportunities there presented for cultivating an intimate acquaintance with the chief Sachems of the neighboring tribes were well improved, and exerted an important influence, not only in creating the State of which he was to be the founder, but also in protecting all New England amid the horrors of savage warfare. Ousamequin, or Massasoit, as he is usually called, was the Sachem of the Wampanoags, called also the Pokanoket tribe, inhabiting the Plymouth territory. His seat was at Mount Hope, in what is now the town of Bristol, R. I. With this chief, the early and steadfast friend of the English, Williams established a friendship which proved of the greatest service at the time of his exile."— S. G. Arnold, *History of the State of Rhode Island and Providence Plantations, v.* 1, *ch.* 1. — Williams "remained at Plymouth, teaching in the church, but supporting himself by manual labor, nearly two years. His ministry was popular in the main and his person universally liked. Finally, however, he advanced some opinions which did not suit the steady-going Plymouth elders, and therefore, departing 'something abruptly,' he returned to Salem. There he acted as assistant to Mr. Skelton, the aged pastor of the church, and when Mr. Skelton died, less than a year later, became his successor. At Salem he was again under the surveillance of the rulers and elders of the Bay, and they were swift to make him sensible of it. He had written in Plymouth, for the Plymouth Governor and Council a treatise on the Massachusetts Patent, in which he had maintained his doctrine that the King could not give the settlers a right to take away from the natives their land without paying them for it. He was not a lawyer but an ethical teacher, and it was doubtless as such that he maintained this opinion. In our day its ethical correctness is not disputed. It has always been good Rhode Island doctrine. He also criticised the patent because in it King James claimed to be the first Christian prince who discovered New England, and because he called Europe Christendom or the Christian World. Williams did not scruple to denounce these formal fictions in downright Saxon as lies. He does not appear to have been, at any period of his life, a paragon of conventional propriety. A rumor of the treatise got abroad, though it remained unpublished. The patent happened to be a sensitive point with the

magistrates. It had been granted in England to an English trading company, and its transfer to Massachusetts was an act of questionable legality. Moreover it was exceedingly doubtful whether the rulers, in exercising the extensive civil jurisdiction which they claimed under it, did not exceed their authority. They were apprehensive of proceedings to forfeit it, and therefore were easily alarmed at any turning of attention to it. When they heard of the treatise they sent for it, and, having got it, summoned the author 'to be censured.' He appeared in an unexpectedly placable mood, and not only satisfied their minds in regard to some of its obscurer passages, but offered it, since it had served its purpose, to be burnt. The magistrates, propitiated by his complaisance, appeared to have accepted the offer as equivalent to a promise of silence, though it is impossible that he, the uncompromising champion of aboriginal rights, can ever have meant to give, or even appear to give, such a promise. Accordingly when they heard soon afterwards that he was discussing the patent they were deeply incensed, though it was doubtless the popular curiosity excited by their own indiscreet action which elicited the discussion. Their anger was aggravated by another doctrine then put forth by him, namely, that an oath ought not to be tendered to an unregenerate, or, as we should say, an unreligious man, because an oath is an act of worship, and cannot be taken by such a man without profanation. . . . He also taught that an oath being an act of worship, could not properly be exacted from any one against his will, and that even Christians ought not to desecrate it by taking it for trivial causes. . . . The magistrates again instituted proceedings against him, at first subjecting him to the ordeal of clerical visitation, then formally summoning him to answer for himself before the General Court. At the same time the Salem church was arraigned for contempt in choosing him as pastor while he was under question. The court, however, did not proceed to judgment, but allowed them both further time for repentance. It so happened that the inhabitants of Salem had a petition before the court for 'some land at Marblehead Neck, which they did challenge as belonging to their town.' The court, when the petition came up, refused to grant it until the Salem church should give satisfaction for its contempt, thus virtually affirming that the petitioners had no claim to justice even, so long as they adhered to their recusant pastor. Williams was naturally indignant. He induced his church — 'enchanted his church,' says Cotton Mather — to send letters to the sister churches, appealing to them to admonish the magistrates and deputies of their 'heinous sin.' He wrote the letters himself. His Massachusetts contemporaries say he was 'unlamblike.' Undoubtedly they heard no gentle bleating in those letters, but rather the reverberating roar of the lion chafing in his rage. The churches repelled the appeal; and then turning to the Salem church, besieged it only the more assiduously, laboring with it, nine with one, to alienate it from its pastor. What could the one church do,— with the magistracy against it, the clergy against it, the churches and the people against it, muttering their vague anathemas, and Salem town suffering unjustly on its account,— what could it do but yield ? It yielded virtually if not yet in form; and Williams stood forth alone in his opposition to the united power of Church and State. . . . The fateful court day came at last. The court assembles, magistrates and deputies, with the clergy to advise them. Williams appears, not to be tried, but to be sentenced unless he will retract. He reaffirms his opinions. Mr. Hooker, a famous clerical dialectician, is chosen to dispute with him, and the solemn mockery of confutation begins. . . . Hour after hour, he argues unsubdued, till the sun sinks low and the weary court adjourns. On the morrow [Friday, October 9, 1635], still persisting in his glorious 'contumacy,' he is sentenced, the clergy all save one advising, to be banished, or, to adopt the apologetic but felicitous euphemism of his great adversary, John Cotton, 'enlarged' out of Massachusetts. He was allowed at first six weeks, afterwards until spring, to depart. But in January the magistrates having heard that he was drawing others to his opinion, and that his purpose was to erect a plantation about Narragansett Bay, 'from whence the infection would easily spread,' concluded to send him by ship, then ready, to England [see MASSACHUSETTS: A. D. 1636]. The story is familiar how Williams, advised of their intent, baffled it by plunging into the wilderness, where, after being 'sorely tost for one fourteen weeks, in a bitter winter season, not knowing what bread or bed did mean,' he settled with the opening spring, on the east bank of the Seekonk, and there built and planted."— T. Durfee, *Historical Discourse : Two hundred and fiftieth Anniversary of the Settlement of Providence*, 1886.—"The course pursued towards Roger Williams was not exceptional. What was done to him had been done in repeated instances before. Within the first year of its settlement the colony had passed sentence of exclusion from its territory upon no less than fourteen persons. It was the ordinary method by which a corporate body would deal with those whose presence no longer seemed desirable. Conceiving themselves to be by patent the exclusive possessors of the soil,— soil which they had purchased for the accomplishment of their personal and private ends,— the colonists never doubted their competency to fix the terms on which others should be allowed to share in their undertaking. . . . While there is some discrepancy in the contemporary accounts of this transaction, there is entire agreement on one point, that the assertion by Roger Williams of the doctrine of 'soul-liberty' was not the head and front of his offending. Whatever was meant by the vague charge in the final sentence that he had 'broached and divulged new and dangerous opinions, against the authority of magistrates,' it did not mean that he had made emphatic the broad doctrine of the entire separation of church and state. We have his own testimony on this point. In several allusions to the subject in his later writings,— and it can hardly be supposed that in a matter which he felt so sorely his memory would have betrayed him,— he never assigns to his opinion respecting the power of the civil magistrate more than a secondary place. He repeatedly affirms that the chief causes of his banishment were his extreme views regarding separation, and his denouncing of the patent. Had he been himself conscious of having incurred the hostility of the Massachusetts colony for asserting the great principle with which he was afterwards identified, he would

surely have laid stress upon it. . . . It is . . . clear that in the long controversy it had become covered up by other issues, and that his opponents, at least, did not regard it as his most dangerous heresy. So far as it was a mere speculative opinion it was not new. . . . To upbraid the Puritans as unrelenting persecutors, or extol Roger Williams as a martyr to the cause of religious liberty, is equally wide of the real fact. On the one hand, the controversy had its origin in the passionate and precipitate zeal of a young man whose relish for disputation made him never unwilling to encounter opposition, and on the other, in the exigencies of a unique community, where the instincts of a private corporation had not yet expanded into the more liberal policy of a body politic. If we cannot impute to the colony any large statesmanship, so neither can we wholly acquit Roger Williams of the charge of mixing great principles with some whimsical conceits. The years which he passed in Massachusetts were years of discipline and growth, when he doubtless already cherished in his active brain the germs of the principles which he afterwards developed; but the fruit was destined to be ripened under another sky."—J. L. Diman, *Orations and Essays, pp.* 114–117.

A. D. 1636.—The wanderings of the exiled Roger Williams.—His followers.—The settlement at Providence.—The little that is known of the wanderings of Roger Williams after his banishment from Salem, until his settlement at Providence, is derived from a letter which he wrote more than thirty years afterwards (June 22, 1670) to Major Mason, the hero of the Pequot War. In that letter he says: "When I was unkindly and unchristianly, as I believe, driven from my house and land and wife and children, (in the midst of a New England winter, now about thirty-five years past,) at Salem, that ever honored Governor, Mr. Winthrop, privately wrote to me to steer my course to Narragansett Bay and Indians, for many high and heavenly and public ends, encouraging me, from the freeness of the place from any English claims or patents. I took his prudent motion as a hint and voice from God, and waving all other thoughts and motions, I steered my course from Salem (though in winter snow, which I feel yet) unto these parts, wherein I may say Peniel, that is, I have seen the face of God. . . . I first pitched, and began to build and plant at Seekonk, now Rehoboth, but I received a letter from my ancient friend, Mr. Winslow, then Governor of Plymouth, professing his own and others love and respect to me, yet lovingly advising me, since I was fallen into the edge of their bounds, and they were loath to displease the Bay, to remove but to the other side of the water, and then he said, I had the country free before me, and might be as free as themselves, and we should be loving neighbors together. These were the joint understandings of these two eminently wise and Christian Governors and others, in their day, together with their counsel and advice as to the freedom and vacancy of this place, which in this respect, and many other Providences of the Most Holy and Only Wise, I called Providence. . . . Some time after, the Plymouth great Sachem, (Oufamaquin,) upon occasion affirming that Providence was his land, and therefore Plymouth's land, and some resenting it, the then prudent and godly Governor, Mr. Bradford, and others of his godly council, answered, that if, after due examination, it should be found true what the barbarian said, yet having to my loss of a harvest that year, been now (though by their gentle advice) as good as banished from Plymouth as from the Massachusetts, and I had quietly and patiently departed from them, at their motion to the place where now I was, I should not be molested and tossed up and down again, while they had breath in their bodies; and surely, between those, my friends of the Bay and Plymouth, I was sorely tossed, for one fourteen weeks, in a bitter winter season, not knowing what bread or bed did mean, beside the yearly loss of no small matter in my trading with English and natives, being debarred from Boston, the chief mart and port of New England."—*Letters of Roger Williams; ed. by J. R. Bartlett, pp.* 335–336.—"According to the weight of authority, and the foregoing extract, when Williams left Salem he made his way from there by sea, coasting, probably, from place to place during the 'fourteen weeks' that 'he was sorely tossed,' and holding intercourse with the native tribes, whose language he had acquired, as we have before stated, during his residence at Plymouth. Dr. Dexter and Professer Diman interpret this and other references differently, and conclude that the journey must have been by land. See Dexter, p. 62, note; Nar. Club Pub., Vol. II, p. 87. Perhaps the true interpretation is that the journey was partly by sea and partly by land; that is, from the coast inward—to confer with the natives—was by land, and the rest by sea." —O. S. Straus, *Roger Williams, ch.* 5, *and foot-note.*—Mr. Rider, the well-known critical student of Rhode Island history, has commented on the above passage in Mr. Straus's work as follows: "The distance from Salem by sea to Seekonk was across Massachusetts Bay, Cape Cod Bay, the Atlantic Ocean, Vineyard Sound, Buzzard's Bay, the Atlantic Ocean again, and Narragansett Bay,—a distance scarcely less than 500 miles, in and out, by the line of the coast; all of which had to be covered either in a birch bark canoe or in a shallop; if in a canoe, then to be paddled, but if in a shallop, where did Williams get it, and what became of it? history does not answer. If Williams was in a boat sailing into Narragansett Bay, 'the pleasure of the Most High to direct my steps into the Bay' would become a positive absurdity unless the Most High meant that Williams should jump overboard! He certainly could have taken no steps in a boat. But if Williams was in a boat, what sense could there be in his saying 'I was sorely tossed for one fourteen weeks, in a bitter (hyperbole again) winter season, not knowing what bread or bed did mean.' Did they not have beds in boats, nor bread? As to the expression in the Cotton Letter, it was his soul, and not his body, which was exposed to poverties, &c.; observe the quotation. . . . When Mr. Straus in his foot-note, speaks of Williams's journey, 'partly by sea and partly by land, that is from the coast inward, to confer with the natives,' he is dealing solely with the imagination. No such conference ever took place." —S. S. Rider, *Roger Williams* (*Book Notes, v.* 11, *p.* 148).—It was the opinion of Prof. Gammell that, when Roger Williams fled from Salem, "he made his way through the forest to the lodges of the Pokanokets, who occupied the country north from Mount Hope as far as Charles River.

Ousemaguin, or Massasoit, the famous chief of this tribe, had known Mr. Williams when he lived in Plymouth, and had often received presents and tokens of kindness at his hands; and now, in the days of his friendless exile, the aged chief welcomed him to his cabin at Mount Hope, and extended to him the protection and aid he required. He granted to him a tract of land on the Seekonk River, to which, at the opening of spring, he repaired, and where 'he pitched and began to build and plant' [near the beautiful bend in the river, now known as 'Manton's Cove,' a short distance above the upper bridge, directly eastward of Providence.—Foot-note]. At this place, also, at the same time, he was joined by a number of his friends from Salem. . . . But scarcely had the first dwelling been raised . . . when he was again disturbed, and obliged to move still further from Christian neighbors and the dwellings of civilized men," as related in his letter quoted above. "He accordingly soon abandoned the fields which he had planted, and the dwelling he had begun to build, and embarked in a canoe upon the Seekonk River, in quest of another spot where, unmolested, he might rear a home and plant a separate colony. There were five others, who, having joined him at Seekonk, bore him company." Coasting along the stream and "round the headlands now known as Fox Point and India Point, up the harbor, to the mouth of the Mooshausic River," he landed, and, "upon the beautiful slope of the hill that ascends from the river, he descried the spring around which he commenced the first 'plantations of Providence.' It was in the latter part of June, 1636, as well as can be ascertained, that Roger Williams and his companions began the settlement at the mouth of the Mooshausic River. A little north of what is now the centre of the city, the spring is still pointed out, which drew the attention of the humble voyagers from Seekonk. Here, after so many wanderings, was the weary exile to find a home, and to lay the foundations of a city, which should be a perpetual memorial of pious gratitude to the superintending Providence which had protected him and guided him to the spot. . . . The spot at which he had landed . . . was within the territory belonging to the Narragansetts. Canonicus, the aged chief of the tribe, and Miantonomo, his nephew, had visited the colonies of Plymouth and Massachusetts Bay, while Williams resided there, and had learned to regard him, in virtue of his being a minister, as one of the sachems of the English. He had also taken special pains to conciliate their good-will and gain their confidence. . . . Indeed, there is reason to believe that, at an early period after his arrival in New England, on finding himself so widely at variance with his Puritan brethren, he conceived the design of withdrawing from the colonies, and settling among the Indians, that he might labor as a missionary. . . . In all his dealings with the Indians, Mr. Williams was governed by a strict regard to the rights which, he had always contended, belonged to them as the sole proprietors of the soil. . . . It was by his influence, and at his expense, that the purchase was procured from Canonicus and Miantonomo, who partook largely of the shyness and jealousy of the English so common to their tribe. He says, 'It was not thousands nor tens of thousands of money that could have bought of them an English entrance into this bay.'"—W. Gammell, *Life of Roger Williams* (*Library of Am. Biog., series* 2, *v.* 4), *ch.* 6–7.

A. D. 1636-1661.—Sale and gift of lands by the Indians to Roger Williams.—His conveyance of the same to his associates.—"The first object of Mr. Williams would naturally be, to obtain from the sachems a grant of land for his new colony. He probably visited them, and received a verbal cession of the territory, which, two years afterwards, was formally conveyed to him by a deed. This instrument may properly be quoted here. 'At Narraganset, the 24th of the first month, commonly called March, the second year of the plantation or planting at Moshassuck, or Providence [1638]; Memorandum, that we, Canonicus and Miantinomo, the two chief sachems of Narraganset, having two years since sold unto Roger Williams the lands and meadows upon the two fresh rivers, called Moshassuck and Wanasquatucket, do now, by these presents, establish and confirm the bounds of these lands, from the river and fields of Pawtucket, the great hill of Notaquoncanot, on the northwest, and the town of Mashapaug, on the west. We also in consideration of the many kindnesses and services he hath continually done for us, both with our friends of Massachusetts, as also at Connecticut, and Apaum, or Plymouth, we do freely give unto him all that land from those rivers reaching to Pawtuxet river; as also the grass and meadows upon the said Pawtuxet river. In witness whereof, we have hereunto set our hands. [The mark (a bow) of Canonicus. The mark (an arrow) of Miantonomo]. In the presence of [The mark of Sohash. The mark of Alsomunsit].'. . . The lands thus ceded to Mr. Williams he conveyed to twelve men, who accompanied, or soon joined, him, reserving for himself an equal part only." Twenty-three years later, on the 20th of December, 1661, he executed a more formal deed of conveyance to his associates and their heirs of the lands which had unquestionably been partly sold and partly given to himself personally by the Indians. This latter instrument was in the following words. "'Be it known unto all men by these presents, that I, Roger Williams, of the town of Providence, in the Narraganset Bay, in New England, having, in the year one thousand six hundred thirty-four, and in the year one thousand six hundred thirty-five had several treaties with Canonicus and Miantinomo, the two chief sachems of the Narraganset, and in the end purchased of them the lands and meadows upon the two fresh rivers called Moshassuck and Wanasquatucket, the two sachems having, by a deed under their hands, two years after the sale thereof, established and confirmed the bounds of these lands from the rivers and fields of Pawtucket, the great hill of Notaquoncanot on the northwest, and the town of Mashapaug on the west, notwithstanding I had the frequent promise of Miantinomo, my kind friend, that it should not be land that I should want about these bounds mentioned, provided that I satisfied the Indians there inhabiting. I having made covenant of peaceable neighborhood with all the sachems and natives round about us, and having, of a sense of God's merciful Providence unto me in my distress,

called the place Providence, I desired it might be for a shelter for persons distressed for conscience. I then considering the condition of divers of my distressed countrymen, I communicated my said purchase unto my loving friends, John Throckmorton, William Arnold, William Harris, Stukely Westcott, John Greene, Senior, Thomas Olney, Senior, Richard Waterman, and others, who then desired to take shelter here with me, and in succession unto so many others as we should receive into the fellowship and society of enjoying and disposing of the said purchase; and besides the first that were admitted, our town records declare, that afterwards we received Chad Brown, William Field, Thomas Harris, Senior, William Wickenden, Robert Williams, Gregory Dexter, and others, as our town book declares; and whereas, by God's merciful assistance, I was the procurer of the purchase, not by monies nor payment, the natives being so shy and jealous that monies could not do it, but by that language, acquaintance and favor with the natives, and other advantages, which it pleased God to give me, and also bore the charges and venture of all the gratuities, which I gave to the great sachems and other sachems and natives round about us, and lay engaged for a loving and peaceable neighborhood with them, to my great charge and travel; it was therefore thought fit by some loving friends, that I should receive some loving consideration and gratuity, and it was agreed between us, that every person, that should be admitted into the fellowship of enjoying land and disposing of the purchase, should pay thirty shillings unto the public stock; and first, about thirty pounds should be paid unto myself, by thirty shillings a person, as they were admitted; this sum I received, and in love to my friends, and with respect to a town and place of succor for the distressed as aforesaid, I do acknowledge the said sum and payment as full satisfaction; and whereas in the year one thousand six hundred and thirty-seven, so called, I delivered the deed subscribed by the two aforesaid chief sachems, so much thereof as concerneth the aforementioned lands, from myself and from my heirs, unto the whole number of the purchasers, with all my power, right and title therein, reserving only unto myself one single share equal unto any of the rest of that number; I now again, in a more formal way, under my hand and seal, confirm my former resignation of that deed of the lands aforesaid, and bind myself, my heirs, my executors, my administrators and assigns, never to molest any of the said persons already received, or hereafter to be received, into the society of purchasers, as aforesaid; but that they, their heirs, executors, administrators and assigns, shall at all times quietly and peaceably enjoy the premises and every part thereof, and I do further by these presents bind myself, my heirs, my executors, my administrators and assigns never to lay any claim, nor cause any claim to be laid, to any of the lands aforementioned, or unto any part or parcel thereof, more than unto my own single share, by virtue or pretence of any former bargain, sale or mortgage whatsoever, or jointures, thirds or entails made by me, the said Roger Williams, or of any other person, either for, by, through or under me. In witness whereof, I have hereunto set my hand and seal, the twentieth day of December, in the present year one thousand six hundred sixty-one. Roger Williams.'. . . From this document, it appears, that the twelve persons to whom the lands, on the Moshassuck and Wanasquatucket rivers, were conveyed by Mr. Williams, did not pay him any part of the thirty pounds, which he received; but that the sum of thirty shillings was exacted of every person who was afterwards admitted, to form a common stock. From this stock, thirty pounds were paid to Mr. Williams, for the reasons mentioned in the instrument last quoted."— J. D. Knowles, *Memoir of Roger Williams, ch.* 8.

A. D. 1637.—The Pequot War.—"Williams was banished in 1636 and settled at Providence. The Pequot war took place the next year following. The Pequots were a powerful tribe of Indians, dwelling . . . in the valley of the Thames at the easterly end of Connecticut, and holding the lands west to the river of that name. The parties to this war were, the Massachusetts, Plymouth, and Connecticut colonies, assisted by the Narragansett and Mohegan tribes of Indians on one side, against the Pequots, single-handed, on the other. The Pequots undertook to make an alliance with the Narragansetts and the Mohegans (Hubbard's Indian Wars, 1677, p. 118), and but for Williams would have succeeded, (Narr. Club, v. 6, p. 269). Williams had obtained a powerful influence over Canonicus and Miantinomi, the great Sachems of the Narragansetts, (Narr. Club, v. 6, p. 17,) and Massachusetts having just banished him, sent at once to him to prevent if possible this alliance, (Narr. Club, v. 6, p. 269). By his influence a treaty of alliance was made with Miantinomi, Williams being employed by both sides as a friend, the treaty was deposited with him and he was made interpreter by Massachusetts for the Indians upon their motion, (Winthrop's Hist. N. E., 1853, v. 1, p. 237). The Narragansetts, the Mohegans, the Niantics, the Nipmucs, and the Cowesets, were by this treaty either neutrals or fought actively for the English in the war."—S. S. Rider, *Political results of the Banishment of Williams* (*Book Notes, v.* 8, *no.* 17).—See NEW ENGLAND: A. D. 1637.

A. D. 1638-1640.—The purchase, the settlement, and the naming of the island.—The founding of Newport.—Early in the spring of 1638, while Mrs. Anne Hutchinson was undergoing imprisonment at Boston (see MASSACHUSETTS: A. D. 1636-1638), "Mrs. Hutchinson's husband, Coddington, John Clarke, educated a physician, and other principal persons of the Hutchinsonian party, were given to understand that, unless they removed of their own accord, proceedings would be taken to compel them to do so. They sent, therefore, to seek a place of settlement, and found one in Plymouth patent; but, as the magistrates of that colony declined to allow them an independent organization, they presently purchased of the Narragansets, by the recommendation of Williams, the beautiful and fertile Island of Aquiday [or Aquetnet, or Aquidneck]. The price was 40 fathoms of white wampum; for the additional gratuity of ten coats and twenty hoes, the present inhabitants agreed to remove. The purchasers called it the Isle of Rhodes — a name presently changed by use to Rhode Island. Nineteen persons, having signed a covenant 'to incorporate themselves into a body politic,' and to submit to 'our Lord Jesus Christ,' and to his

'most perfect and absolute laws,' began a settlement at its northern end, with Coddington as their judge or chief magistrate, and three elders to assist him. They were soon joined by others from Boston; but those who were 'of the rigid separation, and savored Anabaptism,' removed to Providence, which now began to be well peopled."—R. Hildreth, *Hist. of the U. S., v.* 1, *ch.* 9.—"This little colony increased rapidly, so that in the following spring some of their number moved to the south-west part of the island and began the settlement of Newport. The northern part of the island which was first occupied was called Portsmouth. Both towns, however, were considered, as they were in fact, as belonging to the same colony. To this settlement, also, came Anne Hutchinson with her husband and family after they had been banished from Massachusetts. There is no record that in this atmosphere of freedom she occasioned any trouble or disturbance. Here she led a quiet and peaceable life until the death of her husband in 1642, when she removed to the neighborhood of New York, where she and all the members of her family, sixteen in number, were murdered by the Indians, with the exception of one daughter, who was taken into captivity. In imitation of the form of government which existed under the judges of Israel, during the period of the Hebrew Commonwealth, the two settlements, Rhode Island and Portsmouth, chose Coddington to be their magistrate, with the title of Judge, and a few months afterward they elected three elders to assist him. This form of government continued until 1640."—O. S. Straus, *Roger Williams, ch.* 6.

A. D. 1638-1647.—The Constitution of Providence Plantation.—The charter and the Union.—Religious liberty as understood by Roger Williams.—"The colonists of Plymouth had formed their social compact in the cabin of the Mayflower. The colonists of Providence formed theirs on the banks of the Mooshausick. 'We, whose names are hereunder,' it reads, 'desirous to inhabit in the town of Providence, do promise to subject ourselves in active or passive obedience to all such orders or agreements as shall be made for public good for the body, in an orderly way, by the major assent of the present inhabitants, masters of families, incorporated together into a town fellowship, and such others as they shall admit unto them only in civil things.' Never before, since the establishment of Christianity, has the separation of Church from State been definitely marked out by this limitation of the authority of the magistrate to civil things; and never, perhaps, in the whole course of history, was a fundamental principle so vigorously observed. Massachusetts looked upon the experiment with jealousy and distrust, and when ignorant or restless men confounded the right of individual opinion in religious matters with a right of independent action in civil matters, those who had condemned Roger Williams to banishment, eagerly proclaimed that no well ordered government could exist in connection with liberty of conscience. . . . Questions of jurisdiction also arose. Massachusetts could not bring herself to look upon her sister with a friendly eye, and Plymouth was soon to be merged in Massachusetts. It was easy to foresee that there would be bickerings and jealousies, if not open contention between them. Still the little Colony grew apace. The first church was founded in 1639. To meet the wants of an increased population the government was changed, and five disposers or selectmen charged with the principal functions of administration, subject, however, to the superior authority of monthly town meetings; so early and so naturally did municipal institutions take root in English colonies. A vital point was yet untouched. Williams, indeed, held that the Indians, as original occupants of the soil, were the only legal owners of it, and carrying his principle into all his dealings with the natives, bought of them the land on which he planted his Colony. The Plymouth and Massachusetts colonists, also, bought their land of the natives, but in their intercourse with the whites founded their claim upon royal charter. They even went so far as to apply for a charter covering all the territory of the new Colony. Meanwhile two other colonies had been planted on the shores of the Narragansett Bay: the Colony of Aquidnick, on the Island of Rhode Island, and the colony of Warwick. The sense of a common danger united them, and, in 1643, they appointed Roger Williams their agent to repair to England and apply for a royal charter. It has been treasured up as a bitter memory that he was compelled to seek a conveyance in New York, for Massachusetts would not allow him to pass through her territories. His negotiations were crowned with full success. . . . He found the King at open war with the Parliament, and the administration of the colonies entrusted to the Earl of Warwick and a joint committee of the two Houses. Of the details of the negotiation little is known, but on the 14th of March of the following year [1644], a 'free and absolute charter was granted as the Incorporation of Providence Plantations in Narragansett Bay in New England.' . . . Civil government and civil laws were the only government and laws which it recognized; and the absence of any allusion to religious freedom in it shows how firmly and wisely Williams avoided every form of expression which might seem to recognize the power to grant or to deny that inalienable right. . . . Yet more than three years were allowed to pass before it went into full force as a bond of union for the four towns. Then, in May, 1647, the corporators met at Portsmouth in General Court of Election, and, accepting the charter, proceeded to organize a government in harmony with its provisions. Warwick, although not named in the charter, was admitted to the same privileges with her larger and more flourishing sisters. This new government was in reality a government of the people, to whose final decision in their General Assembly all questions were submitted. 'And now,' says the preamble to the code, . . . 'it is agreed by this present Assembly thus incorporate and by this present act declared, that the form of government established in Providence Plantations is Democratical.'"—G. W. Greene, *Short Hist. of R. I., ch.* 3 *and* 5.—"The form of government being settled, they now prepared such laws as were necessary to enforce the due administration of it; but the popular approbation their laws must receive, before they were valid, made this a work of time; however, they were so industrious in it, that in the month of May, 1647, they completed a regular body of laws, taken chiefly from the laws of England, adding a very few of their own form-

ing, which the circumstances and exigencies of their present condition required. These laws, for securing of right, for determining controversies, for preserving order, suppressing vice, and punishing offenders, were, at least, equal to the laws of any of the neighbouring colonies; and infinitely exceeded those of all other Christian countries at that time in this particular,—that they left the conscience free, and did not punish men for worshipping God in the way, they were persuaded, he required. . . . It was often objected to Mr. Williams, that such great liberty in religious matters, tended to licentiousness, and every kind of disorder: To such objections I will give the answer he himself made, in his own words [Letter to the Town of Providence, January, 1654–5]. 'Loving Friends and Neighbours, It pleaseth God yet to continue this great liberty of our town meetings, for which, we ought to be humbly thankful, and to improve these liberties to the praise of the Giver, and to the peace and welfare of the town and colony, without our own private ends. I thought it my duty, to present you with this my impartial testimony, and answer to a paper sent you the other day from my brother,—"That it is blood-guiltiness, and against the rule of the gospel, to execute judgment upon transgressors, against the private or public weal." That ever I should speak or write a tittle that tends to such an infinite liberty of conscience, is a mistake; and which I have ever disclaimed and abhorred. To prevent such mistakes, I at present shall only propose this case.—There goes many a ship to sea, with many a hundred souls in one ship, whose weal and wo is common; and is a true picture of a commonwealth, or an human combination, or society. It hath fallen out sometimes, that both Papists and Protestants, Jews and Turks, may be embarked into one ship. Upon which supposal, I do affirm, that all the liberty of conscience that ever I pleaded for, turns upon these two hinges, that none of the Papists, Protestants, Jews, or Turks, be forced to come to the ship's prayers or worship; nor, secondly, compelled from their own particular prayers or worship, if they practise any. I further add, that I never denied that, notwithstanding this liberty, the commander of the ship ought to command the ship's course; yea, and also to command that justice, peace, and sobriety, be kept and practised, both among the seamen and all the passengers. If any seamen refuse to perform their service, or passengers to pay their freight;—if any refuse to help in person or purse, towards the common charges, or defence;—if any refuse to obey the common laws and orders of the ship, concerning their common peace and preservation;—if any shall mutiny and rise up against their commanders, and officers;—if any shall preach or write, that there ought to be no commanders, nor officers, because all are equal in Christ, therefore no masters, nor officers, no laws, nor orders, no corrections nor punishments—I say I never denied, but in such cases, whatever is pretended, the commander or commanders may judge, resist, compel, and punish such transgressors, according to their deserts and merits. This, if seriously and honestly minded, may, if it so please the Father of lights, let in some light, to such as willingly shut not their eyes. I remain, studious of our common peace and liberty,—Roger Williams.' This religious liberty was not only asserted in words, but uniformly adhered to and practised; for in the year 1656, soon after the Quakers made their first appearance in New England, and at which most of these colonies were greatly alarmed and offended: Those at that time called the four united colonies, which were the Massachusetts, Plymouth, Connecticut, and New Haven, wrote to this colony, to join with them in taking effectual methods to suppress them, and prevent their pernicious doctrines being spread and propagated in the country.—To this request the Assembly of this colony gave the following worthy answer: 'We shall strictly adhere to the foundation principle on which this colony was first settled; to wit, that every man who submits peaceably to the civil authority, may peaceably worship God according to the dictates of his own conscience, without molestation.' And not to the people of the neighbouring governments only, was this principle owned; but it was asserted in their applications to the ruling powers in the mother country; for in the year 1659, in an address of this colony to Richard Cromwell, then lord protector of England, Scotland, and Ireland, there is this paragraph,—'May it please your highness to know, that this poor colony of Providence Plantations, mostly consists of a birth and breeding of the providence of the Most High.—We being an outcast people, formerly from our mother nation, in the bishops' days; and since from the rest of the New English over-zealous colonies: Our frame being much like the present frame and constitution of our dearest mother England; bearing with the several judgments, and consciences, each of other, in all the towns of our colony.—The which our neighbour colonies do not; which is the only cause of their great offence against us.' But as every human felicity has some attendant misfortune, so the people's enjoyment of very great liberty, hath ever been found to produce some disorders, factions, and parties amongst them. . . . It must be confessed, the historians and ministers of the neighbouring colonies, in all their writings for a long time, represented the inhabitants of this colony as a company of people who lived without any order, and quite regardless of all religion; and this, principally, because they allowed an unlimited liberty of conscience, which was then interpreted to be profane licentiousness, as though religion could not subsist without the support of human laws, and Christians must cease to be so, if they suffered any of different sentiments to live in the same country with them. Nor is it to be wondered at, if many among them that first came hither, being tinctured with the same bitter spirit, should create much disturbance; nor that others, when got clear of the fear of censure and punishment should relax too much, and behave as though they were become indifferent about religion itself. With people of both these characters, the fathers of this colony had to contend. . . . In this age it seemed to be doubted whether a civil government could be kept up and supported without some particular mode of religion was established by its laws, and guarded by penalties and tests: And for determining this doubt, by an actual trial, appears to have been the principal motive with King Charles the Second, for granting free liberty of conscience to the people of this colony, by his charter of 1663,—in which

he makes use of these words: 'That they might hold forth a lively experiment, that a most flourishing civil state may stand, and best be maintained, and that amongst our English subjects, with a full liberty in religious concernments. And that true piety, rightly grounded on gospel principles, will give the best and greatest security to sovereignty, and will lay in the hearts of men the strongest obligations to true loyalty.'"—Stephen Hopkins, *Historical Account of the Planting and Growth of Providence* (*Mass. Hist. Soc. Coll's, 2d ser., v.* 9).

A. D. 1639.—The first Baptist Church.—"There can be little doubt, as to what were the religious tenets of the first settlers of Providence. At the time of their removal here, they were members of Plymouth and Massachusetts churches. Those churches, as it respects government, were Independent or Congregational, in doctrine, moderately Calvinistic and with regard to ceremonies, Pedobaptists. The settlers of Providence, did not cease to be members of those churches, by their removal, nor did the fact of their being members, constitute them a church, after it. They could not form themselves into a church of the faith and order of the Plymouth and Massachusetts churches, until dismissed from them; and after such dismissal, some covenant or agreement among themselves was necessary in order to effect it. That they met for public worship is beyond a doubt; but such meetings, though frequent and regular, would not make them a church. Among the first thirteen, were two ordained ministers, Roger Williams and Thomas James. That they preached to the settlers is quite probable, but there is no evidence of any intent to form a church, previous to March 1639. When they did attempt it, they had ceased to be Pedobaptists, for Ezekiel Holyman, a layman, had baptized Roger Williams, by immersion, and Mr. Williams afterwards had baptized Mr. Holyman and several others of the company, in the same manner. By this act they disowned the churches of which they had been members, and for this, they were soon excommunicated, by those churches. After being thus baptized, they formed a church and called Mr. Williams to be their pastor. This was the first church gathered in Providence. It has continued to the present day, and is now known as The First Baptist Church. . . . Mr. Williams held the pastoral office about four years, and then resigned the same. Mr. Holyman was his colleague. . . . A letter of Richard Scott, appended to 'A New England Fire-Brand Quenched,' and published about 1673, states that Mr. Williams left the Baptists and turned Seeker, a few months after he was baptized. Mr. Scott was a member of the Baptist church for some time, but at the date of this letter, had united with the Friends. According to Mr. Williams' new views as a Seeker, there was no regularly constituted church on earth, nor any person authorized to administer any church ordinance, nor could there be, until new apostles should be sent by the Great Head of the church, for whose coming he was seeking. He was not alone in these opinions. Many in his day believed that the ministry and ordinances of the christian church were irretrievably lost, during the papal usurpation. It has been supposed, by some, that Mr. Williams held these opinions while in Massachusetts, and that this was the reason he denied the church of England to be a true church, and withdrew from his connexion with the Salem church. Aside from the statement of Mr. Scott, above quoted, that Mr. Williams turned Seeker, after he joined the Baptists and walked with them some months, the supposition is shown to be groundless, by his administering baptism in Providence, as before stated, and joining with the first Baptist church there. These acts he could not have performed, had he then been a Seeker."—W. R. Staples, *Annals of the town of Providence, ch.* 7.

A. D. 1641-1647.—Samuel Gorton and the Warwick Plantation.—"Among the supporters of Mrs. Hutchinson, after her arrival at Aquedneck, was a sincere and courageous, but incoherent and crotchetty man named Samuel Gorton. In the denunciatory language of that day he was called a 'proud and pestilent seducer,' or, as the modern newspaper would say, a 'crank.' It is well to make due allowances for the prejudice so conspicuous in the accounts given by his enemies, who felt obliged to justify their harsh treatment of him. But we have also his own writings from which to form an opinion as to his character and views. . . . Himself a London clothier, and thanking God that he had not been brought up in 'the schools of human learning,' he set up as a preacher without ordination, and styled himself 'professor of the mysteries of Christ.' He seems to have cherished that doctrine of private inspiration which the Puritans especially abhorred. . . . Gorton's temperament was such as to keep him always in an atmosphere of strife. Other heresiarchs suffered persecution in Massachusetts, but Gorton was in hot water everywhere. His arrival in any community was the signal for an immediate disturbance of the peace. His troubles began in Plymouth, where the wife of the pastor preferred his teachings to those of her husband. In 1638 he fled to Aquedneck, where his first achievement was a schism among Mrs. Hutchinson's followers, which ended in some staying to found the town of Portsmouth while others went away to found Newport. Presently Portsmouth found him intolerable, flogged and banished him, and after his departure was able to make up its quarrel with Newport. He next made his way with a few followers to Pawtuxet, within the jurisdiction of Providence, and now it is the broad-minded and gentle Roger Williams who complains of his 'bewitching and madding poor Providence.' . . . Williams disapproved of Gorton, but was true to his principles of toleration and would not take part in any attempt to silence him. But in 1641 we find thirteen leading citizens of Providence, headed by William Arnold, sending a memorial to Boston, asking for assistance and counsel in regard to this disturber of the peace. How was Massachusetts to treat such an appeal? She could not presume to meddle with the affair unless she could have permanent jurisdiction over Pawtuxet; otherwise she was a mere intruder. . . . Whatever might be the abstract merits of Gorton's opinions, his conduct was politically dangerous; and accordingly the jurisdiction over Pawtuxet was formally conceded to Massachusetts. Thereupon that colony, assuming jurisdiction, summoned Gorton and his men to Boston, to prove their

title to the lands they occupied. They of course regarded the summons as a flagrant usurpation of authority, and instead of obeying it they withdrew to Shawomet [Warwick], on the western shore of Narragansett bay, where they bought a tract of land from the principal sachem of the Narragansetts, Miantonomo."—J. Fiske, *The Beginnings of New England, pp.* 163–168.—"Soon afterward, by the surrender to Massachusetts of a subordinate Indian chief, who claimed the territory . . . purchased by Gorton of Miantonomi [or Miantonomo], that Government made a demand of jurisdiction there also; and as Gorton refused their summons to appear at Boston, Massachusetts sent soldiers, and captured the inhabitants in their homes, took them to Boston, tried them, and sentenced the greater part of them to imprisonment for blasphemous language to the Massachusetts authorities. They were finally liberated, and banished; and as Warwick was included in the forbidden territory, they went to Rhode Island. Gorton and two of his friends soon afterward went to England." Subsequently, when, in 1647, the government of Providence Plantations was organized under the charter which Roger Williams had procured in England in 1644, "Warwick, whither Gorton and his followers had now returned, though not named in the charter, was admitted to its privileges."—C. Deane, *New England (Narrative and Critical History of America, v.* 3, *ch.* 9).

A. D. 1651-1652.—Coddington's usurpation.—Second mission of Roger Williams to England.—Restoration of the Charter.—First enactment against Slavery.—In 1651, William Coddington, who had been chosen President some time before, but who had gone to England without legally entering the office, succeeded by some means in obtaining from the Council of State a commission which appointed him governor of Rhode Island and Connecticut for life, with a council of six to assist him in the government. This apparently annulled the charter of the colony. Again the colony appealed to Roger Williams to plead its cause in England and again he crossed the ocean, "obtaining a hard-wrung leave to embark at Boston. . . . In the same ship went John Clarke, as agent for the Island towns, to ask for the revocation of Coddington's commission. On the success of their application hung the fate of the Colony. Meanwhile the Island towns submitted silently to Coddington's usurpation, and the main-land towns continued to govern themselves by their old laws, and meet and deliberate as they had done before in their General Assembly. It was in the midst of these dangers and dissensions that on the 19th of May, in the session of 1652, it was 'enacted and ordered . . . that no black mankind or white being forced by covenant, bond or otherwise shall be held to service longer than ten years,' and that 'that man that will not let them go free, or shall sell them any else where to that end that they may be enslaved to others for a longer time, hee or they shall forfeit to the Colonie forty pounds.' This was the first legislation concerning slavery on this continent. If forty pounds should seem a small penalty, let us remember that the price of a slave was but twenty. If it should be objected that the act was imperfectly enforced, let us remember how honorable a thing it is to have been the first to solemnly recognize a great principle. Soul liberty had borne her first fruits. . . . Welcome tidings came in September, and still more welcome in October. Williams and Clarke . . . had obtained, first, permission for the colony to act under the charter until the final decision of the controversy, and a few weeks later the revocation of Coddington's commission. The charter was fully restored."—G. W. Greene, *Short Hist. of Rhode Island, ch.* 6.

A. D. 1656.—Refusal to join in the persecution of Quakers. See MASSACHUSETTS: A. D. 1656–1661.

A. D. 1660-1663.—The Charter from Charles II., and the boundary conflicts with Connecticut.—"At its first meeting after the King [Charles II.] came to enjoy his own again, the government of Rhode Island caused him to be proclaimed, and commissioned Clarke [agent of the colony in England] to prosecute its interests at court, which he accordingly proceeded to do. . . . He was intrusted with his suit about a year before Winthrop's arrival in England; but Winthrop [the younger, who went to England on behalf of Connecticut] had been there several months, attending to his business, before he heard anything of the designs of Clarke. His charter of Connecticut had passed through the preliminary forms, and was awaiting the great seal, when it was arrested in consequence of representations made by the agent from Rhode Island. . . . Winthrop, in his new charter, had used the words 'bounded on the east by the Narrogancett River, commonly called Narrogancett Bay, where the said river falleth into the sea.' To this identity between Narragansett River and Narragansett Bay Clarke objected, as will be presently explained. A third party was interested in the settlement of the eastern boundary of Connecticut. This was the Atherton Company, so called from Humphrey Atherton of Dorchester, one of the partners. They had bought of the natives a tract of land on the western side of Narragansett Bay; and when they heard that Connecticut was soliciting a charter, they naturally desired that their property should be placed under the government of that colony, rather than under the unstable government of Rhode Island. Winthrop, who was himself one of the associates, wrote from London that the arrangement he had made accorded with their wish. Rhode Island, however, maintained that the lands of the Atherton purchase belonged to her jurisdiction. . . . When Winthrop thought that he had secured for Connecticut a territory extending eastward to Narragansett Bay, Clarke had obtained for Rhode Island the promise of a charter which pushed its boundary westward to the Paucatuck River, so as to include in the latter colony a tract 25 miles wide, and extending in length from the southern border of Massachusetts to the sea. The interference of the charters with each other endangered both. The agents entered into a negotiation which issued, after several months, in a composition effected by the award of four arbiters. Two articles of it were material. One was that Paucatuck River should 'be the certain bounds between the two colonies, which said river should, for the future, be also called, alias, Narrogansett, or Narrogansett River.' The other allowed the Atherton Company to choose 'to which of those colonies they would belong.' The undesirable consequences of a dispute were thus averted; though to say that 'Paucatuck River' meant Narragansett Bay was much the same as

to give to the Thames the name of the British Channel; and if the agreement between the agents should stand, Connecticut would be sadly curtailed of her domain." On the 8th of July, 1663, "Clarke's charter, which the King probably did not know that he had been contradicting, passed the seals. It created 'a body corporate and politic, in fact and name, by the name of the Governor and Company of the English Colony of Rhode Island and Providence Plantations in New England in America.' Similar to the charter of Connecticut in grants marked by a liberality hitherto unexampled, it added to them the extraordinary provision that 'no person within the said colony, at any time thereafter, should be anywise molested, punished, disquieted, or called in question, for any difference of opinion in matters of religion which did not actually disturb the civil peace of the said colony.'. . . Matters were now all ripe for a conflict of jurisdiction between Rhode Island and Connecticut. Using the privilege of choice secured by the compact between the agents, the Atherton Company elected to place their lands, including a settlement known by the name of Wickford, under the government of the latter colony. Rhode Island enacted that all persons presuming to settle there without her leave should be 'taken and imprisoned for such their contempt.'. . . This proved to be the beginning of a series of provocations and reprisals between the inharmonious neighbors."—J. G. Palfrey, *Compendious Hist. of N. Eng., bk.* 2, *ch.* 12 (*v.* 2).

A. D. 1674-1678.—King Philip's War. See New England: A. D. 1674–1675; 1675; 1676–1678.

A. D. 1683.—Death of Roger Williams.—Estimates of his character.—Roger Williams, having given all to his colony, seems to have died without property, dependent upon his children. His son, Daniel, in a letter written in 1710, says: "He never gave me but about three acres of land, and but a little afore he deceased. It looked hard, that out of so much at his disposing, that I should have so little, and he so little. . . . If a covetous man had that opportunity as he had, most of this town would have been his tenants." "Of the immediate cause and exact time of Mr. Williams' death we are not informed. It is certain, however, that he died at some time between January 16, 1682–3, and May 10, 1683. . . . He was in the 84th year of his age."—J. D. Knowles, *Memoir of Roger Williams, pp.* 111 *and* 354.—"We call those great who have devoted their lives to some noble cause, and have thereby influenced for the better the course of events. Measured by that standard, Roger Williams deserves a high niche in the temple of fame, alongside of the greatest reformers who mark epochs in the world's history. He was not the first to discover the principles of religious liberty, but he was the first to proclaim them in all their plenitude, and to found and build up a political community with those principles as the basis of its organization. The influence and effect of his 'lively experiment' of religious liberty and democratic government upon the political system of our country, and throughout the civilized world, are admirably stated by Professor Gervinus in his 'Introduction to the History of the Nineteenth Century.' He says: 'Roger Williams founded in 1636 a small new society in Rhode Island, upon the principles of entire liberty of conscience, and the uncontrolled power of the majority in secular affairs. The theories of freedom in Church and State, taught in the schools of philosophy in Europe, were here brought into practice in the government of a small community. It was prophesied that the democratic attempts to obtain universal suffrage, a general elective franchise, annual parliaments, entire religious freedom, and the Miltonian right of schism would be of short duration. But these institutions have not only maintained themselves here, but have spread over the whole union. They have superseded the aristocratic commencements of Carolina and of New York, the high-church party in Virginia, the theocracy in Massachusetts, and the monarchy throughout America; they have given laws to one quarter of the globe, and, dreaded for their moral influence, they stand in the back-ground of every democratic struggle in Europe.'"—O. S. Straus, *Roger Williams, p.* 233.—"Roger Williams, as all know, was the prophet of complete religious toleration in America. . . . That as a man he was 'conscientiously contentious' I should naturally be among the last to deny; most men who contribute materially towards bringing about great changes, religious or moral, are 'conscientiously contentious.' Were they not so they would not accomplish the work they are here to do."—C. F. Adams, *Massachusetts: its Historians and its History, p.* 25.—"The world, having at last nearly caught up with him, seems ready to vote—though with a peculiarly respectable minority in opposition—that Roger Williams was after all a great man, one of the true heroes, seers, world-movers, of these latter ages. Perhaps one explanation of the pleasure which we take in now looking upon him, as he looms up among his contemporaries in New England, may be that the eye of the observer, rather fatigued by the monotony of so vast a throng of sages and saints, all quite immaculate, all equally prim and stiff in their Puritan starch and uniform, all equally automatic and freezing, finds a relief in the easy swing of this man's gait, the limberness of his personal movement, his escape from the pasteboard proprieties, his spontaneity, his impetuosity, his indiscretions, his frank acknowledgments that he really had a few things yet to learn. Somehow, too, though he sorely vexed the souls of the judicious in his time, and evoked from them words of dreadful reprehension, the best of them loved him; for indeed this headstrong, measureless man, with his flashes of Welsh fire, was in the grain of him a noble fellow; 'a man,' as Edward Winslow said, 'lovely in his carriage.'. . . From his early manhood even down to his late old age, Roger Williams stands in New England a mighty and benignant form, always pleading for some magnanimous idea, some tender charity, the rectification of some wrong, the exercise of some sort of forbearance toward men's bodies or souls. It was one of his vexatious peculiarities, that he could do nothing by halves—even in logic. Having established his major and his minor premises, he utterly lacked the accommodating judgment which would have enabled him to stop there and go no further whenever it seemed that the concluding

member of his syllogism was likely to annoy the brethren. To this frailty in his organization is due the fact that he often seemed to his contemporaries an impracticable person, presumptuous, turbulent, even seditious."—M. C. Tyler, *Hist. of American Literature, ch. 9, sect. 4.*

A. D. 1776.—Allegiance to the king renounced.—State independence declared.—The British occupation.—"The last Colonial Assembly of Rhode Island met on the 1st of May. On the 4th, two months before the Congressional Declaration of Independence, it solemnly renounced its allegiance to the British crown, no longer closing its session with 'God save the King,' but taking in its stead as expressive of their new relations, 'God save the United Colonies.' . . . The Declaration of Independence by Congress was received with general satisfaction, and proclaimed with a national salute and military display. At Providence the King's arms were burned, and the Legislature assumed its legal title, 'The State of Rhode Island and Providence Plantations.' . . . From the 4th of May, 1776, the Declaration of Independence of Rhode Island, to the battle of Tiverton Heights, on the 29th of August, 1778, she lived with the enemy at her door, constantly subject to invasion by land and by water, and seldom giving her watch-worn inhabitants the luxury of a quiet pillow. . . . In November . . . a British fleet took possession of her waters, a British army of her principal island. The seat of government was removed to Providence."—G. W. Greene, *Short Hist. of R. I., ch. 24–25.*—See UNITED STATES OF AM.: A. D. 1776–1779.

A. D. 1783-1790.—After the War of Independence.—Paper-money.—Opposition to the Federal Constitution.—Tardy entrance into the Union.—Rhode Island emerged from the war of independence bankrupt. "The first question was how to replenish the exhausted treasury. The first answer was that money should be created by the fiat of Rhode Island authorities. Intercourse with others was not much thought of. Fiat money would be good at home. So the paper was issued by order of the Legislature which had been chosen for that purpose. A 'respectable minority' opposed the insane measure, but that did not serve to moderate the insanity. When the credit of the paper began to fall, and traders would not receive it, laws were passed to enforce its reception at par. Fines and punishments were enacted for failure to receive the worthless promises. Starvation stared many in the face. Now it was the agricultural class against the commercial class; and the former party had a large majority in the state and General Assembly. When dealers arranged to secure trade outside the state, that they might not be compelled to handle the local paper currency, it was prohibited by act. When three judges decided that the law compelling men to receive this 'money' was unconstitutional, they were brought before that august General Assembly, and tried and censured for presuming to say that constitutional authority was higher than legislative authority. At last, however, that lesson was learned, and the law was repealed. Before this excitement had subsided the movement for a new national Constitution began. But what did Rhode Island want of a closer bond of union with other states? . . . She feared the 'bondage' of a centralized government. She had fought for the respective liberties of the other colonies, as an assistant in the struggle. She had fought for her own special, individual liberty as a matter of her own

interest. Further her needs were comparatively small as to governmental machinery, and taxation must be small in proportion; and she did not wish to be taxed to support a general government. . . . So when the call was made for each state to hold a convention to elect delegates to a Constitutional Convention, Rhode Island paid not the slightest attention to it. All the other states sent delegates, but Rhode Island sent none; and the work of that convention, grand and glorious as it was, was not shared by her. . . . The same party that favored inflation, or paper money, opposed the Constitution; and that party was in the majority and in power. The General Assembly had been elected with this very thing in view. Meanwhile the loyal party, which was found mostly in the cities and commercial centres, did all in its power to induce the General Assembly to call a convention; but that body persistently refused. Once it suggested a vote of the people in their own precincts; but that method was a failure. As state after state came into the Union, the Union party, by bonfire, parade, and loud demonstration, celebrated the event."—G. L. Harney, *How Rhode Island received the Constitution* (*New England Mag., May*, 1890).—"The country party was in power, and we have seen that elsewhere as well as in Rhode Island, it was the rural population that hated change. The action of the other states had been closely watched and their objections noted. One thing strikes a Rhode Islander very peculiarly in regard to the adoption of the federal constitution. The people were not to vote directly upon it, but only second-hand through delegates to a state convention. No amendment to our state constitution, even at this day, can be adopted without a majority of three-fifths of all the votes cast, the voting being directly on the proposition, and a hundred years ago no state was more democratic in its notions than Rhode Island. Although the Philadelphia Convention had provided that the federal constitution should be ratified in the different states by conventions of delegates elected by the people for that purpose, upon the call of the General Assembly, yet this did not accord with the Rhode Island idea, so in February, 1788, the General Assembly voted to submit the question whether the constitution of the United States should be adopted, to the voice of the people to be expressed at the polls on the fourth Monday in March. The federalists fearing they would be out-voted, largely abstained from voting, so the vote stood two hundred and thirty-seven for the constitution, and two thousand seven hundred and eight against it, there being about four thousand voters in the state at that time. Governor Collins, in a letter to the president of Congress written a few days after the vote was taken, gives the feeling then existing in Rhode Island, in this wise:—'Although this state has been singular from her sister states in the mode of collecting the sentiments of the people upon the constitution, it was not done with the least design to give any offence to the respectable body who composed the convention, or a disregard to the recommendation of Congress, but upon pure republican principles, founded upon that basis of all governments originally derived from the body of the people at large. And although, sir, the majority has been so great against adopting the Constitution, yet the people, in general, conceive that it may contain some necessary articles which could well be added and adapted to the present confederation. They are sensible that the present powers invested with Congress are incompetent for the great national government of the Union, and would heartily acquiesce in granting sufficient authority to that body to make, exercise and enforce laws throughout the states, which would tend to regulate commerce and impose duties and excise, whereby Congress might establish funds for discharging the public debt.' A majority of the voters of the country was undoubtedly against the constitution, but convention after convention was carried by the superior address and management of its friends. Rhode Island lacked great men, who favored the constitution, to lead her. . . . The requisite number of states having ratified the constitution, a government was formed under it April 30, 1789. Our General Assembly, at its September session in that year, sent a long letter to Congress explanatory of the situation in Rhode Island, and its importance warrants my quoting a part of it. 'The people of this state from its first settlement,' ran the letter, 'have been accustomed and strongly attached to a democratical form of government. They have viewed in the new constitution an approach, though perhaps but small, toward that form of government from which we have lately dissolved our connection at so much hazard and expense of life and treasure,—they have seen with pleasure the administration thereof from the most important trusts downward, committed to men who have highly merited and in whom the people of the United States place unbounded confidence. Yet, even on this circumstance, in itself so fortunate, they have apprehended danger by way of precedent. Can it be thought strange, then, that with these impressions, they should wait to see the proposed system organized and in operation, to see what further checks and securities would be agreed to and established by way of amendments, before they would adopt it as a constitution of government for themselves and their posterity?' . . . Rhode Island never supposed she could stand alone. In the words of her General Assembly in the letter just referred to:—'They know themselves to be a handful, comparatively viewed.' This letter, as well as a former one I have quoted from, showed that she, like New Hampshire, Massachusetts, New York, Virginia, and North Carolina, hoped to see the constitution amended. Like the latter state she believed in getting the amendments before ratification, and so strong was the pressure for amendments that at the very first session of Congress a series of amendments was introduced and passed for ratification by the states, and Rhode Island, though the last to adopt the constitution, was the ninth state to ratify the first ten amendments to that instrument now in force; ratifying both constitution and amendments at practically the same time. One can hardly wonder at the pressure for amendments to the original constitution when the amendments have to be resorted to for provisions that Congress shall make no law respecting an establishment of religion, or prohibiting the free use thereof, or abridging the freedom of speech, or of the press, or the right of the people peaceably to assemble and to petition the government for a redress of grievances; that excessive bail should not be

required, nor excessive fines imposed, nor cruel and unusual punishments inflicted; for right of trial by jury in civil cases; and for other highly important provisions."—H. Rogers, *Rhode Island's Adoption of the Federal Constitution* (*R. I. Hist. Soc.*, 1890).—The convention which finally accepted for Rhode Island and ratified the federal constitution met at South Kingston, in March, 1790, then adjourned to meet at Newport in May, and there completed its work. See UNITED STATES OF AM.: A. D. 1787, and 1787–1789.

A. D. 1814.—The Hartford Convention. See UNITED STATES OF AM.: A. D. 1814 (DECEMBER) THE HARTFORD CONVENTION.

A. D. 1841-1843.—The Dorr Rebellion.—The old Charter replaced by a State Constitution.—The old colonial charter of Rhode Island remained unchanged until 1843. Its property qualification of the right of suffrage, and the inequality of representation in the legislature which became more flagrant as the state and its cities increased in population, became causes of great popular discontent. The legislature turned a deaf ear to all demands for a democratic basis of government, and in 1841 a serious attempt was made by a resolute party to initiate and carry through a revision of the constitution independently of legislative action. A convention was held in October of that year which framed a constitution and submitted it to the vote of the people. It was adopted by a majority of the votes cast, and, in accordance with its provisions, an election was held the following April. Thomas Wilson Dorr was chosen Governor, and on the 3d of May, 1842, the new government was formally inaugurated by its supporters at Providence, where they were in the majority. "If Mr. Dorr and his officers, supported by the armed men then at their command, had taken possession of the State House, Arsenal, and other state property, and acted as if they had confidence in themselves and their cause, the result might have been different. This was the course desired and advocated by Mr. Dorr, but he was overruled by more timid men, who dared go just far enough to commit themselves, disturb the peace of the state, and provoke the Law and Order government, but not far enough to give themselves a chance of success. While the People's government was being organized in Providence, the regularly elected General Assembly met on the same day at Newport, inaugurated the officers as usual, and passed resolutions declaring that an insurrection existed in the state and calling on the President for aid, which was . . . declined with good advice as to amnesty and concession, which was not heeded. On the following day a member of the People's legislature was arrested under the Algerine law, and this arrest was followed by others, which in turn produced a plentiful crop of resignations from that body. . . . At the request of his legislature, Mr. Dorr now went to Washington and unsuccessfully tried to secure the aid and countenance of President Tyler. . . . During Mr. Dorr's absence, both parties were pushing on military preparations. . . . The excitement at this time was naturally great, though many were still inclined to ridicule the popular fears, and the wildest rumors filled the air." On the 18th, the Dorr party made an attempt to gain possession of the state arsenal, but it failed rather ignominiously, and Dorr himself fled to Connecticut. One more abortive effort was made, by others less sagacious than himself, to rally the supporters of the Constitution, in an armed camp, formed at Chepachet; but the party in power confronted it with a much stronger force, and it dispersed without firing a gun. This was the end of the "rebellion." "In June, 1842, while the excitement was still at its height, the General Assembly had called still another convention, which met in September and . . . framed the present constitution, making an extension of the suffrage nearly equivalent to that demanded by the suffrage party previous to 1841. In November this constitution was adopted, and in May, 1843, went into effect with a set of officers chosen from the leaders of the Landholders' party, the same men who had always ruled the state. . . . Early in August, Governor Dorr, who had remained beyond the reach of the authorities, against his own will and in deference to the wishes of his friends who still hoped, issued an address explaining and justifying his course and announcing that he should soon return to Rhode Island. Accordingly, on October 31, he returned to Providence, without concealment, and registered himself at the principal hotel. Soon afterwards, he was arrested and committed to jail, without bail, to await trial for treason. . . . The spirit in which this trial was conducted does no credit to the fairness or magnanimity of the court or of the Law and Order party. Under an unusual provision of the act, although all Dorr's acts had been done in Providence County, he was tried in Newport, the most unfriendly county in the state. . . . Every point was ruled against Mr. Dorr, and the charge to the jury, while sound in law, plainly showed the opinion and wishes of the court. It was promptly followed by a verdict of guilty, and on this verdict Mr. Dorr, on June 25, just two years from his joining the camp at Chepachet, was sentenced to imprisonment for life. . . . Declining an offer of liberation if he would take the oath to support the new constitution, Mr. Dorr went to prison and remained in close confinement until June, 1845, when an act of amnesty was passed, and he was released. A great concourse greeted him with cheers at the prison gates, and escorted him with music and banners to his father's house, which he had not entered since he began his contest for the establishment of the People's constitution. The newspapers all over the country, which favored his cause, congratulated him and spoke of the event as an act of tardy justice to a martyr in the cause of freedom and popular rights. . . . But Mr. Dorr's active life was over. He had left the prison broken in health and visibly declining to his end. The close confinement, dampness, and bad air had shattered his constitution, and fixed upon him a disease from which he never recovered. He lived nine years longer but in feeble health and much suffering." —C. H. Payne, *The Great Dorr War* (*New England Mag., June*, 1890).

ALSO IN: D. King, *Life and Times of Thomas Wilson Dorr.*

A. D. 1888.—Constitutional Amendment.—The qualification of the Suffrage.—"The adoption of the Amendment to the Constitution of Rhode Island, at the recent election, relating to the elective franchise, brings to a close a political struggle which began in earnest in 1819. Hence

it has been in progress about 80 years. It makes, or will ultimately make, great political changes here. . . . It may not be inopportune, upon the consummation of so great a political change, to note briefly some of the steps by which the change came to pass. . . . The qualifications of electors was not defined by the charter. That power was given to the General Assembly. A property qualification was first introduced into the laws in 1665, and has ever since been and now is in part retained. It was not at first specified to be land, but men of competent estates, without regard to the species of property, 'may be admitted to be freemen.' Even so accurate a scholar as the late Judge Potter, has erred in his statement of the case. He says that by the act of March, 1663–4, all persons were required to be of 'competent estate.' This is not correct. The proposition was made two years subsequent to the establishment of the charter, and was made by the King of England, and sent by him by commissioners to Rhode Island and was then adopted and enacted by the General Assembly. . . . This qualification was made to depend only on land, by the act of the General Assembly of February 1723–4, and was a purely Rhode Island measure (Digest. of R. I., 1730, p. 110). From that time until the present, covering a period of nearly 165 years, this qualification has in some measure remained. The value was then (in 1723) fixed at £100, and practically, it was never changed. It was raised or lowered from time to time to meet the fluctuation of paper money. Sometimes it was in 'old tenor' and sometimes in 'lawful money,' both of which were in paper, and reckoned usually in pounds, shillings and pence. In 1760, the amount was £40 lawful money. In 1763 'lawful money' was defined to be gold or silver. After the decimal system came into use, the mode of reckoning was changed into dollars. Thus in £40 are 800 shillings, which at six shillings to the dollar, which was then New England currency, is equal to $133.33; by the law of 1798 the sum was made $134, and so it has always since remained, and so under the recent amendment it remains as a qualification of an elector, who can vote on a question of expenditure, or the levying of a tax. . . . There was practically no change in the qualifications required of a man to become an elector from the earliest times down to 1842. In 1819 a serious attempt was made to obtain a constitution. A convention was called and a constitution was framed and submitted to the people, that is, to the Freemen, for adoption; but the General Assembly enacted that a majority of three-fifths should be required for its adoption. This was the origin of the three-fifth restriction in the present constitution. It did not enlarge the suffrage; a proposition to that end received only 3 votes against 61, nor was it of any general benefit, and it was as well that it failed. The political disabilities of men were confined to two classes, to wit: The second son, and other younger sons of freemen, and those other native American citizens of other states who had moved into Rhode Island, and therein acquired a residence. To these two classes, although possessed of abundant personal property, and upon which the state levied and collected taxes, and from whom the state exacted military service, the right to vote was denied, because among their possessions there was no land. It was taxation without representation, the very principle upon which the Revolution had been fought. In 1828 more than one-half the taxes paid in Providence were paid by men who could not vote upon any question. In 1830, in North Providence, there were 200 freemen and 579 native men, over twenty-one years, who were disfranchised. . . . There were in 1832 five men in Pawtucket who had fought the battles for Rhode Island through the Revolution, but who, possessing no land, had never been able to vote upon any question. . . . In another respect a great wrong was done. It was in the representation of the towns in the General Assembly. Jamestown had a representative for every eighteen freemen. Providence, one to every 275. Smithfield, one in every 206. Fifty dollars in taxes, in Barrington, had the same power in the representation that $750 had in Providence. The minority of legal voters actually controlled the majority. . . . Such then was the political condition of men in Rhode Island in 1830. There were about 8,000 Freemen and about 13,000 unenfranchised Americans with comparatively no naturalized foreigners among them. The agitation of the question did not cease. In 1829 it was so violent that the General Assembly referred the question to a committee, of which Benjamin Hazard was the head, and which committee made a report, always since known as Hazard's Report, which it was supposed would quiet forever the agitation. But it did not; for five years later a convention was called and a portion of a constitution framed. The question of foreigners was first seriously raised by Mr. Hazard in this report. By this term Mr. Hazard intended not only citizens of countries outside of the United States, but he intended American citizens of other American States. He would deny political rights to a man born in Massachusetts, who came to dwell in Rhode Island, in the same way that he would deny them to a Spaniard. A Massachusetts man must live here one year, the Spaniard three, but both must own land. These ideas were formulated in the constitution of 1834 as far as it went. . . . Fortunately it fell through and by the most disgraceful of actions; and its history when written will form one of the darkest chapters in Rhode Island history. This discrimination against foreign born citizens, that is, men born in countries outside of the United States, became more pointed in the proposed Landholders' Constitution of November 1841. A native of the United States could vote on a land qualification, or if he paid taxes upon other species of property. A foreigner must own land and he could not vote otherwise. This Constitution was defeated. Then came the People's Constitution, (otherwise known as the Dorr Constitution). It made no restrictions upon foreigners; it admitted all citizens of the United States upon an equal footing; negroes were excluded in both documents. This Constitution never went into effect. Then came the present Constitution, adopted in September, 1842, by which all the disabilities complained of were swept away with the exception of the discrimination in the case of foreigners. By it negroes were admitted, but foreigners were required to hold lands, as all the various propositions had provided with the single exception of the People's Constitution. Now comes the amendment recently adopted, and parallel

with it I have reproduced the section relating to the same matter from the People's Constitution:

Qualification of Electors under Amendment (Bourn) to Constitution, adopted April, 1888.	*Qualification of Electors under the People's (Dorr) Constitution,* 1842.
Section 1. Every male citizen of the United States of the age of 21 years, who has had his residence and home in this State for two years, and in the town or city in which he may offer to vote six months next preceding the time of his voting, and whose name shall be registered in the town or city where he resides on or before the last day of Dec., in the year next preceding to the time of his voting, shall have a right to vote in the election of all civil officers and on all questions in all legally organized town or ward meetings: Provided, that no person shall at any time be allowed to vote in the election of the City Council of any city, or upon any proposition to impose a tax, or for the expenditure of money in any town or city, unless he shall within the year next preceding have paid a tax assessed upon his property therein, valued at least at one hundred and thirty-four dollars.	Section 1. Every white male citizen of the United States of the age of twenty-one years, who has resided in this State for one year, and in any town, city or district of the same for six months next preceding the election at which he offers to vote, shall be an elector of all officers, who are elected, or may hereafter be made eligible by the people * * Sec. 4. No elector who is not possessed of, and assessed for ratable property in his own right to the amount of one hundred and fifty dollars, or, who shall have neglected, or refused to pay any tax assessed upon him in any town or city or district, for one year preceding the * * meeting at which he shall offer to vote, shall be entitled to vote on any question of taxation, or the expenditure of any public moneys * * Sec. 7. There shall be a strict registration of all qualified voters * * * and no person shall be permitted to vote whose name has not been entered upon the list of voters before the polls are opened.

It thus appears that the people of Rhode Island have at last adopted an amendment to the Constitution, more liberal in its qualifications of electors, than the terms asked by Mr. Dorr, in 1842. . . . All that was asked by Mr. Dorr, and even by those of his party, more radical than himself, has been granted, and even more. And yet they were denounced with every species of vile epithet as Free Suffrage Men."—S. S. Rider, *The End of a great Political Struggle in Rhode Island* (*Book Notes, v.* 5, *pp.* 53–57).

RHODES.—The island of Rhodes, with its picturesque capital city identical in name, lying in the Ægean Sea, near the southwestern corner of Asia Minor, has a place alike notable in the history of ancient and mediæval times; hardly less of a place, too, in prehistoric legends and myths. It has been famed in every age for a climate almost without defect. Among the ancients its Doric people [see Asia Minor: The Greek Colonies] were distinguished for their enterprise in commerce, their rare probity, their courage, their refinement, their wealth, their liberality to literature and the arts. In the middle ages all this had disappeared, but the island and the city had become the seat of the power of the Knights of St. John — the last outpost of European civilization in the east, held stoutly against the Turks until 1522. The unsuccessful siege of Rhodes, B. C. 305 or 304, by Demetrius, the son of Antigonus, was one of the great events of ancient military history. It "showed not only the power but the virtues of this merchant aristocracy. They rebuilt their shattered city with great magnificence. They used the metal of Demetrius's abandoned engines for the famous Colossus [see below], a bronze figure of the sun about 100 feet high, which, however, was thrown down and broken by the earthquake of B. C. 227, and lay for centuries near the quays, the wonder of all visitors. . . . It is said that the Saracens sold the remnants of this statue for old metal when they captured Rhodes. . . . It was doubtless during the same period that Rhodes perfected that system of marine mercantile law which was accepted not only by all Hellenistic states, but acknowledged by the Romans down to the days of the empire. . . . We do not know what the detail of their mercantile system was, except that it was worked by means of an active police squadron, which put down piracy, or confined it to shipping outside their confederacy, and also that their persistent neutrality was only abandoned when their commercial interests were directly attacked. In every war they appear as mediators and peace-makers. There is an allusion in the 'Mercator' of Plautus to young men being sent to learn business there, as they are now sent to Hamburg or Genoa. The wealth and culture of the people, together with the stately plan of their city, gave much incitement and scope to artists in bronze and marble, as well as to painters, and the names of a large number of Rhodian artists have survived on the pedestals of statues long since destroyed. But two famous works — whether originals or copies seems uncertain — still attest the genius of the school, the 'Laocoon,' now in the Vatican, and the 'Toro Farnese.'"—J. P. Mahaffy, *Story of Alexander's Empire, ch.* 20, *with foot-note.*

B. C. 412. — Revolt from Athens. See Greece: B. C. 413–412.

B. C. 378-357.—In the new Athenian Confederacy.—Revolt and secession.—The Social War. See Athens: B. C. 378–357.

B. C. 305-304.—Siege by Demetrius Poliorcetes.—One of the memorable sieges of antiquity was that in which the brave, free citizens of Rhodes held their splendid town (B. C. 305) for one whole year against the utmost efforts of Demetrius, called Poliorcetes, or "the Besieger," son of Antigonus, the would-be successor of Alexander (see Macedonia: B. C. 310–301). Demetrius was a remarkable engineer, for his age, and constructed machinery for the siege which was the wonder of the Grecian world. His masterpiece was the Helepolis, or "city-taker,"—a wooden tower, 150 feet high, sheathed with iron, travelling on wheels and moved by the united strength of 3,400 men. He also assailed the walls of Rhodes with battering rams, 150 feet long, each driven by 1,000 men. But

all his ingenious appliances failed and he was forced in the end to recognize the independence of the valiant Rhodians.—C. Torr, *Rhodes in Ancient Times, pp.* 13–14, 44.

RHODES, The Colossus of.—"In the elementary works for the instruction of young people, we find frequent mention of the Colossus of Rhodes. The statue is always represented with gigantic limbs, each leg resting on the enormous rocks which face the entrance to the principal port of the Island of Rhodes; and ships in full sail passed easily, it is said, between its legs; for, according to Pliny the ancient, its height was 70 cubits. This Colossus was reckoned among the seven wonders of the world, the six others being, as is well known, the hanging gardens of Babylon, devised by Nitocris, wife of Nebuchadnezzar; the pyramids of Egypt; the statue of Jupiter Olympus; the Mausoleum of Halicarnassus; the temple of Diana at Ephesus; and the Pharos of Alexandria, completely destroyed by an earthquake in 1303. Nowhere has any authority been found for the assertion that the Colossus of Rhodes spanned the entrance to the harbour of the island and admitted the passage of vessels in full sail between its wide-stretched limbs. . . . The following is the real truth concerning the Colossus." After the abandonment of the siege of Rhodes, in 305, by Demetrius Poliorcetes, "the Rhodians, inspired by a sentiment of piety, and excited by fervent gratitude for so signal a proof of the divine favour, commanded Charès to erect a statue to the honour of their deity [the sun-god Helios]. An inscription explained that the expenses of its construction were defrayed out of the sale of the materials of war left by Demetrius on his retreat from the island of Rhodes. This statue was erected on an open space of ground near the great harbour, and near the spot where the pacha's seraglio now stands; and its fragments, for many years after its destruction, were seen and admired by travellers."—O. Delepierre, *Historical Difficulties, ch.* 1.

RHODES, Knights of.—During their occupation of the island, the Knights Hospitallers of St. John of Jerusalem were commonly called Knights of Rhodes, as they were afterwards called Knights of Malta. See HOSPITALLERS OF ST. JOHN.

RI, The.—"The Ri or king, who was at the head of the tribe [the 'tuath,' or tribe, in ancient Ireland], held that position not merely by election, but as the representative in the senior line of the common ancestor, and had a hereditary claim to their obedience. As the supreme authority and judge of the tribe he was the Ri or king. This was his primary function. . . . As the leader in war he was the 'Toisech' or Captain."—W. F. Skene, *Celtic Scotland, v.* 3, *p.* 140. —See, also, TUATH, THE.

"RIGHT," "LEFT," AND "CENTER," The.—In France, and several other continental European countries, political parties in the legislative bodies are named according to the positions of the seats which they occupy in their respective chambers. The extreme conservatives gather at the right of the chair of the presiding officer, and are known, accordingly, as "The Right." The extreme radicals similarly collected on the opposite side of the chamber, are called "The Left." Usually, there is a moderate wing of each of these parties which partially detaches itself and is designated, in one case, "The Right Center," and in the other, "The Left Center"; while, midway between all these divisions, there is a party of independents who take the name of "The Center."

ROCHELLE: Early Importance.—Expulsion of the English.—Grant of Municipal independence.—"Rochelle had always been one of the first commercial places of France; it was well known to the English under the name of the White Town, as they called it, from its appearance when the sun shone and was reflected from its rocky coasts. It was also much frequented by the Netherlanders. . . . The town had . . . enjoyed extraordinary municipal franchises ever since the period of the English wars [see FRANCE: A. D. 1337–1360, and 1360–1380]. It had by its own unaided power revolted from the English dominion [1372], for which Charles V., in his customary manner, conferred upon the townsfolk valuable privileges,—among others, that of independent jurisdiction in the town and its liberties. The design of Henry II. to erect a citadel within their walls they had been enabled fortunately to prevent, through the favour of the Chatillons and the Montmorencies. Rochelle exhibited Protestant sympathies at an early period."—L. von Ranke, *Civil Wars and Monarchy in France, in the* 16*th and* 17*th Centuries, ch.* 14.

ROMAN CITIZENSHIP, under the Republic. See CIVES ROMANI; also, QUIRITES.

Under the Empire.—"While Pompeius, Cæsar, Augustus and others extended the Latin rights to many provincial communities, they were careful to give the full Roman qualification [the 'privileges of Quiritary proprietorship, which gave not merely the empty title of the suffrage, but the precious immunity from tribute or land-tax'] to persons only. Of such persons, indeed, large numbers were admitted to citizenship by the emperors. The full rights of Rome were conferred on the Transalpine Gauls by Claudius, and the Latin rights on the Spaniards by Vespasian; but it was with much reserve that any portions of territory beyond Italy were enfranchised, and rendered Italic or Quiritary soil, and thus endowed with a special immunity. . . . The earlier emperors had, indeed, exercised a jealous reserve in popularizing the Roman privileges; but from Claudius downwards they seem to have vied with one another in the facility with which they conferred them as a boon, or imposed them as a burden. . . . The practice of purchasing Civitas was undoubtedly common under Claudius. . . . Neither Hadrian, as hastily affirmed by St. Chrysostom, nor his next successor, as has been inferred from a confusion of names, was the author of the decree by which the Roman franchise was finally communicated to all the subjects of the empire. Whatever the progress of enfranchisement may have been, this famous consummation was not effected till fifty years after our present date, by the act of Antoninus Caracalla [A. D. 211–217]."—C. Merivale, *Hist. of the Romans, ch.* 67, *with foot-note.*

ROMAN CITY FESTIVAL.—The "Roman chief festival or festival of the city (ludi maximi, Romani) . . . was an extraordinary thanksgiving festival celebrated in honour of the Capitoline Jupiter and the gods dwelling along with him, ordinarily in pursuance of a vow made by the general before battle, and therefore usually observed on the return home of the burgess-force in autumn. A festal procession proceeded toward the Circus staked off between the Palatine and Aventine. . . . In each species of contest there was but one competition, and

that between not more that two competitors."—T. Mommsen, *Hist. of Rome, bk.* 1, *ch.* 15.

ROMAN EMPIRE, THE HOLY: A. D. 963.—Founded by Otto the Great.—Later Origin of the Name.—"The Holy Roman Empire, taking the name in the sense which it commonly bore in later centuries, as denoting the sovereignty of Germany and Italy vested in a Germanic prince, is the creation of Otto the Great. Substantially, it is true, as well as technically, it was a prolongation of the Empire of Charles [Charlemagne]; and it rested (as will be shewn in the sequel) upon ideas essentially the same as those which brought about the coronation of A. D. 800. . . . This restored Empire, which professed itself a continuation of the Carolingian, was in many respects different. It was less wide, including, if we reckon strictly, only Germany proper and two-thirds of Italy; or counting in subject but separate kingdoms, Burgundy, Bohemia, Moravia, Poland, Denmark, perhaps Hungary. Its character was less ecclesiastical. Otto exalted indeed the spiritual potentates of his realm, and was earnest in spreading Christianity among the heathen: he was master of the Pope and Defender of the Holy Roman Church. But religion held a less important place in his mind and his administration. . . . It was also less Roman. . . . Under him the Germans became not only a united nation, but were at once raised on a pinnacle among European peoples as the imperial race, the possessors of Rome and Rome's authority. While the political connection with Italy stirred their spirit, it brought with it a knowledge and culture hitherto unknown." It was not until the reign of Frederick Barbarossa that the epithet "Holy" was prefixed to the title of the revived Roman Empire. "Of its earlier origin, under Conrad II (the Salic), which some have supposed, there is no documentary trace, though there is also no proof to the contrary. So far as is known it occurs first in the famous Privilege of Austria, granted by Frederick in the fourth year of his reign, the second of his empire. . . . Used occasionally by Henry VI and Frederick II, it is more frequent under their successors, William, Richard, Rudolf, till after Charles IV's time it becomes habitual, for the last few centuries indispensable. Regarding the origin of so singular a title many theories have been advanced. . . . We need not, however, be in any great doubt as to its true meaning and purport. . . . Ever since Hildebrand had claimed for the priesthood exclusive sanctity and supreme jurisdiction, the papal party had not ceased to speak of the civil power as being, compared with that of their own chief, merely secular, earthly, profane. It may be conjectured that, to meet this reproach, no less injurious than insulting, Frederick or his advisers began to use in public documents the expression 'Holy Empire'; thereby wishing to assert the divine institution and religious duties of the office he held. . . . It is almost superfluous to observe that the beginning of the title 'Holy' has nothing to do with the beginning of the Empire itself. Essentially and substantially, the Holy Roman Empire was, as has been shewn already, the creation of Charles the Great. Looking at it more technically, as the monarchy, not of the whole West, like that of Charles, but of Germany and Italy, with a claim, which was never more than a claim, to universal sovereignty, its beginning is fixed by most of the German writers, whose practice has been followed in the text, at the coronation of Otto the Great. But the title was at least one, and probably two centuries later."—J. Bryce, *The Holy Roman Empire, ch.* 6, 9 *and* 12, *with foot-note.*—Otto, or Otho, the Great, the second of the Saxon line of Germanic kings, crossed the Alps and made himself master of the distracted kingdom of Italy in 951, on the invitation of John XII, who desired his assistance against the reigning king of Italy, Berengar II, and who offered him the imperial coronation (there had been no acknowledged emperor for forty years) as his reward. He easily reduced Berengar to vassalage, and, after receiving the imperial crown from Pope John, he did not scruple to depose that licentious and turbulent pontiff, by the voice of a synod which he convoked in St. Peter's, and to seat another in his place. Three revolts in the city of Rome, which were stirred up by the deposed pope, the emperor suppressed with a heavy hand, and he took away from the city all its forms of republican liberty, entrusting the government to the pope as his viceroy.—The same, *ch.* 9.—"This Germanic empire . . . was a resuscitation of the idea of the old Roman empire but by no means of its form. On the contrary, through constant struggles new constitutional forms had developed themselves of which the old world had as yet no conception. . . . In a word or two at least, we must characterize this transformation. Its essence is that an attempt was made to adjust the conception of obedience and military service to the needs of the life of the individual. All the arrangements of life changed their character so soon as it became the custom to grant land to local overlords who, in turn, provided with possessions according to their own several grades, could only be sure of being able to hold these possessions in so far as they kept faith and troth with the lord-in-chief of the land. It was through and through a living organization, which took in the entire monarchy and bound it together into a many-membered whole; for the counts and dukes for their own part entered into a similar relationship with their own sub-tenants. Therewith the possession of land entered into an indissoluble connection with the theory of the empire, a connection which extended also to those border nations which were in contact with and subordinate to the monarchy. That an empire so constituted could not reckon on such unconditional obedience as had

been paid to the old Roman empire is clear as day. Nevertheless the whole order of things in the world depended on the system of adjusted relationships, the keystone or rather commanding central point of which was formed by this same empire. It could scarcely claim any longer to be universal, but it did nevertheless hold the chief place in the general state-system of Europe, and it proved a powerful upholder of the independence of the secular power. It was just this idea of universal power, and altogether of ascendancy over the Christian world, that was indelibly implanted in the German empire. But could this idea be actually realized, was Germany strong enough to carry it through? Otto the Great originated it, but by no means carried it to its completion. He passed his life amid constant internal and external struggles; no lasting form of constitution was he able to leave behind."—L. von Ranke, *Weltgeschichte* (*trans. from the German, v.* 7, *pp.* 5–7.—"Not through laws, not through an artificial state-system, not through a great army of officials did Otto rule Western Europe, but more than all through the wealth of military resources which his victories had placed in his hands. Through the great army of his German vassals who were well versed in war he overthrew the Slavonians, kept the Danes in check, compelled the Hungarians to relinquish their nomadic life of plunder and to seek settled dwelling places in the plains of the Danube; so that now the gates of the East through which up till then masses of peoples threatening everything with destruction had always anew broken in upon the West were closed forever. The fame of his victories and his feudal supremacy, extending itself further and further, made him also protector of the Burgundian and French kingdoms, and finally lord of Lombardy and of the City of Rome. With the military resources of Germany he holds in subjection the surrounding peoples; but through the power thus won, on the other hand, he himself gains a proud ascendancy over the multitude of his own vassals. Only for the reason that he wins for himself a truly royal position in Germany is he enabled to gain the imperial crown; but this again it is which first really secures and confirms his own and his family's rule in the German lands. On this rests chiefly his preëminent position, that he is the first and mightiest lord of Western Christendom, that as such he is able at any moment to bring together a numerous military force with which no people, no prince can any longer cope. But not on this alone. For the Catholic clergy also, spreading far and wide over the whole West, serves him as it were like a new crowd of vassals in stole and cassock. He nominates the archbishops and bishops in his German and Italian kingdoms as well as in the newly converted lands of the North and East; he rules the successor of St. Peter and through him exercises a decisive influence on church progress even in the Western lands where he does not himself install the dignitaries of the church. Different as this German empire was from the Frankish, faulty as was its organization, its resources seemed nevertheless sufficient in the hand of a competent ruler to maintain a far-reaching and effectual rule in the West; the more so as it was upheld by public opinion and supported by the authority of the church. But one must not be led into error; these resources were only sufficient in the hands of a so powerful and active prince as Otto. From the Elbe marshes he hastened to the Abruzzian Mountains; from the banks of the Rhine now to the shores of the Adriatic, now to the sand-dunes of the Baltic. Ceaselessly is he in motion, continually under arms—first against the Wends and Hungarians, then against the Greeks and Lombards. No county in his wide realm, no bishopric in Catholic Christendom but what he fixed his eye upon and vigilantly watched. And wherever he may tarry and whatever he may undertake, his every act is full of fire, force and vigor and always hits the mark. With such a representative the empire is not only the highest power in the Western world but one which on all its affairs has a deep and active influence—a power as much venerated as it was dreaded."—W. von Giesebrecht, *Deutsche Kaiserzeit* (*trans. from the German*), *v.* 1, *pp.* 476–484.—"He (Otto) now permanently united the Roman empire to the German nation and this powerful and intelligent people undertook the illustrious but thankless task of being the Atlas of universal history. And soon enough did the connection of Germany with Italy result in the reform of the church and the revival of the various sciences, while in Italy itself it was essentially the Germanic element which brought into being the glorious civic republics. Through a historical necessity, doubtless, Germany and Italy, the purest representatives of the antique and the Teutonic types and the fairest provinces in the kingdom of human thought, were brought into this long-lasting connection. From this point of view posterity has no right to complain that the Roman empire was laid like a visitation of Fate on our Fatherland and compelled it for centuries to pour out its life-blood in Italy in order to construct those foundations of general European culture for which modern humanity has essentially Germany to thank."—Gregorovius, *Geschichte der Stadt Rom* (*trans. from the German*), *v.* 3, *p.* 334.

ROMAN LAW, and its lasting influence.—"Roman Law as taught in the writings of the Roman jurists is a science, a science of great perfection, a science so perfect as to almost approach the harmonious finish of art. But Roman Law is not only a marvellous system of the legal customs and concepts of the Romans; its value

is not restricted to students of Roman Law; it has an absolute value for students of any law whatever. In other words the Romans outstripped all other nations, both ancient and modern, in the scientific construction of legal problems. They alone offer that curious example of one nation's totally eclipsing the scientific achievements of all other nations. By law, however, we here understand not all branches of law, as constitutional, criminal, pontifical, and private law, together with jurisprudence. By Roman Law we mean exclusively Roman Private Law. The writings of Roman jurists on constitutional and criminal law have been superseded and surpassed by the writings of more modern jurists. Their writings on questions of Private Law, on the other hand, occupy a unique place; they are, to the present day, considered as the inexhaustible fountain-head, and the inimitable pattern of the science of Private Law. . . . A Roman lawyer, and even a modern French or German lawyer — French and German Private Law being essentially Roman Law — were, and are, never obliged to ransack whole libraries of precedents to find the law covering a given case. They approach a case in the manner of a physician: carefully informing themselves of the facts underlying the case, and then eliciting the legal spark by means of close meditation on the given data according to the general principles of their science. The Corpus juris civilis is one stout volume. This one volume has sufficed to cover billions of cases during more than thirteen centuries. The principles laid down in this volume will afford ready help in almost every case of Private Law, because they emanate from Private Law alone, and have no tincture of non-legal elements."—E. Reich, *Graeco-Roman Institutions, pp.* 3-13.—"'The Responsa prudentum,' or answers of the learned in the law, consisted of explanations of authoritative written documents. It was assumed that the written law was binding, but the responses practically modified and even overruled it. A great variety of rules was thus supposed to be educed from the Twelve Tables [see Rome: B. C. 451–449], which were not in fact to be found there. They could be announced by any jurisconsult whose opinions might, if he were distinguished, have a binding force nearly equal to enactments of the legislature. The responses were not published by their author, but were recorded and edited by his pupils, and to this fact the world is indebted for the educational treatises, called Institutes or Commentaries, which are among the most remarkable features of the Roman system. The distinction between the 'responses' and the 'case law' of England should be noticed. The one consists of expositions by the bar, and the other by the bench. It might have been expected that such a system would have popularized the law. This was not the fact. Weight was only attached to the responses of conspicuous men who were masters of the principles as well as details of jurisprudence. The great development of legal principles at Rome was due to this method of producing law. Under the English system no judge can enunciate a principle until an actual controversy arises to which the rule can be applied; under the Roman theory, there was no limit to the question to which a response might be given, except the skill and ingenuity of the questioner. Every possible phase of a legal principle could thus be examined, and the result would show the symmetrical product of a single master mind. This method of developing law nearly ceased at the fall of the republic. The Responses were systematized and reduced into compendia. The right to make responses was limited by Augustus to a few jurisconsults. The edict of the Prætor became a source of law, and a great school of jurists, containing such men as Ulpian, Paulus, Gaius, and Papinian, arose, who were authors of treatises rather than of responses."—T. W. Dwight, *Introd. to Maine's "Ancient Law."*—"Apart from the more general political conditions on which jurisprudence also, and indeed jurisprudence especially depends, the causes of the excellence of the Roman civil law lie mainly in two features: first, that the plaintiff and defendant were specially obliged to explain and embody in due and binding form the grounds of the demand and of the objection to comply with it; and secondly, that the Romans appointed a permanent machinery for the edictal development of their law, and associated it immediately with practice. By the former the Romans precluded the pettifogging practices of advocates, by the latter they obviated incapable law-making, so far as such things can be prevented at all; and by means of both in conjunction they satisfied, as far as is possible, the two conflicting requirements, that law shall constantly be fixed, and that it shall constantly be in accordance with the spirit of the age. . . . This state [Rome], which made the highest demands on its burgesses and carried the idea of subordinating the individual to the interest of the whole further than any state before or since has done, only did and only could do so by itself removing the barriers to intercourse and unshackling liberty quite as much as it subjected it to restriction. In permission or in prohibition the law was always absolute. . . . A contract did not ordinarily furnish a ground of action, but where the right of the creditor was acknowledged, it was so all-powerful that there was no deliverance for the poor debtor, and no humane or equitable consideration was shown towards him. It seemed as if the law found a pleasure in presenting on all sides its sharpest spikes, in drawing the most extreme consequences, in forcibly obtruding on the bluntest understanding the tyrannic nature of the idea of right. The poetical form and the genial symbolism, which so pleasingly prevail in the Germanic legal ordinances, were foreign to the Roman; in his law all was clear and precise; no symbol was employed, no institution was superfluous. It was not cruel; everything necessary was performed without tedious ceremony, even the punishment of death; that a free man could not be tortured was a primitive maxim of Roman law, to obtain which other peoples have had to struggle for thousands of years. Yet this law was frightful in its inexorable severity, which we cannot suppose to have been very greatly mitigated by humanity in practice, for it was really the law of the people; more terrible than Venetian piombi and chambers of torture was that series of living entombments which the poor man saw yawning before him in the debtors' towers of the rich. But the greatness of Rome was involved in, and was based upon, the fact that the Roman people ordained for itself and endured a system of law, in which the eternal principles of freedom and

of subordination, of property and of legal redress, reigned and still at the present day reign unadulterated and unmodified."—T. Mommsen, *History of Rome, bk.* 1, *ch.* 8 *and* 11 (*v.* 1).—"Though hard to realise, and especially so for Englishmen, it is true that modern Europe owes to the Romans its ancient inherited sense of the sacredness of a free man's person and property, and its knowledge of the simplest and most rational methods by which person and property may be secured with least inconvenience to the whole community. The nations to come after Rome were saved the trouble of finding out all this for themselves; and it may be doubted whether any of them had the requisite genius. We in England, for example, owe the peculiar cumbrousness of our legal system to the absence of those direct Roman influences, which, on the continent, have simplified and illuminated the native legal material."—W. W. Fowler, *The City-State of the Greeks and Romans, p.* 209.—"In all the lands which had obeyed Rome, and were included in the nominal supremacy of the revived Western Empire, it [Roman Law] acquired a prevalence and power not derived from the sanction of any distinct human authority. No such authority was for the time being strong enough to compete in men's esteem and reverence with the shadow of majesty that still clung to the relics of Roman dominion. Thus the Roman law was not merely taken as (what for many purposes and in many states it really was) a common groundwork of institutions, ideas, and method, standing towards the actual rules of a given community somewhat in the same relation as in the Roman doctrine ius gentium to ius civile; but it was conceived as having, by its intrinsic reasonableness, a kind of supreme and eminent virtue, and as claiming the universal allegiance of civilised mankind. If I may use a German term for which I cannot find a good English equivalent, its principles were accepted not as ordained by Cæsar, but as in themselves binding on the Rechtsbewusstsein of Christendom. They were part of the dispensation of Roman authority to which the champions of the Empire in their secular controversy with the Papacy did not hesitate to attribute an origin no less divine than that of the Church itself. Even in England (though not in English practice, for anything I know) this feeling left its mark. In the middle of the thirteenth century, just when our legal and judicial system was settling into its typical form, Bracton copied whole pages of the Bolognese glossator Azo. On the Continent, where there was no centralised and countervailing local authority, the Roman law dwarfed everything else. Yet the law of the Corpus Juris and the glossators was not the existing positive law of this or that place: the Roman law was said to be the common law of the Empire, but its effect was always taken as modified by the custom of the country or city. 'Stadtrecht bricht Landrecht, Landrecht bricht gemein Recht.' Thus the main object of study was not a system of actually enforced rules, but a type assumed by actual systems as their exemplar without corresponding in detail to any of them. Under such conditions it was inevitable that positive authority should be depreciated, and the method of reasoning, even for practical purposes, from an ideal fitness of things, should be exalted, so that the distinction between laws actually administered and rules elaborated by the learned as in accordance with their assumed principles was almost lost sight of."—Sir F. Pollock, *Oxford Lectures, pp.* 30–32.—"In some of the nations of modern Continental Europe (as, for example, in France), the actual system of law is mainly of Roman descent; and in others of the same nations (as, for example in the States of Germany), the actual system of law, though not descended from the Roman, has been closely assimilated to the Roman by large importations from it. Accordingly, in most of the nations of modern Continental Europe, much of the substance of the actual system, and much of the technical language in which it is clothed, is derived from the Roman Law, and without some knowledge of the Roman Law, the technical language is unintelligible; whilst the order or arrangement commonly given to the system, imitates the exemplar of a scientific arrangement which is presented by the Institutes of Justinian. Even in our own country, a large portion of the Ecclesiastical and Equity, and some (though a smaller) portion of the Common, Law, is derived immediately from the Roman Law, or from the Roman through the Canon. Nor has the influence of the Roman Law been limited to the positive law of the modern European nations. For the technical language of this all-reaching system has deeply tinctured the language of the international law or morality which those nations affect to observe. . . . Much has been talked of the philosophy of the Roman Institutional writers. Of familiarity with Grecian philosophy there are few traces in their writings, and the little that they have borrowed from that source is the veriest foolishness: for example, their account of Jus naturale, in which they confound law with animal instincts; law, with all those wants and necessities of mankind which are causes of its institution. Nor is the Roman law to be resorted to as a magazine of legislative wisdom. The great Roman Lawyers are, in truth, expositors of a positive or technical system. Not Lord Coke himself is more purely technical. Their real merits lie in their thorough mastery of that system; in their command of its principles; in the readiness with which they recall, and the facility and certainty with which they apply them. In support of my own opinion of these great writers I shall quote the authority of two of the most eminent Jurists of modern times. 'The permanent value of the Corpus Juris Civilis,' says Falck, 'does not lie in the Decrees of the Emperors, but in the remains of juristical literature which have been preserved in the Pandects. Nor is it so much the matter of these juristical writings, as the scientific method employed by the authors in explicating the notions and maxims with which they have to deal, that has rendered them models to all succeeding ages, and pre-eminently fitted them to produce and to develope those qualities of the mind which are requisite to form a Jurist.' And Savigny says, 'It has been shown above, that, in our science, all results depend on the possession of leading principles; and it is exactly this possession upon which the greatness of the Roman jurists rests. The notions and maxims of their science do not appear to them to be the creatures of their own will; they are actual beings, with whose existence and genealogy they have become familiar from long and intimate intercourse. Hence their

whole method of proceeding has a certainty which is found nowhere else except in mathematics, and it may be said without exaggeration that they calculate with their ideas. If they have a case to decide, they begin by acquiring the most vivid and distinct perception of it, and we see before our eyes the rise and progress of the whole affair, and all the changes it undergoes. It is as if this particular case were the germ whence the whole science was to be developed. Hence, with them, theory and practice are not in fact distinct; their theory is so thoroughly worked out as to be fit for immediate application, and their practice is uniformly ennobled by scientific treatment. In every principle they see a case to which it may be applied; in every case, the rule by which it is determined; and in the facility with which they pass from the general to the particular and the particular to the general, their mastery is indisputable.' In consequence of this mastery of principles, of their perfect consistency ('elegantia') and of the clearness of the method in which they are arranged, there is no positive system of law which it is so easy to seize as a whole. The smallness of its volume tends to the same end."—J. Austin, *Lectures on Jurisprudence, v.* 3, *pp.* 358–361.—"A glance at the history of those countries in Europe that did not adopt Roman Law will prove and illustrate the political origin of the 'reception' of this law in Germany and France still more forcibly. The Kingdom of Hungary never adopted the theory or practice of Roman Law. This seems all the more strange since Hungary used Latin as the official language of her legislature, laws, and law-courts down to the first quarter of this century. A country so intensely imbued with the idiom of Rome would seem to be quite likely to adopt also the law of Rome. This, however, the Hungarians never did. Their law is essentially similar to the common law of England, in that it is derived mainly from precedents and usage. The unwillingness of the Hungarians to adopt Roman Law was based on a political consideration. Roman Law, they noticed, requires a professional and privileged class of jurists who administer law to the exclusion of all other classes. In German territories the privileged class of civilians were in the service of the rulers. But it so happened that ever since 1526 the ruler, or at least the nominal head of Hungary, was a foreigner: the Archduke of Austria, or Emperor of Germany. Hence to introduce Roman Law in Hungary would have been tantamount to surrendering the law of the country to the administration of foreigners, or of professors, who had a vital interest to work in the interest of their foreign employer, the Archduke of Austria. Consequently the Hungarians prudently abstained from the establishment of numerous Universities, and persistently refused to adopt Roman Law, the scientific excellence of which they otherwise fully acknowledged. For, the Hungarians always were, and to the present moment still are, the only nation on the continent who maintained an amount of political liberty and self-government quite unknown to the rest of continental Europe, particularly in the last two centuries. The same reason applies to England. England never adopted Roman Law, because it was against the interests of English liberty to confide the making and interpretation of law to the hands of a privileged class of jurists. As said before, Roman Law cannot be adopted unless you adopt a privileged class of professional jurists into the bargain. The hatred of the English was not so much a hatred of civil law, but of the civilians. These jurists develop law on the strength of theoretical principles, and actual cases are not decided according to former judgments given in similar cases, but by principles obtained through theoretico-practical speculation. Hence there is no division of questions of law and fact in civil cases; nor is there, in a system of Roman Private Law, any room for juries, and thus law is taken completely out of the hands of the people. This, however, the English would not endure, and thus they naturally fell to confiding their law to their judges. English common law is judge-made law."—E. Reich, *Græco-Roman Institutions, pp.* 62–63.—See, also, Corpus Juris Civilis; and Education, Mediæval: Italy.

ROMAN PEACE.—"The benefits conferred upon the world by the universal dominion of Rome were of quite inestimable value. First of these benefits, . . . was the prolonged peace that was enforced throughout large portions of the world where chronic warfare had hitherto prevailed. The 'pax romana' has perhaps been sometimes depicted in exaggerated colours; but as compared with all that had preceded, and with all that followed, down to the beginning of the nineteenth century, it deserved the encomiums it has received."—J. Fiske, *American Political Ideas viewed from the Standpoint of Universal History, lect.* 2.

ROMAN QUESTION, The. See Italy: A. D. 1862–1866.

ROMAN ROADS IN BRITAIN.—"Four principal lines of road have been popularly known as 'the four Roman ways.' In the time of Edward the Confessor, and probably much earlier, there were four roads in England protected by the king's peace. These were called Watlinge-strete, Fosse, Hickenilde-strete, and Ermine-strete. Watling-street runs from London to Wroxeter. The Fosse from the sea coast near Seaton in Devonshire to Lincoln. The Ikenild-street from Iclingham near Bury St. Edmund's in Suffolk, to Wantage in Berkshire, and on to Cirencester and Gloucester. The Ermingstreet ran through the Fenny district of the east of England. These streets seem to have represented a combination of those portions of the Roman roads which in later times were adopted and kept in repair for the sake of traffic. . . . The name of 'Watling-street' became attached to other roads, as the Roman road beyond the Northumbrian wall, which crossed the Tyne at Corbridge and ran to the Frith of Forth at Cramond, bears that name; and the Roman road beyond Uriconium (Wroxeter) to Bravinium (Leintwarden) Salop, is also called Watlingstreet. The street in Canterbury through which the road from London to Dover passes is known

as Watling-street, and a street in London also bears that name. . . . Two lines of road also bear the name of the Icknield-street, or Hikenilde-street; but there is some reason to believe that the Icknield-street was only a British trackway and never became a true Roman road."—H. M. Scarth, *Roman Britain, ch.* 13.—"In the fifth year after the Conquest, inquisition was made throughout the kingdom into the ancient laws and customs of England. . . . From this source we learn, that there were at that time in England four great roads protected by the King's Peace, of which two ran lengthways through the island, and two crossed it, and that the names of the four were respectively, Watlinge-strete, Fosse, Hikenilde-strete and Ermingstrete. These are the roads which are popularly but incorrectly known as 'the four Roman ways.' . . . The King's Peace was a high privilege. Any offence committed on these highways was tried, not in the local court, where local influence might interfere with the administration of justice, but before the king's own officers."—E. Guest, *Origines Celticae, v.* 2*: The Four Roman Ways.*—See, also, WATLING STREET.

ROMAN WALLS IN BRITAIN.—There were two great fortified walls constructed by the Romans in Britain, but the name is most often applied to the first one, which was built under the orders of the Emperor Hadrian, from the Solway to the Tyne, 70 miles long and from 18 to 19 feet high, of solid masonry, with towers at intervals and with ditches throughout. In the reign of Antoninus Pius a second fortified line, farther to the north, extending from the Forth to the Clyde, was constructed. This latter was a rampart of earth connecting numerous forts. Hadrian's wall was strengthened at a later time by Severus and is sometimes called by his name. Popularly it is called "Graham's Dike." Both walls were for the protection of Roman Britain from the wild tribes of Caledonia.—E. Guest, *Origines Celticae, v.* 2, *pp.* 88–94.

ROMANCE LANGUAGE, Earliest Monument of. See STRASBURG: A. D. 842.

ROMANIA, The Empire of.—The new feudal empire, constituted by the Crusaders and the Venetians, after their conquest of Constantinople, and having the great and venerable but half ruined capital of the Byzantines for its seat, received the name of the Empire of Romania. The reign of its first emperor, the excellent Baldwin of Flanders, was brought to a tragical end in little more than a year from his coronation. Summoned to quell a revolt at Adrianople, he was attacked by the king of Bulgaria, defeated, taken prisoner and murdered within a year by his savage captor. He was succeeded on the throne by his brother Henry, a capable, energetic and valiant prince; but all the ability and all the vigor of Henry could not give cohesion and strength to an empire which was false in its constitution and predestined to decay. On Henry's death, without children (A. D. 1216), his sister Yoland's husband, Peter of Courtenay, a French baron, was elected emperor; but that unfortunate prince, on attempting to reach Constantinople by a forced march through the hostile Greek territory of Epirus, was taken captive and perished in an Epirot prison. His eldest son, Philip of Namur, wisely refused the imperial dignity; a younger son, Robert, accepted it, and reigned feebly until 1228, when he died. Then the venerable John de Brienne, ex-king of Jerusalem, was elected emperor-regent for life, the crown to pass on his death to Baldwin of Courtenay, a young brother of Robert. "John de Brienne died in 1237, after living to witness his empire confined to a narrow circuit round the walls of Constantinople. Baldwin II. prolonged the existence of the empire by begging assistance from the Pope and the king of France; and he collected the money necessary for maintaining his household and enjoying his precarious position, by selling the holy relics preserved by the Eastern Church [such, for example, as the crown of thorns, the bonds, the sponge and the cup of the crucifixion, the rod of Moses, etc.]. He was fortunate in finding a liberal purchaser in St. Louis. . . . At length, in the year 1261, a division of the Greek army [of the empire of Nicæa] surprised Constantinople, expelled Baldwin, and put an end to the Latin power [see GREEK EMPIRE OF NICÆA: A. D. 1204–1261], without the change appearing to be a revolution of much importance beyond the walls of the city."—G. Finlay, *Hist. of Greece from its Conquest by the Crusaders, ch.* 4.—In the last days of the sham empire, Baldwin II. maintained his court "by tearing the copper from the domes of the public buildings erected by the Byzantine emperors, which he coined into money, and by borrowing gold from Venetian bankers, in whose hands he placed his eldest son Philip as a pledge."—G. Finlay, *Hist. of the Byzantine and Greek Empires, from* 716 *to* 1453, *bk.* 4, *ch.* 1, *sect.* 3 (*v.* 2).

ROMANS, King of the.—Henry II., —St. Henry by canonization—the last of the German emperors of the House of Saxony (A. D. 1002–1024), abstained from styling himself "Emperor," for some years, until he had gone to Rome and received the imperial crown from the hands of the Pope. Meantime he invented and assumed the title of King of the Romans. His example was followed by his successors. The King of the Romans in later history was Emperor of the Holy Roman Empire in embryo.—S. A. Dunham, *Hist. of the Germanic Empire, bk.* 1, *ch.* 2 (*v.* 1).—"It was not till the reign of Maximilian that the actual coronation at Rome was dispensed with, and the title of Emperor taken immediately after the election."—H. Hallam, *The Middle Ages, ch.* 3, *pt.* 1.

A Logical Outline of Roman History

In which the Dominant Conditions and

Influences are Distinguished by Colors.

Physical or material.
Social and political.
Intellectual, moral and religious.

Three Latin and Sabine tribes of an early day established their settlements on neighboring hills, by the banks of the Tiber, in the midland of Italy, which is the midland of the Mediterranean or midland sea. They were throned, as it were, at the center of the only wide dominion in which a virile and energetic civilization could rise in ancient times. — *Geographical position.*

The union of these three tribes formed the patrician nucleus of Rome. Around them gathered another population of kindred blood, which acquired a certain footing of association with them, but not immediately on equal terms. The precedence and superiority of the primal families, in rank and in rights, was jealously maintained, and the later-coming plebs were received into a pseudo-citizenship which carried more burdens than privileges with it. — *Patricians and Plebeians.*

By what impulse of character, or through what favor of circumstance, at the beginning, this infant city-state grew masterful in war, over all its neighbors, none can tell. But as it did so, the sturdy plebeian populace which fought its battles resented more and more the greedy monopoly of offices and of conquered lands to which the patricians clung, and a struggle between classes occurred which shaped the domestic politics of Rome for more than two centuries.

Before that contest came to the surface of history, the oligarchy of the city had cast out the kings which were its early chiefs, and had put two yearly-chosen consuls in their place, thus founding the great Roman Republic, with a purely aristocratic constitution. Then the battle of the plebs for equality of rights and powers was promptly opened, and the long, significant process of the democratizing of the state began. — *B. C. 509. Founding of the Republic.*

By their first victory the commons secured, for their own leadership and defense, a remarkable magistracy, protected by sanctities and armed with powers which never have been used in government elsewhere, before or since. With that great tribunician authority, invincible when capably and boldly wielded, they won their way, step by step, to equality in the high offices and sacred colleges of the state; to legislative equality in their assembly; to legality of intermarriage with the patrician class; and to participation in the public lands. — *B. C. 492. Tribunes of the Plebs.*

But while plebs and patricians thus strove with each other at home, they were united against their neighbors in many wars, which seldom turned to their disadvantage. Æquians, Volscians, Etruscans, Latin allies, Samnites, Gauls, Greeks of south Italy, yielded in turn to their arms, until the whole Italian peninsula had been brought under Roman rule. — *B. C. 489–275. Conquest of Italy.*

Then followed intrusion in Sicily, collision with Carthage in that island, and the half century of Punic wars, which tried the Republic to the extremity of its powers, but which left it with no rival in the Mediterranean world. — *B. C. 264–202. Punic Wars.*

From that time the career of Roman conquest was rapidly pursued in widening fields. Sicily, Spain, Greece, Macedonia, Asia Minor, Southern Gaul, Northern Africa, submitted as provinces to the proconsuls of Rome. — *B. C. 214–146. Expanding dominion.*

It was corrupted by the spoils of conquest and the

of slavery. A middle class had practically disappeared. Freemen had been driven from industrial callings by servile competition; the small farms of rural Rome had been swallowed up in great slave-worked estates; the public lands had been drawn, by one trick of law or another, into private hands. The greater mass of the common people had degenerated to a worthless mob. The democratic power which their ancestors won still belonged to them, but they had lost the sense and the spirit to exercise it, except fitfully and threateningly, for purposes that were generally base. A new nobility had risen out of the plebeian ranks, the senate, reinforced by it, and helped by the exigencies of the long period of war, had recovered control of government, keeping ascendancy over the mob by political arts and bribes.

Social and political degeneration.

Thus came the fatal time when demagogues played with the passions of that fickle mob which bore the awful sovereignty of Rome in its keeping; and when patriots were forced to be as demagogues, if they sought to lift Roman citizenship from its muddy degradation. In the undertakings of the Gracchi, perhaps something of both demagogue and patriot was combined; but what they did only shook the decaying political fabric and unsettled it more. The extension of Roman citizenship to the Italian allies, which Caius Gracchus contended for, and which might have grounded the Republic on broad bases of nationality, was yielded in the next generation, but too late, and after a ruinous war. From the embers of that fiery Social War broke the flames of civil strife in which the old constitution was finally consumed. Marius, Sulla, Pompeius, Cæsar, were distinguished among its destroyers; Cicero and Cato earned their immortality in its defense.

B. C. 133–121.
The Gracchi.

B. C. 90–88.
The Social War.

B. C. 88–45.
Civil Wars.

By the genius of Cæsar a new sovereignty — an imperial autocracy — was founded, on the ruins of the shattered Republic. By the shrewdness of his wise nephew, Octavius, its enduring organization was shaped. The mighty fabric of the Roman Empire which then arose, to dominate the world for centuries, and to dominate the history of the world perhaps forever, owed its greatness altogether to the effective organization of government which it embodied. It inherited all the corruptions and diseases in society which had sickened and destroyed the Republic; but it extinguished factions at the seat of power, established authority there, and perfected a radiating mechanism of provincial administration such as had not been known in human experience before. Hence, emperors might be madmen or fiends or fools, as many among them were, and Rome might be a sink of all vices and miseries, as it commonly was, and the whole Empire might be grievously oppressed, as it seldom failed to be, but the working of the administrative system went on, with little disturbance or change, — so mighty and irresistible in its machinery that it seemed to mankind like a part of the natural world, and they lost the ability to think of any different political state.

B. C. 45–A. D. 476.
The Empire.

Christianity, springing up in Judæa within the first century of the Empire, spread through and around it like an interlacing vine, — sweet and wholesome in its early fruits, strong as a bond, powerful as a regenerating influence. But when the ecclesiasticism of a politically fashioned Church had been grafted on the Christian vine, it bore then the evil seeds of new corruption, new discord, new maladies for the Roman world.

Christianity.

So there came, at last, a time when the long-enduring frame of Roman government could no longer bear the increasing dead-weight of social paralysis within and the increasing pressure of barbaric enemies from without. Of real vitality in the Empire there had been little for half-a-century before its fall in the West.

A. D. 476.
Fall of the Empire in the West.

It survived in the East, because its Greek capital was more impregnable, and more commandingly placed for the continued centralization of a waning power; and because habit and routine have more potency in the Eastern than in the Western world.

A. D. 476–1453.
Survival of the Eastern Empire.

Once Western Europe obeyed again, after more than four centuries, the obstinate habit of homage to Rome, when it restored the Empire of the Cæsars, though less in fact than in name.

A. D. 800.
Revival of the Western Empire.

ROME.

The beginning of the City-State and the origin of its name.—The three tribes of original Romans who formed the Patrician order.—The Plebs and their inferior citizenship.—"About fourteen miles up from the mouth of the river Tiber, hills of moderate elevation rise on both banks of the stream, higher on the right, lower on the left bank. With the latter group there has been closely associated for at least two thousand five hundred years the name of the Romans. We are unable, of course, to tell how or when that name arose; this much only is certain, that in the oldest form of it known to us the inhabitants of the canton are called not Romans, but (by a shifting of sound that frequently occurs in the earlier period of a language, but fell very early in abeyance in Latin) Ramnians (Ramnes), a fact which constitutes an expressive testimony to the immemorial antiquity of the name. Its derivation cannot be given with certainty; possibly Ramnes may mean 'foresters,' or 'bushmen.' But they were not the only dwellers on the hills by the bank of the Tiber. In the earliest division of the burgesses of Rome a trace has been preserved of the fact that that body arose out of the amalgamation of three cantons once probably independent, the Ramnians, Tities, and Luceres, into a single commonwealth—in other words, out of such a 'synoikismos' as that from which Athens arose in Attica. The great antiquity of this threefold division of the community is perhaps best evinced by the fact that the Romans, in matters especially of constitutional law, regularly used the forms tribuere ('to divide into three') and tribus ('a third') in the general sense of 'to divide' and 'a part,' and the latter expression (tribus) like our 'quarter,' early lost its original signification of number. . . . That the Ramnians were a Latin stock cannot be doubted, for they gave their name to the new Roman commonwealth, and therefore must have substantially determined the nationality of the united community. Respecting the origin of the Luceres nothing can be affirmed, except that there is no difficulty in the way of our assigning them, like the Ramnians, to the Latin stock. The second of these communities, on the other hand, is with one consent derived from Sabina. . . . And, as in the older and more credible traditions, without exception, the Tities take precedence of the Ramnians, it is probable that the intruding Tities compelled the older Ramnians to accept the 'synoikismos.' . . . Long, in all probability, before an urban settlement arose on the Tiber, these Ramnians, Tities, and Luceres, at first separate, afterwards united, had their stronghold on the Roman hills, and tilled their fields from the surrounding villages. The 'wolf festival' (Lupercalia), which the gens of the Quinctii celebrated on the Palatine hill, was probably a tradition from these primitive ages—a festival of husbandmen and shepherds, which more than any other preserved the homely pastimes of patriarchal simplicity, and, singularly enough, maintained itself longer than all the other heathen festivals in Christian Rome. From these settlements the later Rome arose."—T. Mommsen, *Hist. of Rome, bk.* 1, *ch.* 4.—"Rome did not seem to be a single city; it appeared like a confederation of several cities, each one of which was attached by its origin to another confederation. It was the centre where the Latins, Etruscans, Sabellians, and Greeks met. Its first king was a Latin; the second, a Sabine; the fifth was, we are told, the son of a Greek; the sixth was an Etruscan. Its language was composed of the most diverse elements. The Latin predominated, but Sabellian roots were numerous, and more Greek radicals were found in it than in any other of the dialects of Central Italy. As to its name, no one knew to what language that belonged. According to some, Rome was a Trojan word; according to others, a Greek word. There are reasons for believing it to be Latin, but some of the ancients thought it to be Etruscan. The names of Roman families also attest a great diversity of origin. . . . The effect of this mixing of the most diverse nations was, that from the beginning Rome was related to all the peoples that it knew. It could call itself Latin with the Latins, Sabine with the Sabines, Etruscan with the Etruscans, and Greek with the Greeks. Its national worship was also an assemblage of several quite different worships, each one of which attached it to one of these nations."—Fustel de Coulanges, *The Ancient City, bk.* 5, *ch.* 2.—"The whole history of the world has been determined by the geological fact that at a point a little below the junction of the Tiber and the Anio the isolated hills stand nearer to one another than most of the other hills of Latium. On a site marked out above all other sites for dominion, the centre of Italy, the centre of Europe, as Europe then was, a site at the junction of three of the great nations of Italy, and which had the great river as its highway to lands beyond the bounds of Italy, stood two low hills, the hill which bore the name of Latin Saturn, and the hill at the meaning of whose name of Palatine scholars will perhaps guess for ever. These two hills, occupied by men of two of the nations of Italy, stood so near to one another that a strait choice indeed was laid on those who dwelled on them. They must either join together on terms closer than those which commonly united Italian leagues, or they must live a life of border warfare more ceaseless, more bitter, than the ordinary warfare of Italian enemies. Legend, with all likelihood, tells us that warfare was tried; history, with all certainty, tells us that the final choice was union. The two hills were fenced with a single wall; the men who dwelled on them changed from wholly separate communities into tribes of a single city. Changes of the same kind took place on not a few spots of Greece and Italy; not a few of the most famous cities of both lands grew on this wise out of the union of earlier detached settlements. But no other union of the kind, not even that which called Sparta into being out of five villages of an older day, could compare in its effects on all later time with the union of those two small hill-fortresses into a single city. For that city was Rome; the hill of Saturn became the site of Rome's capitol, the scene of her triumphs, the home of her patron gods. The hill on the other side of the swampy dale became the dwelling-place of Rome's Cæsars, and handed on its name of Palatium as the name for the homes of all the kings of the earth. Around those hills as a centre,

Latium, Italy, Mediterranean Europe, were gathered in, till the world was Roman, or rather till the world was Rome. . . . Three tribes, settlers on three hills, were the elements of which the original commonwealth was made. Whether there was anything like a nobility within the tribes themselves, whether certain houses had any precedence, any preferences in the disposal of offices, we have no means of judging. That certain houses are far more prominent in legend and history than others may suggest such a thought, but does not prove it. But one thing is certain; these three tribes, these older settlers, were the original Roman people, which for a while numbered no members but themselves. They were the patres, the fathers, a name which in its origin meant no more than such plain names as goodman, housefather, and the like. In the Roman polity the father only could be looked on as a citizen in the highest sense; his children, his grand-children, were in his power, from which, just like slaves, they could be released only by his own special act. Such was the origin of the name fathers, patres, patricians, a name round which such proud associations gathered, as the three tribes who had once been the whole Roman people shrank up into a special noble class in the midst of a new Roman people which grew up around them, but which they did not admit to the same rights as themselves. The incorporation of a third tribe marks the end of the first period of Roman history. These were the Luceres of the Cœlian, admitted perhaps at first with rights not quite on a level with those of the two earlier tribes, the Ramnes of the Palatine, the oldest Romans of all, and the Tities of the Capitoline or hill of Saturn. The oldest Roman people was now formed. No fourth tribe was ever admitted; the later tribes of Rome, it must be remembered, are a separate division which have nothing to do with these old patrician tribes. And it must have been a most rare favour for either individuals or whole houses to be received into any of the three original tribes. . . . Now, if the privileged body of citizens is small, and if circumstances tend to make the settlement of non-privileged residents large, here is one of the means by which a privileged order in the narrower sense, a nobility in the midst of a nation or people may arise. An order which takes in few or no new members tends to extinction; if it does not die out, it will at least sensibly lessen. But there is no limit to the growth of the non-privileged class outside. Thus the number of the old burghers will be daily getting smaller, the number of the new residents will be daily getting larger, till those who once formed the whole people put on step by step the character of an exclusive nobility in the midst of the extended nation which has grown up around them. By this time they have acquired all the attributes of nobility, smallness of numbers, antiquity, privilege. And their possession of the common land—a possession shared constantly by a smaller number—is likely to give them a fourth attribute which, vulgarly at least, goes to swell the conception of nobility, the attribute of wealth. . . . Thus around the original people of Rome, the populus, the patres, the three ancient tribes, the settlers on the three earliest hills of Rome, arose a second people, the plebs. The whole history of Rome is a history of incorporation. The first union between the Capitoline and Palatine hills was the first stage of the process which at last made Romans of all the nations round the Mediterranean sea. But the equal incorporation of which that union was the type had now ceased, not to begin again for ages. Whatever amount of belief we give to the legends of Roman wars and conquests under the kings, we can hardly doubt that the territory of several neighbouring towns was incorporated with the Roman state, and that their people, whether they removed to Rome or went on occupying their own lands elsewhere, became Romans, but not as yet full Romans. They were Romans in so far as they ceased to be members of any other state, in so far as they obeyed the laws of Rome, and served in the Roman armies. But they were not Romans in the sense of being admitted into the original Roman body; they had no votes in the original Roman assembly; they had no share in its public land; they were not admissible to the high offices of the state. They had an organization of their own; they had their own assemblies, their own magistrates, their own sacred rights, different in many things from those of the older Roman People. And we must remember that, throughout the Roman history, when any town or district was admitted to any stage, perfect or imperfect, of Roman citizenship, its people were admitted without regard to any distinctions which had existed among them in their elder homes. The patricians of a Latin town admitted to the Roman franchise became plebeians at Rome. Thus from the beginning, the Roman plebs contained families which, if the word 'noble' has any real meaning, were fully as noble as any house of the three elder tribes. Not a few too of the plebeians were rich; rich and poor, they were the more part land-owners; no mistake can be greater than that which looks on the Roman plebs as the low multitude of a town. As we first see them, the truest aspect of them is that of a second nation within the Roman state, an inferior, a subject, nation, shut out from all political power, subject in many things to practical oppression, but which, by its very organization as a subject nation, was the more stirred up to seek, and the better enabled to obtain, full equality with the elder nation to which it stood side by side as a subject neighbour."—E. A. Freeman, *The Practical Bearings of European History* (*Lectures to American Audiences*), *pp.* 278–279, *and* 285–292.—See, also, ITALY, ANCIENT; LATIUM; ALBA; and SABINES.

Early character and civilization of the Romans.—Opposing theories.—"That the central position of Rome, in the long and narrow peninsula of Italy, was highly favourable to her Italian dominion, and that the situation of Italy was favourable to her dominion over the countries surrounding the Mediterranean, has been often pointed out. But we have yet to ask what launched Rome in her career of conquest, and, still more, what rendered that career so different from those of ordinary conquerors? . . . About the only answer that we get to these questions is race. The Romans, we are told, were by nature a peculiarly warlike race. 'They were the wolves of Italy,' says Mr. Merivale, who may be taken to represent fairly the state of opinion on this subject. . . . But the further we inquire, the more reason there appears to be for believing that peculiarities of race are themselves origi-

nally formed by the influence of external circumstances on the primitive tribe; that, however marked and ingrained they may be, they are not congenital and perhaps not indelible. . . . Thus, by ascribing the achievements of the Romans to the special qualities of their race, we should not be solving the problem, but only stating it again in other terms. . . .What if the very opposite theory to that of the she-wolf and her foster-children should be true? What if the Romans should have owed their peculiar and unparalleled success to their having been at first not more warlike, but less warlike than their neighbours? It may seem a paradox, but we suspect that in their imperial ascendency is seen one of the earliest and not least important steps in that gradual triumph of intellect over force, even in war, which has been an essential part of the progress of civilization. The happy day may come when Science in the form of a benign old gentleman with a bald head and spectacles on nose, holding some beneficent compound in his hand, will confront a standing army, and the standing army will cease to exist. That will be the final victory of intellect. But in the meantime, our acknowledgements are due to the primitive inventors of military organization and military discipline. They shivered Goliath's spear. A mass of comparatively unwarlike burghers, unorganized and undisciplined, though they may be the hope of civilization from their mental and industrial qualities, have as little of collective as they have of individual strength in war; they only get in each other's way, and fall singly victims to the prowess of a gigantic barbarian. He who first thought of combining their force by organization, so as to make their numbers tell, and who taught them to obey officers, to form regularly for action, and to execute united movements at the word of command, was, perhaps, as great a benefactor of the species as he who grew the first corn, or built the first canoe. What is the special character of the Roman legends, so far as they relate to war? Their special character is that they are legends not of personal prowess but of discipline. Rome has no Achilles. The great national heroes, Camillus, Cincinnatus, Papirius Cursor, Fabius Maximus, Manlius, are not prodigies of personal strength and valour, but commanders and disciplinarians. The most striking incidents are incidents of discipline. The most striking incident of all is the execution by a commander of his own son for having gained a victory against orders. 'Disciplinam militarem,' Manlius is made to say, 'qua stetit ad hanc diem Romana res.' Discipline was the great secret of Roman ascendency in war. . . . But how came military discipline to be so specially cultivated by the Romans? . . . Dismissing the notion of occult qualities of race, we look for a rational explanation in the circumstances of the plain which was the cradle of the Roman Empire. It is evident that in the period designated as that of the kings, when Rome commenced her career of conquest, she was, for that time and country, a great and wealthy city. This is proved by the works of the kings, the Capitoline Temple, the excavation for the Circus Maximus, the Servian Wall, and above all the Cloaca Maxima. Historians have indeed undertaken to give us a very disparaging picture of the ancient Rome. . . . But the Cloaca Maxima is in itself conclusive evidence of a large population, of wealth, and of a not inconsiderable degree of civilization. Taking our stand upon this monument, and clearing our vision entirely of Romulus and his asylum, we seem dimly to perceive the existence of a deep prehistoric background, richer than is commonly supposed in the germs of civilization,—a remark which may in all likelihood be extended to the background of history in general. Nothing surely can be more grotesque than the idea of a set of wolves, like the Norse pirates before their conversion to Christianity, constructing in their den the Cloaca Maxima. That Rome was comparatively great and wealthy is certain. We can hardly doubt that she was a seat of industry and commerce, and that the theory which represents her industry and commerce as having been developed subsequently to her conquests is the reverse of the fact. Whence, but from industry and commerce, could the population and the wealth have come? Peasant farmers do not live in cities, and plunderers do not accumulate. Rome had around her what was then a rich and peopled plain; she stood at a meeting-place of nationalities; she was on a navigable river, yet out of the reach of pirates; the sea near her was full of commerce, Etruscan, Greek, and Carthaginian. . . . Her patricians were financiers and money-lenders. . . . Even more decisive is the proof afforded by the early political history of Rome. . . . The institutions which we find existing in historic times must have been evolved by some such struggle between the orders of patricians and plebeians as that which Livy presents to us. And these politics, with their parties and sections of parties, their shades of political character, the sustained interest which they imply in political objects, their various devices and compromises, are not the politics of a community of peasant farmers, living apart each on his own farm and thinking of his own crops: they are the politics of the quick-witted and gregarious population of an industrial and commercial city. . . . Of course when Rome had once been drawn into the career of conquest, the ascendency of the military spirit would be complete; war, and the organization of territories acquired in war, would then become the great occupation of her leading citizens; industry and commerce would fall into disesteem, and be deemed unworthy of the members of the imperial race. . . . Even when the Roman nobles had become a caste of conquerors and pro-consuls, they retained certain mercantile habits; unlike the French aristocracy, and aristocracies generally, they were careful keepers of their accounts, and they showed a mercantile talent for business, as well as a more than mercantile hardness, in their financial exploitation of the conquered world. Brutus and his contemporaries were usurers like the patricians of the early times. No one, we venture to think, who has been accustomed to study national character, will believe that the Roman character was formed by war alone: it was manifestly formed by war combined with business."—Goldwin Smith, *The Greatness of the Romans* (*Contemp. Rev., May*, 1878).—A distinctly contrary theory of the primary character and early social state of the Romans is presented in the following: "The Italians were much more backward than the Greeks, for their land is turned to the west, to Spain, to Gaul, to Africa, which could teach them nothing, while Greece is turned to

the east, to the coasts along which the civilisations of the Nile and the Tigris spread through so many channels. Besides, the country itself is far less stimulating to its inhabitants: compared to Greece, Italy is a continental country whose inhabitants communicate more easily by land than by sea, except in the two extreme southern peninsulas, which characteristically were occupied by Greek colonies whose earlier development was more brilliant than that of the mother country. . . . The equable fertility of the land was itself a hindrance. As far back as we can form any conjecture, the bulk of the people were shepherds or husbandmen; we cannot trace a time like that reflected in the Homeric poems, when high-born men of spirit went roving in their youth by land and sea, and settled down in their prime with a large stock of cattle and a fair stud of horses, to act as referees in peace and leaders in war to the cottars around. . . . Other differences less intelligible to us were not less weighty: the volcanic character of the western plain of central Italy, the want of a fall to the coast (which caused some of the watercourses to form marshes, and made the Tiber a terror to the Romans for its floods), told in ways as yet untraced on the character of the inhabitants. For one thing the ancient worship of Febris and Mefitis indicates a constant liability to fever; then the air of Greece is lighter than the air of Italy, and this may be the reason that it was more inspiring. . . . Italian indigenous literature was of the very scantiest; its oldest element was to be found in hymns, barely metrical, and so full of repetitions as to dispense with metre. The hymns were more like spells than psalms, the singers had an object to gain rather than feelings to express. The public hymns were prayers for blessing: there were private chants to charm crops out of a neighbour's field, and bring other mischief to pass against him. Such 'evil songs' were a capital offence, though there was little, perhaps, in their form to suggest a distinction whether the victim was being bewitched or satirised. The deliberate articulate expression of spite seemed a guilt and power of itself. Besides these there were dirges at funerals, ranging between commemoration of the deceased and his ancestors, propitiation of the departed spirit, and simple lamentation. There were songs at banquets in praise of ancient worthies. . . . We find no trace of any poet who composed what free-born youths recited at feasts; probably they extemporised without training and attained no mastery. If a nation has strong military instincts, we find legendary or historical heroes in its very oldest traditions; if a nation has strong poetical instincts, we find the names of historical or legendary poets. In Italy we only meet with nameless fauns and prophets, whose inspired verses were perhaps on the level of Mother Shipton."—G. A. Simcox, *A History of Latin Literature, v.* 1, *introd.*

Struggle with the Etruscans. See ETRUSCANS.

B. C. 753.—Era of the foundation of the city. —"Great doubts have been entertained, as well by ancient historians as by modern chronologists, respecting this era. Polybius fixes it to the year B. C. 751; Cato, who has been followed by Dionysius of Halicarnassus, Solinus, and Eusebius, to B. C. 752; Fabius Pictor, to B. C. 747; Archbishop Usher, to B. C. 748; and Newton, to B. C. 627: Terentius Varro, however, refers it to B. C. 753; which computation was adopted by the Roman emperors, and by Plutarch, Tacitus, Dion, Aulus Gellius, Censorinus, Onuphrius, Baroius, bishop Beveridge, Stranchius, Dr. Playfair, and by most modern chronologists: Livy, Cicero, Pliny, and Velleius Paterculus occasionally adopted both the Varronian and Catonian computations. Dr. Hales has, however, determined, from history and astronomy, that the Varronian computation is correct, viz. B. C. 753."—Sir H. Nicolas, *Chronology of History, p.* 2.

B. C. 753-510.—The legendary period of the kings.—Credibility of the Roman annals. —Probable Etruscan domination.—"It may . . . be stated, as the result of this inquiry, that the narrative of Roman affairs, from the foundation of the city to the expulsion of the Tarquins, is formed out of traditionary materials. At what time the oral traditions were reduced into writing, and how much of the existing narrative was the arbitrary supplement of the historians who first framed the account which has descended to us, it is now impossible to ascertain. . . . The records of them, which were made before the burning of Rome, 390 B. C., were doubtless rare and meagre in the extreme; and such as there were at this time chiefly perished in the conflagration and ruin of the city. It was probably not, till after this period — that is to say, about 120 years after the expulsion of the kings — and above 350 years after the era assigned for the foundation of the city, that these oral reports — these hearsay stories of many generations — began to be entered in the registers of the pontifices. . . . The history of the entire regal period, as respects both its external attestation and its internal probability, is tolerably uniform in its character. . . . Niebuhr, indeed, has drawn a broad line between the reigns of Romulus and Numa on the one hand, and those of the five last kings on the other. The former he considers to be purely fabulous and poetical; the latter he regards as belonging to the mythico-historical period, when there is a narrative resting on a historical basis, and most of the persons mentioned are real. But it is impossible to discover any ground, either in the contents of the narrative, or in its external evidence, to support this distinction. Romulus, indeed, from the form of his name, appears to be a mere personification of the city of Rome, and to have no better claim to a real existence than Hellen, Danaus, Ægyptus, Tyrrhenus, or Italus. But Numa Pompilius stands on the same ground as the remaining kings, except that he is more ancient; and the narrative of all the reigns, from the first to the last, seems to be constructed on the same principles. That the names of the kings after Romulus are real, is highly probable; during the latter reigns, much of the history seems to be in the form of legendary explanations of proper names. . . . Even with respect to the Tarquinian family, it may be doubted whether the similarity of their name to that of the city of Tarquinii was not the origin of the story of Demaratus and the Etruscan origin. The circumstance that the two king Tarquins were both named Lucius, and that it was necessary to distinguish them by the epithets of Priscus and Superbus, raises a presumption that the names were real. Müller indeed regards the names of the two Tarquins as merely represent-

ing the influence exercised by the Etruscan city of Tarquinii in Rome at the periods known as their reigns. . . . The leading feature of the government during this period is that its chief was a king, who obtained his office by the election of the people, and the confirmation of the Senate, in the same manner in which consuls and other high magistrates were appointed after the abolition of royalty; but that, when once fully elected, he retained his power for life. In the mode of succession, the Roman differed from the early Greek kings, whose office was hereditary. The Alban kings, likewise, to whom the Roman kings traced their origin, are described as succeeding by inheritance and not by election. . . . The predominant belief of the Romans concerning their regal government was, that the power of the kings was limited by constitutional checks; that the chief institutions of the Republic, namely, the Senate and the Popular Assembly, existed in combination with the royalty, and were only suspended by the lawless despotism of the second Tarquin. Occasionally, however, we meet with the idea that the kings were absolute."—Sir G. C. Lewis, *Inquiry into the Credibility of Early Roman History, ch.* 11, *sect.* 39–40 (*v.* 1).—"Of the kings of Rome we have no direct contemporary evidence; we know them only from tradition, and from the traces they left behind them in the Republican constitution which followed. But the 'method of survivals' has here been applied by a master-hand [Mommsen]; and we can be fairly sure, not only of the fact that monarchy actually existed at Rome, but even of some at least of its leading characteristics. Here we have kingship no longer denoting, as in Homer, a social position of chieftaincy which bears with it certain vaguely-conceived prerogatives, but a clearly defined magistracy within the fully realised State. The rights and duties of the Rex are indeed defined by no documents, and the spirit of the age still seems to be obedience and trust; but we also find the marks of a formal customary procedure, which is already hardening into constitutional practice, and will in time further harden into constitutional law. The monarchy has ceased to be hereditary, if it ever was so; and the method of appointment, though we are uncertain as to its exact nature, is beyond doubt regulated with precision, and expressed in technical terms."—W. W. Fowler, *The City-State of the Greeks and Romans, pp.* 74–75.—"The analogy of other states, no less than the subsequent constitution of Rome, which always retained the marks of its first monarchical complexion, leaves us in no doubt that kings once reigned in Rome, and that by a determined uprising of the people they were expelled, leaving in the Roman mind an ineradicable hatred of the very name. We have to be content with these hard facts, extracted from those thrilling stories with which Livy adorns the reign and the expulsion of Tarquinius Superbus."—R. F. Horton, *Hist. of the Romans, ch.* 2.—The names of the kings, with the dates assigned to them, are as follows: Romulus, B. C. 753–717; Numa Pompilius, B. C. 715–673; Tullus Hostilius, B. C. 673–642; Ancus Martius, B. C. 641–617; Lucius Tarquinius Priscus, B. C. 616–579; Servius Tullius, B. C. 578–535; Tarquinius Superbus, B. C. 534–510.—According to the legend of early Rome, Romulus attracted inhabitants to the city he had founded by establishing within its walls a sanctuary or refuge, for escaped slaves, outlaws and the like. But he could not in a fair way procure wives for these rough settlers, because marriage with them was disdained by the reputable people of neighboring cities. Therefore he arranged for an imposing celebration of games at Rome, in honor of the god Consus, and invited his neighbors, the Sabines, to witness them. These came unsuspectingly with their wives and daughters, and, when they were absorbed in the show, the Romans, at a given signal, rushed on them and carried off such women as they chose to make captive. A long and obstinate war ensued, which was ended by the interposition of the women concerned, who had become reconciled to their Roman husbands and satisfied to remain with them.—Livy, *History, ch.* 9.—"We cannot . . . agree with Niebuhr, who thinks he can discover some historical facts through this legendary mist. As he supposes, the inhabitants of the Palatine had not the right of intermarriage ('connubium') with their Sabine neighbours on the Capitoline and the Quirinal. This inferiority of the Palatine Romans to the Sabines of the Capitoline and Quirinal hills caused discontent and war. The right of intermarriage was obtained by force of arms, and this historical fact lies at the bottom of the tale of the rape of the Sabines. Such a method of changing legends into history is of very doubtful utility. It seems more natural to explain the legend from the customs at the Roman marriage ceremonies"—in which the pretence of forcible abduction was enacted.—W. Ihne, *Hist. of Rome, bk.* 1, *ch.* 2.—"With the reign of the fifth king, Tarquinius Priscus, a marked change takes place. The traditional accounts of the last three kings not only wear a more historical air than those of the first four, but they describe something like a transformation of the Roman city and state. Under the rule of these latter kings the separate settlements were for the first time enclosed with a rampart of colossal size and extent. The low grounds were drained, and a forum and circus elaborately laid out; on the Capitoline Mount a temple was erected, the massive foundations of which were an object of wonder even to Pliny. . . . The kings increase in power and surround themselves with new splendour. Abroad, Rome suddenly appears as a powerful state ruling far and wide over southern Etruria and Latium. These startling changes are, moreover, ascribed to kings of alien descent, who one and all ascend the throne in the teeth of established constitutional forms. Finally, with the expulsion of the last of them—the younger Tarquin—comes a sudden shrinkage of power. At the commencement of the republic Rome is once more a comparatively small state, with hostile and independent neighbours at her very doors. It is difficult to avoid the conviction that the true explanation of this phenomenon is to be found in the supposition that Rome during this period passed under the rule of powerful Etruscan lords. Who the people were whom the Romans knew as Etruscans and the Greeks as Tyrrhenians is a question, which, after centuries of discussion, still remains unanswered; nor in all probability will the answer be found until the lost key to their language has been discovered. That they were regarded by the Italic tribes, by Umbrians, Sabellians, and Latins, as intruders is certain. Entering Italy, as they

probably did from the north or north-east, they seem to have first of all made themselves masters of the rich valley of the Po and of the Umbrians who dwelt there. Then crossing the Apennines, they overran Etruria proper as far south as the banks of the Tiber, here too reducing to subjection the Umbrian owners of the soil. In Etruria they made themselves dreaded, like the Northmen of a later time, by sea as well as by land. . . . We find the Etruscan power encircling Rome on all sides, and in Rome itself a tradition of the rule of princes of Etruscan origin. The Tarquinii come from South Etruria; their name can hardly be anything else than the Latin equivalent of the Etruscan Tarchon, and is therefore possibly a title (='lord' or 'prince') rather than a proper name. . . . That Etruria had, under the sway of Etruscan lords, forged ahead of the country south of the Tiber in wealth and civilisation is a fact which the evidence of remains has placed beyond doubt. It is therefore significant that the rule of the Tarquins in Rome is marked by an outward splendour which stands in strong contrast to the primitive simplicity of the native kings. . . . These Etruscan princes are represented, not only as having raised Rome for the time to a commanding position in Latium, and lavished upon the city itself the resources of Etruscan civilisation, but also the authors of important internal changes. They are represented as favouring new men at the expense of the old patrician families, and as reorganising the Roman army on a new footing, a policy natural enough in military princes of alien birth."—H. F. Pelham, *Outlines of Roman Hist., bk.* 1, *ch.* 3.

B. C. 510.—Expulsion of Tarquin the Proud.—The story from Livy.—Lucius Tarquinius Superbus, or Tarquin the Proud, son of Tarquinius Priscus and son-in-law of Servius Tullius, brought about the assassination of the latter, and mounted the throne. "Lucius Tarquin, having thus seized the kingdom (for he had not the consent either of the Senators or of the Commons to his deed), bare himself very haughtily, so that men called him Tarquin the Proud. First, lest some other, taking example by him, should deal with him as he had dealt with Tullius, he had about him a company of armed men for guards. And because he knew that none loved him, he would have them fear him. To this end he caused men to be accused before him. And when they were so accused, he judged them by himself, none sitting with him to see that right was done. Some he slew unjustly, and some he banished, and some he spoiled of their goods. And when the number of the Senators was greatly diminished by these means (for he laid his plots mostly against the Senators, as being rich men and the chief of the State), he would not choose any into their place, thinking that the people would lightly esteem them if there were but a few of them. Nor did he call them together to ask their counsel, but ruled according to his own pleasure, making peace and war, and binding treaties or unbinding, with none to gainsay him. Nevertheless, for a while he increased greatly in power and glory. He made alliance with Octavius Mamilius, prince of Tusculum, giving him his daughter in marriage; nor was there any man greater than Mamilius in all the cities of the Latins; and Suessa Pometia, that was a city of the Volsci, he took by force, and finding that the spoil was very rich (for there were in it forty talents of gold and silver), he built with the money a temple to Jupiter on the Capitol, very great and splendid, and worthy not only of his present kingdom but also of that great Empire that should be thereafter. Also he took the city of Gabii by fraud. . . . By such means did King Tarquin increase his power. Now there was at Rome in the days of Tarquin a noble youth, by name Lucius Junius, who was akin to the house of Tarquin, seeing that his mother was sister to the King. This man, seeing how the King sought to destroy all the chief men in the State (and, indeed, the brother of Lucius had been so slain), judged it well so to bear himself that there should be nothing in him which the King should either covet or desire. Wherefore he feigned foolishness, suffering all that he had to be made a prey; for which reason men gave him the name of Brutus, or the Foolish. Then he bided his time, waiting till the occasion should come when he might win freedom for the people." In a little time "there came to Brutus an occasion of showing what manner of man he was. Sextus, the King's son, did so grievous a wrong to Lucretia, that was the wife of Collatinus, that the woman could not endure to live, but slew herself with her own hand. But before she died she called to her her husband and her father and Brutus, and bade them avenge her upon the evil house of Tarquin. And when her father and her husband sat silent for grief and fear, Brutus drew the knife wherewith she slew herself from the wound, and held it before him dripping with blood, and cried aloud, 'By this blood I swear, calling the Gods to witness, that I will pursue with fire and sword and with all other means of destruction Tarquin the Proud, with his accursed wife and all his race; and that I will suffer no man hereafter to be king in this city of Rome.' And when he had ended he bade the others swear after the same form of words. This they did and, forgetting their grief, thought only how they might best avenge this great wrong that had been done. First they carried the body of Lucretia, all covered with blood, into the market-place of Collatia (for these things happened at Collatia), and roused all the people that saw a thing so shameful and pitiful, till all that were of an age for war assembled themselves carrying arms. Some of them stayed behind to keep the gates of Collatia, that no one should carry tidings of the matter to the King, and the rest Brutus took with him with all the speed that he might to Rome. There also was stirred up a like commotion, Brutus calling the people together and telling them what a shameful wrong the young Tarquin had done. Also he spake to them of the labours with which the King wore them out in the building of temples and palaces and the like, so that they who had been in time past the conquerors of all the nations round about were now come to be but as hewers of wood and drawers of water. Also he set before them in what shameful sort King Tullius had been slain, and how his daughter had driven her chariot over the dead body of her father. With suchlike words he stirred up the people to great wrath, so that they passed a decree that there should be no more kings in Rome, and that

Lucius Tarquin with his wife and his children should be banished. After this Brutus made haste to the camp and stirred up the army against the King. And in the meanwhile Queen Tullia fled from her palace, all that saw her cursing her as she went. As for King Tarquin, when he came to the city he found the gates shut against him; thereupon he returned and dwelt at Cære that is in the land of Etruria, and two of his sons with him; but Sextus going to Gabii, as to a city which he had made his own, was slain by the inhabitants. The King and his house being thus driven out, Brutus was made consul with one Collatinus for his colleague."—*Stories from Livy; by A. J. Church, ch.* 5.

B. C. 509.—The establishment of the Republic.—The Valerian Laws.—"However much the history of the expulsion of the last Tarquinius, 'the proud,' may have been interwoven with anecdotes and spun out into a romance, it is not in its leading outlines to be called in question. . . . The royal power was by no means abolished, as is shown by the fact that, when a vacancy occurred, a 'temporary king' (interrex) was nominated as before. The one life-king was simply replaced by two year-kings, who called themselves generals (prætores), or judges (iudices), or merely colleagues (consules) [consules are those who 'leap or dance together.' Foot-note]. The collegiate principle, from which this last—and subsequently most current—name of the annual kings was derived, assumed in their case an altogether peculiar form. The supreme power was not entrusted to the two magistrates conjointly, but each consul possessed and exercised it for himself as fully and wholly as it had been possessed and exercised by the king; and, although a partition of functions doubtless took place from the first—the one consul for instance undertaking the command of the army, and the other the administration of justice—that partition was by no means binding, and each of the colleagues was legally at liberty to interfere at any time in the province of the other [see Consul, Roman]. . . . This peculiarly Latin, if not peculiarly Roman, institution of co-ordinate supreme authorities . . . manifestly sprang out of the endeavour to retain the regal power in legally undiminished fulness. . . . A similar course was followed in reference to the termination of their tenure of office. . . . They ceased to be magistrates, not upon the expiry of the set term, but only upon their publicly and solemnly demitting their office: so that, in the event of their daring to disregard the term and to continue their magistracy beyond the year, their official acts were nevertheless valid, and in the earlier times they scarcely even incurred any other than a moral responsibility."—T. Mommsen, *Hist. of Rome, bk.* 2, *ch.* 1.—"No revolution can be undertaken and completed with success if the mass of the people is not led on by some superior intellect. At the dissolution of an existing legal authority the only authority remaining is personal and de facto, which in proportion to the danger of the position is more or less military and dictatorial. The Romans especially acknowledged the necessity, when circumstances required it, of submitting to the unlimited power of a dictator. Such a chief they found, at the time of the revolution, in Brutus. Collatinus also may, during a certain time, have stood in a similar manner at the head of the state, probably from less pure motives than Brutus, in consequence of which he succumbed to the movement which he in part may have evoked. After Brutus, Valerius Publicola was the recognised supreme head and the arbiter of events in Rome with dictatorial power, until his legislation made an end of the interregnum, and with all legal forms founded the true and genuine republic with two annual consuls. The dictatorship is found in the Latin cities as a state of transition between monarchy and the yearly prætorship; and we may conjecture that also in Rome the similar change in the constitution was effected in a similar way. In important historical crises the Romans always availed themselves of the absolute power of a dictator, as in Greece, with similar objects, Aesymnetae were chosen. . . . How long the dictatorial constitution lasted must remain undecided; for we must renounce the idea of a chronology of that time. It appears to me not impossible that the period between the expulsion of the kings and the Valerian laws, which in our authorities is represented as a year, may have embraced ten years, or much more."—W. Ihne, *Researches into the History of the Roman Constitution, p.* 61.—"The republic seems to have been first regularly established by the Valerian laws, of which, unfortunately, we can discover little more than half obliterated traces in the oldest traditions of the Romans. According to the story, P. Valerius was chosen as consul after the banishment of Tarquinius Collatinus, and remained alone in office after the death of his colleague, Brutus, without assembling the people for the election of a second consul. This proceeding excited a suspicion in the minds of the people, that he intended to take sole possession of the state, and to re-establish royal power. But these fears proved groundless. Valerius remained in office with the sole design of introducing a number of laws intended to establish the republic on a legal foundation, without the danger of any interference on the part of a colleague. The first of these Valerian laws threatened with the curse of the gods any one who, without the consent of the people, should dare to assume the highest magistracy. . . . The second law of Valerius . . . prescribe that in criminal trials, where the life of a citizen was at stake, the sentence of the consul should be subject to an appeal to the general assembly of the people. This Valerian law of appeal was the Roman Habeas Corpus Act."—W. Ihne, *Hist. of Rome, bk.* 2, *ch.* 1 (*v.* 1).—See, also, Consul, Roman; Comitia Curiata; Comitia Centuriata; Censors; Quæstors, Roman; Senate, Roman.

B. C. 494-492.—The first secession of the Plebs.—Origin of the Tribunes of the Plebs, and the Ædiles.—Original and acquired power of the Tribunes.—The two Roman peoples and their antagonism.—"The struggle [of plebeians against patricians in early Rome] opens with the debt question. We must realize all along how the internal history is affected by the wars without. The debtors fall into their difficulties through serving in the field during the summer; for of course the army is a citizen army and the citizens are agriculturists. Two patrician families take the side of the poor, the Horatii and the Valerii. Manius Valerius

Publicola, created dictator, promises the distressed farmers that, if they will follow him in his campaign against the Sabines, he will procure the relaxation of their burdens. They go and return victorious. But Appius Claudius (whose family had but recently migrated to Rome, a proud and overbearing Sabine stock) opposed the redemption of the dictator's promise. The victorious host, forming a seventh of the arm-bearing population, instantly marched out of the gate of the city, crossed the river Anio, and took up a station on the Sacred Mount [Mons Sacer]. They did not mean to go back again; they were weary of their haughty masters. . . . At last a peace is made — a formal peace concluded by the fetiales: they will come back if they may have magistrates of their own. This is the origin of the tribunes of the plebs [B. C. 492]. . . . The plebs who marched back that day from the Sacred Mount had done a deed which was to have a wonderful issue in the history of the world; they had dropped a seed into the soil which would one day spring up into the imperial government of the Cæsars. The 'tribunicia potestas,' with which they were clothing their new magistrates, was to become a more important element in the claims of the emperors than the purple robe of the consuls."— R. F. Horton, *Hist. of the Romans, ch.* 3.—"The tribunes of the people were so essentially different from all the other magistrates that, strictly speaking, they could hardly be called magistrates at all. They were originally nothing but the official counsel of the plebs — but counsel who possessed a veto on the execution of any command or any sentence of the patrician authorities. The tribune of the people had no military force at his disposal with which to inforce his veto. . . . There is no more striking proof of the high respect for law which was inherent in the Roman people, than that it was possible for such a magistracy to exercise functions specially directed against the governing class. . . . To strengthen an official authority which was so much wanting in physical strength, the Romans availed themselves of the terrors of religion. . . . The tribunes were accordingly placed under the special protection of the Deity. They were declared to be consecrated and inviolable ('sacrosancti'), and whoever attacked them, or hindered them in the exercise of their functions, fell a victim to the avenging Deity, and might be killed by anyone without fear of punishment."—W. Ihne, *Hist. of Rome, bk.* 2, *ch.* 2, *and bk.* 6, *ch.* 8.—"The tribune had no political authority. Not being a magistrate, he could not convoke the curies or the centuries [see Comitia Curiata and Comitia Centuriata]. He could make no proposition in the senate; it was not supposed, in the beginning, that he could appear there. He had nothing in common with the real city — that is to say, with the patrician city, where men did not recognize any authority of his. He was not the tribune of the people; he was the tribune of the plebs. There were then, as previously, two societies in Rome — the city and the plebs; the one strongly organized, having laws, magistrates, and a senate; the other a multitude, which remained without rights and laws, but which found in its inviolable tribunes protectors and judges. In succeeding years we can see how the tribunes took courage, and what unexpected powers they assumed. They had no authority to convoke the people, but they convoked them. Nothing called them to the senate; they sat at first at the door of the chamber; later they sat within. They had no power to judge the patricians; they judged them and condemned them. This was the result of the inviolability attached to them as sacrosancti. Every other power gave way before them. The patricians were disarmed the day they had pronounced, with solemn rites, that whoever touched a tribune should be impure. The law said, 'Nothing shall be done against a tribune.' If, then, this tribune convoked the plebs, the plebs assembled, and no one could dissolve this assembly, which the presence of the tribune placed beyond the power of the patricians and the laws. If the tribune entered the senate, no one could compel him to retire. If he seized a consul, no one could take the consul from his hand. Nothing could resist the boldness of a tribune. Against a tribune no one had any power, except another tribune. As soon as the plebs thus had their chiefs, they did not wait long before they had deliberative assemblies. These did not in any manner resemble those of the patricians. The plebs, in their comitia, were distributed into tribes; the domicile, not religion or wealth, regulated the place of each one. The assembly did not commence with a sacrifice; religion did not appear there. They knew nothing of presages, and the voice of an augur, or a pontiff, could not compel men to separate. It was really the comitia of the plebs, and they had nothing of the old rules, or of the religion of the patricians. True, these assemblies did not at first occupy themselves with the general interests of the city; they named no magistrates, and passed no laws. They deliberated only on the interests of their own order, named the plebeian chiefs, and carried plebiscita. There was at Rome, for a long time, a double series of decrees — senatusconsulta for the patricians, plebiscita for the plebs. The plebs did not obey the senatusconsulta, nor the patricians the plebiscita. There were two peoples at Rome. These two peoples, always in presence of each other, and living within the same walls, still had almost nothing in common. A plebeian could not be consul of the city, nor a patrician tribune of the plebs. The plebeian did not enter the assembly by curies, nor the patrician the assembly of the tribes. They were two peoples that did not even understand each other, not having — so to speak — common ideas. . . . The patricians persisted in keeping the plebs without the body politic, and the plebs established institutions of their own. The duality of the Roman population became from day to day more manifest. And yet there was something which formed a tie between these two peoples: this was war. The patricians were careful not to deprive themselves of soldiers. They had left to the plebeians the title of citizens, if only to incorporate them into the legions. They had taken care, too, that the inviolability of the tribunes should not extend outside of Rome, and for this purpose had decided that a tribune should never go out of the city. In the army, therefore, the plebs were under control; there was no longer a double power; in presence of the enemy Rome became one."— N. D. Fustel de Coulanges, *The Ancient City, bk.* 4, *ch.* 7.— It is supposed that the tribunes were originally two in number; but later there were five, and, finally,

ten. The law which created their office was "deposited in a temple, under the charge of two plebeian magistrates specially appointed for the purpose and called Aediles or 'housemasters.' These aediles were attached to the tribunes as assistants, and their jurisdiction chiefly concerned such minor cases as were settled by fines."—T. Mommsen, *Hist. of the Roman Republic* (*abridged by Bryant and Hendy*), *ch.* 7.—"Besides the tribunes, who stood over against the consuls, two plebeian ædiles were appointed, who might balance the patrician quæstors. Their name seems borrowed from the temple (Ædes Cereris) which is now built on the cattle market between the Palatine and the river to form a religious centre for the plebeian interest, as the ancient temple of Saturn was already a centre for the patrician interest. The goddess of bread is to preside over the growth of the democracy. The duty of ædiles is, in the first instance, to keep the public buildings in repair; but they acquire a position not unlike that of police-officers."—R. F. Horton, *Hist. of the Romans, ch.* 3.—The office of the curule ædiles (two in number, who were elected in "comitia tributa") was instituted in 366 B. C. These were patricians at first; but in 304 B. C. the office was thrown open in alternate years to the plebeians, and in 91 B. C. all restrictions were removed. The curule ædiles had certain judicial functions, and formed with the plebeian ædiles a board of police and market administration, having oversight also of the religious games.—*The same, App. A.*

B. C. 493.—League with the Latins. See below: B. C. 339–338.

B. C. 489-450.—Volscian Wars.—The wars of the Romans with the neighboring Volscians stretched over a period of some forty years (B. C. 489–450) and ended in the disappearance of the latter from history. The legend of Coriolanus (Caius Marcius, on whom the added name was bestowed because of his valiant capture of the Volscian town of Corioli) is connected with these wars; but modern critics have stripped it of all historic credit and left it only a beautiful romance.—W. Ihne, *Hist. of Rome, bk.* 2, *ch.* 4 (*v.* 1).

Also in: A. J. Church, *Stories from Livy, ch.* 7.

B. C. 472-471.—The Publilian Law of Volero.—Exclusion of Patricians from the Comitia Tributa.—"Volero Publilius was chosen one of the Tribunes for . . . [B. C. 472]; and he straightway proposed a law, by which it was provided that the Tribunes and Ædiles of the plebs should be elected by the plebeians themselves at the Assembly of the Tribes in the Forum, not at the Assembly of the Centuries in the Field of Mars. This is usually called the Publilian Law of Volero. For a whole year the patricians succeeded in putting off the law. But the plebeians were determined to have it."—H. G. Liddell, *Hist. of Rome, bk.* 2, *ch.* 8 (*v.* 1).—"The immediate consequence of the tribuneship of the people was the organisation of the assembly of tribes, the 'comitia tributa,' whereby they lost their former character as factional or party meetings and were raised to the dignity and functions of assemblies of the Roman people. . . . The circumstances which, in 471 B. C., led to the passing of the Publilian law, seem to indicate that even at that time the attempt was made by the patricians to change the original character of the tribuneship of the people, and to open it to the patrician class. The patricians intruded themselves in the assembly of the plebeians, surely not for the purpose of making a disturbance as it is represented, but to enforce a contested right, by which they claimed to take part in the comitia of tribes. . . . This question was decided by the Publilian law, which excluded the patricians from the comitia tributa and specified the privileges of these comitia, now admitted to be purely plebeian. . . . These were the right of meeting together unmolested in separate purely plebeian comitia, the right of freely and independently electing their representatives, the right of discussing and settling their own affairs, and in certain matters of passing resolutions [plebiscita] which affected the whole community. These resolutions were, of course, not binding on the state, they had more the character of petitions than enactments, but still they were the formal expression of the will of a great majority of the Roman people, and as such they could not easily be set aside or ignored by the patrician government."—W. Ihne, *Hist. of Rome, bk.* 2, *ch.* 8, *and bk.* 6, *ch.* 1.

Also in: B. G. Niebuhr, *Lect's on Hist. of Rome, lect.* 20.

B. C. 466-463.—The Plague.—In the war of the Romans with the Volscians, the former were so hard pressed that "it became necessary to receive men and cattle within the walls of Rome, just as at Athens in the Peloponnesian war; and this crowding together of men and beasts produced a plague [B. C. 466–463]. . . . It is probable that the great pestilence which, thirty years later, broke out in Greece and Carthage, began in Italy as early as that time. The rate of mortality was fearful; it was a real pestilence, and not a mere fever. . . . Both consuls fell victims to the disease, two of the four augurs, the curio maximus, the fourth part of the senators, and an immense number of citizens of all classes."—B. G. Niebuhr, *Lect's on the Hist. of Rome, lect.* 21.

Also in: T. Arnold, *Hist. of Rome, ch.* 11.

B. C. 458.—Conquest of the Æqui.—"Alternating with the raids [of the Romans] against the Volsci are the almost yearly campaigns with the Æqui, who would pour down their valleys and occupy Mount Algidus, threatening Tusculum and the Latin Way which led to Rome. It was on one of these occasions, when the republic too was engaged with Sabines to the north, and Volscians to the south, that the Consul Minucius [B. C. 458] found himself hemmed in on the mountain-side by the Æqui. Very beautiful and very characteristic is the legend which veils the issue of the danger. L. Quinctius Cincinnatus, ruined by a fine imposed upon his son, is tilling his little farm across the Tiber, when the messengers of the Senate come to announce that he is made dictator. With great simplicity he leaves his plough, conquers the Æqui, and returns to his furrows again."—R. F. Horton, *Hist. of the Romans, ch.* 4.

Also in: A. J. Church, *Stories from Livy, ch.* 9.

B. C. 456.—The Icilian Law.—The early process of legislation illustrated.—Persuasiveness of Plebeian Petitions.—"The process of

legislation in early times has been preserved to us in a single instance in which Dionysius has followed the account derived by him from an ancient document. The case is that of the Lex Icilia de Aventino publicando (B. C. 456), an interlude in the long struggle over the Terentilian law [see below: B. C. 451–449]. This Lex Icilia was preserved, as Dionysius tells us, on a brazen column in the temple of Diana on the Aventine. It seems unlikely that the original tablet in such a situation should have survived the burning of the city by the Gauls. Yet a record so important to the plebs would doubtless be at once restored, and the restoration would show at least the belief prevalent at this very early period (B. C. 389) as to the proper procedure in case of such a law. 'Icilius,' says Dionysius (X. 31), 'approached the consuls then in office and the senate, and requested them to pass the preliminary decree for the law that he proposed, and to bring it before the people.' By threatening to arrest the consuls he compelled them to assemble the senate, and Icilius addressed the senate on behalf of his bill. Finally the senate consented . . . (Dionys. X. 32). Then, after auspices and sacrifices, 'the law was passed by the comitia centuriata, which were convened by the consuls.' . . . Now here we have an order of proceeding under which the plebs have a practical initiative in legislation, and in which, nevertheless, each of the powers of the state acts in a perfectly natural and constitutional manner. . . . The formal legislative power lies solely with the populus Romanus. The vote of the corporation of the plebs is not then in early times strictly a legislative process at all. It is merely a strong and formal petition, an appeal to the sovereign assembly to grant their request. But this sovereign assembly can only be convened and the question put to it by a consul. If the consuls are unfavourable to the bill, they can refuse to put it to the vote at all. In any case, unless, like Sp. Cassius, they were themselves revolutionists, they would not think of doing so save on the recommendation of their authorised advisers. . . . The senate is assembled and freely discusses the law. An adverse vote justifies the consuls in their resistance. Then follow tedious manœuvres. The senate treat with members of the college of tribunes to procure their veto; they urge the necessity of a military expedition, or, as a last resource, advise the appointment of a dictator. Such is the general picture we get from Livy's story. If by these means they can tide over the tribune's year of office, the whole process has to be gone through again. The senate have the chance of a lucky accident in getting one of the new tribunes subservient to them; or sometimes (as in the case of the proposal to remove to Veii) they may persuade the plebs itself to throw out the tribunician rogatio when again introduced (Livy, v. 30). On the other hand the tribunes may bring to bear their reserved power of impeding all public business; and the ultima ratio lies with the plebeians, who have the power of secession in their hands. In practice, however, the senate is nearly always wise enough to yield before the plebs is driven to play this its last card. Their yielding is expressed by their backing the petition of the plebs and recommending the consuls to put the question of its acceptance to the populus. With this recommendation on the part of the senate the struggle is generally at an end. It is still in the strict right of the consuls to refuse to put the question to the comitia. Livy (iii. 19) gives us one instance in the matter of the Terentilian law, when the senate is disposed to yield, and the consul 'non in plebe coercendâ quam senatu castigando vehementior fuit.' But a consul so insisting on his right would incur enormous personal responsibility, and expose himself, unsheltered by public opinion, to the vengeance of the plebs when he went out of office. When the consul too has yielded, and the question is actually put to the vote of the sovereign (generally in its comitia centuriata), the controversy has been long ago thoroughly threshed out. Though it is only at this stage that legislation in the strict sense of the word commences, yet no instance is recorded of a refusal on the part of the sovereign people to assent to the petition of the plebs backed by the recommendation of the senate."—J. L. Strachan-Davidson, *Plebeian Privilege at Rome* (*English Historical Rev., April,* 1886).—On the bearings of this proceeding on the subsequently adopted Valerio-Horatian, Publilian, and Hortensian laws, see below: B. C. 286.

B. C. 451-449.—The Terentilian Law.—The Decemvirs and the Twelve Tables.—Not long after the establishment of the tribuneship, "the plebeians felt the necessity of putting an end to the exclusive possession of the laws which the patricians enjoyed, and to make them the common property of the whole nation. This could only be done by writing them down and making them public. A proposal was accordingly made in the assembly of the tribes by the tribune C. Terentilius Arsa (462 B. C.) to appoint a commission for the purpose of committing to writing the whole of the laws. . . . It is not wonderful that the patricians opposed with all their strength a measure which would wrest a most powerful weapon out of their hands. . . . The contest for the passing of the bill of Terentilius lasted, according to tradition, not less than ten years, and all means of open and secret opposition and of partial concession were made use of to elude the claims of the popular party. . . . After a ten years' struggle it [the motion for a commission] was passed into law. It proposed that a commission of ten men, being partly patricians and partly plebeians, should be appointed, for the purpose of arranging the existing law into a code. At the same time the consular constitution was to be suspended, and the ten men to be intrusted with the government and administration of the commonwealth during the time that they acted as legislators. By the same law the plebeian magistracy of the tribunes of the people ceased likewise, and the ten men became a body of magistrates intrusted with unlimited authority. . . . The patricians did not act entirely in good faith. . . . They carried the election of ten patricians. . . . Having, however, obtained this advantage over the credulity of their opponents, the patricians made no attempt to use it insolently as a party victory. The decemvirs proceeded with wisdom and moderation. Their administration, as well as their legislation, met with universal approval. They published on ten tables the greater part of the Roman law, and after these laws had met with the approbation of the people, they were declared by a decision of the people to be binding. Thus the first year of the decemvirate passed, and so far the

traditional story is simple and intelligible." The part of the tradition which follows is largely rejected by modern critical historians. It relates that when decemvirs were chosen for another year, to complete their work, Appius Claudius brought about the election, with himself, of men whom he could control, and then established a reign of terror which surpassed the worst tyranny of the kings, refusing to abdicate when the year expired. The tragic story of Virginia connects itself with this terrible oppression, and with the legend of its downfall. In the end, the Roman people delivered themselves, and secured the permanent authority of the code of laws, which had been enlarged from ten to twelve Tables.—W. Ihne, *Hist. of Rome, bk.* 2, *ch.* 9 *and* 10.—"The Twelve Tables were considered as the foundation of all law, and Cicero always mentions them with the utmost reverence. But only fragments remain."—H. G. Liddell, *Hist of Rome, bk.* 2, *ch.* 11.—"The most celebrated system of jurisprudence known to the world begins, as it ends, with a code. From the commencement to the close of its history, the expositors of Roman Law consistently employed language which implied that the body of their system rested on the Twelve Decemviral Tables, and therefore on a basis of written law. Except in one particular, no institutions anterior to the Twelve Tables were recognised at Rome. The theoretical descent of Roman jurisprudence from a code, the theoretical ascription of English law to immemorial unwritten tradition, were the chief reasons why the development of their system differed from the development of ours. Neither theory corresponded exactly with the facts, but each produced consequences of the utmost importance. . . . The ancient Roman code belongs to a class of which almost every civilised nation in the world can show a sample, and which, so far as the Roman and Hellenic worlds were concerned, were largely diffused over them at epochs not widely distant from one another. They appeared under exceedingly similar circumstances, and were produced, to our knowledge, by very similar causes. . . . In Greece, in Italy, on the Hellenised sea-board of Western Asia, these codes all made their appearance at periods much the same everywhere, not, I mean, at periods identical in point of time, but similar in point of the relative progress of each community. Everywhere, in the countries I have named, laws engraven on tablets and published to the people take the place of usages deposited with the recollection of a privileged oligarchy. . . . The ancient codes were doubtless originally suggested by the discovery and diffusion of the art of writing. It is true that the aristocracies seem to have abused their monopoly of legal knowledge; and at all events their exclusive possession of the law was a formidable impediment to the success of those popular movements which began to be universal in the western world. But, though democratic sentiment may have added to their popularity, the codes were certainly in the main a direct result of the invention of writing. Inscribed tablets were seen to be a better depositary of law, and a better security for its accurate preservation, than the memory of a number of persons however strengthened by habitual exercise. . . . Among the chief advantages which the Twelve Tables and similar codes conferred on the societies which obtained them, was the protection which they afforded against the frauds of the privileged oligarchy and also against the spontaneous depravation and debasement of the national institutions. The Roman Code was merely an enunciation in words of the existing customs of the Roman people. Relatively to the progress of the Romans in civilization, it was a remarkably early code, and it was published at a time when Roman society had barely emerged from that intellectual condition in which civil obligation and religious duty are inevitably confounded."—H. S. Maine, *Ancient Law, ch.* 1.

B. C. 449.—The Valerio-Horatian Laws.—On the overthrow of the tyranny of the Decemvirs, at Rome, B. C. 449, L. Valerius Potitus and M. Horatius Barbatus, being elected consuls, brought about the passage of certain laws, known as the Valerio-Horatian Laws. These renewed an old law (the Valerian Law) which gave to every Roman citizen an appeal from the supreme magistrate to the people, and they also made the plebiscita, or resolutions of the assembly of the tribes, authoritative laws, binding on the whole body politic.—H. G. Liddell, *Hist. of Rome, bk.* 2, *ch.* 10.—See a discussion of the importance of the last mentioned of these laws, in its relations to the subsequent Publilian and Hortensian laws, below: B. C. 286.

B. C. 445-400.—The Canuleian Law.—Creation of the Consular Tribunes.—Progress of the Plebs toward Political Equality.—"The year 449 had not taken from the patricians all their privileges. Rome has still two classes, but only one people, and the chiefs of the plebs, sitting in the senate, are meditating, after the struggle to obtain civil equality, to commence another to gain political equality. . . . Two things maintained the insulting distinction between the two orders: the prohibition of marriage between patricians and plebeians, and the tenure of all the magisterial officers by those who formed since the origin of Rome the sovereign people of the 'patres.' In 445 B. C. the tribune Canuleius demanded the abolition of the prohibition relative to marriages, and his colleagues, a share in the consulate. This was a demand for political equality." The Canuleian law legalizing marriages between patricians and plebeians was conceded, but not until a third "secession" of the plebeians had taken place. The plebeian demand for a share in the consulate was pacified for the time by a constitutional change which formed out of the consulate three offices: "the quæstorship, the censorship and the consular tribunate. The two former are exclusively patrician. The military [or consular] tribunes, in reality proconsuls confined, with one exception, to the command of the legions, could now be chosen without distinction, from the two orders. But the law, in not requiring that every year a fixed number of them be plebeians, allowed them to be all patricians; and they remained so for nearly fifty years. In spite of such skilful precautions, the senate did not give up the consulate. It held in reserve and pure from all taint the patrician magistracy, hoping for better days. . . . The constitution of 444 B. C. authorized the nomination of plebeians to the consular tribunate; down to 400 B. C. none obtained it; and during the seventy-eight years that this office continued, the senate twenty-four times nominated consuls, that is to say, it

attempted, and succeeded, one year in three, in re-establishing the ancient form of government. These perpetual oscillations encouraged the ambitious hopes of a rich knight, Spurius Mælius (439 B. C.). He thought that the Romans would willingly resign into his hands their unquiet liberty, and during a famine he gave very liberally to the poor. The senate became alarmed at this alms-giving which was not at all in accordance with the manners of that time, and raised to the dictatorship Cincinnatus, who, on taking office, prayed the gods not to grant that his old age should prove a cause of hurt or damage to the republic. Summoned before the tribunal of the dictator, Mælius refused to appear, and sought protection against the lictors amongst the crowd which filled the Forum. But the master of the horse, Serv. Ahala, managed to reach him, and ran him through with his sword. In spite of the indignation of the people, Cincinnatus sanctioned the act of his lieutenant, caused the house of the traitor to be demolished, and the 'præfectus annonæ,' Minucius Augurinus, sold, for an 'as' per 'modius,' the corn amassed by Mælius. Such is the story of the partisan of the nobles [Livy]; but at that epoch to have dreamt of re-establishing royalty would have been a foolish dream in which Spurius could not have indulged. Without doubt he had wished to obtain, by popular favour, the military tribunate, and in order to intimidate the plebeian candidates, the patricians overthrew him by imputing to him the accusation which Livy complacently details by the mouth of Cincinnatus, of having aimed at royalty. The crowd always can be cajoled by words, and the senate had the art of concentrating on this word 'royalty' all the phases of popular hatred. The move succeeded; during the eleven years following the people nine times allowed consuls to be nominated. There was, however, in 433 B. C. a plebeian dictator, Mamercus Æmilius, who reduced the tenure of censorship to 18 months. These nine consulships gave such confidence to the nobles that the senate itself had to suffer from the proud want of discipline shown by the consuls of the year 428 B. C. Though conquered by the Æquians, they refused to nominate a dictator. To overcome their resistance the senate had recourse to the tribunes of the people, who threatened to drag the consuls to prison. To see the tribunitian authority protecting the majesty of the senate was quite a new phenomenon. From this day the reputation of the tribunate equalled its power, and few years passed without the plebeians obtaining some new advantage. Three years earlier the tribunes, jealous of seeing the votes always given to the nobles, had proscribed the white robes, which marked out from a distance, to all eyes, the patrician candidate: This was the first law against undue canvassing. In 430 a law put an end to arbitrary valuations of penalties payable in kind. In 427 the tribunes, by opposing the levies, obliged the senate to carry to the comitia centuriata the question of the war against Veii. In 423 they revived the agrarian law, and demanded that the tithe should be more punctually paid in the future by the occupiers of domain land, and applied to the pay of the troops. They miscarried this time; but in 421 it seemed necessary to raise the number of quæstors from two to four; the people consented to it only on the condition that the quæstorship be accessible to the plebeians. Three years later 3,000 acres of the lands of Labicum were distributed to fifteen hundred plebeian families. It was very little: so the people laid claim in 414 to the division of the lands of Bola, taken from the Æquians. A military tribune, Postumius, being violently opposed to it, was slain in an outbreak of the soldiery. This crime, unheard of in the history of Roman armies, did harm to the popular cause; there was no distribution of lands, and for five years the senate was able to nominate the consuls. The patrician reaction produced another against it which ended in the thorough execution of the constitution of the year 444. An Icilius in 412, a Mænius in 410 B. C. took up again the agrarian law, and opposed the levy. The year following three of the Icilian family were named as tribunes. It was a menace to the other order. The patricians understood it, and in 410 three plebeians obtained the quæstorship. In 405 pay was established for the troops, and the rich undertook to pay the larger portion of it. Finally, in 400, four military tribunes out of six were plebeians. The chiefs of the people thus obtained the public offices and even places in the senate, and the poor obtained an indemnity which supported their families while they served with the colours. All ambitions, all desires, are at present satisfied. Calm and union returned to Rome; we can see it in the vigour of the attacks on external foes." —V. Duruy, *History of Rome, v.* 1, *pp.* 231–239.

B. C. 406-396.—The Veientine wars.—Proposed removal to Veii.—"Veii lay about ten miles from Rome, between two small streams which meet a little below the city and run down into the Tiber, falling into it nearly opposite to Castel Giubileo, the ancient Fidenæ. Insignificant in point of size, these little streams, however, like those of the Campagna generally, are edged by precipitous rocky cliffs, and thus are capable of affording a natural defence to a town built on the table-land above and between them. The space enclosed by the walls of Veii was equal to the extent of Rome itself, so long as the walls of Servius Tullius were the boundary of the city. . . . In the magnificence of its public and private buildings Veii is said to have been preferred by the Roman commons to Rome: and we know enough of the great works of the Etruscans to render this not impossible."—T. Arnold, *Hist. of Rome, ch.* 12 (*v.* 1).—"Rome and Veii, equals in strength and size, had engaged in periodical conflicts from time immemorial. . . . But the time had come for the final struggle with Veii. . . . How the siege lasted for ten years [B. C. 406–396]; how, at the bidding of a captured Tuscan seer, the Alban Lake was drained (and is not the tunnel which drained it visible to-day?); how Camillus, the dictator, by a tunnel underground took the city, and forestalled the sacrifice; how Juno came from Veii, and took up her abode upon the Aventine; how Camillus triumphed; and how the nemesis fell upon him, and he was banished—all this and more is told by Livy in his matchless way. It is an epic, and a beautiful epic."—R. F. Horton, *Hist. of the Romans, ch.* 4.—At the time of the conquest of Veii, there was a proposal that half the inhabitants of Rome should remove to the empty city, and found a new state. It was defeated with difficulty. A little later, when the Gauls had destroyed Rome, its citizens, having

found Veii a strong and comfortable place of refuge, were nearly persuaded to remain there and not rebuild their former home. Thus narrowly was the "Eternal City" saved to history. —H. G. Liddell, *Hist. of Rome, bk.* 2, *ch.* 13 *and* 15.

B. C. 390-347.—Invasions by the Gauls.—Destruction of the city.—"Before the time we are now speaking of, there had been a great movement in these Celtic nations [of Gael and Cymri]. Two great swarms went out from Gaul. Of these, one crossed the Alps into Italy; the other, moving eastward, in the course of time penetrated into Greece. . . . It is supposed that the Gael who dwelt in the eastern parts of Gaul, being oppressed by Cymric tribes of the west and north, went forth to seek new homes in distant lands. . . . At all events, it is certain that large bodies of Celts passed over the Alps before and after this time, and having once tasted the wines and eaten the fruits of Italy, were in no hurry to return from that fair land into their own less hospitable regions. We read of one swarm after another pressing into the land of promise; parties of Lingones, whose fathers lived about Langres in Champagne; Boians, whose name is traced in French Bourbon and Italian Bologna; Senones, whose old country was about Sens, and who have left record of themselves in the name of Senigaglia (Sena Gallica) on the coast of the Adriatic. . . . They overran the rich plains of Northern Italy, and so occupied the territory which lies between the Alps, the Apennines and the Adriatic [except Liguria] that the Romans called this territory Gallia Cisalpina, or Hither Gaul. The northern Etruscans gave way before these fierce barbarians, and their name is heard of no more in those parts. Thence the Gauls crossed the Apennines into southern Etruria, and while they were ravaging that country they first came in contact with the sons of Rome. The common date for this event is 390 B. C. . . . The tribe which took this course were of the Senones, as all authors say, and therefore we may suppose they were Gaelic; but it has been thought they were mixed with Cymri, since the name of their king or chief was Brennus, and Brenhin is Cymric for a king." The Romans met the invaders on the banks of the Alia, a little stream from the Sabine Hills which flows into the Tiber, and were terribly defeated there. The Gauls entered Rome and found, as the ancient story is, only a few venerable senators, sitting in their chairs and robes of state, whom they slew, because one of the senators resented the stroking of his beard by an insolent barbarian. The remaining inhabitants had withdrawn into the Capitol, or taken refuge at Veii and Cære. After pillaging and burning the city, the Gauls laid siege to the Capitol, and strove desperately for seven months to overcome its defenders by arms or famine. In the end they retreated, without success, but whether bribed, or driven, or weakened by sickness, is matter of uncertainty. The Romans cherished many legends connected with the siege of the Capitol,—like that, for example, of the sentinel and the sacred geese. "Thirty years after the first irruption (361 B. C.), we hear that another host of Senonian Gauls burst into Latium from the north, and, in alliance with the people of Tibur, ravaged the lands of Rome, Latium and Campania. For four years they continued their ravages, and then we hear of them no more. A third irruption followed, ten years later [B. C. 347], of still more formidable character. At that time, the Gauls formed a stationary camp on the Alban Hills and kept Rome in perpetual terror. . . . After some months they poured southwards, and disappear from history."—H. G. Liddell, *Hist. of Rome, bk.* 2, *ch.* 14 (*v.* 1).

B. C. 376-367.—The Licinian Laws.—"C. Licinius Stolo and L. Sextius . . . being Tribunes of the Plebs together in the year 376 B. C. promulgated the three bills which have ever since borne the name of the Licinian Rogations. These were: I. That of all debts on which interest had been paid, the sum of the interest paid should be deducted from the principal, and the remainder paid off in three successive years. II. That no citizen should hold more than 500 jugera (nearly 320 acres) of the Public Land, nor should feed on the public pastures more than 100 head of larger cattle and 500 of smaller, under penalty of a heavy fine. III. That henceforth Consuls, not Consular Tribunes, should always be elected, and that one of the two Consuls must be a Plebeian." The patricians made a desperate resistance to the adoption of these proposed enactments for ten years, during most of which long period the operations of government were nearly paralyzed by the obstinate tribunes, who inflexibly employed their formidable power of veto to compel submission to the popular demand. In the end they prevailed, and the Licinian rogations became Laws.—H. G. Liddell, *Hist. of Rome, bk.* 2, *ch.* 15 (*v.* 1).—"Licinius evidently designed reuniting the divided members of the plebeian body. Not one of them, whether rich or poor, but seems called back by these bills to stand with his own order from that time on. If this supposition was true, then Licinius was the greatest leader whom the plebeians ever had up to the time of Cæsar. But from the first he was disappointed. The plebeians who most wanted relief cared so little for having the consulship opened to the richer men of their estate that they would readily have dropped the bill concerning it, lest a demand should endanger their own desires. In the same temper the more eminent men of the order, themselves among the creditors of the poor and the tenants of the domain, would have quashed the proceedings of the tribunes respecting the discharge of debt and the distribution of land, so that they carried the third bill only, which would make them consuls without disturbing their possessions. While the plebeians continued severed from one another, the patricians drew together in resistance to the bills. Licinius stood forth demanding, at once, all that it had cost his predecessors their utmost energy to demand, singly and at long intervals, from the patricians. . . . The very comprehensiveness of his measures proved the safeguard of Licinius. Had he preferred but one of these demands, he would have been unhesitatingly opposed by the great majority of the patricians. On the other hand he would have had comparatively doubtful support from the plebs." In the end, after a struggle of ten years duration, Licinius and Sextius carried their three bills, together with a fourth, brought forward later, which opened to the plebeians the office of the duumvirs, who con-

sulted the Sibyline books. "It takes all the subsequent history of Rome to measure the consequences of the Revolution achieved by Licinius and Sextius; but the immediate working of their laws could have been nothing but a disappointment to their originators and upholders. . . . For some ten years the law regarding the consulship was observed, after which it was occasionally violated, but can still be called a success. The laws of relief, as may be supposed of all such sumptuary enactments, were violated from the first. No general recovery of the public land from those occupying more than five hundred jugera ever took place. Consequently there was no general division of land among the lackland class. Conflicting claims and jealousy on the part of the poor must have done much to embarrass and prevent the execution of the law. No system of land survey to distinguish between 'ager publicus' and 'ager privatus' existed. Licinius Stolo himself was afterwards convicted of violating his own law. The law respecting debts met with much the same obstacles. The causes of embarrassment and poverty being much the same and undisturbed, soon reproduced the effects which no reduction of interest or installment of principal could effectually remove. . . . These laws, then, had little or no effect upon the domain question or the re-distribution of land. They did not fulfil the evident expectation of their author in uniting the plebeians into one political body. This was impossible. What they did do was to break up and practically abolish the patriciate. Henceforth were the Roman people divided into rich and poor only."— A. Stephenson, *Public Lands and Agrarian Laws of the Roman Republic* (*Johns Hopkins Univ. Studies, 9th ser., nos.* 7–8).

Also in: T. Mommsen, *Hist. of Rome, bk.* 2, *ch.* 3 (*v.* 1).—S. Eliot, *The Liberty of Rome, bk.* 2, *ch.* 7 (*v.* 1).

B. C. 366.—Institution of the Prætorship.—"By the establishment of the prætorship (366 B. C.) the office of chief judge was separated as a distinct magistracy from the consulship. . . . The prætor was always looked upon as the colleague of the consuls. He was elected in the same manner as the consuls by centuriate comitia, and, moreover, under the same auspices. He was furnished with the imperium, had lictors and fasces. He represented the consuls in town by assembling the senate, conducting its proceedings, executing its decrees. . . . Up to the time of the first Punic war one prætor only was annually elected. Then a second was added to conduct the jurisdiction between citizens and foreigners. A distinction was now made between the city prætor (prætor urbanus), who was always looked upon as having a higher dignity, and the foreign prætor (prætor peregrinus). On the final establishment of the two provinces of Sicily and Sardinia, probably 227 B. C., two new prætors were appointed to superintend the regular government of those provinces, and still later on two more were added for the two provinces of Spain. The number of annual prætors now amounted to six, and so it remained until the legislation of Sulla."— W. Ihne, *Hist. of Rome, bk.* 6, *ch.* 5.— See, also, Consul, Roman.

B. C. 343-290.—The Samnite Wars.—When the Romans had made themselves dominant in middle Italy, and the Samnites [see Samnites] in southern Italy, the question which of the two peoples should be masters of the peninsula at large was sure to demand settlement. About the middle of the fourth century, B. C., it began to urge the two rivals into collision, and the next two generations of Romans were busied chiefly with Samnite Wars, of which they fought three, with brief intervals to divide them, and at the end of which the Samnite name had been practically erased from history. The first hostilities grew out of a quarrel between the Samnites of the mountains and their degenerate countrymen of Capua and Campania. The latter sought help from the Romans, and, according to the Romans, surrendered their city to them in order to secure it; but this is obviously untrue. The First Samnite War, which followed this (B. C. 343–341), had no definite result, and seems to have been brought to an end rather abruptly by a mutiny in the Roman army and by trouble between Rome and her Latin allies. According to the Roman annals there were three great battles fought in this war, one on Mount Gaurus, and two elsewhere; but Mommsen and other historians entirely distrust the historic details as handed down. The Second or Great Samnite War occurred after an interval of fifteen years, during which time the Romans had conquered all Latium, reducing their Latin kinsmen from confederates to subjects. That accomplished, the Romans were quite ready to measure swords again with their more important rivals in the south. The long, desperate and doubtful war which ensued was of twenty-two years duration (B. C. 326–304). In the first years of this war victory was with the Romans and the Samnites sued for peace; but the terms offered were too hard for them and they fought on. Then Fortune smiled on them and gave them an opportunity to inflict on their haughty enemy one of the greatest humiliations that Rome in all her history ever suffered. The entire Roman army, commanded by the two consuls of the year, was caught in a mountain defile (B. C. 321), at a place called the Caudine Forks, and compelled to surrender to the Samnite general, C. Pontius. The consuls and other officers of the Romans signed a treaty of peace with Pontius, and all were then set free, after giving up their armor and their cloaks and passing "under the yoke." But the Roman senate refused to ratify the treaty, and gave up those who had signed it to the Samnites. The latter refused to receive the offered prisoners and vainly demanded a fulfilment of the treaty. Their great victory had been thrown away, and, although they won another important success at Lautulæ, the final result of the war which they were forced to resume was disastrous to them. After twenty-two years of obstinate fighting they accepted terms (B. C. 304) which stripped them of all their territory on the sea-coast, and required them to acknowledge the supremacy of Rome. The peace so purchased lasted less than six years. The Samnites were tempted (B. C. 298) while the Romans had a war with Etruscans and Gauls on their hands, to attempt the avenging of their humiliations. Their fate was decided at the battle of Sentinum (B. C. 295), won by the old consul, Q. Fabius Maximus, against the allied Samnites and Gauls, through the heroic self-sacrifice of his colleague, P. Decius Mus [imitating his father, of the same name — see below: B. C. 339–338]. The Samnites struggled hopelessly on some five years

longer and submitted finally in 290 B. C. Their great leader, Pontius, was put to death in the dungeons of the state prison under the Capitoline.—J. Michelet, *Hist. of the Roman Republic, bk.* 2, *ch.* 1.

Also in: H. G. Liddell, *Hist. of Rome, bk.* 2, *ch.* 19, *and* 21-24.—T. Mommsen, *Hist. of Rome, bk.* 2, *ch.* 6.

B. C. 340.—The Publilian Laws.—"In the second year of the Latin war (340 B. C.) the Plebeian Consul, Q. Publilius Philo, being named Dictator by his Patrician colleague for some purpose now unknown, proposed and carried three laws still further abridging the few remaining privileges of the Patrician Lords. The first Publilian law enacted that one of the Censors, as one of the Consuls, must be a Plebeian. . . . The second gave fuller sanction to the principle already established, that the Resolutions of the Plebeian Assembly should have the force of law. The third provided that all laws passed at the Comitia of the Centuries or of the Tribes should receive beforehand the sanction of the Curies."—H. G. Liddell, *Hist. of Rome, bk.* 3, *ch.* 20 (*v.* 1). —See a discussion of these laws in their relation to the preceding Valerio-Horatian law, and the subsequent Hortensian laws, below: B. C. 286.

B. C. 339-338.—Subjugation of the Latins. —Grant of pseudo-citizenship.—The real concession of the next century and its effects.—A league between the Romans and their kinsmen and neighbors, the Latins, of Tibur, Prænestе, Lanuvium, Aricia, Velitræ, and other towns, as well as with the Hernicans, existed during a century and a half, from the treaty of Sp. Cassius, B. C. 493, according to the Roman annals. At first, the members of the league stood together on fairly equal terms fighting successful wars with the Volscians, the Æquians and the Etruscans. But all the time the Romans contrived to be the greater gainers by the alliance, and as their power grew their arrogance increased, until the Latin allies were denied almost all share in the conquests and the spoils which they helped to win. The discontent which this caused fermented to an outbreak after the first of the Samnite wars. The Latins demanded to be admitted to Roman citizenship and to a share in the government of the state. Their demand was haughtily and even insultingly refused, and a fierce, deadly war between the kindred peoples ensued (B. C. 339-338). The decisive battle of the war was fought under Mount Vesuvius, and the Romans were said to have owed their victory to the self-sacrifice of the plebeian consul, P. Decius Mus, who, by a solemn ceremony, devoted himself and the army of the enemy to the infernal gods, and then threw himself into the thick of the fight, to be slain. The Latin towns were all reduced to dependence upon Rome,—some with a certain autonomy left to them, some with none. "Thus, isolated, politically powerless, socially dependent on Rome, the old towns of the Latins, once so proud and so free, became gradually provincial towns of the Roman territory. . . . The old Latium disappeared and a new Latium took its place, which, by means of Latin colonies, carried the Roman institutions, in the course of two centuries, over the whole peninsula."—W. Ihne, *Hist. of Rome, bk.* 3, *ch.* 6 (*v.* 1).—"The Latins, being conquered, surrendered,—that is to say, they gave up to the Romans their cities, their worships, their laws, and their lands. Their position was cruel. A consul said in the senate that, if they did not wish Rome to be surrounded by a vast desert, the fate of the Latins should be settled with some regard to clemency. Livy does not clearly explain what was done. If we are to trust him, the Latins obtained the right of Roman citizenship without including in the political privileges the right of suffrage, or in the civil the right of marriage. We may also note, that these new citizens were not counted in the census. It is clear that the senate deceived the Latins in giving them the name of Roman citizens. This title disguised a real subjection, since the men who bore it had the obligations of citizens without the rights. So true is this, that several Latin cities revolted, in order that this pretended citizenship might be withdrawn. A century passed, and, without Livy's notice of the fact, we might easily discover that Rome had changed her policy. The condition of the Latins having the rights of citizens, without suffrage and without connubium, no longer existed. Rome had withdrawn from them the title of citizens, or, rather, had done away with this falsehood, and had decided to restore to the different cities their municipal governments, their laws, and their magistracies. But by a skilful device Rome opened a door which, narrow as it was, permitted subjects to enter the Roman city. It granted to every Latin who had been a magistrate in his native city the right to become a Roman citizen at the expiration of his term of office. This time the gift of this right was complete and without reserve; suffrage, magistracies, census, marriage, private law, all were included. . . . By being a citizen of Rome, a man gained honor, wealth, and security. The Latins, therefore, became eager to obtain this title, and used all sorts of means to acquire it. One day, when Rome wished to appear a little severe, she found that 12,000 of them had obtained it through fraud. Ordinarily, Rome shut her eyes, knowing that by this means her population increased, and that the losses of war were thus repaired. But the Latin cities suffered; their richest inhabitants became Roman citizens, and Latium was impoverished. The taxes, from which the richest were exempt as Roman citizens, became more and more burdensome, and the contingent of soldiers that had to be furnished to Rome was every year more difficult to fill up."—N. D. Fustel de Coulanges, *The Ancient City, bk.* 5, *ch.* 2.

B. C. 326-304 ?—Abolition of personal slavery for debt. See Debt, Roman Law concerning.

B. C. 312.—The censorship of Appius Claudius.—His admission of the freedmen to the Tribes.—The building of the Appian Way.—"Appius Claudius, . . . afterwards known as Appius the Blind, . . . was elected Censor [B. C. 312], . . . and, as was usual, entered, with his colleague, Plautius Decianus, upon the charge of filling the vacancies which had occurred within the Senate since the last nominations to that body by the preceding Censors. The new elections were always made, it appears, from certain lists of citizens who had either borne great offices or possessed high rank; but Appius, determined from the beginning to secure his authority, either for his own sake or for that of his faction, through any support he could command, now named several of the lowest men in Rome as Senators, amongst whom he even admitted

some sons of freedmen, who, as such, were scarcely to be considered to be absolutely free, much less to be worthy of any political advancement. The nomination, backed by a powerful party, out of rather than in the Senate, and vainly, if not feebly, opposed by Plautius Decianus, who resigned his office in disgust at his colleague, was carried, but was set aside in the following year by the Consuls, who could call such Senators as they pleased, and those only, as it seems, to their sessions. Appius, still keeping his place, was soon after assailed by some of the Tribunes, now the representatives, as must be remembered, of the moderate party, rather than of the Plebeian estate. At this the Censor admitted all the freedmen in Rome to the Tribes, amongst which he distributed them in such a manner as promised him the most effectual support. Appius, however, was not wholly absorbed in mere political intrigues. A large portion of his energy and his ambition was spent upon the Way [Appian Way] and the Aqueduct which have borne his name to our day, and which, in his own time, were undertakings so vast as to obtain for him the name of 'the Hundred-handed.' He was an author, a jurist, a philosopher, and a poet, besides. . . . Cneius Flavius, the son of a freedman, one, therefore, of the partisans on whom the Censor and his faction were willing to lavish pretended favor in return for unstinted support, was employed by Appius near his person, in the capacity of private secretary. Appius, who, as already mentioned, was a jurist and an author, appears to have compiled a sort of manual concerning the business-days of the Calendar and the forms of instituting or conducting a suit before the courts; both these subjects being kept in profound concealment from the mass of the people, who were therefore obliged, in case of any legal proceeding, to resort first to the Pontiff to learn on what day, and next to the Patrician jurist to inquire in what form, they could lawfully manage their affairs before the judicial tribunals. This manual was very likely given to Flavius to copy; but it could scarcely have been with the knowledge, much less with the desire, of his employer, that it was published. . . . But Flavius stood in a position which tempted him, whether he were generous or designing, to divulge the secrets of the manual he had obtained; and it may very well have been from a desire to conciliate the real party of the Plebeians, which ranked above him, as a freedman, that he published his discoveries. He did not go unrewarded, but was raised to various offices, amongst them to the tribuneship of the Plebeians, and finally to the curule ædileship, in which his disclosures are sometimes represented as having been made. . . . The predominance of the popular party is plainly attested in the same year by the censorship of Fabius Rullianus and Decius Mus, the two great generals, who, succeeding to Appius Claudius, removed the freedmen he had enrolled amongst all the Tribes into four Tribes by themselves."—S. Eliot, *The Liberty of Rome: Rome, bk.* 2, *ch.* 8 (*v.* 2).

B. C. 300.—The Ogulnian Law.—In the year 300 B. C., "Quintus and Cneius Ogulnius appear in the tribuneship, as zealous champions of the popular party against the combination of the highest and the lowest classes. Instead, however, of making any wild attack upon their adversaries, the Tribunes seem to have exerted themselves in the wiser view of detaching the populace from its Patrician leaders, in order to unite the severed forces of the Plebeians upon a common ground. . . . A bill to increase the number of the Pontiffs by four, and that of the Augurs by five new incumbents, who should then, and, as was probably added, thenceforward, be chosen from the Plebeians, was proposed by the Tribunes. . . . Though some strenuous opposition was made to its passage, it became a law. The highest places of the priesthood, as well as of the civil magistracies, were opened to the Plebeians, whose name will no longer serve us as it has done, so entirely have the old distinctions of their estate from that of the Patricians been obliterated. The Ogulnii did not follow up the success they had gained, and the alliance between the lower Plebeians and the higher Patricians was rather cemented than loosened by a law professedly devised to the advantage of the upper classes of the Plebeians."—S. Eliot, *Liberty of Rome: Rome, bk.* 2, *ch.* 9 (*v.* 2).

B. C. 295-191.—Conquest of the Cisalpine Gauls.—Early in the 3d century B. C. the Gauls on the southern side of the Alps, being reinforced from Transalpine Gaul, again entered Roman territory, encouraged and assisted by the Samnites, who were then just engaging in their third war with Rome. A Roman legion which first encountered them in Etruria, under Scipio Barbatus, was annihilated, B. C. 295. But the vengeance of Rome overtook them before that year closed, at Sentinum, where the consuls Fabius and Decius ended the war at one blow. The Gauls were quiet after this for ten years; but in 285 B. C. the Senonian tribes invaded Etruria again and inflicted an alarming defeat on the Romans at Arretium. They also put to death some Roman ambassadors who were sent to negotiate an exchange of prisoners; after which the war of Rome against them was pushed to extermination. The whole race was destroyed or reduced to slavery and Roman colonies were established on its lands. The Boian Gauls, between the Apennines and the Po, now resented this intrusion on Gallic territory, but were terribly defeated at the Vadimonian Lake and sued for peace. This peace was maintained for nearly sixty years, during which time the Romans were strengthening themselves beyond the Apennines, with a strong colony at Ariminum (modern Rimini) on the Adriatic Sea, with thick settlements in the Senonian country, and with a great road—the Via Flaminia—in process of construction from Rome northwards across the Apennines, through Umbria and along the Adriatic coast to Ariminum. The Boians saw that the yoke was being prepared for them, and in 225 B. C. they made a great effort to break it. In the first encounter with them the Romans were beaten, as in previous wars, but at the great battle of Telamon, fought soon afterwards, the Gallic hosts were almost totally destroyed. The next year the Boians were completely subjugated, and in 223 and 222 B. C. the Insubrians were likewise conquered, their capital Mediolanum (Milan) occupied, and all north Italy to the Alps brought under Roman rule, except as the Ligurians in the mountains were still unsubdued and the Cenomanians and the Veneti retained a nominal independence as allies of Rome. But Hannibal's invasion of Italy, occurring soon

after, interrupted the settlement and pacification of the Gallic country and made a reconquest necessary after the war with the Carthaginians had been ended. The new Roman fortified colony of Placentia was taken by the Gauls and most of the inhabitants slain. The sister colony of Cremona was besieged, but resisted until relieved. Among the battles fought, that of Comum, B. C. 196, appears to have been the most important. The war was prolonged until 191 B. C., after which there appears to have been no more resistance to Roman rule among the Cisalpine Gauls.—W. Ihne, *Hist. of Rome, bk.* 3, *ch.* 12–13; *bk.* 4, *ch.* 5; *bk.* 5, *ch.* 7.

B. C. 286.— The last Secession of the Plebs.—The Hortensian Laws.—"About the year 286 B. C. the mass of the poorer citizens [of Rome], consisting (as may be guessed) chiefly of those who had lately been enfranchised by Appius, left the city and encamped in an oak-wood upon the Janiculum. To appease this last Secession, Q. Hortensius was named Dictator, and he succeeded in bringing back the people by allowing them to enact several laws upon the spot. One of these Hortensian laws was probably an extension of the Agrarian law of Curius, granting not seven but fourteen jugera (about 9 acres) to each of the poorer citizens. Another provided for the reduction of debt. But that which is best known as the Hortensian law was one enacting that all Resolutions of the Tribes should be law for the whole Roman people. This was nearly in the same terms as the law passed by Valerius and Horatius at the close of the Decemvirate, and that passed by Publilius Philo the Dictator, after the conquest of Latium. Hortensius died in his Dictatorship,—an unparalleled event, which was considered ominous. Yet with his death ended the last Secession of the People."—H. G. Liddell, *Hist. of Rome, bk.* 3, *ch.* 25 (*v.*1).—"It is impossible to suppose that the assembly of the plebs advanced at a single step from the meeting of a private corporation to be the delegated alter ego of the sovereign populus Romanus. We may be sure that the right of the plebs to legislate for the nation was accorded under checks and qualifications, long before they were invested with this absolute authority. We find, in fact, two occasions prior to the Hortensian law, on which the legislative competency of the plebs is said to have been recognised. The first of these is the Valerio-Horatian Law of B. C. 449 [see above: B. C. 449], the year after the decemvirate, the second the law of the dictator Publilius Philo, B. C. 339 [see above: B. C. 340]. Unfortunately the historians describe these laws in words which merely repeat the contents of the Hortensian law. . . . Some modern writers have been disposed to get over the difficulty by the conjecture that the laws of Publilius Philo and Hortensius were only re-enactments of that of Valerius and Horatius, and that the full powers of the plebs date back to the year B. C. 449. Mommsen's arguments against this view appear to me conclusive. Why should the jurists universally refer the powers exercised by the plebs to a mere re-enactment, rather than to the original source of their authority? . . . Niebuhr believes that the law of Valerius and Horatius gave the plebs legislative authority, subject to the consent of a sort of upper house, the general assembly of the patrician body; he identifies this assembly with the 'comitia curiata.' . . . Mommsen's method of dealing with the question" is to strike out the Valerio-Horatian law and that of Publilius Philo from the series of enactments relating to the plebs. "He believes that both these laws regulated the proceedings of the 'comitia populi tributa,' and are transferred by a mere blunder of our authorities to the 'concilium plebis tributum.' . . . But the supposition of a possible blunder is too small a foundation on which to establish such an explanation. . . . I believe that, for the purpose of showing how the legislative power of the plebs may gradually have established itself, the known powers of the sovereign 'populus,' of the magistrates of the Roman people, and of the senate, will supply us with sufficient material; and that the assumptions of the German historians are therefore unnecessary. . . . I imagine . . . that the law of Valerius and Horatius simply recognised de jure the power which Icilius [see above: B. C. 456] had exercised de facto: that is to say, it ordered the consul to bring any petition of the plebs at once to the notice of the senate, and empowered the tribune to plead his cause before the senate; perhaps it went further and deprived the consul of his right of arbitrarily refusing to accede to the recommendation of the senate, if such were given, and directed that he should in such case convene the comitia and submit the proposal to its vote. If this restriction of the power of the consul removed the first obstacle in the way of tribunician bills supported by the vote of the plebs, another facility still remained to be given. The consul might be deprived of the opportunity of sheltering himself behind the moral responsibility of the senate. Does it not suggest itself as a plausible conjecture that the law of Publilius Philo struck out the intervening senatorial deliberation and compelled the consul to bring the petition of the plebs immediately before the 'comitia populi Romani'? If such were the tenor of the Publilian law, it would be only a very slight inaccuracy to describe it as conferring legislative power on the plebs. . . . The Hortensian law which formally transferred the sovereign power to the plebs would thus be a change greater de jure than de facto. . . . This power, if the theory put forward in these pages be correct, was placed within the reach of the plebeians by the law of Valerius and Horatius, and was fully secured to them by the law of Publilius Philo."—J. L. Strachan-Davidson, *The Growth of Plebeian Privilege at Rome* (*English Historical Rev., April,* 1886).—"With the passing of the Lex Hortensia the long struggle between the orders came to an end. The ancient patrician gentes remained, but the exclusive privileges of the patriciate as a ruling order were gone. For the great offices of state and for seats in the senate the plebeians were by law equally eligible with patricians. The assemblies, whether of people or plebs, were independent of patrician control. In private life inter-marriages between patricians and plebeians were recognised as lawful, and entailed no disabilities on the children. Finally, great as continued to be the prestige attaching to patrician birth, and prominent as was the part played in the subsequent history by individual patricians and by some of the patrician houses, the plebs were now in numbers and even in wealth the preponderant section of the people. Whatever struggles might arise in

the future, a second struggle between patricians and plebeians was an impossibility. Such being the case, it might have been expected that the separate organisation, to which the victory of the plebs was largely due, would, now that the reason for its existence was gone, have disappeared. Had this happened, the history of the republic might have been different. As it was, this plebeian machinery — the plebeian tribunes, assemblies, and resolutions — survived untouched, and lived to play a decisive part in a new conflict, not between patricians and plebeians, but between a governing class, itself mainly plebeian, and the mass of the people, and finally to place at the head of the state a patrician Cæsar. Nor was the promise of a genuine democracy, offered by the opening of the magistracies and the Hortensian law, fulfilled. For one hundred and fifty years afterwards the drift of events was in the opposite direction, and when the popular leaders of the first century B. C. endeavoured to make government by the people a reality, it was already too late."—H. F. Pelham, *Outlines of Roman Hist., bk.* 2, *ch.* 1.

B. C. 282-275. — War with Tarentum and Pyrrhus. — The conquest of the Samnites by the Romans, which was completed in 290 B. C., extended the power of the latter to the very gates of the Greek cities on the Tarentine gulf, of which Tarentum was the chief. At once there arose a party in Tarentum which foresaw the hopelessness of resistance to Roman aggression and favored a spontaneous submission to the supremacy of the formidable city on the Tiber. The patriotic party which opposed this humiliation looked abroad for aid, and found an eager ally in the Molossian king of Epirus, the adventurous and warlike Pyrrhus (see EPIRUS), who sprang from the family of Olympias, mother of Alexander the Great. In the autumn of 282 B. C., the inevitable war between Rome and Tarentum broke out, and early in 280 B. C. Pyrrhus landed a powerful army in Italy, comprising 20,000 heavy-armed foot-soldiers, 3,000 horse, 2,000 archers and 20 elephants. The Romans met him soon after at Heraclea, on the coast. It was the first collision of the Roman legion and the Macedonian phalanx, and the first encounter of the Latin soldier with the huge war-beast of the Asiatics. Pyrrhus won a bloody victory, but won it at such cost that it terrified him. He tried at once to arrange a peace, but the proud Romans made no terms with an invader. Next year he inflicted another great defeat upon them near Asculum, in Apulia; but nothing seemed to come of it, and the indomitable Romans were as little conquered as ever. Then the restless Epirot king took his much shaken army over to Sicily and joined the Greeks there in their war with the Carthaginians. The latter were driven out of all parts of the island except Lilybæum; but failing, after a long siege, to reduce Lilybæum, Pyrrhus lost the whole fruits of his success. The autumn of 276 B. C. found him back again in Italy, where the Romans, during his absence of three years, had recovered much ground. Next year, in the valley of Beneventum, they had their revenge upon him for Heraclea and Asculum, and he was glad to take the shattered remains of his army back to Greece. His career of ambition and adventure was ended three years afterwards (see MACEDONIA: B. C. 277–244), under the walls of Argos, by a tile which a woman flung down upon his head. In due time all Magna Græcia succumbed to the dominion of Rome, and the commerce and wealth of Tarentum passed over under Roman auspices to the new port of Brundisium, on the Adriatic side of the same promontory. — T. Arnold, *Hist. of Rome, ch.* 36–37 (*v.* 2).

B. C. 275. — Union of Italy under the sovereignty of the republic. — Differing relations of the subject communities to the sovereign state. — Roman citizenship as variously qualified. — "For the first time Italy was united into one state under the sovereignty of the Roman community. What political privileges the Roman community on this occasion withdrew from the various other Italian communities and took into its own sole keeping, or in other words, what conception of political power is to be associated with this sovereignty of Rome, we are nowhere expressly informed. . . . The only privileges that demonstrably belonged to it were the right of making war, of concluding treaties, and of coining money. No Italian community could declare war against any foreign state, or even negotiate with it, or coin money for circulation. On the other hand, every war and every state-treaty resolved upon by the Roman people were binding in law on all the other Italian communities, and the silver money of Rome was legally current throughout all Italy. It is probable that formerly the general rights of the leading community extended no further. But to these rights there was necessarily attached a prerogative of sovereignty that practically went far beyond them. The relations, which the Italians sustained to the leading community, exhibited in detail great inequalities. In this point of view, in addition to the full burgesses of Rome, there were three different classes of subjects to be distinguished. The full franchise itself, in the first place, was extended as far as was possible, without wholly abandoning the idea of an urban commonwealth in the case of the Roman commune. Not only was the old burgess-domain extended by individual assignation far into Etruria on the one hand and into Campania on the other, but, after the example was first set in the case of Tusculum, a great number of communities more or less remote were gradually incorporated with the Roman state and merged in it completely. . . . Accordingly the Roman burgess-body probably extended northward as far as the neighbourhood of Caere, eastward to the Apennines, and southward as far as, or beyond, Formiae. In its case, however, we cannot use the term 'boundaries' in a strict sense. Isolated communities within this region, such as Tibur, Praeneste, Signia, and Norba, had not the Roman franchise; others beyond its bounds, such as Sena, possessed it; and it is probable that families of Roman farmers were already dispersed throughout all Italy, either altogether isolated or associated in villages. Among the subject communities the most privileged and most important class was that of the Latin towns, which now embraced but few of the original participants in the Alban festival (and these, with the exception of Tibur and Praeneste, altogether insignificant communities), but on the other hand obtained accessions equally numerous and important in the autonomous communi-

ties founded by Rome in and even beyond Italy — the Latin colonies, as they were called — and was always increasing in consequence of new settlements of the same nature. These new urban communities of Roman origin, but with Latin rights, became more and more the real buttresses of the Roman rule. These Latins, however, were by no means those with whom the battles of the lake Regillus and Trifanum had been fought. . . . The Latins of the later times of the republic, on the contrary, consisted almost exclusively of communities, which from the beginning had honoured Rome as their capital and parent city; which, settled amidst peoples of alien language and of alien habits, were attached to Rome by community of language, of law, and of manners; which, as the petty tyrants of the surrounding districts, were obliged doubtless to lean on Rome for their very existence, like advanced posts leaning upon the main army. . . . The main advantage enjoyed by them, as compared with other subjects, consisted in their equalization with burgesses of the Roman community so far as regarded private rights — those of traffic and barter as well as those of inheritance. The Roman franchise was in future conferred only on such citizens of these townships as had filled a public magistracy in them: in that case, however, it was, apparently from the first, conferred without any limitation of rights. . . . The two other classes of Roman subjects, the subject Roman burgesses and the non-Latin allied communities, were in a far inferior position. The communities having the Roman franchise without the privilege of electing or being elected (civitas sine suffragio), approached nearer in form to the full Roman burgesses than the Latin communities that were legally autonomous. Their members were, as Roman burgesses, liable to all the burdens of citizenship, especially to the levy and taxation, and were subject to the Roman census; whereas, as their very designation indicates, they had no claim to its honorary rights. They lived under Roman laws, and had justice administered by Roman judges; but the hardship was lessened by the fact that their former common law was, after undergoing revision by Rome, restored to them as Roman local law, and a 'deputy' (praefectus) annually nominated by the Roman praetor was sent to them to conduct its administration. In other respects these communities retained their own administration, and chose for that purpose their own chief magistrates. . . . Lastly, the relations of the non-Latin allied communities were subject, as a matter of course, to very various rules, just as each particular treaty of alliance had defined them. Many of these perpetual treaties of alliance, such as that with the Hernican communities and those with Neapolis, Nola, and Heraclea, granted rights comparatively comprehensive, while others, such as the Tarentine and Samnite treaties, probably approximated to despotism. . . . The central administration at Rome solved the difficult problem of preserving its supervision and control over the mass of the Italian communities liable to furnish contingents, partly by means of the four Italian quaestors, partly by the extension of the Roman censorship over the whole of the dependent communities. The quaestors of the fleet, along with their more immediate duty, had to raise the revenues from the newly acquired domains and to control the contingents of the new allies; they were the first Roman functionaries to whom a residence and district out of Rome were assigned by law, and they formed the necessary intermediate authority between the Roman senate and the Italian communities. . . . Lastly, with this military administrative union of the whole peoples dwelling to the south of the Apennines, as far as the Iapygian promontory and the straits of Rhegium, was connected the rise of a new name common to them all — that of 'the men of the toga' (togati), which was their oldest designation in Roman state law, or that of the 'Italians,' which was the appellation originally in use among the Greeks and thence became universally current. . . . As the Gallic territory down to a late period stood contrasted in law with the Italian, so the 'men of the toga' were thus named in contrast to the Celtic 'men of the hose' (braccati); and it is probable that the repelling of the Celtic invasions played an important diplomatic part as a reason or pretext for centralizing the military resources of Italy in the hands of the Romans. . . . The name Italia, which originally and even in the Greek authors of the 5th century — in Aristotle for instance — pertained only to the modern Calabria, was transferred to the whole land of these wearers of the toga. The earliest boundaries of this great armed confederacy led by Rome, or of the new Italy, reached on the western coast as far as the district of Leghorn south of the Arnus, on the east as far as the Aesis north of Ancona. . . . The new Italy had thus become a political unity; it was also in the course of becoming a national unity."— T. Mommsen, *Hist. of Rome, bk.* 2, *ch.* 7 (*v.* 1).

B. C. 264-241.—The first Punic War.—Conquest of Sicily.—"The ten years preceding the First Punic War were probably a time of the greatest physical prosperity which the mass of the Roman people ever knew. Within twenty years two agrarian laws had been passed on a most extensive scale, and the poorer citizens had received besides what may be called a large dividend in money out of the lands which the state had conquered. In addition to this, the farming of the state domains, or of their produce, furnished those who had money with abundant opportunities of profitable adventure. . . . No wonder, then, that war was at this time popular. . . . But our 'pleasant vices' are ever made instruments to scourge us; and the First Punic War, into which the Roman people forced the senate to enter, not only in its long course bore most heavily upon the poorer citizens, but, from the feelings of enmity which it excited in the breast of Hamilcar, led most surely to that fearful visitation of Hannibal's sixteen years' invasion of Italy, which destroyed for ever, not indeed the pride of the Roman dominion, but the well-being of the Roman people."—T. Arnold, *Hist. of Rome, pp.* 538-540.—"The occasion of the First Punic War was dishonourable to Rome. Certain mercenary soldiers had seized Messana in Sicily, destroyed the citizens, and held possession against the Syracusans, 284 B. C. They were beaten in the field, and blockaded in Messana by Hiero, king of Syracuse, and then, driven to extremity, sent a deputation to Rome, praying that 'the Romans, the sovereigns of Italy, would not suffer an Italian people to be destroyed by Greeks and Carthaginians,' 264 B. C. It was singular that such a request should be made to

the Romans, who only six years before had chastised the military revolt of their brethren Mamertines in Rhegium, taking the city by storm, scourging and beheading the defenders, and then restoring the old inhabitants (270 B. C.). The senate was opposed to the request of the Messana deputation; but the consuls and the people of Rome, already jealous of Carthaginian influence in Sicily and the Mediterranean, resolved to protect the Mamertine buccaneers and to receive them as their friends and allies. Thus dishonestly and disgracefully did the Romans depart from their purely Italian and continental policy, which had so well succeeded, to enter upon another system, the results of which no one then could foresee. Some excuse may be found in the fact that the Carthaginians had been placed by their partisans in Messana in possession of the citadel, and this great rival power of Carthage was thus brought unpleasantly near to the recent conquered territory of Rome. The fear of Carthaginian influence overcame the natural reluctance to an alliance with traitors false to their military oath, the murderers and plunderers of a city which they were bound to protect. Thus began 'the First Punic War, which lasted, without intermission, 22 years, a longer space of time than the whole period occupied by the wars of the French Revolution.' In this war Duilius won the first naval battle near Mylæ (Melarro). Regulus invaded Africa proper, the territory of Carthage, with great success, until beaten and taken prisoner at Zama, 256–255 B. C. The war was carried on in Sicily and on the sea until 241 B. C., when peace was made on conditions that the Carthaginians should evacuate Sicily and make no war upon Hiero, king of Sicily (the ally of the Romans), that they should pay 3,200 Euboic talents (about £110,000) within ten years, 241 B. C. The effects of an exhausting war were soon overcome by ancient nations, so that both Rome and Carthage rapidly recovered, 'because wars in those days were not maintained at the expense of posterity.' Rome had to check the Illyrian pirates and to complete the conquest of Cisalpine Gaul and the Ligurians 238–221 B. C. Meanwhile the Carthaginians, hampered by a three years' rebellion of its mercenary troops, quietly permitted the Romans to take possession of Corsica and Sardinia, and agreed to pay 1,200 talents as compensation to Roman merchants. On the other hand, measures were in process to re-establish the Carthaginian power; the patriotic party, the Barcine family, under Hamilcar, commenced the carrying out of the extensions and consolidations of the territories in Spain."—W. B. Boyce, *Introd. to the Study of Hist., period* 4, *sect.* 4.

B. C. 218-211.—The Second Punic War; Hannibal in Italy.—Cannæ.—"Twenty-three years passed between the end of the first Punic War and the beginning of the second. But in the meanwhile the Romans got possession, rather unfairly, of the islands of Sardinia and Corsica, which Carthage had kept by the peace. On the other hand a Carthaginian dominion was growing up in Spain under Hamilcar Barkas, one of the greatest men that Carthage ever reared, his son-in-law Hasdrubal, and his son Hannibal, the greatest man of all, and probably the greatest general that the world ever saw. Another quarrel arose between Carthage and Rome, when Hannibal took the Spanish town of Saguntum, which the Romans claimed as an ally. War began in 218, and Hannibal carried it on by invading Italy by land. This was one of the most famous enterprises in all history. Never was Rome so near destruction as in the war with Hannibal. He crossed the Alps and defeated the Romans in four battles, the greatest of which was that of Cannae in B. C. 216."—E. A. Freeman, *Outlines of Hist. (or Gen'l Sketch of European Hist.), ch.* 3.—"The first battle was fought (218) on the river Ticinus, which runs into the Padus from the north. The Romans were driven back, and Hannibal passed the Padus. Meanwhile another Roman army had come up, and its general, the consul, Tiberius Sempronius Longus, wanted to fight at once. The little river of the Trebbia lay between the two armies, and on a cold morning the Roman general marched his soldiers through the water against Hannibal. The Romans were entirely beaten, and driven out of Gaul. All northern Italy had thus passed under Hannibal's power, and its people were his friends; so next year, 217, Hannibal went into Etruria, and marched south towards Rome itself, plundering as he went. The Roman consul, Caius Flaminius Nepos, went to meet him, and a battle was fought on the shores of the Lake Trasimenus. It was a misty day, and the Romans, who were marching after Hannibal, were surrounded by him and taken by surprise: they were entirely beaten, and the consul was killed in battle. Then the Romans were in great distress, and elected a dictator, Quintus Fabius Maximus. He saw that it was no use to fight battles with Hannibal, so he followed him about, and watched him, and did little things against him when he could: so he was called 'Cunctator,' or 'the Delayer.' But, although this plan of waiting was very useful, the Romans did not like it, for Hannibal was left to plunder as he thought fit, and there was always danger that the other Italians would join him against Rome. So next year, 216, the Romans made a great attempt to get rid of him. They sent both the consuls with an army twice as large as Hannibal's, but again they were defeated at Cannæ. They lost 70,000 men, while Hannibal only lost 6,000: all their best soldiers were killed, and it seemed as though they had no hope left. But nations are not conquered only by the loss of battles. Hannibal hoped, after the battle of Cannæ, that the Italians would all come to his side, and leave Rome. Some did so, but all the Latin cities, and all the Roman colonies held by Rome. So long as this was the case, Rome was not yet conquered. Hannibal could win battles very quickly, but it would take him a long time to besiege all the cities that still held to Rome, and for that he must have a larger army. But he could not get more soldiers,—the Romans had sent an army into Spain, and Hannibal's brother, Hasdrubal, was busy fighting the Romans there, and could not send any troops to Italy. The Carthaginians also would not send any, for they were becoming afraid of Hannibal, and they did not know anything about Italy. So they answered his letters, asking for more men, by saying, that if he had won such great battles, he

ought not to want any more troops. At Cannæ, then, Hannibal had struck his greatest blow: he could do no more. The Romans had learned to wait, and be careful: so they fought no more great battles, but every year they grew stronger and Hannibal grew weaker. The chief town that had gone over to Hannibal's side was Capua, but in 211 the Romans took it again, and Hannibal was not strong enough to prevent them. The chief men of Capua were so afraid of falling into the hands of the Romans that they all poisoned themselves. After this all the Italian cities that had joined Hannibal began to leave him again." —M. Creighton, *Hist. of Rome, ch.* 3.

B. C. 211.—The Second Punic War: Hannibal at the gates.—In the eighth year of the Second Punic War (B. C. 211), when fortune had begun to desert the arms of Hannibal — when Capua, his ally and mainstay in Italy was under siege by the Romans and he was powerless to relieve the doomed senators and citizens — the Carthaginian commander made a sudden march upon Rome. He moved his army to the gates of his great enemy, "not with any hope of taking the city, but with the hope that the Romans, panic-stricken at the realization of a fear they had felt for five years past, would summon the consuls from the walls of Capua. But the cool head of Fabius, who was in Rome, guessed the meaning of that manœuvre, and would only permit one of the consuls, Flaccus, to be recalled. Thus the leaguer of the rebel city was not broken. Hannibal failed in his purpose, but he left an indelible impression of his terrible presence upon the Roman mind. Looming through a mist of romantic fable, unconquerable, pitiless, he was actually seen touching the walls of Rome, hurling with his own hand a spear into the sacred Pomoerium. He had marched along the Via Latina, driving crowds of fugitives before him, who sought refuge in the city. . . . He had fixed his camp on the Anio, within three miles of the Esquiline. To realize the state of feeling in Rome during those days of panic would be to get at the very heart of the Hannibalic war. The Senate left the Curia and sat in the Forum, to reassure, by their calm composure, the excited crowds. Fabius noticed from the battlements that the ravagers spared his property. It was a cunning attempt on the part of Hannibal to bring suspicion on him; but he forthwith offered the property for sale; and such was the effect of his quiet confidence that the market price even of the land on which the camp of the enemy was drawn never fell an 'as.' . . . Hannibal marched away into the Sabine country, and made his way back to Tarentum, Rome unsacked, Capua unrelieved."—R. F. Horton, *Hist. of the Romans, ch.* 12.

B. C. 211-202.—The Second Punic War: Defeat of Hasdrubal at the Metaurus.—The war in Africa.—The end at Zama.—Acquisition of Spain.—"The conquest of Capua was the turning point in the war. Hannibal lost his stronghold in Campania and was obliged to retire to the southern part of Italy. Rome was gaining everywhere. The Italians who had joined Hannibal began to lose confidence. Salapia and many towns in Samnium were betrayed to the Romans. But when Fulvius, the proconsul who commanded in Apulia, appeared before Herdonea, which he hoped to gain possession of by treachery, Hannibal marched from Bruttium, attacked the Roman army, and gained a brilliant victory. In the following year the Romans recovered several places in Lucania and Bruttium, and Fabius Maximus crowned his long military career with the recapture of Tarentum (B. C. 209). The inhabitants were sold as slaves; the town was plundered and the works of art were sent to Rome. The next year Marcellus, for the fifth time elected to the consulship, was surprised near Venusia and killed. . . . The war had lasted ten years, yet its favorable conclusion seemed far off. There were increasing symptoms of discontent among the allies, while the news from Spain left little doubt that the long prepared expedition of Hasdrubal over the Alps to join his brother in Italy was at last to be realized. Rome strained every nerve to meet the impending danger. The number of legions was increased from twenty-one to twenty-three. The preparations were incomplete, when the news came that Hasdrubal was crossing the Alps by the same route which his brother had taken eleven years before. The consuls for the new year were M. Livius Salinator and G. Claudius Nero. Hannibal, at the beginning of spring, after reorganizing his force in Bruttium, advanced northward, encountered the consul Nero at Grumentum, whence, after a bloody but indecisive battle, he continued his march to Canusium. Here he waited for news from his brother. The expected despatch was intercepted by Nero, who formed the bold resolution of joining his colleague in the north, and with their united armies crushing Hasdrubal while Hannibal was waiting for the expected despatch. Hasdrubal had appointed a rendezvous with his brother in Umbria, whence with their united armies they were both to advance on Narnia and Rome. Nero, selecting from his army 7,000 of the best soldiers and 1,000 cavalry, left his camp so quietly that Hannibal knew nothing of his departure. Near Sena he found his colleague Livius, and in the night entered his camp that his arrival might not be known to the Carthaginians. Hasdrubal, when he heard the trumpet sound twice from the Roman camp and saw the increased numbers, was no longer ignorant that both consuls were in front of him. Thinking that his brother had been defeated, he resolved to retire across the Metaurus and wait for accurate information. Missing his way, wandering up and down the river to find a ford, pursued and attacked by the Romans, he was compelled to accept battle. Although in an unfavorable position, a deep river in his rear, his troops exhausted by marching all night, still the victory long hung in suspense. Hasdrubal displayed all the qualities of a great general, and when he saw that all was lost, he plunged into the thickest of the battle and was slain. The consul returned to Apulia with the same rapidity with which he had come. He announced to Hannibal the defeat and death of his brother by casting Hasdrubal's head within the outposts and by sending two Carthaginian captives to give

him an account of the disastrous battle. 'I foresee the doom of Carthage,' said Hannibal sadly, when he recognized the bloody head of his brother. This battle decided the war in Italy. Hannibal withdrew his garrisons from the towns in southern Italy, retired to the peninsula of Bruttium, where for four long years, in that wild and mountainous country, with unabated courage and astounding tenacity, the dying lion clung to the land that had been so long the theatre of his glory. . . . The time had come to carry into execution that expedition to Africa which Sempronius had attempted in the beginning of the war. Publius Scipio, on his return from Spain, offered himself for the consulship and was unanimously elected. His design was to carry the war into Africa and in this way compel Carthage to recall Hannibal. . . . The senate finally consented that he should cross from his province of Sicily to Africa, but they voted no adequate means for such an expedition. Scipio called for volunteers. The whole of the year B. C. 205 passed away before he completed his preparations. Meanwhile the Carthaginians made one last effort to help Hannibal. Mago, Hannibal's youngest brother, was sent to Liguria with 14,000 men to rouse the Ligurians and Gauls to renew the war on Rome; but having met a Roman army under Quintilius Varus, and being wounded in the engagement which followed, his movements were so crippled that nothing of importance was accomplished. In the spring of B. C. 204 Scipio had completed his preparations. He embarked his army from Lilybæum, and after three days landed at the Fair Promontory near Utica. After laying siege to Utica all summer, he was compelled to fall back and entrench himself on the promontory. Masinissa had joined him immediately on his arrival. By his advice Scipio planned a night attack on Hasdrubal, the son of Gisgo, and Syphax, who were encamped near Utica. This enterprise was completely successful. A short time afterwards Hasdrubal and Syphax were again defeated. Syphax fled to Numidia, where he was followed by Lælius and Masinissa and compelled to surrender. These successes convinced the Carthaginians that with the existing forces the Roman invasion could not long be resisted. Therefore they opened negotiations for peace with Scipio, in order probably to gain time to recall their generals from Italy. The desire of Scipio to bring the war to a conclusion induced him to agree upon preliminaries of peace, subject to the approval of the Roman senate and people. . . . Meanwhile the arrival of Hannibal at Hadrumetum had so encouraged the Carthaginians that the armistice had been broken before the return of the ambassadors from Rome. All hopes of peace by negotiation vanished, and Scipio prepared to renew the war, which, since the arrival of Hannibal, had assumed a more serious character. The details of the operations which ended in the battle of Zama are but imperfectly known. The decisive battle was fought on the river Bagradas, near Zama, on the 19th of October, B. C. 202. Hannibal managed the battle with his usual skill. His veterans fought like the men who had so often conquered in Italy, but his army was annihilated. The elephants were rendered unavailing by Scipio's skillful management. Instead of the three lines of battle, with the usual intervals, Scipio arranged his companies behind each other like the rounds of a ladder. Through these openings the elephants could pass without breaking the line. This battle terminated the long struggle. . . . Hannibal himself advised peace."—R. F. Leighton, *Hist. of Rome, ch.* 23–24.—"Scipio prepared as though he would besiege the city, but his heart also inclined to peace. . . . The terms which he offered were severe enough, and had the Carthaginians only realised what they involved, they would surely have asked to be allowed to meet their fate at once. They were to retain indeed their own laws and their home domain in Africa; but they were to give up all the deserters and prisoners of war, all their elephants, and all their ships of the line but ten. They were not to wage war, either in Africa or outside of it, without the sanction of the Roman Senate. They were to recognise Massinissa as the king of Numidia, and, with it, the prescriptive right which he would enjoy of plundering and annoying them at his pleasure, while they looked on with their hands tied, not daring to make reprisals. Finally, they were to give up all claim to the rich islands of the Mediterranean and to the Spanish kingdom, the creation of the Barcides, of which the fortune of war had already robbed them; and thus shorn of the sources of their wealth, they were to pay within a given term of seven years a crushing war contribution! Henceforward, in fact, they would exist on sufferance only, and that the sufferance of the Romans. . . . The conclusion of the peace was celebrated at Carthage by a cruel sight, the most cruel which the citizens could have beheld, except the destruction of the city itself — the destruction of their fleet. Five hundred vessels, the pride and glory of the Phœnician race, the symbol and the seal of the commerce, the colonisation, and the conquests of this most imperial of Phœnician cities, were towed out of the harbour and were deliberately burned in the sight of the citizens."—R. B. Smith, *Rome and Carthage: the Punic Wars, ch.* 17.

B. C. 184-149.—The Spoils of Conquest and the Corruption they wrought.—"The victories of the last half-century seemed to promise ease and wealth to Rome. She was to live on the spoils and revenue from the conquered countries. Not only did they pay a fixed tax to her exchequer, but the rich lands of Capua, the royal domain lands of the kings of Syracuse and of Macedonia, became public property, and produced a large annual rent. It was found possible in 167 to relieve citizens from the property tax or tributum, which was not collected again until the year after the death of Iulius Caesar. But the sudden influx of wealth had the usual effect of raising the standard of expense; and new tastes and desires required increased means for their gratification. All manner of luxuries were finding their way into the city from the East. Splen-

did furniture, costly ornaments, wanton dances and music for their banquets, became the fashion among the Roman nobles; and the younger men went to lengths of debauchery and extravagance hitherto unknown. The result to many was financial embarrassment, from which relief was sought in malversation and extortion. The old standard of honour in regard to public money was distinctly lowered, and cases of misconduct and oppression were becoming more common and less reprobated. . . . The fashionable taste for Greek works of art, in the adornment of private houses, was another incentive to plunder, and in 149 it was for the first time found necessary to establish a permanent court or 'quaestio' for cases of malversation in the provinces. Attempts were indeed made to restrain the extravagance which was at the root of the evil. In 184 Cato, as censor, had imposed a tax on the sale of slaves under twenty above a certain price, and on personal ornaments above a certain value; and though the 'lex Oppia,' limiting the amount of women's jewelry, had been repealed in spite of him in 195, other sumptuary laws were passed. A 'lex Orchia' in 182 limited the number of guests, a 'lex Fannia' in 161 the amount to be spent on banquets; while a 'lex Didia' in 143 extended the operation of the law to all Italy. And though such laws, even if enforced, could not really remedy the evil, they perhaps had a certain effect in producing a sentiment; for long afterwards we find overcrowded dinners regarded as indecorous and vulgar. Another cause, believed by some to be unfavourably affecting Roman character, was the growing influence of Greek culture and Greek teachers. For many years the education of the young, once regarded as the special business of the parents, had been passing into the hands of Greek slaves or freedmen. . . . On the superiority of Greek culture there was a division of opinion. The Scipios and their party patronised Greek philosophy and literature. . . . This tendency, which went far beyond a mere question of literary taste, was opposed by a party of which M. Porcius Cato was the most striking member. . . . In Cato's view the reform needed was a return to the old ways, before Rome was infected by Greece."—E. S. Shuckburgh, *Hist. of Rome to the Battle of Actium, ch.* 32.

B. C. 159-133.—Decline of the Republic.—Social and economic causes.—The growing system of Slavery and its effects.—Monopoly of land by capitalists.—Extinction of small cultivators.—Rapid decrease of citizens.—"In the Rome of this epoch the two evils of a degenerate oligarchy and a democracy not yet developed but already cankered in the bud were interwoven in a manner pregnant with fatal results. According to their party names, which were first heard during this period, the 'Optimates' wished to give effect to the will of the best, the 'Populares' to that of the community; but in fact there was in the Rome of that day neither a true aristocracy nor a truly self-determining community. Both parties contended alike for shadows. . . . Both were equally affected by political corruption, and both were in fact equally worthless. . . . The commonwealth was politically and morally more and more unhinged, and was verging towards its total dissolution. The crisis with which the Roman revolution was opened arose not out of this paltry political conflict, but out of the economic and social relations which the Roman government allowed, like everything else, simply to take their course"; and which had brought about "the depreciation of the Italian farms; the supplanting of the petty husbandry, first in a part of the provinces and then in Italy, by the farming of large estates; the prevailing tendency to devote the latter in Italy to the rearing of cattle and the culture of the olive and vine; finally, the replacing of the free labourers in the provinces as in Italy by slaves. . . . Before we attempt to describe the course of this second great conflict between labour and capital, it is necessary to give here some indication of the nature and extent of the system of slavery. We have not now to do with the old, in some measure innocent, rural slavery, under which the farmer either tilled the field along with his slave, or, if he possessed more land than he could manage, placed the slave . . . over a detached farm. . . . What we now refer to is the system of slavery on a great scale, which in the Roman state, as formerly in the Carthaginian, grew out of the ascendancy of capital. While the captives taken in war and the hereditary transmission of slavery sufficed to keep up the stock of slaves during the earlier period, this system of slavery was, just like that of America, based on the methodically prosecuted hunting of man. . . . No country where this species of game could be hunted remained exempt from visitation; even in Italy it was a thing by no means unheard of, that the poor free man was placed by his employer among the slaves. But the Negroland of that period was western Asia, where the Cretan and Cilician corsairs, the real professional slave-hunters and slave-dealers, robbed the coasts of Syria and the Greek islands; and where, emulating their feats, the Roman revenue-farmers instituted human hunts in the client states and incorporated those whom they captured among their slaves. . . . At the great slave market in Delos, where the slave-dealers of Asia Minor disposed of their wares to Italian speculators, on one day as many as 10,000 slaves are said to have been disembarked in the morning and to have been all sold before evening. . . . In whatever direction speculation applied itself, its instrument was invariably man reduced in the eye of the law to a brute. Trades were in great part carried on by slaves, so that the proceeds belonged to the master. The levying of the public revenues in the lower departments was regularly conducted by the slaves of the associations that leased them. Servile hands performed the operations of mining, making pitch, and others of a similar kind; it became early the custom to send herds of slaves to the Spanish mines. . . . The tending of cattle was universally performed by slaves. . . . But far worse in every respect was the plantation system proper—the cultivation of the fields by a band of slaves not unfrequently branded with iron, who with shackles on their legs performed the labours of the field under overseers during the day, and were locked up together by night in the common, frequently subterranean, labourers' prison. This plantation system had migrated from the East to Carthage, . . . and seems to have been brought by the Carthaginians to Sicily. . . . The abyss of misery and woe which opens before our eyes in this most miserable of all proletariates, we

leave to be fathomed by those who venture to gaze into such depths; it is very possible that, compared with the sufferings of the Roman slaves, the sum of all Negro suffering is but a drop. Here we are not so much concerned with the distress of the slaves themselves as with the perils which it brought upon the Roman state [see SLAVE WARS IN SICILY AND ITALY]. . . . The capitalists continued to buy out the small landholders, or indeed, if they remained obstinate, to seize their fields without title of purchase. . . . The landlords continued mainly to employ slaves instead of free labourers, because the former could not like the latter be called away to military service; and thus reduced the free proletariate to the same level of misery with the slaves. They continued to supersede Italian grain in the market of the capital, and to lessen its value over the whole peninsula, by selling Sicilian slave-corn at a mere nominal price. . . . After 595 [B. C. 159], . . . when the census yielded 328,000 citizens capable of bearing arms, there appears a regular falling off, for the list in 600 [B. C. 154] stood at 324,000, that in 607 [B. C. 147] at 322,000, that in 623 [B. C. 131] at 319,000 burgesses fit for service — an alarming result for a period of profound peace at home and abroad. If matters were to go on at this rate, the burgess-body would resolve itself into planters and slaves; and the Roman state might at length, as was the case with the Parthians, purchase its soldiers in the slave-market. Such was the external and internal condition of Rome, when the state entered on the 7th century of its existence. Wherever the eye turned, it encountered abuses and decay; the question could not but force itself on every sagacious and well disposed man, whether this state of things were not capable of remedy or amendment."—T. Mommsen, *Hist. of Rome, bk.* 4, *ch.* 2 (*v.* 3).

ALSO IN: T. Arnold, *Hist. of the Roman Commonwealth, ch.* 2.—G. Long, *Decline of the Roman Republic, v.* 1, *ch.* 10–12.—W. R. Brownlow, *Slavery and Serfdom in Europe, lect.* 1–2.

B. C. 151-146.—The Third Punic War: Destruction of Carthage.—"Carthage, bound hand and foot by the treaty of 201 B. C., was placed under the jealous watch of the loyal prince of Numidia, who himself willingly acknowledged the suzerainty of Rome. But it was impossible for this arrangement to be permanent. Every symptom of reviving prosperity at Carthage was regarded at Rome with feverish anxiety, and neither the expulsion of Hannibal in 195 B. C. nor his death in 183 B. C. did much to check the growing conviction that Rome would never be secure while her rival existed. It was therefore with grim satisfaction that many in the Roman senate watched the increasing irritation of the Carthaginians under the harassing raids and encroachments of their favoured neighbour, Masinissa, and waited for the moment when Carthage should, by some breach of the conditions imposed upon her, supply Rome with a pretext for interference. At last in 151 B. C. came the news that Carthage, in defiance of treaty obligations, was actually at war with Masinissa. The anti-Carthaginian party in the senate, headed by M. Porcius Cato, eagerly seized the opportunity; in spite of the protests of Scipio Nasica and others, war was declared, and nothing short of the destruction of their city itself was demanded from the despairing Carthaginians. This demand, as the senate, no doubt, foresaw, was refused, and in 149 B. C. the siege of Carthage began. During the next two years little progress was made, but in 147 P. Cornelius Scipio Æmilianus, son of L. Æmilius Paulus, conqueror of Macedonia, and grandson by adoption of the conqueror of Hannibal, was, at the age of 37, and though only a candidate for the ædileship, elected consul and given the command in Africa. In the next year (146 B. C.) Carthage was taken and razed to the ground. Its territory became the Roman province of Africa, while Numidia, now ruled by the three sons of Masinissa, remained as an allied state under Roman suzerainty, and served to protect the new province against the raids of the desert tribes. Within little more than a century from the commencement of the first Punic war, the whole of the former dominions of Carthage had been brought under the direct rule of Roman magistrates, and were regularly organised as Roman provinces."—H. F. Pelham, *Outlines of Roman Hist., bk.* 3, *ch.* 1.—See, also, CARTHAGE: B. C. 146.

B. C. 146.—Supremacy of the Senate.—"At the close of a century first of deadly struggle and then of rapid and dazzling success, Rome found herself the supreme power in the civilised world. . . . We have now to consider how this period of conflict and conquest had affected the victorious state. Outwardly the constitution underwent but little change. It continued to be in form a moderate democracy. The sovereignty of the people finally established by the Hortensian law remained untouched in theory. It was by the people in assembly that the magistrates of the year were elected, and that laws were passed; only by 'order of the people' could capital punishment be inflicted upon a Roman citizen. For election to a magistracy, or for a seat in the senate, patrician and plebeian were equally eligible. But between the theory and the practice of the constitution there was a wide difference. Throughout this period the actually sovereign authority in Rome was that of the senate, and behind the senate stood an order of nobles (nobiles), who claimed and enjoyed privileges as wide as those which immemorial custom had formerly conceded to the patriciate. The ascendency of the senate, which thus arrested the march of democracy in Rome, was not, to any appreciable extent, the result of legislation. It was the direct outcome of the practical necessities of the time, and when these no longer existed, it was at once and successfully challenged in the name and on the behalf of the constitutional rights of the people. Nevertheless, from the commencement of the Punic wars down to the moment when with the destruction of Carthage in 146 B. C. Rome's only rival disappeared, this ascendency was complete and almost unquestioned. It was within the walls of the senate-house, and by decrees of the senate, that the foreign and the domestic policy of the state were alike determined. . . . Though the ascendency of the senate was mainly due to the fact that without it the government of the state could scarcely have been carried on, it was strengthened and confirmed by the close and intimate connection which existed between the senate and the nobility. This 'nobility' was in its nature and origin widely different from the old patriciate. Though every patrician was of

course 'noble,' the majority of the families which in this period styled themselves noble were not patrician but plebeian, and the typical nobles of the time of the elder Cato, of the Gracchi, or of Cicero, the Metelli, Livii, or Licinii were plebeians. The title nobilis was apparently conceded by custom to those plebeian families one or more of whose members had, after the opening of the magistracies, been elected to a curule office, and which in consequence were entitled to place in their halls, and to display at their funeral processions the 'imagines' of these distinguished ancestors. The man who, by his election to a curule office thus ennobled his descendants, was said to be the 'founder of his family,' though himself only a new man. . . . Office brought wealth and prestige, and both wealth and prestige were freely employed to exclude 'new men' and to secure for the 'noble families' a monopoly of office. The ennobled plebeians not only united with the patricians to form a distinct order, but outdid them in pride and arrogance. . . . The establishment of senatorial ascendency was not the only result of this period of growth and expansion. During the same time the foundations were laid of the provincial system, and with this of the new and dangerous powers of the proconsuls."—H. F. Pelham, *Outlines of Roman Hist., bk.* 3, *ch.* 3.—"The great struggle against Hannibal left the Senate the all but undisputed government of Rome. Originally a mere consulting board, assessors of the king or consul, the Senate had become the supreme executive body. That the government solely by the comitia and the magistrates should by experience be found wanting was as inevitable at Rome as at Athens. Rome was more fortunate than Athens in that she could develop a new organism to meet the need. The growth of the power of the Senate was all the more natural and legitimate the less it possessed strict legal standing-ground. But the fatal dualism thus introduced into the constitution—the Assembly governing de jure, and the Senate governing de facto—made all government after a time impossible. The position of the Senate being, strictly speaking, an unconstitutional one, it was open to any demagogue to bring matters of foreign policy or administration before an Assembly which was without continuity, without special knowledge, and in which there was no debate. Now, if the Senate governed badly, the Assembly 'could not govern at all;' and there could be, in the long run, but one end to the constant struggle between the two sources of authority."—W. T. Arnold, *The Roman System of Provincial Administration, ch.* 2. —See, also, SENATE, ROMAN.

B. C. 133-121.—The attempted reforms of the Gracchi.— "The first systematic attack upon the senatorial government is connected with the names of Tiberius and Gaius Gracchus, and its immediate occasion was an attempt to deal with no less a danger than the threatened disappearance of the class to which of all others Rome had owed most in the past. For, while Rome had been extending her sway westward and eastward, and while her nobles and merchants were amassing colossal fortunes abroad, the small landholders throughout the greater part of Italy were sinking deeper into ruin under the pressure of accumulated difficulties. The Hannibalic war had laid waste their fields and thinned their numbers, nor when peace returned to Italy did it bring with it any revival of prosperity. The heavy burden of military service still pressed ruinously upon them, and in addition they were called upon to compete with the foreign corn imported from beyond the sea, and with the foreign slave-labour purchased by the capital of the wealthier men. . . . The small holders went off to follow the eagles or swell the proletariate of the cities, and their holdings were left to run waste or merged in the vineyards, oliveyards, and above all in the great cattle-farms of the rich, while their own place was taken by slaves. The evil was not equally serious in all parts of Italy. It was least felt in the central highlands, in Campania, and in the newly settled fertile valley of the Po. It was worst in Etruria and in southern Italy; but everywhere it was serious enough to demand the earnest attention of Roman statesmen. Of its existence the government had received plenty of warning in the declining numbers of ablebodied males returned at the census, in the increasing difficulties of recruiting for the legions, in servile out-breaks in Etruria and Apulia."—H. F. Pelham, *Outlines of Roman Hist., bk.* 4, *ch.* 1.—The earlier agrarian laws which the Roman plebeians had wrung from the patricians (the Licinian Law and similar ones—see above: B. C. 376–367; also AGRARIAN LAWS) had not availed to prevent the absorption, by one means and another, of the public domain—the "ager publicus," the conquered land which the state had neither sold nor given away—into the possession of great families and capitalists, who held it in vast blocks, to be cultivated by slaves. Time had almost sanctioned this condition of things, when Tiberius Sempronius Gracchus, elder of the two famous brothers called "The Gracchi," undertook in 133 B. C. a reformation of it. As one of the tribunes of the people that year, he brought forward a law which was intended to enforce the provisions of the Licinian Law of 367 B. C., by taking away from the holders of public land what they held in excess of 500 jugera (about 320 acres) each. Three commissioners, called Triumviri, were to be appointed to superintend the execution of the law and to redistribute the land recovered, among needy citizens. Naturally the proposal of this act aroused a fierce opposition in the wealthy class whose ill-gotten estates were threatened by it. One of the fellow-tribunes of Tiberius was gained over by the opposition and used the power of his veto to prevent the taking of a vote upon the bill. Then Gracchus, to overcome the obstacle, had recourse to an unconstitutional measure. The obstinate tribune was deposed from his office by a vote of the people, and the law was then enacted. For the carrying out of his measure, and for his own protection, no less, Tiberius sought a re-election to the tribunate, which was contrary to usage, if not against positive law. His enemies raised a tumult against him on the day of election and he was slain, with three hundred of his party, and their corpses were flung into the Tiber. Nine years later, his younger brother, Caius Gracchus, obtained election to the tribune's office and took up the work of democratic political reform which Tiberius had sacrificed his life in attempting. His measures were radical, attacking the powers and privileges of the ruling orders. But mixed with them were schemes of demagoguery which did infinite mischief to the Roman people and state. He carried

the first frumentarian law (lex frumentaria) as it was called, by which corn was bought with public money, and stored, for sale to Roman citizens at a nominal price. After three years of power, through the favor of the people, he, too, in 121 B. C. was deserted by them and the party of the patricians was permitted to put him to death, with a great number of his supporters.— G. Long, *Decline of the Roman Republic, v.* 1, *ch.* 10–13, 18–19.—"Caius, it is said, was the first Roman statesman who appointed a regular distribution of corn among the poorer citizens, requiring the state to buy up large consignments of grain from the provinces, and to sell it again at a fixed rate below the natural price. The nobles themselves seem to have acquiesced without alarm in this measure, by which they hoped to secure the city from seditious movements in time of scarcity; but they failed to foresee the discouragement it would give to industry, the crowds of idle and dissipated citizens it would entice into the forum, the appetite it would create for shows, entertainments and largesses, and the power it would thus throw into the hands of unprincipled demagogues. Caius next established customs duties upon various articles of luxury imported into the city for the use of the rich; he decreed the gratuitous supply of clothing to the soldiers, who had hitherto been required to provide themselves out of their pay; he founded colonies for the immediate gratification of the poorer citizens, who were waiting in vain for the promised distribution of lands; he caused the construction of public granaries, bridges and roads, to furnish objects of useful labour to those who were not unwilling to work. Caius himself, it is said, directed the course and superintended the making of the roads, some of which we may still trace traversing Italy in straight lines from point to point, filling up depressions and hollowing excrescences in the face of the country, and built upon huge substructions of solid masonry. Those who most feared and hated him confessed their amazement at the magnificence of his projects and the energy of his proceedings; the people, in whose interests he toiled, were filled with admiration and delight, when they saw him attended from morning to night by crowds of contractors, artificers, ambassadors, magistrates, soldiers, and men of learning, to all of whom he was easy of access, adapting his behaviour to the condition of each in turn; thus proving, as they declared, the falsehood of those who presumed to call him violent and tyrannical. . . . By these innovations Caius laid a wide basis of popularity. Thereupon he commenced his meditated attack upon the privileged classes. We possess at least one obscure intimation of a change he effected or proposed in the manner of voting by centuries, which struck at the influence of the wealthier classes. He confirmed and extended the Porcian law, for the protection of citizens against the aggression of the magistrates without a formal appeal to the people. Even the powers of the dictatorship, to which the senate had been wont to resort for the coercion of its refractory opponents, were crippled by these provisions; and we shall see that no recourse was again had to this extraordinary and odious appointment till the 'oligarchy had gained for a time a complete victory over their adversaries. Another change, even more important, was that by which the knights were admitted to the greater share, if not, as some suppose, to the whole, of the judicial appointments. . . . As long as the senators were the judges, the provincial governors, who were themselves senators, were secure from the consequence of impeachment. If the knights were to fill the same office, it might be expected that the publicani, the farmers of the revenues abroad, would be not less assured of impunity, whatever were the enormity of their exactions. . . . It was vain, indeed, to expect greater purity from the second order of citizens than from the first. If the senators openly denied justice to complainants, the knights almost as openly sold it. This was in itself a grievous degradation of the tone of public morality; but this was not all the evil of the tribune's reform. It arrayed the two privileged classes of citizens in direct hostility to one another. 'Caius made the republic double-headed,' was the profound remark of antiquity. He sowed the seeds of a war of an hundred years. Tiberius had attempted to raise up a class of small proprietors, who, by the simplicity of their manners and moderation of their tastes, might form, as he hoped, a strong conservative barrier between the tyranny of the nobles and the envy of the people; but Caius, on the failure of this attempt, was content to elevate a class to power, who should touch upon both extremes of the social scale,—the rich by their wealth, and the poor by their origin. Unfortunately this was to create not a new class, but a new party. . . . One direct advantage, at all events, Caius expected to derive, besides the humiliation of his brother's murderers, from this elevation of the knights: he hoped to secure their grateful co-operation towards the important object he next had in view: this was no less than the full admission of the Latins and Italians to the right of suffrage."—C. Merivale, *The Fall of the Roman Republic, ch.* 1.

B. C. 118-99.—Increasing corruption of government.—The Jugurthine War.—Invasion and defeat of the Cimbri and Teutones.—The power of Marius.—"After the death of Caius Gracchus, the nobles did what they pleased in Rome. They paid no more attention to the Agrarian Law, and the state of Italy grew worse and worse. . . . The nobles cared nothing for Rome's honour, but only for their own pockets. They governed badly, and took bribes from foreign kings, who were allowed to do what they liked if they could pay enough. This was especially seen in a war that took place in Africa. After Carthage had been destroyed, the greatest state in Africa was Numidia. The king of Numidia was a friend of the Roman people, and had fought with them against Carthage. So Rome had a good deal to do with Numidia, and the Numidians often helped Rome in her wars. In 118 a king of Numidia died, and left the kingdom to his two sons and an adopted son named Jugurtha. Jugurtha determined to have the kingdom all to himself, so he murdered one of the sons and made war upon the other, who

applied to Rome for help [see NUMIDIA: B. C. 118–104]. The Senate was bribed by Jugurtha, and did all it could to please him; at last, however, Jugurtha besieged his brother in Cirta, and when he took the city put him and all his army to death (112). After this the Romans thought they must interfere, but the Senate for more money were willing to let Jugurtha off very easily. He came to Rome to excuse himself before the people, and whilst he was there he had a Numidian prince, of whom he was afraid, murdered in Rome itself. But his bribes were stronger than the laws. . . . The Romans declared war against Jugurtha, but he bribed the generals, and for three years very little was done against him. At last, in 108, a good general, who would not take bribes, Quintus Metellus, went against him and defeated him. Metellus would have finished the war, but in 106 the command was taken from him by Caius Marius the consul. This Caius Marius was a man of low birth, but a good soldier. He had risen in war by his bravery, and had held magistracies in Rome. He was an officer in the army of Metellus, and was very much liked by the common soldiers, for he was a rough man like themselves, and talked with them, and lived as they did. . . . Marius left Africa and went to Rome to try and be made consul in 106. He found fault with Metellus before the people, and said that he could carry on the war better himself. So the people made him consul, and more than that, they said that he should be general in Africa instead of Metellus. . . . Marius finished the war in Africa, and brought Jugurtha in triumph to Italy in 104. . . . When it was over, Marius was the most powerful man in Rome. He was the leader of the popular party, and also the general of the army. The army had greatly changed since the time of Hannibal. The Roman soldiers were no longer citizens who fought when their country wanted them, and then went back to their work. But as wars were now constantly going on, and going on too in distant countries, this could no longer be the case, and the army was full of men who took to a soldier's life as a trade. Marius was the favourite of these soldiers: he was a soldier by trade himself, and had risen in consequence to power in the state. Notice, then, that when Marius was made consul, it was a sign that the government for the future was to be carried on by the army, as well as by the people and the nobles. Marius was soon wanted to carry on another war. Two great tribes of barbarians from the north had entered Gaul west of the Alps, and threatened to drive out the Romans, and even attack Italy. They came with their wives and children, like a wandering people looking for a home. . . . At first these Cimbri defeated the Roman generals in southern Gaul, where the Romans had conquered the country along the Rhone, and made it a province, which is still called the province, or Provence. The Romans, after this defeat, were afraid of another burning of their city by barbarians, so Marius was made consul again, and for the next five years he was elected again and again. . . . In the year 102 the Teutones and the Cimbri marched to attack Italy, but Marius defeated them in two great battles [see CIMBRI AND TEUTONES: B. C. 113–102]. Afterwards when he went back to Rome in triumph he was so powerful that he could have done what he chose in the state. The people were very grateful to him, the soldiers were very fond of him, and the nobles were very much afraid of him. But Marius did not think much of the good of the state: he thought much more of his own greatness, and how he might become a still greater man. So, first, he joined the party of the people, and one of the tribunes, Lucius Appuleius Saturninus, brought forward some laws like those of Caius Gracchus, and Marius helped him. But there were riots in consequence, and the Senate begged Marius to help them in putting down the riots. For a time Marius doubted what to do, but at last he armed the people, and Saturninus was killed (99). But now neither side liked Marius, for he was true to neither, and did only what he thought would make himself most powerful. So for the future Marius was not likely to be of much use in the troubles of the Roman state."—M. Creighton, *Hist. of Rome* (*Primer*), *ch.* 7.

B. C. 90–88.—Demands of the Italian Socii for Roman citizenship.—The Marsian or Social War.—Rise of Sulla.—"It is a most erroneous though widely prevalent opinion that the whole of Italy was conquered by the force of Roman arms, and joined to the empire [of the Republic] against its will. Roman valour and the admirable organization of the legions, it is true, contributed to extend the dominion of Rome, but they were not nearly so effective as the political wisdom of the Roman senate. . . . The subjects of Rome were called by the honourable name of allies (Socii). But the manner in which they had become allies was not always the same. It differed widely according to circumstances. Some had joined Rome on an equal footing by a free alliance ('fœdus æquum'), which implied nothing like subjection. . . . Others sought the alliance of Rome as a protection from pressing enemies or troublesome neighbours. . . . On the whole, the condition of the allies, Latin colonies as well as confederated Italians, seems to have been satisfactory, at least in the earlier period. . . . But even the right of self-government which Rome had left to the Italian communities proved an illusion in all cases where the interests of the ruling town seemed to require it. A law passed in Rome, nay, a simple senatorial decree, or a magisterial order, could at pleasure be applied to the whole of Italy. Roman law gradually took the place of local laws, though the Italians had no part in the legislation of the Roman people, or any influence on the decrees of the Roman senate and magistrates. . . . All public works in Italy, such as roads, aqueducts, and temples, were carried out solely for the benefit of Rome. . . . Not in peace only, but also in the time of war, the allies were gradually made to feel how heavily the hand of Rome weighed upon them. . . . In proportion as with the increase of their power the Romans felt more and more secure and independent of the allies, they showed them less consideration and tenderness, and made them feel that they had gradually sunk from their former position of friends to be no more than subjects." There was increasing discontent among the Italian allies, or Socii, with this state of things, especially after the time of the Gracchi, when a

proposal to extend the Roman citizenship and franchise to them was strongly pressed. In the next generation after the murder of Caius Gracchus, there arose another political reformer, Marcus Livius Drusus, who likewise sought to have justice done to the Italians, by giving them a voice in the state which owed its conquests to their arms. He, too, was killed by the political enemies he provoked; and then the allies determined to enforce their claims by war. The tribes of the Sabellian race — Marsians, Samnites, Hirpenians, Lucanians, and their fellows — organized a league, with the town of Corfinium (its name changed to Italica) for its capital, and broke into open revolt. The prominence of the Marsians in the struggle caused the war which ensued to be sometimes called the Marsian War; it was also called the Italian War, but, more commonly, the Social War. It was opened, B. C. 90, by a horrible massacre of Roman citizens residing at Asculum, Picenum,—a tragedy for the guilt of which that town paid piteously the next year, when it was taken at the end of a long siege and after a great battle fought under its walls. But the Romans had suffered many defeats before that achievement was reached. At the end of the first year of the war they had made no headway against the revolt, and it is the opinion of Ihne and other historians that "Rome never was so near her destruction," and that "her downfall was averted, not by the heroism of her citizens, as in the war of Hannibal, but by a reversal" of her "policy of selfish exclusion and haughty disdain." A law called the Julian Law, because proposed by the consul L. Julius Cæsar, was adopted B. C. 90, which gave the Roman franchise to the Latins, and to all the other Italian communities which had so far remained faithful. Soon afterward two of the new tribunes carried a further measure, the Plautio-Papirian Law, which offered the same privilege to any Italian who, within two months, should present himself before a Roman magistrate to claim it. These concessions broke the spirit of the revolt and the Roman armies began to be victorious. Sulla, who was in the field, added greatly to his reputation by successes at Nola (where his army honored him by acclaim with the title of Imperator) and at Bovianum, which he took. The last important battle of the war was fought on the old blood-drenched plain of Cannæ, and this time the victory was for Rome. After that, for another year, some desperate towns and remnants of the revolted Socii held out, but their resistance was no more than the death throes of a lost cause.—W. Ihne, *Hist. of Rome, bk.* 6, *ch.* 9, *with foot-note, and bk.* 7, *ch.* 13–14.

B. C. 88-78.—Rivalry of Marius and Sulla. —War with Mithridates.—Civil war.—Successive proscriptions and reigns of terror.—Sulla's dictatorship.—The political diseases of which the Roman Republic was dying made quick progress in the generation that passed between the murder of Caius Gracchus and the Social War. The Roman rabble which was nominally sovereign and the oligarchy which ruled actually, by combined bribery and browbeating of the populace, had both been worse corrupted and debased by the increasing flow of tribute and plunder from provinces and subject states. Rome had familiarized itself with mob violence, and the old respect for authority and for law was dead. The soldier with an army at his back need not stand any longer in awe of the fasces of a tribune or a consul. It was a natural consequence of that state of things that the two foremost soldiers of the time, Caius Marius and L. Cornelius Sulla (or Sylla, as often written,) should become the recognized chiefs of the two opposing factions of the day. Marius was old, his military glory was waning, he had enjoyed six consulships and coveted a seventh; Sulla was in the prime of life, just fairly beginning to show his surpassing capabilities and entering on his real career. Marius was a plebeian of plebeians and rude in all his tastes; Sulla came from the great Cornelian gens, and refined a little the dissoluteness of his life by studies of Greek letters and philosophy. Marius was sullenly jealous; Sulla was resolutely ambitious. A new war, which promised great prizes to ambition and cupidity, alike, was breaking out in the east,—the war with Mithridates. Both Marius and Sulla aspired to the command in it; but Sulla had been elected one of the consuls for the year 88 B. C. and, by custom and law, would have the conduct of the war assigned to him. Marius, however, intrigued with the demagogues and leaders of the mob, and brought about a turbulent demonstration and popular vote, by which he could claim to be appointed to lead the forces of the state against Mithridates. Sulla fled to his army, in camp at Nola, and laid his case before the officers and men. The former, for the most part, shrank from opposing themselves to Rome; the latter had no scruples and demanded to be led against the Roman mob. Sulla took them at their word, and marched them straight to the city. For the first time in its history (by no means the last) the great capital was forcibly entered by one of its own armies. There was some resistance, but not much. Sulla paralyzed his opponents by his energy, and by a threat to burn the city if it did not submit. Marius and his chief partisans fled. Sulla contented himself with outlawing twelve, some of whom were taken and put to death. Marius, himself, escaped to Africa, after many strange adventures, in the story of which there is romance unquestionably mixed. Sulla (with his colleague in harmony with him) fulfilled the year of his consulate at Rome and then departed for Greece to conduct the war against Mithridates. In doing so, he certainly knew that he was giving up the government to his enemies; but he trusted his future in a remarkable way, and the necessity, for Rome, of confronting Mithridates was imperative. The departure of Sulla was the signal for fresh disorders at Rome. Cinna, one of the new consuls, was driven from the city, and became the head of a movement which appealed to the "new citizens," as they were called, or the "Italian party"—the allies who had been enfranchised as the result of the Social War. Marius came back from exile to join it. Sertorius and Carbo were other leaders who played important parts. Presently there were four armies beleaguering Rome, and after some unsuccessful resistance the gates were opened to them, by order of the Roman senate. Cinna, the consul, was nominally restored to authority, but Marius was really supreme, and Marius was

implacable in his sullen rage. Rome was treated like a conquered city. The public and private enemies of Marius and of all who chose to call themselves Marians, were hunted down and slain. To stop the massacre, at last, Sertorius — the best of the new masters of Rome — was forced to turn his soldiers against the bands of the assassins and to slaughter several thousands of them. Then some degree of order was restored and there was the quiet in Rome of a city of the dead. The next year Marius realized his ambition for a seventh consulship, but died before the end of the first month of it. Meantime, Sulla devoted himself steadily to the war against Mithridates [see MITHRIDATIC WARS], watching from afar the sinister course of events at Rome, and making no sign. It was not until the spring of 83 B. C., four years after his departure from Italy and three years after the death of Marius, that he was ready to return and settle accounts with his enemies. On landing with his army in Italy he was joined speedily by Pompey, Crassus, and other important chiefs. Cinna had been killed by mutinous soldiers; Carbo and young Marius were the leaders of the "Italian party." There was a fierce battle at Sacriportus, near Prænestе, with young Marius, and a second with Carbo at Clusium. Later, there was another furious fight with the Samnites, under the walls of Rome, at the Colline Gate, where 50,000 of the combatants fell. Then Sulla was master of Rome. Every one of his suspected friends in the senate had been butchered by the last orders of young Marius. His retaliation was not slow; but he pursued it with a horrible deliberation. He made lists, to be posted in public, of men who were marked for death and whom anybody might slay. There are differing accounts of the number doomed by this proscription; according to one annalist the death-roll was swelled to 4,700 before the reign of terror ceased. Sulla ruled as a conqueror until it pleased him to take an official title, when he commanded the people to elect him Dictator, for such term as he might judge to be fit. They obeyed. As Dictator, he proceeded to remodel the Roman constitution by a series of laws which were adopted at his command. One of these laws enfranchised 10,000 slaves and made them citizens. Another took away from the tribunes a great part of their powers; allowed none but members of the senate to be candidates for the office, and no person once a tribune to hold a curule office. Others reconstructed the senate, adding 300 new members to its depleted ranks, and restored to it the judicial function which C. Gracchus had transferred to the knights; they also restored to it the initiative in legislation. Having remodeled the Roman government to his liking, Sulla astounded his friends and enemies by suddenly laying down his dictatorial powers and retiring to private life at his villa, near Puteoli, on the Bay of Naples. There he wrote his memoirs, which have been lost, and gave himself up to the life of pleasure which was even dearer to him than the life of power. But he enjoyed it scarcely a year, when he died, B. C. 78. His body, taken to Rome, was burned with pomp.—G. Long, *Decline of the Roman Republic, v. 2, ch. 17–29.*

B. C. 78-68.—Danger from the legionaries. —Rising power of Pompeius.—Attempt of Lepidus.— Pompeius against Sertorius in Spain.— Insurrection of Spartacus and the Gladiators.— The second Mithridatic War, and war in Armenia.—"The Roman legionary, . . . drawn from the dregs of the populace, and quartered through the best years of his life in Greece and Asia, in Spain and Gaul, lived solely upon his pay, enhanced by extortion or plunder. His thirst of rapine grew upon him. He required his chiefs to indulge him with the spoil of cities and provinces; and when a foreign enemy was not at hand, he was tempted to turn against the subjects of the state, or, if need be, against the state itself. . . . Marius and Sulla, Cinna and Carbo had led the forces of Rome against Rome herself. . . . The problem which thus presented itself to the minds of patriots — how, namely, to avert the impending dissolution of their polity under the blows of their own defenders — was indeed an anxious and might well appear a hopeless one. It was to the legions only that they could trust, and the legions were notoriously devoted to their chiefs. . . . The triumph of Sulla had been secured by the accession to his side of Pompeius Strabo, the commander of a large force quartered in Italy. These troops had transferred their obedience to a younger Pompeius, the son of their late leader. Under his auspices they had gained many victories; they had put down the Marian faction, headed by Carbo, in Sicily, and had finally secured the ascendency of the senate on the shores of Africa. Sulla had evinced some jealousy of their captain, who was young in years, and as yet had not risen above the rank of Eques; but when Pompeius led his victorious legions back to Italy, the people rose in the greatest enthusiasm to welcome him, and the dictator, yielding to their impetuosity, had granted him a triumph and hailed him with the title of 'Magnus.' Young as he was, he became at once, on the abdication of Sulla, the greatest power in the commonwealth. This he soon caused to be known and felt. The lead of the senatorial party had now fallen to Q. Lutatius Catulus and M. Æmilius Lepidus, the heads of two of the oldest and noblest families of Rome. The election of these chiefs to the consulship for the year 676 of the city (B. C. 78) seemed to secure for the time the ascendency of the nobles, and the maintenance of Sulla's oligarchical constitution bequeathed to their care. . . . But there were divisions within the party itself which seemed to seize the opportunity for breaking forth. Lepidus was inflamed with ambition to create a faction of his own, and imitate the career of the usurpers before him. . . . But he had miscalculated his strength. Pompeius disavowed him, and lent the weight of his popularity and power to the support of Catulus; and the senate hoped to avert an outbreak by engaging both the consuls by an oath to abstain from assailing each other. During the remainder of his term of office Lepidus refrained from action; but as soon as he reached his province, the Narbonensis in Gaul, he developed his plans, summoned to his standard the Marians, who had taken refuge in great numbers in that region, and invoked the aid of

the Italians, with the promise of restoring to them the lands of which they had been dispossessed by Sulla's veterans. With the aid of M. Junius Brutus, who commanded in the Cisalpine, he made an inroad into Etruria, and called upon the remnant of its people, who had been decimated by Sulla, to rise against the faction of their oppressors. The senate, now thoroughly alarmed, charged Catulus with its defence; the veterans, restless and dissatisfied with their fields and farms, crowded to the standard of Pompeius. Two Roman armies met near the Milvian bridge, a few miles to the north of the city, and Lepidus received a check, which was again and again repeated, till he was driven to flee into Sardinia, and there perished shortly afterwards of fever. Pompeius pursued Brutus into the Cisalpine. . . . The remnant of [Lepidus'] troops was carried over to Spain by Perperna, and there swelled the forces of an abler leader of the same party, Q. Sertorius." Sertorius had established himself strongly in Spain, and aspired to the founding of an independent state; but after a prolonged struggle he was overcome by Pompeius and assassinated by traitors in his own ranks (see SPAIN: B. C. 83–72).—"Pompeius had thus recovered a great province for the republic at the moment when it seemed on the point of being lost through the inefficiency of one of the senatorial chiefs. Another leader of the dominant party was about to yield him another victory. A war was raging in the heart of Italy. A body of gladiators had broken away from their confinement at Capua under the lead of Spartacus, a Thracian captive, had seized a large quantity of arms, and had made themselves a retreat or place of defence in the crater of Mount Vesuvius [see SPARTACUS, THE RISING OF]. . . . The consuls were directed to lead the legions against them, but were ignominiously defeated [B. C. 72]. In the absence of Pompeius in Spain and of Lucullus in the East, M. Crassus was the most prominent among the chiefs of the party in power. This illustrious noble was a man of great influence, acquired more by his wealth, for which he obtained the surname of Dives, than for any marked ability in the field or in the forum; but he had a large following of clients and dependents, who . . . now swelled the cry for placing a powerful force under his orders, and entrusting to his hands the deliverance of Italy. The brigands themselves were becoming demoralized by lack of discipline. Crassus drove them before him to the extremity of the peninsula. . . . Spartacus could only save a remnant of them by furiously breaking through the lines of his assailants. This brave gladiator was still formidable, and it was feared that Rome itself might be exposed to his desperate attack. The senate sent importunate messages to recall both Pompeius and Lucullus to its defence. . . . Spartacus had now become an easy prey, and the laurels were quickly won with which Pompeius was honoured by his partial countrymen. Crassus was deeply mortified, and the senate itself might feel some alarm at the redoubled triumphs of a champion of whose loyalty it was not secure. But the senatorial party had yet another leader, and a man of more ability than Crassus, at the head of another army. The authority of Pompeius in the western provinces was balanced in the East by that of L. Licinius Lucullus, who commanded the forces of the republic in the struggle which she was still maintaining against Mithridates. . . . The military successes of Lucullus fully justified the choice of the government." He expelled Mithridates from all the dominions which he claimed, and drove him to take refuge with the king of Armenia. "The kingdom of Armenia under Tigranes III. was at the height of its power when Clodius, the brother-in-law of Lucullus, then serving under him, was despatched to the royal residence at Tigranocerta to demand the surrender of Mithridates. . . . The capital of Armenia was well defended by its position among the mountains and the length and severity of its winter season. It was necessary to strike once for all [B. C. 69]. Lucullus had a small but well-trained and well-appointed army of veterans. Tigranes surrounded and encumbered himself with a vast cloud of undisciplined barbarians, the flower of whom, consisting of 17,000 mailed cavalry, however formidable in appearance, made but a feeble resistance to the dint of the Roman spear and broadsword. When their ranks were broken they fell back upon the inert masses behind them, and threw them into hopeless confusion. Tigranes made his escape with dastardly precipitation. A bloody massacre ensued. . . . In the following year Lucullus advanced his posts still further eastward. . . . But a spirit of discontent or lassitude had crept over his own soldiers. . . . He was constrained to withdraw from the siege of Artaxata, the furthest stronghold of Tigranes, on the banks of the Araxes, and after crowning his victories with a successful assault upon Nisibis, he gave the signal for retreat, leaving the destruction of Mithridates still unaccomplished. Meanwhile the brave proconsul's enemies were making head against him at Rome."—C. Merivale, *The Roman Triumvirates, ch.* 1.—Lucullus "wished to consummate the ruin of Tigranes, and afterwards to carry his arms to Parthia. He had not this perilous glory. Hitherto, his principal means of success had been to conciliate the people, by restraining the avidity both of his soldiers and of the Italian publicans. The first refused to pursue a war which only enriched the general; the second wrote to Rome, where the party of knights was every day regaining its ancient ascendancy. They accused of rapacity him who had repressed theirs. All were inclined to believe, in short, that Lucullus had drawn enormous sums from the towns which he preserved from the soldiers and publicans. They obtained the appointment of a successor, and by this change the fruit of this conquest was in a great measure lost. Even before Lucullus had quitted Asia, Mithridates re-entered Pontus, invaded Cappadocia, and leagued himself more closely with the pirates."—J. Michelet, *Hist. of the Roman Republic, p.* 308.—"It was imagined at Rome that Mithridates was as good as conquered, and that a new province of Bithynia and Pontus was awaiting organisation. . . . Ten commissioners as usual had been despatched to assist. . . . Lucullus had hoped before their arrival to strike some blow to recover his losses; but Marcius Rex had refused his appeal for help from Cilicia, and his own troops had . . . declined to march . . . when they learnt that the command was about to pass from Lucullus to Glabrio."—E. S. Shuckburgh, *Hist. of Rome to the Battle of Actium, p.* 677.

B. C. 69-63.—The drift towards revolution. —Pompeius in the East.—His extraordinary commission.—His enlargement of the Roman dominions.—His power.—Ambitions and projects of Cæsar.—Consulship of Cicero.—"To a superficial observer, at the close of the year 70 B. C., it might possibly have seemed that the Republic had been given a new lease of life. . . . And, indeed, for two or three years this promising condition of things continued. The years 69 and 68 B. C. must have been tolerably quiet ones, for our authorities have very little to tell us of them. . . . Had a single real statesman appeared on the scene at this moment, or even if the average senator or citizen had been possessed of some honesty and insight, it was not impossible that the government might have been carried on fairly well even under republican forms. But there was no leading statesman of a character suited to raise the whole tone of politics; and there was no general disposition on the part of either Senate or people to make the best of the lull in the storm, to repair damages, or to set the ship on her only true course. So the next few years show her fast drifting in the direction of revolution; and the current that bore her was not a local one, or visible to the eye of the ordinary Roman, but one of world-wide force, whose origin and direction could only be perceived by the highest political intelligence. It was during these years that Cæsar was quietly learning the business of government, both at home and in the provinces. . . . Cæsar was elected quæstor in 69 B. C., and served the office in the following year. It fell to him to begin his acquaintance with government in the province of Further Spain, and thus began his lifelong connection with the peoples of the West. . . . On his return to Rome, which must have taken place about the beginning of 67 B. C., Cæsar was drawn at once into closer connection with the man who, during the next twenty years, was to be his friend, his rival, and his enemy. Pompeius was by this time tired of a quiet life. . . . Both to him and his friends, it seemed impossible to be idle any longer. There was real and abundant reason for the employment of the ablest soldier of the day. The audacity of the pirates was greater than ever [see CILICIA, PIRATES OF]. Lucullus, too, in Asia, had begun to meet with disasters, and was unable, with his troops in a mutinous temper, to cope with the combined forces of the kings of Armenia and Pontus. . . . In this year, 67 B. C., a bill was proposed by a tribune, Gabinius, in the assembly of the plebs, in spite of opposition in the Senate, giving Pompeius exactly that extensive power against the pirates which he himself desired, and which was really necessary if the work was to be done swiftly and completely. He was to have exclusive command for three years over the whole Mediterranean, and over the resources of the provinces and dependent states. For fifty miles inland in every province bordering on these seas—i. e., in the whole Empire—he was to exercise an authority equal to that of the existing provincial governor. He was to have almost unlimited means of raising both fleets and armies, and was to nominate his own staff of twenty-five 'legati' (lieutenant-generals), who were all to have the rank of prætor. Nor was this all; for it was quite understood that this was only part of a plan which was to place him at the head of the armies in Asia Minor, superseding the able but now discredited Lucullus. In fact, by another law of Gabinius, Lucullus was recalled, and his command given to one of the consuls of the year, neither of whom, as was well known, was likely to wield it with the requisite ability. Whichever consul it might be, he would only be recognised as keeping the place warm for Pompeius. . . . Pompeius left Rome in the spring of 67 B. C., rapidly cleared the seas of piracy, and in the following year superseded Lucullus in the command of the war against Mithridates [with the powers given him by the Gabinian Law prolonged and extended by another, known as the Manilian Law]. He did not return till the beginning of 61 B. C. At first sight it might seem as though his absence should have cleared the air, and left the political leaders at Rome a freer hand. But the power and the resources voted him, and the unprecedented success with which he used them, made him in reality as formidable to the parties at home as he was to the peoples of the East. He put an end at last to the power of Mithridates, received the submission of Tigranes of Armenia, and added to the Roman dominion the greater part of the possessions of both these kings. The sphere of Roman influence now for the first time reached the river Euphrates, and the Empire was brought into contact with the great Parthian kingdom beyond it. Asia Minor became wholly Roman, with the exception of some part of the interior, which obedient kinglets were allowed to retain. Syria was made a Roman province. Pompeius took Jerusalem, and added Judæa to Syria [see JEWS: B. C. 166–40]. . . . The man to whom all this was due became at once the leading figure in the world. It became clear that when his career of conquest was over yet another task would devolve on him, if he chose to accept it—the re-organisation of the central government at Rome. . . . His gathered power overhung the state like an avalanche ready to fall; and in the possible path of an avalanche it is waste of time and labour to build any solid work. So these years, for Cæsar as for the rest, are years of plotting and intrigue on one side, and of half-hearted government on the other. . . . He was elected to the curule-ædileship—the next above the quæstorship in the series of magistracies—and entered on his office on January 1, 65 B. C. . . . Cæsar's political connection with Crassus at this time is by no means clear. The two were sailing the same course, and watching Pompeius with the same anxiety; but there could not have been much in common between them, and they were in fact rapidly getting in each other's way. The great money-lender, however, must have been in the main responsible for the enormous expenditure which Cæsar risked in this ædileship and the next three years. . . . At the close of the year 64 B. C., on the accession to office of a new board of tribunes, . . . an agrarian bill on a vast scale was promulgated by the tribune Servilius Rullus. The two most startling features of this were: first, the creation of a board of ten to carry out its provisions, each member of which was to be invested with military and

judicial powers like those of the consuls and prætors; and secondly, the clauses which entrusted this board with enormous financial resources, to be raised by the public sale of all the territories and property acquired since the year 88 B. C., together with the booty and revenues now in the hands of Pompeius. The bill included, as its immediate object, a huge scheme of colonisation for Italy, on the lines of the Gracchan agrarian bills. . . . But it was really an attack on the weak fortress of senatorial government, in order to turn out its garrison, and occupy and fortify it in the name of the democratic or Marian party, against the return of the new Sulla, which was now thought to be imminent. The bill may also have had another and secondary object—namely, to force the hand of the able and ambitious consul [Cicero] who would come into office on January 1, 63; at any rate it succeeded in doing this, though it succeeded in nothing else. Cicero's great talents, and the courage and skill with which he had so far for the most part used them, had made him already a considerable power in Rome; but no one knew for certain to which party he would finally attach himself. . . . On the very first day of his office he attacked the bill in the Senate and exposed its real intention, and showed plainly that his policy was to convert Pompeius into a pillar of the constitution, and to counteract all democratic plots directed against him. . . . Whether it was his eloquence, or the people's indifference, that caused the bill to be dropped, can only be matter of conjecture; but it was withdrawn at once by its proposer, and the whole scheme fell through. This was Cicero's first and only real victory over Cæsar. . . . It was about this time, in the spring of 63 B. C., that the office of Pontifex Maximus became vacant by the death of old Metellus Pius, and Cæsar at once took steps to secure it for himself. The chances in his favour were small, but the prize was a tempting one. Success would place him at the head of the whole Roman religious system. . . . He was eligible, for he had already been for several years one of the college of pontifices, but as the law of election stood, a man so young and so democratic would have no chance against candidates like the venerable conservative leader Catulus, and Cæsar's own old commander in the East, Servilius Isauricus, both of whom were standing. Sulla's law, which placed the election in the hands of the college itself—a law framed expressly to exclude persons of Cæsar's stamp—must be repealed, and the choice vested once more in the people. The useful tribune Labienus was again set to work, the law was passed, and on March 6th Cæsar was elected by a large majority. . . . The latter part of this memorable year was occupied with a last and desperate attempt of the democratic party to possess themselves of the state power while there was yet time to forestall Pompeius. This is the famous conspiracy of Catilina; it was an attack of the left wing on the senatorial position, and the real leaders of the democracy took no open or active part in it."—W. W. Fowler, *Julius Cæsar, ch.* 4–5.

B. C. 63.—The conspiracy of Catiline.—The conspiracy organized against the senatorial government of Rome by L. Sergius Catilina, B. C. 63, owes much of its prominence in Roman history to the preservation of the great speeches in which Cicero exposed it, and by which he rallied the Roman people to support him in putting it down. Cicero was consul that year, and the official responsibility of the government was on his shoulders. The central conspirators were a desperate, disreputable clique of men, who had everything to gain and nothing to lose by revolution. Behind them were all the discontents and malignant tempers of demoralized and disorganized Rome; and still behind these were suspected to be, darkly hidden, the secret intrigues of men like Cæsar and Crassus, who watched and waited for the expiring breath of the dying republic. Cicero, having made a timely discovery of the plot, managed the disclosure of it with great adroitness and won the support of the people to his proceedings against the conspirators. Catiline made his escape from Rome and placed himself at the head of a small army which his supporters had raised in Etruria; but he and it were both destroyed in the single battle fought. Five of his fellow-conspirators were hastily put to death without trial, by being strangled in the Tullianum.—W. Forsyth, *Life of Cicero, ch.* 8.

B. C. 63-58.—Increasing disorders in the capital.—The wasted opportunities of Pompeius.—His alliance with Cæsar and Crassus.—The First Triumvirate.—Cæsar's consulship.—His appointment to the command in Cisalpine Gaul.—Exile of Cicero.—"Recent events had fully demonstrated the impotence of both the Senate and the democratic party; neither was strong enough to defeat the other or to govern the State. There was no third party—no class remaining out of which a government might be erected; the only alternative was monarchy—the rule of a single person. Who the monarch would be was still uncertain; though, at the present moment, Pompeius was clearly the only man in whose power it lay to take up the crown that offered itself. . . . For the moment the question which agitated all minds was whether Pompeius would accept the gift offered him by fortune, or would retire and leave the throne vacant. . . . In the autumn of 63 B. C. Quintus Metellus Nepos arrived in the capital from the camp of Pompeius, and got himself elected tribune with the avowed purpose of procuring for Pompeius the command against Catilina by special decree, and afterwards the consulship for 61 B. C. . . . The aristocracy at once showed their hostility to the proposals of Metellus, and Cato had himself elected tribune expressly for the purpose of thwarting him. But the democrats were more pliant, and it was soon evident that they had come to a cordial understanding with the general's emissary. Metellus and his master both adopted the democratic view of the illegal executions [of the Catilinarians]; and the first act of Cæsar's prætorship was to call Catulus to account for the moneys alleged to have been embezzled by him in rebuilding the Capitoline temple and to transfer the superintendence of the works to Pompeius. . . . On the day of voting, Cato and another of the tribunes put their veto upon the proposals of Metellus,

who disregarded it. There were conflicts of the armed bands of both sides, which terminated in favour of the government. The Senate followed up the victory by suspending Metellus and Cæsar from their offices. Metellus immediately departed for the camp of Pompeius; and when Cæsar disregarded the decree of suspension against himself, the Senate had ultimately to revoke it. Nothing could have been more favourable to the interests of Pompeius than these late events. After the illegal executions of the Catilinarians, and the acts of violence against Metellus, he 'could appear at once as the defender of the two palladia of Roman liberty'—the right of appeal, and the inviolability of the tribunate,—and as the champion of the party of order against the Catilinarian band. But his courage was unequal to the emergency; he lingered in Asia during the winter of 63–62 B. C., and thus gave the Senate time to crush the insurrection in Italy, and deprived himself of a valid pretext for keeping his legions together. In the autumn of 62 B. C. he landed at Brundisium, and, disbanding his army, proceeded to Rome with a small escort. On his arrival in the city in 61 B. C. he found himself in a position of complete isolation; he was feared by the democrats, hated by the aristocracy, and distrusted by the wealthy class. He at once demanded for himself a second consulship, the confirmation of all his acts in the East, and the fulfilment of the promise he had made to his soldiers to furnish them with lands. But each of these demands was met with the most determined opposition. . . . His promise of lands to his soldiers was indeed ratified, but not executed, and no steps were taken to provide the necessary funds and lands. . . . From this disagreeable position, Pompeius was rescued by the sagacity and address of Cæsar, who saw in the necessities of Pompeius the opportunity of the democratic party. Ever since the return of Pompeius, Cæsar had grown rapidly in influence and weight. He had been prætor in 62 B. C., and, in 61, governor in Farther Spain, where he utilized his position to free himself from his debts, and to lay the foundation of the military position he desired for himself. Returning in 60 B. C., he readily relinquished his claim to a triumph, in order to enter the city in time to stand for the consulship. . . . It was quite possible that the aristocracy might be strong enough to defeat the candidature of Cæsar, as it had defeated that of Catilina; and again, the consulship was not enough; an extraordinary command, secured to him for several years, was necessary for the fulfilment of his purpose. Without allies such a command could not be hoped for; and allies were found where they had been found ten years before, in Pompeius and Crassus, and in the rich equestrian class. Such a treaty was suicide on the part of Pompeius; . . . but he had drifted into a situation so awkward that he was glad to be released from it on any terms. . . . The bargain was struck in the summer of 60 B. C. [forming what became known in Roman history as the First Triumvirate]. Cæsar was promised the consulship and a governorship afterwards; Pompeius, the ratification of his arrangements in the East, and land for his soldiers; Crassus received no definite equivalent, but the capitalists were promised a remission of part of the money they had undertaken to pay for the lease of the Asiatic taxes. . . . Cæsar was easily elected consul for 59 B. C. All that the exertions of the Senate could do was to give him an aristocratic colleague in Marcus Bibulus. Cæsar at once proceeded to fulfil his obligations to Pompeius by proposing an agrarian law. All remaining Italian domain land, which meant practically the territory of Capua, was to be given up to allotments, and other estates in Italy were to be purchased out of the revenues of the new Eastern provinces. The soldiers were simply recommended to the commission, and thus the principle of giving rewards of land for military service was not asserted. The execution of the bill was to be entrusted to a commission of twenty. . . . At length all these proposals were passed by the assembly [after rejection by the Senate], and the commission of twenty, with Pompeius and Crassus at their head, began the execution of the agrarian law. Now that the first victory was won, the coalition was able to carry out the rest of its programme without much difficulty. . . . It was determined by the confederates that Cæsar should be invested by decree of the people with a special command resembling that lately held by Pompeius. Accordingly the tribune Vatinius submitted to the tribes a proposal which was at once adopted. By it Cæsar obtained the governorship of Cisalpine Gaul, and the supreme command of the three legions stationed there, for five years, with the rank of proprætor for his adjutants. His jurisdiction extended southwards as far as the Rubicon, and included Luca and Ravenna. Subsequently the province of Narbo was added by the Senate, on the motion of Pompeius. . . . Cæsar had hardly laid down his consulship when it was proposed, in the Senate, to annul the Julian laws [See JULIAN LAWS]. . . . The regents determined to make examples of some of the most determined of their opponents." Cicero was accordingly sent into exile, by a resolution of the tribes, and Cato was appointed to an odious public mission, which carried him out of the way, to Cyprus.—T. Mommsen, *Hist. of the Roman Republic (abridged by Bryans and Hendy), ch.* 33.

B. C. 58-51.—Cæsar's conquest of Gaul.—See GAUL: B. C. 58–51.

B. C. 57-52.—Effect of Cæsar's Gallic victories.—Return of Cicero from exile.—New arrangements of the Triumvirs.—Cæsar's Proconsulship extended.—The Trebonian Law.—Disaster and death of Crassus at Carrhæ.—Increasing anarchy in the city.—"In Rome the enemies of Cæsar . . . were awed into silence [by his victorious career in Gaul], and the Senate granted the unprecedented honour of fifteen days' 'supplicatio' to the gods for the brilliant successes in Gaul. Among the supporters of this motion was, as Cæsar learnt in the winter from the magistrates and senators who came to pay court to him at Ravenna, M. Tullius Cicero. From the day of his exile the efforts to secure his return had begun, but it was not until the 4th of August that the Senate, led by the consul, P. Lentulus Spinther, carried the motion for his return, in spite of the violence of the armed gang of Clodius, and sum-

moned all the country tribes to crowd the comitia on Campus Martius, and ratify the senatus consultum. The return of the great orator to the country which he had saved in the terrible days of 63 B. C. was more like a triumph than the entrance of a pardoned criminal. . . . But he had come back on sufferance; the great Three must be conciliated. . . . Cicero, like many other optimates in Rome, was looking for the beginnings of a breach between Pompeius, Crassus and Cæsar, and was anxious to nourish any germs of opposition to the triple-headed monarchy. He pleaded against Cæsar's friend Vatinius, and he gave notice of a motion for checking the action of the agrarian law in Campania. But these signs of an independent opposition were suddenly terminated by a humiliating recantation; for before entering upon his third campaign Cæsar crossed the Apennines, and appeared at the Roman colony of Lucca. . . . Two hundred senators crowded to the rendezvous, but arrangements were made by the Three very independently of Senate in Rome or Senate in Lucca. It was agreed that Pompeius and Crassus should hold a joint consulship again next year, and before the expiration of Cæsar's five years they were to secure his reappointment for another five. . . . Unfortunate Cicero was awed, and in his other speeches of this year tried to win the favor of the great men by supporting their proposed provincial arrangements, and pleading in defence of Cæsar's friend and protégé, L. Balbus." In the year 55 B. C. the Trebonian Law was passed, "which gave to Crassus and Pompeius, as proconsular provinces, Syria and Spain, for the extraordinary term of five years. In this repeated creation of extraordinary powers in favor of the coalition of dynasts, Cato rightly saw an end of republican institutions. . . . Crassus . . . started in 54 B. C., at the head of seven legions, in face of the combined opposition of tribunes and augurs, to secure the eastern frontier of Roman dominion by vanquishing the Parthian power, which, reared on the ruins of the kingdom of the Seleucids, was now supreme in Ctesiphon and Seleucia. Led into the desert by the Arab Sheikh Abgarus, acting as a traitor, the Roman army was surrounded by the fleet Parthian horsemen, who could attack and retreat, shooting their showers of missiles all the time. In the blinding sand and sun of the desert near Carrhæ [on the river Belik, one of the branches of the Euphrates, the supposed site of the Haran of Biblical history], Crassus experienced a defeat which took its rank with Cannæ and the Arausio. A few days afterwards (June 9th, 53 B. C.) he was murdered in a conference to which the commander of the Parthian forces invited him. . . . The shock of this event went through the Roman world, and though Cassius, the lieutenant of Crassus, retrieved the honour of the Roman arms against the Parthians in the following year, that agile people remained to the last unconquered, and the Roman boundary was never to advance further to the east. Crassus, then, was dead, and Pompeius, though he lent Cæsar a legion at the beginning of the year, was more ready to assume the natural antagonism to Cæsar, since the death of his wife Julia in September, 54 B. C., had broken a strong tie with his father-in-law. Further, the condition of the capital seemed reaching a point of anarchy at which Pompeius, as the only strong man on the spot, would have to be appointed absolute dictator. In 53 B. C. no consuls could, in the violence and turmoil of the comitia, be elected until July, and the year closed without any elections having taken place for 52 B. C. T. Annius Milo, who was a candidate for the consulship, and P. Clodius, who was seeking the prætorship, turned every street of Rome into a gladiatorial arena." In January Clodius was killed. "Pompeius was waiting in his new gardens near the Porta Carmentalis, until a despairing government should invest him with dictatorial power; he was altogether too timid and too constitutional to seize it. But with Cato in Rome no one dared mention the word dictator. Pompeius, disappointed, was named sole consul on the 4th of February [B. C. 52], and by July he had got as his colleague his new father-in-law, Metellus."—R. F. Horton, *Hist. of the Romans, ch.* 29.

B. C. 55-54.—Cæsar's invasions of Britain. —See Britain: B. C. 55–54.

B.C. 52-50.—Rivalry of Pompeius and Cæsar. —Approach of the crisis.—Cæsar's legions in motion towards the capital.—"Cæsar had long ago resolved upon the overthrow of Pompey, as had Pompey, for that matter, upon his. For Crassus, the fear of whom had hitherto kept them in peace, having now been killed in Parthia, if the one of them wished to make himself the greatest man in Rome, he had only to overthrow the other; and if he again wished to prevent his own fall, he had nothing for it but to be beforehand with him whom he feared. Pompey had not been long under any such apprehensions, having till lately despised Cæsar, as thinking it no difficult matter to put down him whom he himself had advanced. But Cæsar had entertained this design from the beginning against his rivals, and had retired, like an expert wrestler, to prepare himself apart for the combat. Making the Gallic wars his exercise-ground, he had at once improved the strength of his soldiery, and had heightened his own glory by his great actions, so that he was looked on as one who might challenge comparison with Pompey. Nor did he let go any of those advantages which were now given him, both by Pompey himself and the times, and the ill government of Rome, where all who were candidates for office publicly gave money, and without any shame bribed the people, who, having received their pay, did not contend for their benefactors with their bare suffrages, but with bows, swords and slings. So that after having many times stained the place of election with the blood of men killed upon the spot, they left the city at last without a government at all, to be carried about like a ship without a pilot to steer her; while all who had any wisdom could only be thankful if a course of such wild and stormy disorder and madness might end no worse than in a monarchy. Some were so bold as to declare openly that the government was incurable but by a monarchy, and that they ought to take that remedy from the hands of the gentlest physician, meaning Pompey, who, though in words he pretended to

decline it, yet in reality made his utmost efforts to be declared dictator. Cato, perceiving his design, prevailed with the Senate to make him sole consul [B. C. 52], that with the offer of a more legal sort of monarchy he might be withheld from demanding the dictatorship. They over and above voted him the continuance of his provinces, for he had two, Spain and all Africa, which he governed by his lieutenants, and maintained armies under him, at the yearly charge of a thousand talents out of the public treasury. Upon this Cæsar also sent and petitioned for the consulship, and the continuance of his provinces. Pompey at first did not stir in it, but Marcellus and Lentulus opposed it, who had always hated Cæsar, and now did everything, whether fit or unfit, which might disgrace and affront him. For they took away the privilege of Roman citizens from the people of New Comum, who were a colony that Cæsar had lately planted in Gaul; and Marcellus, who was then consul, ordered one of the senators of that town, then at Rome, to be whipped [B. C. 51], and told him he laid that mark upon him to signify he was no citizen of Rome, bidding him, when he went back again, to show it to Cæsar. After Marcellus's consulship, Cæsar began to lavish gifts upon all the public men out of the riches he had taken from the Gauls; discharged Curio, the tribune, from his great debts; gave Paulus, then consul, 1,500 talents, with which he built the noble court of justice adjoining the forum, to supply the place of that called the Fulvian. Pompey, alarmed at these preparations, now openly took steps, both by himself and his friends, to have a successor appointed in Cæsar's room, and sent to demand back the soldiers whom he had lent him to carry on the wars in Gaul. Cæsar returned them, and made each soldier a present of 250 drachmas. The officer who brought them home to Pompey, spread amongst the people no very fair or favorable report of Cæsar, and flattered Pompey himself with false suggestions that he was wished for by Cæsar's army; and though his affairs here were in some embarrassment through the envy of some, and the ill state of the government, yet there the army was at his command, and if they once crossed into Italy, would presently declare for him; so weary were they of Cæsar's endless expeditions, and so suspicious of his designs for a monarchy. Upon this Pompey grew presumptuous, and neglected all warlike preparations, as fearing no danger. . . . Yet the demands which Cæsar made had the fairest colors of equity imaginable. For he proposed to lay down his arms, and that Pompey should do the same, and both together should become private men, and each expect a reward of his services from the public. For that those who proposed to disarm him, and at the same time to confirm Pompey in all the power he held, were simply establishing the one in the tyranny which they accused the other of aiming at. When Curio made these proposals to the people in Cæsar's name, he was loudly applauded, and some threw garlands towards him, and dismissed him as they do successful wrestlers, crowned with flowers. Antony, being tribune, produced a letter sent from Cæsar on this occasion, and read it, though the consuls did what they could to oppose it. But Scipio, Pompey's father-in-law, proposed in the Senate, that if Cæsar did not lay down his arms within such a time, he should be voted an enemy; and the consuls putting it to the question, whether Pompey should dismiss his soldiers, and again, whether Cæsar should disband his, very few assented to the first, but almost all to the latter. But Antony proposing again, that both should lay down their commissions, all but a very few agreed to it. Scipio was upon this very violent, and Lentulus the consul cried aloud, that they had need of arms, and not of suffrages, against a robber; so that the senators for the present adjourned, and appeared in mourning as a mark of their grief for the dissension. Afterwards there came other letters from Cæsar, which seemed yet more moderate, for he proposed to quit everything else, and only to retain Gaul within the Alps, Illyricum, and two legions, till he should stand a second time for consul. Cicero, the orator, who was lately returned from Cilicia, endeavored to reconcile differences, and softened Pompey, who was willing to comply in other things, but not to allow him the soldiers. At last Cicero used his persuasions with Cæsar's friends to accept of the provinces and 6,000 soldiers only, and so to make up the quarrel. And Pompey was inclined to give way to this, but Lentulus, the consul, would not hearken to it, but drove Antony and Curio out of the senate-house with insults, by which he afforded Cæsar [then at Ravenna] the most plausible pretence that could be, and one which he could readily use to inflame the soldiers, by showing them two persons of such repute and authority, who were forced to escape in a hired carriage in the dress of slaves. For so they were glad to disguise themselves, when they fled out of Rome. There were not about him at that time [November, B. C. 50] above 300 horse, and 5,000 foot; for the rest of his army, which was left behind the Alps, was to be brought after him by officers who had received orders for that purpose. But he thought the first motion towards the design which he had on foot did not require large forces at present, and that what was wanted was to make this first step suddenly, and so as to astound his enemies with the boldness of it. . . . Therefore, he commanded his captains and other officers to go only with their swords in their hands, without any other arms, and make themselves masters of Ariminum, a large city of Gaul, with as little disturbance and bloodshed as possible. He committed the care of these forces to Hortensius, and himself spent the day in public as a stander-by and spectator of the gladiators, who exercised before him. A little before night he attended to his person, and then went into the hall, and conversed for some time with those he had invited to supper, till it began to grow dusk, when he rose from table, and made his excuses to the company, begging them to stay till he came back, having already given private directions to a few immediate friends, that they should follow him, not all the same way, but some one way, some another. He himself got into one of the hired carriages, and drove at first another way, but presently turned towards Ariminum."
—Plutarch, *Cæsar* (*Clough's Dryden's trans.*)

Also in Cæsar, *Commentaries on the Civil War, bk.* 1, *ch.* 1–8.—T. Arnold, *Hist. of the Later Roman Commonwealth, ch.* 8 (*v.* 1).

B. C. 50–49.—Cæsar's passage of the Rubicon.—Flight of Pompeius and the Consuls from Italy.—Cæsar at the capital.—"About ten miles from Ariminum, and twice that distance

from Ravenna, the frontier of Italy and Gaul was traced by the stream of the Rubicon. This little river, red with the drainage of the peat mosses from which it descends [and evidently deriving its name from its color], is formed by the union of three mountain torrents, and is nearly dry in the summer, like most of the water courses on the eastern side of the Appenines. In the month of November the winter flood might present a barrier more worthy of the important position which it once occupied; but the northern frontier of Italy had long been secure from invasion, and the channel was spanned by a bridge of no great dimensions. . . . The ancients amused themselves with picturing the guilty hesitation with which the founder of a line of despots stood, as they imagined, on the brink of the fatal river [in the night of the 27th of November, B. C. 50, corrected calendar, or January 15, B. C. 49, without the correction], and paused for an instant before he committed the irrevocable act, pregnant with the destinies of a long futurity. Cæsar, indeed, in his Commentaries, makes no allusion to the passage of the Rubicon, and, at the moment of stepping on the bridge, his mind was probably absorbed in the arrangements he had made for the march of his legions or for their reception by his friends in Ariminum."—C. Merivale, *Hist. of the Romans, ch.* 14.—After the crossing of the Rubicon there were still more messages between Cæsar and Pompey, and the consuls supporting the latter. "Each demands that the other shall first abandon his position. Of course, all these messages mean nothing. Cæsar, complaining bitterly of injustice, sends a portion of his small army still farther into the Roman territory. Marc Antony goes to Arezzo with five cohorts, and Cæsar occupies three other cities with a cohort each. The marvel is that he was not attacked and driven back by Pompey. We may probably conclude that the soldiers, though under the command of Pompey, were not trustworthy as against Cæsar. As Cæsar regrets his two legions, so no doubt do the two legions regret their commander. At any rate, the consular forces, with Pompey and the consuls and a host of senators, retreat southwards to Brundusium—Brindisi—intending to leave Italy. . . . During this retreat, the first blood in the civil war is spilt at Corfinium, a town which, if it now stood at all, would stand in the Abruzzi. Cæsar there is victor in a small engagement, and obtained possession of the town. The Pompeian officers whom he finds there he sends away, and allows them even to carry with them money which he believes to have been taken from the public treasury. Throughout his route southward the soldiers of Pompey—who had heretofore been his soldiers—return to him. Pompey and the consuls still retreat, and still Cæsar follows them, though Pompey had boasted, when first warned to beware of Cæsar, that he had only to stamp upon Italian soil and legions would arise from the earth ready to obey him. He knows, however, that away from Rome, in her provinces, in Macedonia and Achaia, in Asia and Cilicia, in Sicily, Sardinia, and Africa, in Mauritania and the two Spains, there are Roman legions which as yet know no Cæsar. It may be better for Pompey that he should stamp his foot somewhere out of Italy. At any rate he sends the obedient consuls and his attendant senators over to Dyrrhachium in Illyria with a part of his army, and follows with the remainder as soon as Cæsar is at his heels. Cæsar makes an effort to intercept him and his fleet, but in that he fails. Thus Pompey deserts Rome and Italy,—and never again sees the imperial city or the fair land. Cæsar explains to us why he does not follow his enemy and endeavour at once to put an end to the struggle. Pompey is provided with shipping and he is not; and he is aware that the force of Rome lies in her provinces. Moreover, Rome may be starved by Pompey, unless he, Cæsar, can take care that the corn-growing countries, which are the granaries of Rome, are left free for the use of the city."—A. Trollope, *The Commentaries of Cæsar, ch.* 9.—Turning back from Brundisium, Cæsar proceeded to Rome to take possession of the seat of government which his enemies had abandoned to him. He was scrupulous of legal forms, and, being a proconsul, holding military command, did not enter the city in person. But he called together, outside of the walls, such of the senators as were in Rome and such as could be persuaded to return to the city, and obtained their formal sanction to various acts. Among the measures so authorized was the appropriation of the sacred treasure stored up in the vaults of the temple of Saturn. It was a consecrated reserve, to be used for no purpose except the repelling of a Gallic invasion —which had been, for many generations, the greatest dread of Rome. Cæsar claimed it, because he had put an end to that fear, by conquering the Gauls. His stay at Rome on this occasion (April, B. C. 49) was brief, for he needed to make haste to encounter the Pompeian legions in Spain, and to secure the submission of all the west before he followed Pompeius into the Eastern world.—G. Long, *Decline of the Roman Republic, v.* 5, *ch.* 1–4.

Also in J. A. Froude, *Cæsar, ch.* 21.

B. C. 49.—Cæsar's first campaign against the Pompeians in Spain.—His conquest of Massilia.—In Spain, all the strong forces of the country were commanded by partisans of Pompeius and the Optimate party. Cæsar had already sent forward C. Fabius from Southern Gaul with three legions, to take possession of the passes of the Pyrenees and the principal Spanish roads. Following quickly in person, he found that his orders had been vigorously obeyed. Fabius was confronting the Pompeian generals, Afranius and Petreius at Ilerda (modern Lerida in Catalonia), on the river Sicoris (modern Segre), where they made their stand. They had five legions of well-trained veterans, besides native auxiliaries to a considerable number. Cæsar's army, with the reinforcements that he had added to it, was about the same. The Pompeians had every advantage of position, commanding the passage of the river by a permanent bridge of stone and drawing supplies from both banks. Cæsar, on the other hand, had great difficulty in maintaining his communications, and was placed in mortal peril by a sudden flood which destroyed his bridges. Yet, without any general battle, by pure strategic skill and by resistless energy, he forced the hostile army out of its advantageous position, intercepted its retreat and compelled an unconditional surrender. This Spanish campaign, which occupied but forty days, and which was decisive of the contest for all Spain, was one of the finest of Cæsar's military

achievements. The Greek city of Massilia (modern Marseilles), still nominally independent and the ally of Rome, although surrounded by the Roman conquests in Gaul, had seen fit to range itself on the side of Pompeius and the Optimates, and to close its gates in the face of Cæsar, when he set out for his campaign in Spain. He had not hesitated to leave three legions of his moderate army before the city, while he ordered a fleet to be built at Arelates (Arles), for coöperation in the siege. Decimus Brutus commanded the fleet and Trebonius was the general of the land force. The siege was made notable by remarkable engineering operations on both sides, but the courage of the Massiliots was of no long endurance. When Cæsar returned from his Spanish campaign he found them ready to surrender. Notwithstanding they had been guilty of a great act of treachery during the siege, by breaking an armistice, he spared their city, on account, he said, of its name and antiquity. His soldiers, who had expected rich booty, were offended, and a dangerous mutiny, which occurred soon afterwards at Placentia, had this for its main provocation.—Cæsar, *The Civil War, bk.* 1, *ch.* 36–81, *and bk.* 2, *ch.* 1–22.

Also in G. Long, *Decline of the Roman Republic, v.* 5, *ch.* 5 *and* 8.—C. Merivale, *Hist. of the Romans, ch.* 15–16.

B. C. 48.—The war in Epirus and Thessaly.—Cæsar's decisive victory at Pharsalia.—Having established his authority in Italy, Gaul and Spain, and having legalized it by procuring from the assembly of the Roman citizens his formal election to the consulship, for the year A. U. 706 (B. C. 48), Cæsar prepared to follow Pompeius and the Senatorial party across the Adriatic. As the calendar then stood, it was in January that he arrived at Brundisium to take ship; but the season corresponded with November in the calendar as Cæsar, himself, corrected it soon afterwards. The vessels at his command were so few that he could transport only 15,500 of his troops on the first expedition, and it was with that number that he landed at Palæste on the coast of Epirus. The sea was swarming with the fleets of his enemies, and, although he escaped them in going, his small squadron was caught on the return voyage and many of its ships destroyed. Moreover, the Pompeian cruisers became so vigilant that the second detachment of his army, left behind at Brundisium, under Marcus Antonius, found no opportunity to follow him until the winter had nearly passed. Meantime, with his small force, Cæsar proceeded boldly into Macedonia to confront Pompeius, reducing fortresses and occupying towns as he marched. Although his great antagonist had been gathering troops in Macedonia for months, and now numbered an army of some 90,000 or 100,000 men, it was Cæsar, not Pompeius, who pressed for a battle, even before Mark Antony had joined him. As soon as the junction had occurred he pushed the enemy with all possible vigor. But Pompeius had no confidence in his untrained host. He drew his whole army into a strongly fortified, immense camp, on the sea coast near Dyrrhachium, at a point called Petra, and there he defied Cæsar to dislodge him. The latter undertook to wall him in on the land-side of his camp, by a line of ramparts and towers seventeen miles in length. It was an undertaking too great for his force. Pompeius made a sudden flank movement which disconcerted all his plans, and so defeated and demoralized his men that he was placed in extreme peril for a time. Had the Senatorial chief shown half of Cæsar's energy at that critical moment, the cause of Cæsar would probably have been lost. But Pompeius and his party took time to rejoice over their victory, while Cæsar framed plans to repair his defeat. He promptly abandoned his lines before the enemy's camp and fell back into the interior of the country, to form a junction with certain troops which he had previously sent eastward to meet reënforcements then coming to Pompeius. He calculated that Pompeius would follow him, and Pompeius did so. The result was to give Cæsar, at last, the opportunity he had been seeking for months, to confront with his tried legions the motley levies of his antagonist on an open field. The decisive and ever memorable battle was fought in Thessaly, on the plain of Pharsalia, through which flows the river Enipeus, and overlooking which, from a contiguous height, stood anciently the city of Pharsalus. It was fought on the 9th of August, in the year 48 before Christ. It was a battle quickly ended. The foot-soldiers of Pompeius out-numbered those of Cæsar at least as two to one; but they could not stand the charge which the latter made upon them. His cavalry was largely composed of the young nobility of Rome, and Cæsar had few horsemen with which to meet them; but he set against them a strong reserve of his sturdy veterans on foot, and they broke the horsemen's ranks. The defeat was speedily a rout; there was no rallying. Pompeius fled with a few attendants and made his way to Alexandria, where his tragical fate overtook him. Some of the other leaders escaped in different directions. Some, like Brutus, submitted to Cæsar, who was practically the master, from that hour, of the Roman realm, although Thapsus had still to be fought.—Cæsar, *The Civil War, bk.* 3.

See Alexandria: B. C. 48–47.

B. C. 47-46.—Cæsar's overthrow of Pharnaces at Zela.—His return to Rome.—The last stand of his opponents in Africa.—Their defeat at Thapsus.—At the time when Cæsar was in a difficult position at Alexandria, and the subjects of Rome were generally uncertain as to whether their yoke would be broken or not by the pending civil war, Pharnaces, son of the vanquished Pontic king, Mithridates, made an effort to recover the lost kingdom of his father. He himself had been a traitor to his father, and had been rewarded for his treason by Pompeius, who gave him the small kingdom of Bosporus, in the Crimea. He now thought the moment favorable for regaining Pontus, Cappadocia and Lesser Armenia. Cæsar's lieutenant in Asia Minor, Domitius Calvinus, marched against him with a small force, and was badly defeated at Nicopolis (B. C. 48), in Armenia Minor. As a consequence, Cæsar, on being extricated from Alexandria, could not return to Rome, although

his affairs there sorely needed him, until he had restored the Roman authority in Asia Minor. As soon as he could reach Pharnaces, although his army was small in numbers, he struck and shattered the flimsy throne at a single blow. The battle was fought (B. C. 47) at Zela, in Pontus, where Mithridates had once gained a victory over the Romans. It was of this battle that Cæsar is said to have written his famous '*Veni, vidi, vici.*' "Plutarch says that this expression was used in a letter to one Amintius; the name is probably a mistake. Suetonius asserts that the three words were inscribed on a banner and carried in Cæsar's triumph. Appian and Dion refer to them as notorious."— C. Merivale, *Hist. of the Romans, ch.* 18.— After defeating Pharnaces at Zela, destroying his army, "Cæsar passed on through Galatia and Bithynia to the province of Asia proper, settling affairs in every centre; and leaving the faithful Mithridates [of Pergamum — See ALEXANDRIA: B. C. 48–47] with the title of King of the Bosphorus, as a guarantee for the security of these provinces, he sailed for Italy, and arrived at Tarentum before any one was aware of his approach. If he had really wasted time or lost energy in Egypt, he was making up for it now. On the way from Tarentum to Brundisium he met Cicero, who had been waiting for him here for nearly a year. He alighted, embraced his old friend, and walked with him some distance. The result of their talk was shown by Cicero's conduct for the rest of Cæsar's lifetime; he retired to his villas, and sought relief in literary work, encouraged doubtless by Cæsar's ardent praise. The magical effect of Cæsar's presence was felt throughout Italy; all sedition ceased, and Rome, which had been the scene of riot and bloodshed under the uncertain rule of Antonius, was quiet in an instant. The master spent three months in the city, working hard. He had been a second time appointed dictator while he was in Egypt, and probably without any limit of time, space or power; and he acted now without scruple as an absolute monarch. Everything that had to be done he saw to himself. Money was raised, bills were passed, the Senate recruited, magistrates and provincial governors appointed. But there was no time for any attempt at permanent organisation; he must wrest Africa from his enemies. . . . He quelled a most serious mutiny, in which even his faithful tenth legion was concerned, with all his wonderful skill and knowledge of human nature; sent on all available forces to Sicily, and arrived himself at Lilybæum in the middle of December."— W. W. Fowler, *Julius Cæsar, ch.* 17.— The last stand of Cæsar's opponents as a party — the senatorial party, or the republicans, as they are sometimes called — was made in Africa, on the old Carthaginian territory, with the city of Utica for their headquarters, and with Juba, the Numidian king, for their active ally. Varus, who had held his ground there, defeating and slaying Cæsar's friend Curio, was joined first by Scipio, afterwards by Cato, Labienus and other leaders, Cato having led a wonderful march through the desert from the Lesser Syrtis. In the course of the year of respite from pursuit which Cæsar's occupations elsewhere allowed them, they gathered and organized a formidable army. It was near the end of the year 47 B. C. that Cæsar assembled his forces at Lilybæum, in Sicily, and sailed with the first detachment for Africa. As happened so often to him in his bold military adventures, the troops which should follow were delayed by storms, and he was exposed to imminent peril before they arrived. But he succeeded in fortifying and maintaining a position on the coast, near Ruspina, until they came. As soon as they reached him he offered battle to his adversaries, and found presently an opportunity to force the fighting upon them at Thapsus, a coast town in their possession, which he attacked. The battle was decided by the first charge of Cæsar's legionaries, which swept everything — foot-soldiers, cavalry and elephants — before it. The victors in their ferocity gave no quarter and slaughtered 10,000 of the enemy, while losing from their own ranks but fifty men. The decisive battle of Thapsus was fought on the 6th of April, B. C. 46, uncorrected calendar, or Feb. 6th, as corrected later. Scipio, the commander, fled to Spain, was intercepted on the voyage, and ended his own life. The high-minded, stoical Cato committed suicide at Utica, rather than surrender his freedom to Cæsar. Juba, the Numidian king, likewise destroyed himself in despair; his kingdom was extinguished and Numidia became a Roman province. A few scattered leaders of revolt still disputed Cæsar's supremacy, but his power was firmly fixed.—A. Hirtius, *The African War.*

ALSO IN G. Long, *Decline of the Roman Republic, v.* 5, *ch.* 24–27.

B. C. 45.—Cæsar's last campaign against the Pompeians in Spain.—His victory at Munda. —After Thapsus, Cæsar had one more deadly and desperate battle to fight for his sovereignty over the dominions of Rome. Cnæus Pompeius, son of Pompeius Magnus, with Labienus and Varus, of the survivors of the African field, had found disaffection in Spain, out of which they drew an army, with Pompeius in command. Cæsar marched in person against this new revolt, crossing the Alps and the Pyrenees with his customary celerity. After a number of minor engagements had been fought, the decisive battle occurred at Munda, in the valley of the Guadalquiver (modern Monda, between Ronda and Malaga), on the 17th of March, B. C. 45. "Never, it is said, was the great conqueror brought so near to defeat and destruction;" but he won the day in the end, and only Sextus Pompeius survived among the leaders of his enemies. The dead on the field were 30,000.— *Commentary on the Spanish War.*

B. C. 45-44.—The Sovereignty of Cæsar and his titles.—His permanent Imperatorship.—His unfulfilled projects. — "At Rome, official enthusiasm burst forth anew at the tidings of these successes [in Spain]. The Senate decreed fifty days of supplications, and recognized Cæsar's right to extend the pomœrium, since he had extended the limits of the Empire. . . . After Thapsus he was more than a demi-god; after Munda he was a god altogether. A statue was raised to him in the temple of Quirinus with the inscription: 'To the invincible God,' and a college of priests, the Julian, was consecrated to him. . . . On the 13th September the dictator appeared at the gates of Rome, but he did

not triumph till the beginning of October. This time there was no barbarian king or chieftain to veil the victories won over citizens. But Cæsar thought he had no longer need to keep up such consideration; since he was now the State, his enemies, whatever name they bore, must be enemies of the State. . . . It was expected that Cæsar, having suffered so many outrages, would now punish severely, and Cicero, who had always doubted his clemency, believed that tyranny would break out as soon as the tyrant was above fear. But jealousies, recollections of party strifes, did not reach to the height of Cæsar. . . . He restored the statues of Sylla; he replaced that of Pompey on the rostra. . . . He pardoned Cassius, who had tried to assassinate him, the consularis Marcellus who had stirred up war against him, and Quintus Ligarius who had betrayed him in Africa. As a temporary precaution, however, he forbade to the Pompeians, by a 'lex Hirtia,' admission to the magistracy. For his authority, Cæsar sought no new forms. . . . Senate, comitia, magistracies existed as before; but he centred public action in himself alone by combining in his own hands all the republican offices. The instrument which Cæsar used in order to give to his power legal sanction was the Senate. In former times, the general, after the triumph, laid aside his title of imperator and imperium, which included absolute authority over the army, the judicial department and the administrative power; Cæsar, by a decree of the Senate, retained both during life, with the right of drawing freely from the treasury. His dictatorship and his office of præfectus morum were declared perpetual; the consulship was offered him for ten years, but he would not accept it; the Senate wished to join executive to electoral authority by offering him the right of appointment in all curule and plebeian offices; he reserved for himself merely the privilege of nominating half the magistracy. The Senate had enjoined the members chosen to swear, before entering on office, that they would undertake nothing contrary to the dictator's acts, these having the force of law. Further, they gave to his person the legal inviolability of the tribunes, and in order to ensure it, knights and senators offered to serve as guards, while the whole Senate took an oath to watch over his safety. To the reality of power were added the outward signs. In the Senate, at the theatre, in the circus, on his tribunal, he sat, dressed in the royal robe, on a throne of gold, and his effigy was stamped on the coins, where the Roman magistrates had not yet ventured to engrave more than their names. They even went as far as talking of succession, as in a regular monarchy. His title of imperator and the sovereign pontificate were transmissible to his legitimate or adopted children. . . . Cæsar was not deceived by the secret perfidy which prompted such servilities, and he valued them as they deserved. But his enemies found in them fresh reasons for hating the great man who had saved them. . . . The Senate had . . . sunk from its character of supreme council of the Republic into that of a committee of consultation, which the master often forgot to consult. The Civil war had decimated it; Cæsar appointed to it brave soldiers, even sons of freedmen who had served him well, and a considerable number of provincials, Spaniards, Gauls of Gallia Narbonensis, who had long been Romans. He had so many services to reward that his Senate reached the number of 900 members. . . . One day the Senate went in a body to the temple of Venus Genetrix to present to Cæsar certain decrees drawn up in his honor. The demi-god was ill and dared not leave his couch. This was imprudent, for the report spread that he had not deigned to rise. . . . The higher nobles remained apart, not from honours, but from power; but they forgot neither Pharsalia nor Thapsus. They would have consented to obey on condition of having the appearance of commanding. This disguised obedience is for an able government more convenient than outward servility. A few concessions made to vanity obtain tranquil possession of power. This was the policy of Augustus, but it is not that of great ambitions or of a true statesman. These pretences leave everything doubtful; nothing is settled; and Cæsar wished to lay the foundations of a government which should bring a new order of things out of a chaos of ruins. Unless we are paying too much attention to mere anecdotes, he desired the royal diadem. . . . It is difficult not to believe that Cæsar considered the constituting of a monarchical power as the rational achievement of the revolution which he was carrying out. In this way we could explain the persistence of his friends in offering him a title odious to the Romans, who were quite ready to accept a monarch, but not monarchy. . . . In order to attain to this royal title . . . he must mount still higher, and this new greatness he would seek in the East. . . . It was meet that he should wipe out the second military humiliation of Rome after effacing the first; that he should avenge Crassus."—V. Duruy, *Hist. of Rome, ch.* 58, *Sect.* 2–3 (*v.* 3).—"Cæsar was born to do great things, and had a passion after honor. . . . It was in fact a sort of emulous struggle with himself, as it had been with another, how he might outdo his past actions by his future. In pursuit of these thoughts he resolved to make war upon the Parthians, and when he had subdued them, to pass through Hyrcania; thence to march along by the Caspian Sea to Mount Caucasus, and so on about Pontus, till he came into Scythia; then to overrun all the countries bordering upon Germany, and Germany itself; and so to return through Gaul into Italy, after completing the whole circle of his intended empire, and bounding it on every side by the ocean. While preparations were making for this expedition, he proposed to dig through the isthmus on which Corinth stands; and appointed Anienus to superintend the work. He had also a design of diverting the Tiber, and carrying it by a deep channel directly from Rome to Circeii, and so into the sea near Tarracina, that there might be a safe and easy passage for all merchants who traded to Rome. Besides this, he intended to drain all the marshes by Pomentium and Setia, and gain ground enough from the water to employ many thousands of men in tillage. He proposed further to make great mounds on the shore nearest Rome, to hinder the sea from breaking in upon the land, to clear the coast at Ostia of all the hidden rocks and shoals that made it unsafe for shipping, and to form ports and harbors fit to receive the large number of vessels that would frequent them. These things were designed without being carried into effect; but his refor-

mation of the calendar [See CALENDAR, JULIAN], in order to rectify the irregularity of time, was not only projected with great scientific ingenuity, but was brought to its completion, and proved of very great use."—Plutarch, *Cæsar* (*Clough's Dryden's trans.*).

ALSO IN T. Mommsen, *Hist. of Rome, bk. 5, ch. 11, with note.*

B. C. 44.—The Assassination of Cæsar.—"The question of the kingship was over; but a vague alarm had been created, which answered the purpose of the Optimates. Cæsar was at their mercy any day. They had sworn to maintain all his acts. They had sworn, after Cicero's speech, individually and collectively to defend his life. Cæsar, whether he believed them sincere or not, had taken them at their word, and came daily to the Senate unarmed and without a guard. . . . There were no troops in the city. Lepidus, Cæsar's master of the horse, who had been appointed governor of Gaul, was outside the gates with a few cohorts; but Lepidus was a person of feeble character, and they trusted to be able to deal with him. Sixty senators, in all, were parties to the immediate conspiracy. Of these, nine tenths were members of the old faction whom Cæsar had pardoned, and who, of all his acts, resented most that he had been able to pardon them. They were the men who had stayed at home, like Cicero, from the fields of Thapsus and Munda, and had pretended penitence and submission that they might take an easier road to rid themselves of their enemy. Their motives were the ambition of their order and personal hatred of Cæsar; but they persuaded themselves that they were animated by patriotism, and as, in their hands, the Republic had been a mockery of liberty, so they aimed at restoring it by a mock tyrannicide. . . . One man only they were able to attract into coöperation who had a reputation for honesty, and could be conceived, without absurdity, to be animated by a disinterested purpose. Marcus Brutus was the son of Cato's sister Servilia, the friend, and a scandal said the mistress, of Cæsar. That he was Cæsar's son was not too absurd for the credulity of Roman drawing-rooms. Brutus himself could not have believed in the existence of such a relation, for he was deeply attached to his mother; and although, under the influence of his uncle Cato, he had taken the Senate's side in the war, he had accepted afterwards not pardon only from Cæsar, but favors of many kinds, for which he had professed, and probably felt, some real gratitude. . . . Brutus was perhaps the only member of the senatorial party in whom Cæsar felt genuine confidence. His known integrity, and Cæsar's acknowledged regard for him, made his accession to the conspiracy an object of particular importance. . . . Brutus, once wrought upon, became with Cassius the most ardent in the cause which assumed the aspect to him of a sacred duty. Behind them were the crowd of senators of the familiar faction, and others worse than they, who had not even the excuse of having been partisans of the beaten cause; men who had fought at Cæsar's side till the war was over, and believed, like Labienus, that to them Cæsar owed his fortune, and that he alone ought not to reap the harvest. . . . The Ides of March drew near. Cæsar was to set out in a few days for Parthia. Decimus Brutus was going, as governor, to the north of Italy, Lepidus to Gaul, Marcus Brutus to Macedonia, and Trebonius to Asia Minor. Antony, Cæsar's colleague in the consulship, was to remain in Italy. Dolabella, Cicero's son-in-law, was to be consul with him as soon as Cæsar should have left for the East. The foreign appointments were all made for five years, and in another week the party would be scattered. The time for action had come, if action there was to be. . . . An important meeting of the Senate had been called for the Ides (the 15th) of the month. The Pontifices, it was whispered, intended to bring on again the question of the Kingship before Cæsar's departure. The occasion would be appropriate. The Senate-house itself was a convenient scene of operations. The conspirators met at supper the evening before at Cassius's house. Cicero, to his regret, was not invited. The plan was simple, and was rapidly arranged. Cæsar would attend unarmed. The senators not in the secret would be unarmed also. The party who intended to act were to provide themselves with poniards, which could be easily concealed in their paper boxes. So far all was simple; but a question rose whether Cæsar only was to be killed, or whether Antony and Lepidus were to be dispatched along with him. They decided that Cæsar's death would be sufficient. . . . Antony and Lepidus were not to be touched. For the rest the assassins had merely to be in their places in the Senate in good time. When Cæsar entered, Trebonius was to detain Antony in conversation at the door. The others were to gather about Cæsar's chair on pretence of presenting a petition, and so could make an end. A gang of gladiators were to be secreted in the adjoining theatre to be ready should any unforeseen difficulty present itself. . . . Strange stories were told in after years of the uneasy labors of the elements that night. . . . Calpurnia dreamt her husband was murdered, and that she saw him ascending into heaven, and received by the hand of God. In the morning (March 15th) the sacrifices were again unfavorable. Cæsar was restless. Some natural disorder affected his spirits, and his spirits were reacting on his body. Contrary to his usual habit, he gave way to depression. He decided, at his wife's entreaty, that he would not attend the Senate that day. The house was full. The conspirators were in their places with their daggers ready. Attendants came in to remove Cæsar's chair. It was announced that he was not coming. Delay might be fatal. They conjectured that he already suspected something. A day's respite, and all might be discovered. His familiar friend whom he trusted—the coincidence is striking—was employed to betray him. Decimus Brutus, whom it was impossible for him to distrust, went to entreat his attendance. . . . Cæsar shook off his uneasiness, and rose to go. As he crossed the hall his statue fell and shivered on the stones. Some servant, perhaps, had heard whispers, and wished to warn him. As he still passed on, a stranger thrust a scroll into his hand, and begged him to read it on the spot. It contained a list of the conspirators, with a clear account of the plot. He supposed it to be a petition and placed it carelessly among his other papers. The fate of the Empire hung upon a thread, but the thread was not broken. . . . Cæsar entered

and took his seat. His presence awed men, in spite of themselves, and the conspirators had determined to act at once, lest they should lose courage to act at all. He was familiar and easy of access. They gathered round him. . . . One had a story to tell him; another some favor to ask. Tullius Cimber, whom he had just made governor of Bithynia, then came close to him, with some request which he was unwilling to grant. Cimber caught his gown, as if in entreaty, and dragged it from his shoulders. Cassius, who was standing behind, stabbed him in the throat. He started up with a cry and caught Cassius's arm. Another poniard entered his breast, giving a mortal wound. He looked round, and seeing not one friendly face, but only a ring of daggers pointing at him, he drew his gown over his head, gathered the folds about him that he might fall decently, and sank down without uttering another word. . . . The Senate rose with shrieks and confusion, and rushed into the Forum. The crowd outside caught the words that Cæsar was dead, and scattered to their houses. Antony, guessing that those who had killed Cæsar would not spare himself, hurried off into concealment. The murderers, bleeding some of them from wounds which they had given one another in their eagerness, followed, crying that the tyrant was dead, and that Rome was free; and the body of the great Cæsar was left alone in the house where a few weeks before Cicero told him that he was so necessary to his country that every senator would die before harm should reach him."—J. A. Froude, *Cæsar, ch.* 26.

B. C. 44.—The genius and character of Cæsar.—His rank among great men.—"Was Cæsar, upon the whole, the greatest of men? Dr. Beattie once observed, that if that question were left to be collected from the suffrages already expressed in books, and scattered throughout the literature of all nations, the scale would be found to have turned prodigiously in Cæsar's favor, as against any single competitor; and there is no doubt whatsoever, that even amongst his own countrymen, and his own contemporaries, the same verdict would have been returned, had it been collected upon the famous principle of Themistocles, that he should be reputed the first, whom the greatest number of rival voices had pronounced the second."—T. De Quincey, *The Cæsars, ch.* 1.—"The founder of the Roman Empire was a very great man. With such genius and such fortune it is not surprising that he should be made an idol. In intellectual stature he was at least an inch higher than his fellows, which is in itself enough to confound all our notions of right and wrong. He had the advantage of being a statesman before he was a soldier, whereas Napoleon was a soldier before he was a statesman. His ambition coincided with the necessity of the world, which required to be held together by force; and, therefore, his Empire endured for four hundred, or, if we include its Eastern offset, for fourteen hundred years, while that of Napoleon crumbled to pieces in four. But unscrupulous ambition was the root of his character. It was necessary, in fact, to enable him to trample down the respect for legality which still hampered other men. To connect him with any principle seems to me impossible. He came forward, it is true, as the leader of what is styled the democratic party, and in that sense the empire which he founded may be called democratic. But to the gamblers who brought their fortunes to that vast hazard table, the democratic and aristocratic parties were merely rouge and noir. The social and political equity, the reign of which we desire to see, was, in truth, unknown to the men of Cæsar's time. It is impossible to believe that there was an essential difference of principle between one member of the triumvirate and another. The great adventurer had begun by getting deeply into debt, and had thus in fact bound himself to overthrow the republic. He fomented anarchy to prepare the way for his dictatorship. He shrank from no accomplice however tainted, not even from Catiline; from no act however profligate or even cruel. . . . The noblest feature in Cæsar's character was his clemency. But we are reminded that it was ancient, not modern clemency, when we find numbered among the signal instances of it his having cut the throats of the pirates before he hanged them, and his having put to death without torture (simplici morte punivit) a slave suspected of conspiring against his life. Some have gone so far as to speak of him as the incarnation of humanity. But in the whole history of Roman conquest will you find a more ruthless conqueror? A million of Gauls we are told perished by the sword. Multitudes were sold into slavery. The extermination of the Eburones went to the verge even of ancient licence. The gallant Vercingetorix, who had fallen into Cæsar's hands under circumstances which would have touched any but a depraved heart, was kept by him a captive for six years, and butchered in cold blood on the day of the triumph. The sentiment of humanity was then undeveloped. Be it so, but then we must not call Cæsar the incarnation of humanity. Vast plans are ascribed to Cæsar at the time of his death, and it seems to be thought that a world of hopes for humanity perished when he fell. But if he had lived and acted for another century, what could he have done with those moral and political materials but found, what he did found, a military and sensualist empire. A multitude of projects are attributed to him by writers, who, we must remember, are late, and who make him ride a fairy charger with feet like the hands of a man. Some of these projects are really great, such as the codification of the law, and measures for the encouragement of intellect and science; others are questionable, such as the restoration of commercial cities from which commerce had departed; others, great works to be accomplished by an unlimited command of men and money, are the common dreams of every Nebuchadnezzar. . . . Still Cæsar was a very great man, and he played a dazzling part, as all men do who come just at the fall of an old system, when society is as clay in the hands of the potter, and found a new system in its place; while the less dazzling task of making the new system work, by probity and industry, and of restoring the shattered allegiance of a people to its institutions, descends upon unlaurelled heads. But that the men of his time were bound to recognise in him a Messiah, to use the phrase of the Emperor of the French, and that those who opposed him were Jews crucifying their Messiah is an impression which I venture to think will in time subside."—Goldwin Smith, *The Last Republicans of Rome* (*Macmillan's Mag., April*, 1868).

B. C. 44.—After Cæsar's death.—Flight of "the Liberators."—Mark Antony in power.—Arrival and wise conduct of Cæsar's heir, the young Octavius.—The assassins of Cæsar were not long in discovering that Rome gave no applause to their bloody deed. Its first effect was a simply stupefying consternation. The Senators fled,—the forum and the streets were nearly emptied. When Brutus attempted an harangue his hearers were few and silent. In gloomy alarm, he made haste, with his associates, to take refuge on the heights of the capitol. During the night which followed, a few senators, who approved the assassination—Cicero among the number—climbed the hill and held council with them in their place of retreat. The result was a second attempt made, on the following day, to rouse public feeling in their favor by speeches in the forum. The demonstration was again a failure, and the "liberators," as they wished to be deemed, returned with disappointment to the capitol. Meantime, the surviving consul, who had been Cæsar's colleague for the year, M. Antonius—known more commonly as Mark Antony—had acted with vigor to secure power in his own hands. He had taken possession of the great treasure which Cæsar left, and had acquired his papers. He had come to a secure understanding, moreover, with Lepidus, Cæsar's Master of Horse, who controlled a legion quartered near by, and who really commanded the situation, if his energy and his abilities had been equal to it. Lepidus marched his legion into the city, and its presence preserved order. Yet, with all the advantage in their favor, neither Antony nor Lepidus took any bold attitude against Cæsar's murderers. On the contrary, Antony listened to propositions from them and consented, as consul, to call a meeting of the Senate for deliberation on their act. At that meeting he even advocated what might be called a decree of oblivion, so far as concerned the striking down of Cæsar, and a confirmation of all the acts executed and unexecuted, of the late Imperator. These had included the recent appointment of Brutus, Cassius and other leaders among the assassins to high proconsular commands in the provinces. Of course the proposed measure was acceptable to them and their friends, while Antony, having Cæsar's papers in his possession, expected to gain everything from it. Under cover of the blank confirmation of Cæsar's acts, he found in Cæsar's papers a ground of authority for whatever he willed to do, and was accused of forging without limit where the genuine documents failed him. At the same time, taking advantage of the opportunity that was given to him by a public funeral decreed to Cæsar, he delivered an artful oration, which infuriated the people and drove the blood-stained "liberators" in terror from the city. But in many ways Antonius weakened the strong position which his skilful combinations had won for him. In his undisguised selfishness he secured no friends of his own; he alienated the friends of Cæsar by his calm indifference to the crime of the assassins of Cæsar, while he harvested for himself the fruits of it; above all, he offended and insulted the people by his impudent appropriation of Cæsar's vast hoard of wealth. The will of the slain Imperator had been read, and it was known that he had bequeathed three hundred sesterces—nearly £3 sterling, or $15—to every citizen of Rome. The heir named to the greater part of the estate was Cæsar's favorite grand-nephew (grandson of his younger sister, Julia) Caius Octavius, who became, by the terms of the will, his adopted son, and who was henceforth to bear the name Caius Julius Cæsar Octavianus. The young heir, then but eighteen years of age, was at Apollonia, in Illyria, at the quarters of a considerable force which Cæsar had assembled there. With wonderful coolness and prudence for his age, he declined proposals to lead the army to Rome, for the assertion of his rights, but went quietly thither with a few friends, feeling the public pulse as he journeyed. At Rome he demanded from Antony the moneys which Cæsar had left, but the profligate and reckless consul had spent them and would give no account. By great exertions Octavius raised sufficient means on his own account to pay Cæsar's legacy to the Roman citizens, and thereby he consolidated a popular feeling in his own favor, against Antony, which placed him, at once, in important rivalry with the latter. It enabled him presently to share the possession of power with Antony and Lepidus, in the Second Triumvirate, and, finally, to seize the whole sovereignty which Cæsar intended to bequeath to him.—C. Merivale, *Hist. of the Romans, ch.* 23–24.

B. C. 44-42.—Destruction of the Liberators.—Combination of Antony, Octavius and Lepidus.—The Second Triumvirate.—Mark Antony's arrangement of peace with the murderers of Cæsar, on the basis of a confirmation in the Senate of all Cæsar's acts, gave to Marcus Brutus the government of Macedonia, to Decimus Brutus that of Cisalpine Gaul, and to Cassius that of Syria, since Cæsar had already named them to those several commands before they slew him. But Antony succeeded ere long in procuring decrees from the Senate, transferring Macedonia to his brother, and Syria to Dolabella. A little later he obtained a vote of the people giving Cisalpine Gaul to himself, and cancelling the commission of Decimus Brutus. His consular term was now near its expiration and he had no intention to surrender the power he had enjoyed. An army in northern Italy would afford the support which his plans required. But, before those plans were ripe, his position had grown exceedingly precarious. The Senate and the people were alike unfriendly to him, and alike disposed to advance Octavius in opposition. The latter, without office or commission, had already, in the lawless manner of the time, by virtue of the encouragement given to him, collected an army of several legions under his personal banner. Decimus Brutus refused to surrender the government of Gaul, and was supported by the best wishes of the Senate in defying Antony to wrest it from him. The latter now faced the situation boldly, and, although two legions brought from Epirus went over to Octavius, he collected a strong force at Ariminum, marched into Cisalpine Gaul and blockaded Decimus Brutus in Mutina (modern Modena). Meantime, new consuls, Hirtius and Pansa, had taken office at Rome, and the Senate, led by

Cicero, had declared its hostility to Antony. Octavius was called upon to join the new consuls with his army, in proceeding against the late consul — now treated as a public enemy, though not so pronounced. He did so, and two battles were fought, on the 15th of April, B. C. 43, at Forum Gallorum, and on the 27th of the same month under the walls of Mutina, which forced Antony to retreat, but which cost Rome the lives of both her consuls. Antony retired across the Alps and joined his old friend Lepidus in Transalpine Gaul. Octavius declined to follow. Instead of doing so, he sent a military deputation to Rome to demand the consulship, and quickly followed it with his army when the demand had been refused. The demonstration proved persuasive, and he was elected consul, with his half-brother for colleague. His next business was to come to terms with Antony and Lepidus, as against the Liberators and their friends. A conference was arranged, and the three new masters of Rome met in October, B. C. 43, on an island near Bononia (modern Bologna), constituting themselves a commission of three — a triumvirate — to settle the affairs of the commonwealth. They framed a formal contract of five years' duration; divided the powers of government between themselves; named officials for the subordinate places; and — most serious proceeding of all — prepared a proscription list, as Sulla had done, of enemies to be put out of the way. It was an appalling list of 300 senators (the immortal Cicero at their head) and 2,000 knights. When the work of massacre in Rome and Italy had been done, and when the terrified Senate had legalized the self-assumed title and authority of the triumvirs, these turned their attention to the East, where M. Brutus and Cassius had established and maintained themselves in power. Decimus Brutus was already slain, after desertion by his army and capture in attempted flight. In the summer of the year 42 B. C., Antony led a division of the joint army of the triumvirate across the sea and through Macedonia, followed soon after by Octavius with additional forces. They were met at Philippi, and there, in two great battles, fought with an interval of twenty days between, the republic of Rome was finally done to death. "The battle of Philippi, in the estimation of the Roman writers, was the most memorable conflict in their military annals. The numbers engaged on either side far exceed all former experience. Eighty thousand legionaries alone were counted on the one side, and perhaps 120,000 on the other — at least three times as many as fought at Pharsalia." Both Cassius and Brutus died by their own hands. There was no more opposition to the triumvirs, except from Sextus Pompeius, last survivor of the family of the great Pompeius, who had created for himself at sea a little half-piratical realm, and who forced the three to recognize him for a time as a fourth power in the Roman world. But he, too, perished, B. C. 35. For seven years, from B. C. 42 to B. C. 36, Antony ruled the East, Octavius the West, and Lepidus reigned in Africa. —C. Merivale, *Hist. of the Romans, ch.* 24–28.

Also in: The same, *The Fall of the Roman Republic, ch.* 15.

B. C. 31. — The victory of Octavius at Actium. — The rise of the Empire. — The battles of Philippi, which delivered the whole Roman world to Antony, Octavius and Lepidus (the Triumvirs), were fought in the summer of 42 B. C. The battle of Actium, which made Octavius — soon to be named Augustus — the single master of a now fully founded Empire, was fought on the 2d of Sept., B. C. 31. In the interval of eleven years, Octavius, governing Rome, Italy, and the provinces of the West, had steadily consolidated and increased his power, gaining the confidence, the favor and the fear of his subject people. Antony, oppressing the East, had consumed his energies and his time in dalliance with Cleopatra, and had made himself the object of hatred and contempt. Lepidus, who had Africa for his dominion to begin with, had measured swords with Octavius and had been summarily deposed, in the year 36 B. C. It was simply a question of time as to when Antony, in his turn, should make room for the coming monarch. Already, in the year after Philippi, the two sovereign-partners had been at the verge of war. Antony's brother and his wife, Fulvia, had raised a revolt in Italy against Octavius, and it had been crushed at Perusia, before Antony could rouse himself to make a movement in support of it. He did make a formidable demonstration at last; but the soldiers of the two rivals compelled them on that occasion to patch up a new peace, which was accomplished by a treaty negotiated at Brundisium and sealed by the marriage of Antony to Octavia, sister of Octavius. This peace was maintained for ten years, while the jealousies and animosities of the two potentates grew steadily more bitter. It came to an end when Octavius felt strong enough to defy the superior resources, in money, men and ships, which Antony held at his command. The preparations then made on both sides for the great struggle were stupendous and consumed a year. It was by the determination of Antony that the war assumed chiefly a naval character; but Octavius, not Antony, forced the sea-fight when it came. His smaller squadrons sought and attacked the swarming fleets of Egypt and Asia, in the Ambracian gulf, where they had been assembled. The great battle was fought at the inlet of the gulf, off the point, or "acte," of a tongue of land, projecting from the shores of Acarnania, on which stood a temple to Apollo, called the Actium. Hence the name of the battle. The cowardly flight of Cleopatra, followed by Antony, ended the conflict quickly, and the Antonian fleet was entirely destroyed. The deserted army, on shore, which had idly watched the sea-fight, threw down its arms, when the flight of Antonius was known. Before Octavius pursued his enemy into Egypt and to a despairing death, he had other work to do, which occupied him for nearly a year. But he was already sure of the sole sovereignty that he claimed. The date of the battle of Actium "has been formally recorded by historians as signalizing the termination of the republic and the commencement of the Roman monarchy." — C. Merivale, *Hist. of the Romans, ch.* 28.

B. C. 31–A. D. 14.—The settlement of the Empire by the second Cæsar, Octavius, called Augustus.—His organization of government. — "Power and repute had passed away from the old forms of the Republic. The whole world lay at the feet of the master of many legions; it remained only to define the constitutional forms in which the new forces were to

work. But to do this was no easy task. The perplexities of his position, the fears and hopes that crossed his mind, are thrown into dramatic form by the historian Dion Cassius, who brings a scene before our fancy in which Octavianus listens to the conflicting counsels of his two great advisers, Agrippa and Mæcenas. . . . There is little doubt that schemes of resignation were at some time discussed by the Emperor and by his circle of advisers. It is even possible, as the same writer tells us, that he laid before the Senators at this time some proposal to leave the helm of state and let them guide it as of old. . . . The scene, if ever really acted, was but an idle comedy. . . . It is more probable that he was content with some faint show of resistance when the Senate heaped their honours on his head, as afterwards when, more than once, after a ten years' interval, they solemnly renewed the tenure of his power. But we cannot doubt his sincerity in one respect — in his wish to avoid the kingly title and all the odious associations of the same. . . . He shrank also from another title, truly Roman in its character, but odious since the days of Sulla; and though the populace of Rome, when panic-struck by pestilence and famine, clamoured to have him made dictator, . . . yet nothing would induce him to bear the hateful name. But the name of Cæsar he had taken long ago, after his illustrious uncle's death, and this became the title first of the dynasty and then of the imperial office [see CÆSAR, THE TITLE]. Besides this he allowed himself to be styled Augustus, a name which roused no jealousy and outraged no Roman sentiment, yet vaguely implied some dignity and reverence from its long association with the objects of religion [see AUGUSTUS, THE TITLE]. . . . With this exception he assumed no new symbol of monarchic power, but was satisfied with the old official titles, which, though charged with memories of the Republic, yet singly corresponded to some side or fragment of absolute authority. The first of these was Imperator, which served to connect him with the army. . . . The title of the tribunician power connected the monarch with the interests of the lower orders. . . . The Emperor did not, indeed, assume the tribunate, but was vested with the tribunician power which overshadowed the annual holders of the office. It made his person sacred. . . . The 'princeps senatus' in old days had been the foremost senator of his time. . . . No one but the Emperor could fill this position safely, and he assumed the name henceforth to connect him with the Senate, as other titles seemed to bind him to the army and the people. For the post of Supreme Pontiff, Augustus was content to wait awhile, until it passed by death from the feeble hands of Lepidus. He then claimed the exclusive tenure of the office, and after this time Pontifex Maximus was always added to the long list of imperial titles. . . . Besides these titles to which he assumed an exclusive right he also filled occasionally and for short periods most of the republican offices of higher rank, both in the capital and in the country towns. He took from time to time the consular power, with its august traditions and imposing ceremonial. The authority of censor lay ready to his hands when a moral reform was to be set on foot, . . . or when the Senate was to be purged of unworthy members and the order of equites or knights to be reviewed and its dignity consulted. Beyond the capital the pro-consular power was vested in him without local limitations. . . . The offices of state at Rome, meantime, lasted on from the Republic to the Empire, unchanged in name, and with little seeming change of functions. Consuls, Prætors, Quæstors, Tribunes, and Ædiles rose from the same classes as before, and moved for the most part in the same round of work, though they had lost for ever their power of initiative and real control. . . . They were now mainly the nominees of Cæsar, though the forms of popular election were still for a time observed. . . . The consulship was entirely reserved for his nominees, but passed rapidly from hand to hand, since in order to gratify a larger number it was granted at varying intervals for a few months only. . . . It was part of the policy of Augustus to disturb as little as possible the old names and forms of the Republic. . . . But besides these he set up a number of new offices, often of more real power, though of lower rank. . . . The name præfectus, the 'préfêt' of modern France, stood in earlier days for the deputy of any officer of state charged specially to execute some definite work. The præfects of Cæsar were his servants, named by him and responsible to him, set to discharge duties which the old constitution had commonly ignored. The præfect of the city had appeared in shadowy form under the Republic to represent the consul in his absence. Augustus felt the need, when called away from Rome, to have some one there whom he could trust to watch the jealous nobles and control the fickle mob. His trustiest confidants, Mæcenas and Agrippa, filled the post, and it became a standing office, with a growing sphere of competence, overtopping the magistracies of earlier date. The præfects of the prætorian cohorts first appeared when the Senate formally assigned a body-guard to Augustus later in his reign [see PRÆTORIAN PRÆFECTS]. . . . Next to these in power and importance came the præfects of the watch — the new police force organised by Augustus as a protection against the dangers of the night; and of the corn supplies of Rome, which were always an object of especial care on the part of the imperial government. . . . The title 'procurator,' which has come down to us in the form of 'proctor,' was at first mainly a term of civil law, and was used for a financial agent or attorney. The officers so called were regarded at the first as stewards of the Emperor's property or managers of his private business. . . . The agents of the Emperor's privy purse throughout the provinces were called by the same title, but were commonly of higher rank and more repute. Such in its bare outline was the executive of the imperial government. We have next to see what was the position of the Senate. . . . It was one of the first cares of Augustus to restore its credit. At the risk of odium and personal danger he more than once revised the list, and purged it of unworthy members, summoning eminent provincials in their place. . . . The functions also of the Senate were in theory enlarged. . . . But the substance of power and independence had passed away from it for ever. Matters of great moment were debated first, not in the Senate House, but in a sort of Privy Council formed by the trusted advisers of the

Emperor. . . . If we now turn our thoughts from the centre to the provinces we shall find that the imperial system brought with it more sweeping changes and more real improvement. . . . Augustus left to the Senate the nominal control of the more peaceful provinces, which needed little military force. . . . The remaining countries, called imperial provinces, were ruled by generals, called 'legati,' or in some few cases by proctors only. They held office during the good pleasure of their master. . . . There are signs that the imperial provinces were better ruled, and that the transference of a country to this class from the other was looked upon as a real boon, and not as an empty honour. Such in its chief features was the system of Augustus. . . . This was his constructive policy, and on the value of this creative work his claims to greatness must be based."—W. W. Capes, *Roman Hist.: The Early Empire, ch.* 1.—"The arrangement undoubtedly satisfied the requirements of the moment. It saved, at least in appearance, the integrity of the republic, while at the same time it recognised and legalised the authority of the man, who was already by common consent 'master of all things'; and this it effected without any formal alteration of the constitution, without the creation of any new office, and by means of the old constitutional machinery of senate and assembly. But it was an arrangement avowedly of an exceptional and temporary character. The powers voted to Augustus were, like those voted to Pompey in 67 B. C., voted only to him, and, with the exception of the tribunician power, voted only for a limited time. No provision was made for the continuance of the arrangement, after his death, in favour of any other person. And though in fact the powers first granted to Augustus were granted in turn to each of the long line of Roman Cæsars, the temporary and provisional character impressed upon the 'principate' at its birth clung to it throughout. When the princeps for the time being died or was deposed, it was always in theory an open question whether any other citizen should be invested with the powers he had held. Who the man should be, or how he should be chosen, were questions which it was left to circumstances to answer, and even the powers to be assigned to him were, strictly speaking, determined solely by the discretion of the senate and people in each case. It is true that necessity required that some one must always be selected to fill the position first given to Augustus; that accidents, such as kinship by blood or adoption to the last emperor, military ability, popularity with the soldiers or the senate, determined the selection; and that usage decided that the powers conferred upon the selected person should be in the main those conferred upon Augustus. But to the last the Roman emperor was legally merely a citizen whom the senate and people had freely invested with an exceptional authority for special reasons. Unlike the ordinary sovereign, he did not inherit a great office by an established law of succession; and in direct contrast to the modern maxim that 'the king never dies,' it has been well said that the Roman 'principate,' died with the princeps. Of the many attempts made to get rid of this irregular, intermittent character, none were completely successful, and the inconveniences and dangers resulting from it are apparent throughout the history of the empire."—H. F. Pelham, *Outlines of Roman Hist., bk.* 5, *ch.* 3.

A. D. 14-16.—Campaigns of Germanicus in Germany. See Germany: A. D. 14–16.

A. D. 14-37.—Reign of Tiberius.—Increasing vices and cruelties of his rule.—Campaigns of Germanicus in Germany.— His death.—The Delatores and their victims. — Malignant ascendancy of Sejanus. — The Prætorians quartered at Rome.—Augustus had one child only, a daughter, Julia, who was brought to him by his second wife Scribonia; but on his last marriage, with Livia, divorced wife of Tiberius Claudius Nero (divorced by his command), he had adopted her two sons, Tiberius and Drusus. He gave his daughter Julia in marriage, first, to his nephew, Marcellus, the son of his sister Octavia, by her first husband, C. Marcellus. But Marcellus soon died, without offspring, and Julia became the spouse of the emperor's friend and counsellor, Agrippa, to whom she bore three sons, Caius, Lucius, and Agrippa Posthumus (all of whom died before the end of the life of Augustus), and two daughters. Thus the emperor was left with no male heir in his own family, and the imperial succession fell to his adopted son Tiberius — the eldest son of his wife Livia and of her first husband, Tiberius Claudius Nero. There were suspicions that Livia had some agency in bringing about the several deaths which cleared her son's way to the throne. When Augustus died, Tiberius was "in his 56th year, or at least at the close of the 55th. . . . He had by this time acquired a perfect mastery in dissembling his lusts, and his mistrust. . . . He was anxious to appear as a moral man, while in secret he abandoned himself to lusts and debaucheries of every kind. . . . In accordance with this character, Tiberius now played the farce which is so admirably but painfully described by Tacitus; he declined accepting the imperium, and made the senate beg and intreat him to accept it for the sake of the public good. In the end Tiberius yielded, inasmuch as he compelled the senate to oblige him to undertake the government. This painful scene forms the beginning of Tacitus' Annals. The early part of his reign is marked by insurrections among the troops in Pannonia and on the Rhine. . . . Drusus [the son of Tiberius] quelled the insurrection in Illyricum, and Germanicus [the emperor's nephew, son of his brother Drusus, who had died in Germany, B. C. 9], that on the Rhine; but, notwithstanding this, it was in reality the government that was obliged to yield. . . . The reign of Tiberius, which lasted for 23 years, that is till A. D. 37, is by no means rich in events; the early period of it only is celebrated for the wars of Germanicus in Germany. . . . The war of Germanicus was carried into Germany as far as the river Weser [see Germany: A. D. 14–16], and it is surprising to see that the Romans thought it necessary to employ such numerous armies against tribes

which had no fortified towns. . . . The history of his reign after the German wars becomes more and more confined to the interior and to his family. He had an only son, Drusus, by his first wife Agrippina; and Germanicus, the son of his brother Drusus, was adopted by him. Drusus must have been a young man deserving of praise; but Germanicus was the adored darling of the Roman people, and with justice: he was the worthy son of a worthy father, the hero of the German wars. . . . Germanicus had declined the sovereignty, which his legions had offered to him after the death of Augustus, and he remained faithful to his adopted father, although he certainly could not love him. Tiberius, however, had no faith in virtue, because he himself was destitute of it; he therefore mistrusted Germanicus, and removed him from his victorious legions." He sent him "to superintend the eastern frontiers and provinces. On his arrival there he was received with the same enthusiasm as at Rome; but he died very soon afterwards, whether by a natural death or by poison is a question upon which the ancients themselves are not agreed. . . . In the reign of Augustus, any offence against the person of the imperator had, by some law with which we are not further acquainted, been made a 'crimen majestatis,' as though it had been committed against the republic itself. This 'crimen' in its undefined character was a fearful thing; for hundreds of offences might be made to come within the reach of the law concerning it. All these deplorable cases were tried by the senate, which formed a sort of condemning machine set in motion by the tyrant, just like the national convention under Robespierre. . . . In the early part of Tiberius' reign, these prosecutions occurred very rarely; but there gradually arose a numerous class of denouncers ('delatores'), who made it their business to bring to trial any one whom the emperor disliked" (see DELATION.—DELATORS). This was after the death of the emperor's mother, Livia, whom he feared, and who restrained his worst propensities. After her influence was removed, "his dark and tyrannical nature got the upper hand: the hateful side of his character became daily more developed, and his only enjoyment was the indulgence of his detestable lust. . . . His only friend was Aelius Sejanus, a man of equestrian rank. . . . His character bore the greatest resemblance to that of his sovereign, who raised him to the office of praefectus praetorio. . . . Sejanus increased the number of the praetorian cohorts, and persuaded Tiberius to concentrate them in the neighbourhood of Rome, in the 'castrum praetorianum,' which formed as it were the citadel outside the wall of Servius Tullius, but in the midst of the present city. The consequences of this measure render it one of the most important events in Roman history; for the praetorians now became the real sovereigns, and occupied a position similar to that which the Janissaries obtained in Algeria: they determined the fate of the empire until the reign of Diocletian [see PRÆTORIAN GUARDS]. . . . The influence of Sejanus over Tiberius increased every day, and he contrived to inspire his imperial friend with sufficient confidence to go to the island of Capreae. While Tiberius was there indulging in his lusts, Sejanus remained at Rome and governed as his vicegerent. . . . Prosecutions were now instituted against all persons of any consequence at Rome; the time when Tiberius left the capital is the beginning of the fearful annals of his reign." The tyrannical proceedings of Sejanus "continued for a number of years, until at length he himself incurred the suspicion of Tiberius," and was put out of the way. "But a man worse even than he succeeded; this was Macro, who had none of the great qualities of Sejanus, but only analagous vices. . . . The butchery at Rome even increased. . . . Caius Caesar, the son of Germanicus, commonly known by the name of Caligula, formed with Macro a connexion of the basest kind, and promised him the high post of 'praefectus praetorio' if he would assist him in getting rid of the aged monarch. Tiberius was at the time severely ill at a villa near cape Misenum. He fell into a state of lethargy, and everybody believed him to be dead. He came to life again however; on which he was suffocated, or at least his death was accelerated in some way, for our accounts differ on this point. Thus Tiberius died in the 23d year of his reign, A. D. 37, at the age of 78."—B. G. Niebuhr, *Lect's on the Hist. of Rome, lect.* 111–112 (*v.* 3).

A. D. 37-41.—Reign of Caligula, the first of the imperial madmen.— Caius Cæsar, son of Germanicus, owed his nickname, Caligula, to the soldiers of his father's command, among whom he was a great favorite in his childhood. The name was derived from "Caliga," a kind of foot covering worn by the common soldiers, and is sometimes translated "Little Boots." "Having . . . secured the imperial power, he fulfilled by his elevation the wish of the Roman people, I may venture to say, of all mankind; for he had long been the object of expectation and desire to the greater part of the provincials and soldiers, who had known him when a child; and to the whole people of Rome, from their affection for the memory of Germanicus, his father, and compassion for the family almost entirely destroyed. . . . Immediately on his entering the city, by the joint acclamations of the senate, and people, who broke into the senate-house, Tiberius's will was set aside, it having left his other grandson, then a minor, coheir with him; the whole government and administration of affairs was placed in his hands; so much to the joy and satisfaction of the public that, in less than three months after, above 160,000 victims are said to have been offered in sacrifice. . . . To this extraordinary love entertained for him by his countrymen was added an uncommon regard by foreign nations. . . . Caligula himself inflamed this devotion by practising all the arts of popularity. . . . He published accounts of the proceedings of the government — a practice which had been introduced by Augustus, but discontinued by Tiberius. He granted the magistrates a full and free jurisdiction, without any appeal to himself. He made a very strict and exact review of the Roman knights, but conducted it with moderation; publicly depriving of his horse every knight who lay under the stigma of any thing base and dishonourable. . . . He attempted likewise to restore to the people their ancient right of voting in the choice of magistrates. . . . He twice distributed to the people a bounty of 300 sesterces a man, and as

often gave a splendid feast to the senate and the equestrian order, with their wives and children. . . . He frequently entertained the people with stage-plays of various kinds, and in several parts of the city, and sometimes by night, when he caused the whole city to be lighted. . . . He likewise exhibited a great number of circensian games from morning until night; intermixed with the hunting of wild beasts from Africa. . . . Thus far we have spoken of him as a prince. What remains to be said of him bespeaks him rather a monster than a man. . . . He was strongly inclined to assume the diadem, and change the form of government from imperial to regal; but being told that he far exceeded the grandeur of kings and princes, he began to arrogate to himself a divine majesty. He ordered all the images of the gods which were famous either for their beauty or the veneration paid them, among which was that of Jupiter Olympius, to be brought from Greece, that he might take the heads off, and put on his own. Having continued part of the Palatium as far as the Forum, and the temple of Castor and Pollux being converted into a kind of vestibule to his house, he often stationed himself between the twin brothers, and so presented himself to be worshipped by all votaries; some of whom saluted him by the name of Jupiter Latialis. He also instituted a temple and priests, with choicest victims, in honour of his own divinity. . . . The most opulent persons in the city offered themselves as candidates for the honour of being his priests, and purchased it successively at an immense price. . . . In the day-time he talked in private to Jupiter Capitolinus; one while whispering to him, and another turning his ear to him. . . . He was unwilling to be thought or called the grandson of Agrippa, because of the obscurity of his birth. . . . He said that his mother was the fruit of an incestuous commerce maintained by Augustus with his daughter Julia. . . . He lived in the habit of incest with all his sisters. . . . Whether in the marriage of his wives, in repudiating them, or retaining them, he acted with greater infamy, it is difficult to say." Some senators, "who had borne the highest offices in the government, he suffered to run by his litter in their togas for several miles together, and to attend him at supper, sometimes at the head of his couch, sometimes at his feet, with napkins. Others of them, after he had privately put them to death, he nevertheless continued to send for, as if they were still alive, and after a few days pretended that they had laid violent hands upon themselves. . . . When flesh was only to be had at a high price for feeding his wild beasts reserved for the spectacles, he ordered that criminals should be given them to be devoured; and upon inspecting them in a row, while he stood in the middle of the portico, without troubling himself to examine their cases he ordered them to be dragged away, from 'bald-pate to bald-pate' [a proverbial expression, meaning, without distinction.— *Translator's foot-note*]. . . . After disfiguring many persons of honourable rank, by branding them in the face with hot irons, he condemned them to the mines, to work in repairing the high-ways, or to fight with wild beasts; or tying them by the neck and heels, in the manner of beasts carried to slaughter, would shut them up in cages, or saw them asunder. . . . He compelled parents to be present at the execution of their sons. . . . He generally prolonged the sufferings of his victims by causing them to be inflicted by slight and frequently repeated strokes; this being his well-known and constant order: 'Strike so that he may feel himself die.' . . . Being incensed at the people's applauding a party at the Circensian games in opposition to him, he exclaimed, 'I wish the Roman people had but one neck.' . . . He used also to complain aloud of the state of the times, because it was not rendered remarkable by any public calamities. . . . He wished for some terrible slaughter of his troops, a famine, a pestilence, conflagrations, or an earthquake. Even in the midst of his diversions, while gaming or feasting, this savage ferocity, both in his language and actions, never forsook him. Persons were often put to the torture in his presence, whilst he was dining or carousing. A soldier, who was an adept in the art of beheading, used at such times to take off the heads of prisoners, who were brought in for that purpose. . . . He never had the least regard either to the chastity of his own person, or that of others. . . . Besides his incest with his sisters . . . there was hardly any lady of distinction with whom he did not make free. . . . Only once in his life did he take an active part in military affairs. . . . He resolved upon an expedition into Germany. . . . There being no hostilities, he ordered a few Germans of his guard to be carried over and placed in concealment on the other side of the Rhine, and word to be brought him after dinner that an enemy was advancing with great impetuosity. This being accordingly done, he immediately threw himself, with his friends, and a party of the pretorian knights, into the adjoining wood, where, lopping branches from the trees, and forming trophies of them, he returned by torch-light, upbraiding those who did not follow him with timorousness and cowardice. . . . At last, as if resolved to make war in earnest, he drew up his army upon the shore of the ocean, with his balistæ and other engines of war, and while no one could imagine what he intended to do, on a sudden commanded them to gather up the sea shells, and fill their helmets and the folds of their dress with them, calling them 'the spoils of the ocean due to the Capitol and the Palatium.' As a monument of his success he raised a lofty tower. . . . He was crazy both in body and mind, being subject, when a boy, to the falling sickness. . . . What most of all disordered him was want of sleep, for he seldom had more than three or four hours' rest in a night; and even then his sleep was not sound."—Suetonius, *Lives of the Twelve Cæsars: Caligula* (*tr. by A. Thomson*).

Also in: C. Merivale, *Hist. of the Romans under the Empire, ch.* 47–48 (*v.* 5).—S. Baring-Gould, *The Tragedy of the Caesars, v.* 2.

A. D. 41.—The murder of Caligula.—Elevation of Claudius to the throne by the Prætorians.—Beginning of the domination of the soldiery.—"If we may believe our accounts, the tyrant's overthrow was due not to abhorrence of his crimes or indignation at his assaults on the Roman liberties, so much as to resentment at a private affront. Among the indiscretions which seem to indicate the partial madness of the wretched Caius, was the caprice with which he turned from his known foes against his personal friends and familiars. . . . No one felt himself secure, neither the freedmen who attended on

his person, nor the guards who watched over his safety. Among these last was Cassius Chærea, tribune of a prætorian cohort, whose shrill woman's voice provoked the merriment of his master, and subjected him to injurious insinuations. Even when he demanded the watchword for the night the emperor would insult him with words and gestures. Chærea resolved to wipe out the affront in blood. He sought Callistus and others . . . and organized with them and some of the most daring of the nobles a plot against the emperor's life. . . . The festival of the Palatine games was fixed on for carrying the project into effect. Four days did Caius preside in the theatre, surrounded by the friends and guards who were sworn to slay him, but still lacked the courage. On the fifth and last, the 24th of January 794 [A. D. 41], feeling indisposed from the evening's debauch, he hesitated at first to rise. His attendants, however, prevailed on him to return once more to the shows; and as he was passing through the vaulted passage which led from the palace to the Circus, he inspected a choir of noble youths from Asia, who were engaged to perform upon the stage. . . . Caius was still engaged in conversation with them when Chærea and another tribune, Sabinus, made their way to him: the one struck him on the throat from behind with his sword, while the other was in the act of demanding the watchword. A second blow cleft the tyrant's jaw. He fell, and drawing his limbs together to save his body, still screamed, 'I live! I live!' while the conspirators thronging over him, and crying, 'again! again!' hacked him with thirty wounds. The bearers of his litter rushed to his assistance with their poles, while his body-guard of Germans struck wildly at the assassins, and amongst the crowd which surrounded them, killed, it was said, more than one senator who had taken no part in the affair. . . . When each of the conspirators had thrust his weapon into the mangled body, and the last shrieks of its agony had been silenced, they escaped with all speed from the corridor in which it lay; but they had made no dispositions for what was to follow, and were content to leave it to the consuls and senate, amazed and unprepared, to decide on the future destiny of the republic. . . . Some cohorts of the city guards accepted the orders of the consuls, and occupied the public places under their direction. At the same time the consuls, Sentius Saturninus and Pomponius Secundus, the latter of whom had been substituted for Caius himself only a few days before, convened the senate. . . . The first act of the sitting was to issue an edict in which the tyranny of Caius was denounced, and a remission of the most obnoxious of his taxes proclaimed, together with the promise of a donative to the soldiers. The fathers next proceeded to deliberate on the form under which the government should be henceforth administered. On this point no settled principles prevailed. Some were ready to vote that the memory of the Cæsars should be abolished, their temples overthrown, and the free state of the Scipios and Catos restored; others contended for the continuance of monarchy in another family, and among the chiefs of nobility more than one candidate sprang up presently to claim it. The debate lasted late into the night; and in default of any other specific arrangement, the consuls continued to act as the leaders of the commonwealth. . . . But while the senate deliberated, the prætorian guards had resolved. . . . In the confusion which ensued on the first news of the event, several of their body had flung themselves furiously into the palace, and begun to plunder its glittering chambers. None dared to offer them any opposition; the slaves and freedmen fled or concealed themselves. One of the inmates, half hidden behind a curtain in an obscure corner, was dragged forth with brutal violence; and great was the intruders' surprise when they recognised him as Claudius, the long despised and neglected uncle of the murdered emperor. He sank at their feet almost senseless with terror: but the soldiers in their wildest mood still respected the blood of the Cæsars, and instead of slaying or maltreating the suppliant, the brother of Germanicus, they hailed him, more in jest perhaps than earnest, with the title of Imperator, and carried him off to their camp. . . . In the morning, when it was found that the senate had come to no conclusion, and that the people crowding about its place of meeting were urging it with loud cries to appoint a single chief, and were actually naming him as the object of their choice, Claudius found courage to suffer the prætorians to swear allegiance to him, and at the same time promised them a donative of 15,000 sesterces apiece. . . . The senators assembled once again in the temple of Jupiter; but now their numbers were reduced to not more than a hundred, and even these met rather to support the pretensions of certain of their members, who aspired to the empire . . . than to maintain the cause of the ancient republic. But the formidable array of the prætorians, who had issued from their camp into the city, and the demonstrations of the popular will, daunted all parties in the assembly. . . . Presently the Urban cohorts passed over, with their officers and colours, to the opposite side. All was lost: the prætorians, thus reinforced, led their hero to the palace, and there he commanded the senate to attend upon him. Nothing remained but to obey and pass the decree, which had now become a formal act of investiture, by which the name and honours of Imperator were bestowed upon the new chief of the commonwealth. Such was the first creation of an emperor by the military power of the prætorians. . . . Surrounded by drawn swords Claudius had found courage to face his nephew's murderers, and to vindicate his authority to the citizens, by a strong measure of retribution, in sending Chærea and Lupus, with a few others of the blood-embrued, to immediate execution. . . . Claudius was satisfied with this act of vigour, and proceeded, with a moderation but little expected, to publish an amnesty for all the words and acts of the late interregnum. Nevertheless for thirty days he did not venture to come himself into the Curia. . . . The personal fears, indeed, of the new emperor contributed, with a kindly and placable disposition, to make him anxious to gain his subjects' good-will by the gentleness and urbanity of his deportment. . . . His proclamation of amnesty was followed by the pardon of numerous exiles and criminals, especially such as were suffering under sentence for the crime of majestas. . . . The popularity of the new prince, though manifested, thanks to his own discretion, by no such grotesque and impious flatteries as attended on the opening

promise of Caius, was certainly not less deeply felt. . . . The confidence indeed of the upper classes, after the bitter disappointment they had so lately suffered, was not to be so lightly won. The senate and knights might view their new ruler with indulgence, and hope for the best; but they had been too long accustomed to regard him as proscribed from power by constitutional unfitness, as imbecile in mind, and which was perhaps in their estimation even a worse defect, as misshapen and half-developed in physical form, to anticipate from him a wise or vigorous administration. . . . In another rank he would have been exposed perhaps in infancy; as the son of Drusus and Antonia he was permitted to live: but he became from the first an object of disgust to his parents, who put him generally out of their sight, and left him to grow up in the hands of hirelings without judgment or feeling. . . . That the judgment of one from whom the practical knowledge of men and things had been withheld was not equal to his learning, and that the infirmities of his body affected his powers of decision, his presence of mind, and steadfastness of purpose, may easily be imagined: nevertheless, it may be allowed that in a private station, and anywhere but at Rome, Claudius would have passed muster as a respectable, and not, perhaps, an useless member of society. The opinion which is here given of this prince's character may possibly be influenced in some degree by the study of his countenance in the numerous busts still existing, which represent it as one of the most interesting of the whole imperial series. If his figure, as we are told, was tall, and when sitting appeared not ungraceful, his face, at least in repose, was eminently handsome. But it is impossible not to remark in it an expression of pain and anxiety which forcibly arrests our sympathy. It is the face of an honest and well-meaning man, who feels himself unequal to the task imposed upon him. . . . There is the expression of fatigue both of mind and body, which speaks of midnight watches over books, varied with midnight carouses at the imperial table, and the fierce caresses of rival mistresses. There is the glance of fear, not of open enemies, but of pretended friends; the reminiscence of wanton blows, and the anticipation of the deadly potion. Above all, there is the anxious glance of dependence, which seems to cast about for a model to imitate, for ministers to shape a policy, and for satellites to execute it. The model Claudius found was the policy of the venerated Augustus; but his ministers were the most profligate of women, and the most selfish of emancipated slaves. . . . The commencement of the new reign was marked by the renewed activity of the armies on the frontiers."—C. Merivale, *Hist. of the Romans under the Empire, ch.* 48–49 (*v.* 5).

A. D. 47-54.—The wives of Claudius, Messalina and Agrippina.—Their infamous and terrible ascendancy.—Murder of the emperor.—Advent of Nero.—The wife of Claudius was "Valeria Messalina, the daughter of his cousin Barbatus Messala, a woman whose name has become proverbial for infamy. His most distinguished freedmen were the eunuch Posidus; Felix, whom he made governor of Judæa, and who had the fortune to be the husband of three queens; and Callistus, who retained the power which he had acquired under Caius. But far superior in point of influence to these were the three secretaries (as we may term them), Polybius, Narcissus, and Pallas. . . . The two last were in strict league with Messalina; she only sought to gratify her lusts; they longed for honours, power, and wealth. . . . Their plan, when they would have any one put to death, was to terrify Claudius . . . by tales of plots against his life. . . . Slaves and freedmen were admitted as witnesses against their masters; and, though Claudius had sworn, at his accession, that no freeman should be put to the torture, knights and senators, citizens and strangers, were tortured alike. . . . Messalina now set no bounds to her vicious courses. Not content with being infamous herself, she would have others so; and she actually used to compel ladies to prostitute themselves even in the palace, and before the eyes of their husbands, whom she rewarded with honours and commands, while she contrived to destroy those who would not acquiesce in their wives' dishonour." At length (A. D. 48) she carried her audacity so far as to go publicly through a ceremony of marriage with one of her lovers. This nerved even the weak Claudius to resolution, and she was put to death. The emperor then married his niece, Julia Agrippina, the daughter of Germanicus. "The woman who had now obtained the government of Claudius and the Roman empire was of a very different character from the abandoned Messalina. The latter had nothing noble about her; she was the mere bondslave of lust, and cruel and avaricious only for its gratification; but Agrippina was a woman of superior mind, though utterly devoid of principle. In her, lust was subservient to ambition; it was the desire of power, or the fear of death, and not wantonness, that made her submit to the incestuous embraces of her brutal brother Caius, and to be prostituted to the companions of his vices. It was ambition and parental love that made her now form an incestuous union with her uncle. . . . The great object of Agrippina was to exclude Britannicus [the son of Claudius by Messalina], and obtain the succession for her own son, Nero Domitius, now a boy of twelve years of age. She therefore caused Octavia [daughter of Claudius] to be betrothed to him, and she had the philosopher Seneca recalled from Corsica, whither he had been exiled by the arts of Messalina, and committed to him the education of her son, that he might be fitted for empire. In the following year (51) Claudius, yielding to her influence, adopted him." But, although Britannicus was thrust into the background and treated with neglect, his feeble father began after a time to show signs of affection for him, and Agrippina, weary of waiting and fearful of discomfiture, caused poison to be administered to the old emperor in his food (A. D. 54). "The death of Claudius was concealed till all the preparations for the succession of Nero should be made, and the fortunate hour marked by the astrologers be arrived. He then (Oct. 13) issued from the palace, . . . and, being cheered by the cohort which was on guard, he

mounted a litter and proceeded to the camp. He addressed the soldiers, promising them a donative, and was saluted emperor. The senate and provinces acquiesced without a murmur in the will of the guards. Claudius was in his 64th year when he was poisoned."—T. Keightley, *Hist. of the Roman Empire, pt.* 1, *ch.* 5.

ALSO IN: C. Merivale, *Hist. of the Romans under the Empire, ch.* 50 (*v.* 5).—Tacitus, *Annals, bk.* 11–12.

A. D. 54-64.—The atrocities of Nero.—The murder of his mother.—The burning of the city.—"Nero . . . was but a variety of the same species [as Caligula]. He also was an amateur, and an enthusiastic amateur, of murder. But as this taste, in the most ingenious hands, is limited and monotonous in its modes of manifestation, it would be tedious to run through the long Suetonian roll-call of his peccadilloes in this way. One only we shall cite, to illustrate the amorous delight with which he pursued any murder which happened to be seasoned highly to his taste by enormous atrocity, and by almost unconquerable difficulty. . . . For certain reasons of state, as Nero attempted to persuade himself, but in reality because no other crime had the same attractions of unnatural horror about it, he resolved to murder his mother Agrippina. This being settled, the next thing was to arrange the mode and the tools. Naturally enough, according to the custom then prevalent in Rome, he first attempted the thing by poison. The poison failed: for Agrippina, anticipating tricks of this kind, had armed her constitution against them, like Mithridates; and daily took potent antidotes and prophylactics. Or else (which is more probable) the emperor's agent in such purposes, fearing his sudden repentance and remorse, . . . had composed a poison of inferior strength. This had certainly occurred in the case of Britannicus, who had thrown off with ease the first dose administered to him by Nero," but who was killed by a second more powerful potion. "On Agrippina, however, no changes in the poison, whether of kind or strength, had any effect; so that, after various trials, this mode of murder was abandoned, and the emperor addressed himself to other plans. The first of these was some curious mechanical device, by which a false ceiling was to have been suspended by bolts above her bed; and in the middle of the night, the bolt being suddenly drawn, a vast weight would have descended with a ruinous destruction to all below. This scheme, however, taking air from the indiscretion of some amongst the accomplices, reached the ears of Agrippina. . . . Next, he conceived the idea of an artificial ship, which, at the touch of a few springs, might fall to pieces in deep water. Such a ship was prepared, and stationed at a suitable point. But the main difficulty remained, which was to persuade the old lady to go on board." By complicated stratagems this was brought about. "The emperor accompanied her to the place of embarkation, took a most tender leave of her, and saw her set sail. It was necessary that the vessel should get into deep water before the experiment could be made; and with the utmost agitation this pious son awaited news of the result. Suddenly a messenger rushed breathless into his presence, and horrified him by the joyful information that his august mother had met with an alarming accident; but, by the blessing of Heaven, had escaped safe and sound, and was now on her road to mingle congratulations with her affectionate son. The ship, it seems, had done its office; the mechanism had played admirably; but who can provide for everything? The old lady, it turned out, could swim like a duck; and the whole result had been to refresh her with a little sea-bathing. Here was worshipful intelligence. Could any man's temper be expected to stand such continued sieges? . . . Of a man like Nero it could not be expected that he should any longer dissemble his disgust, or put up with such repeated affronts. He rushed upon his simple congratulating friend, swore that he had come to murder him, and as nobody could have suborned him but Agrippina, he ordered her off to instant execution. And, unquestionably, if people will not be murdered quietly and in a civil way, they must expect that such forbearance is not to continue for ever; and obviously have themselves only to blame for any harshness or violence which they may have rendered necessary. It is singular, and shocking at the same time, to mention, that, for this atrocity, Nero did absolutely receive solemn congratulations from all orders of men. With such evidences of base servility in the public mind, and of the utter corruption which they had sustained in their elementary feelings, it is the less astonishing that he should have made other experiments upon the public patience, which seem expressly designed to try how much it would support. Whether he were really the author of the desolating fire which consumed Rome for six days and seven nights [A. D. 64], and drove the mass of the people into the tombs and sepulchres for shelter, is yet a matter of some doubt. But one great presumption against it, founded on its desperate imprudence, as attacking the people in their primary comforts, is considerably weakened by the enormous servility of the Romans in the case just stated: they who could volunteer congratulations to a son for butchering his mother (no matter on what pretended suspicions), might reasonably be supposed incapable of any resistance which required courage, even in a case of self-defence or of just revenge. . . . The great loss on this memorable occasion was in the heraldic and ancestral honours of the city. Historic Rome then went to wreck for ever. Then perished the 'domus priscorum ducum hostilibus ad-huc spoliis adornatæ'; the 'rostral' palace; the mansion of the Pompeys; the Blenheims and the Strathfieldsayes of the Scipios, the Marcelli, the Paulli, and the Cæsars; then perished the aged trophies from Carthage and from Gaul; and, in short, as the historian sums up the lamentable desolation, 'quidquid visendum atque memorabile ex antiquitate duraverat.' And this of itself might lead one to suspect the emperor's hand as the original agent; for by no one act was it possible so entirely and so suddenly to wean the people from their old republican recollections. . . . In any other sense, whether for health or for the conveniences of polished life, or for architectural magnificence, there never was a doubt that the Roman people gained infinitely by this conflagration. For, like London, it arose from its ashes with a splendour proportioned to its vast expansion of wealth and population; and marble took the place of wood. For the moment, however, this event must have been felt by the people as an overwhelming calamity. And it serves to illustrate the passive

endurance and timidity of the popular temper, and to what extent it might be provoked with impunity, that in this state of general irritation and effervescence Nero absolutely forbade them to meddle with the ruins of their own dwellings — taking that charge upon himself, with a view to the vast wealth which he anticipated from sifting the rubbish."—T. De Quincey, *The Cæsars, ch.* 3.

A. D. 64-68. — The first persecution of Christians.—The fitting end of Nero.—"Nero was so secure in his absolutism, he had hitherto found it so impossible to shock the feelings of the people or to exhaust the terrified adulation of the Senate, that he was usually indifferent to the pasquinades which were constantly holding up his name to execration and contempt. But now [after the burning of Rome] he felt that he had gone too far, and that his power would be seriously imperilled if he did not succeed in diverting the suspicions of the populace. He was perfectly aware that when the people in the streets cursed those who set fire to the city, they meant to curse him. If he did not take some immediate step he felt that he might perish, as Gaius [Caligula], had perished before him, by the dagger of the assassin. It is at this point of his career that Nero becomes a prominent figure in the history of the Church. It was this phase of cruelty which seemed to throw a blood-red light over his whole character, and led men to look on him as the very incarnation of the world-power in its most demoniac aspect — as worse than the Antiochus Epiphanes of Daniel's Apocalypse — as the Man of Sin whom (in language figurative, indeed, yet awfully true) the Lord should slay with the breath of His mouth and destroy with the brightness of His coming. For Nero endeavoured to fix the odious crime of having destroyed the capital of the world upon the most innocent and faithful of his subjects — upon the only subjects who offered heartfelt prayers on his behalf — the Roman Christians. . . . Why he should have thought of singling out the Christians, has always been a curious problem, for at this point St. Luke ends the Acts of the Apostles, perhaps purposely dropping the curtain, because it would have been perilous and useless to narrate the horrors in which the hitherto neutral or friendly Roman Government began to play so disgraceful a part. Neither Tacitus, nor Suetonius, nor the Apocalypse, help us to solve this particular problem. The Christians had filled no large space in the eye of the world. Until the days of Domitian we do not hear of a single noble or distinguished person who had joined their ranks. . . . The slaves and artisans, Jewish and Gentile, who formed the Christian community at Rome, had never in any way come into collision with the Roman Government. . . . That the Christians were entirely innocent of the crime charged against them was well known both at the time and afterwards. But how was it that Nero sought popularity and partly averted the deep rage which was rankling in many hearts against himself, by torturing men and women, on whose agonies he thought that the populace would gaze not only with a stolid indifference, but even with fierce satisfaction? Gibbon has conjectured that the Christians were confounded with the Jews, and that the detestation universally felt for the latter fell with double force upon the former. Christians suffered even more than the Jews because of the calumnies so assiduously circulated against them, and from what appeared to the ancients to be the revolting absurdity of their peculiar tenets. 'Nero,' says Tacitus, 'exposed to accusation, and tortured with the most exquisite penalties, a set of men detested for their enormities, whom the common people called Christians. Christus, the founder of this sect, was executed during the reign of Tiberius by the Procurator Pontius Pilate, and the deadly superstition, suppressed for a time, began to burst out once more, not only throughout Judaea, where the evil had its root, but even in the City, whither from every quarter all things horrible or shameful are drifted, and find their votaries.' The lordly disdain which prevented Tacitus from making any inquiry into the real views and character of the Christians, is shown by the fact that he catches up the most baseless allegations against them. . . . The masses, he says, called them 'Christians;' and while he almost apologises for staining his page with so vulgar an appellation, he merely mentions in passing, that, though innocent of the charge of being turbulent incendiaries, on which they were tortured to death, they were yet a set of guilty and infamous sectaries, to be classed with the lowest dregs of Roman criminals. But the haughty historian throws no light on one difficulty, namely, the circumstances which led to the Christians being thus singled out. The Jews were in no way involved in Nero's persecution. . . . The Jews were by far the deadliest enemies of the Christians; and two persons of Jewish proclivities were at this time in close proximity to the person of the Emperor. One was the pantomimist Aliturus, the other was Poppaea, the harlot Empress. . . . If, as seems certain, the Jews had it in their power during the reign of Nero more or less to shape the whisper of the throne, does not historical induction drive us to conclude with some confidence that the suggestion of the Christians as scapegoats and victims came from them? . . . Tacitus tells us that 'those who confessed were first seized, and then on their evidence a huge multitude were convicted, not so much on the charge of incendiarism as for their hatred to mankind.' Compressed and obscure as the sentence is, Tacitus clearly means to imply by the 'confession' to which he alludes the confession of Christianity; and though he is not sufficiently generous to acquit the Christians absolutely of all complicity in the great crime, he distinctly says that they were made the scapegoats of a general indignation. The phrase — 'a huge multitude' — is one of the few existing indications of the number of martyrs in the first persecution, and of the number of Christians in the Roman Church. When the historian says that they were convicted on the charge of 'hatred against mankind' he shows how completely he confounds them with the Jews, against whom he elsewhere brings the accusation of 'hostile feelings towards all except themselves.' Then the historian adds one casual but frightful sentence — a sentence which flings a dreadful light on the cruelty of Nero and the Roman mob. He adds,

'And various forms of mockery were added to enhance their dying agonies. Covered with the skins of wild beasts, they were doomed to die by the mangling of dogs, or by being nailed to crosses; or to be set on fire and burnt after twilight by way of nightly illumination. Nero offered his own gardens for this show, and gave a chariot race, mingling with the mob in the dress of a charioteer, or actually driving about among them. Hence, guilty as the victims were, and deserving of the worst punishments, a feeling of compassion towards them began to rise, as men felt that they were being immolated not for any advantage to the commonwealth, but to glut the savagery of a single man.' Imagine that awful scene, once witnessed by the silent obelisk in the square before St. Peter's at Rome! . . . Retribution did not linger, and the vengeance fell at once on the guilty Emperor and the guilty city. The air was full of prodigies. There were terrible storms; the plague wrought fearful ravages. Rumours spread from lip to lip. Men spoke of monstrous births; of deaths by lightning under strange circumstances; of a brazen statue of Nero melted by the flash; of places struck by the brand of heaven in fourteen regions of the city; of sudden darkenings of the sun. A hurricane devastated Campania; comets blazed in the heavens; earthquakes shook the ground. On all sides were the traces of deep uneasiness and superstitious terror. To all these portents, which were accepted as true by Christians as well as by Pagans, the Christians would give a specially terrible significance. . . . In spite of the shocking servility with which alike the Senate and the people had welcomed him back to the city with shouts of triumph, Nero felt that the air of Rome was heavy with curses against his name. He withdrew to Naples, and was at supper there on March 19, A. D. 68, the anniversary of his mother's murder, when he heard that the first note of revolt had been sounded by the brave C. Julius Vindex, Præfect of Farther Gaul. He was so far from being disturbed by the news, that he showed a secret joy at the thought that he could now order Gaul to be plundered. For eight days he took no notice of the matter. . . . At last, when he heard that Virginius Rufus had also rebelled in Germany, and Galba in Spain, he became aware of the desperate nature of his position. On receiving this intelligence he fainted away, and remained for some time unconscious. He continued, indeed, his grossness and frivolity, but the wildest and fiercest schemes chased each other through his melodramatic brain. . . . Meanwhile he found that the palace had been deserted by his guards, and that his attendants had robbed his chamber even of the golden box in which he had stored his poison. Rushing out, as though to drown himself in the Tiber, he changed his mind, and begged for some quiet hiding-place in which to collect his thoughts. The freedman Phaon offered him a lowly villa about four miles from the city. Barefooted, and with a faded coat thrown over his tunic, he hid his head and face in a kerchief, and rode away with only four attendants. . . . There is no need to dwell on the miserable spectacle of his end, perhaps the meanest and most pusillanimous which has ever been recorded. The poor wretch who, without a pang, had caused so many brave Romans and so many innocent Christians to be murdered, could not summon up resolution to die. . . . Meanwhile a courier arrived for Phaon. Nero snatched his despatches out of his hand, and read that the Senate had decided that he should be punished in the ancestral fashion as a public enemy. Asking what the ancestral fashion was, he was informed that he would be stripped naked and scourged to death with rods, with his head thrust into a fork. Horrified at this, he seized two daggers, and after theatrically trying their edges, sheathed them again, with the excuse that the fatal moment had not yet arrived! Then he bade Sporus begin to sing his funeral song, and begged some one to show him how to die. . . . The sound of horses' hoofs then broke on his ears, and, venting one more Greek quotation, he held the dagger to his throat. It was driven home by Epaphroditus, one of his literary slaves. . . . So died the last of the Cæsars! And as Robespierre was lamented by his landlady, so even Nero was tenderly buried by two nurses who had known him in the exquisite beauty of his engaging childhood, and by Acte, who had inspired his youth with a genuine love."—F. W. Farrar, *The Early Days of Christianity, bk.* 1, *ch.* 4.

A. D. 68-96.—End of the Julian line.—The "Twelve Cæsars" and their successors.—A logical classification.—"In the sixth Caesar [Nero] terminated the Julian line. The three next princes in the succession were personally uninteresting; and, with a slight reserve in favor of Otho, . . . were even brutal in the tenor of their lives and monstrous; besides that the extreme brevity of their several reigns (all three, taken conjunctly, having held the supreme power for no more than twelve months and twenty days) dismisses them from all effectual station or right to a separate notice in the line of Caesars. Coming to the tenth in the succession, Vespasian, and his two sons, Titus and Domitian, who make up the list of the twelve Caesars, as they are usually called, we find matter for deeper political meditation and subjects of curious research. But these emperors would be more properly classed with the five who succeed them — Nerva, Trajan, Hadrian, and the two Antonines; after whom comes the young ruffian, Commodus, another Caligula or Nero, from whose short and infamous reign Gibbon takes up his tale of the decline of the empire. And this classification would probably have prevailed, had not the very curious work of Suetonius, whose own life and period of observation determined the series and cycle of his subjects, led to a different distribution. But as it is evident that, in the succession of the first twelve Caesars, the six latter have no connection whatever by descent, collaterally, or otherwise, with the six first, it would be a more logical distribution to combine them according to the fortunes of the state itself, and the succession of its prosperity through the several stages of splendour, declension, revival, and final decay. Under this arrangement, the first seventeen would belong to the first stage; Commodus would open the second; Aurelian down to Constantine or Julian would fill the third; and Jovian to Augustulus would bring up the melancholy rear."—T. De Quincey, *The Cæsars, ch.* 3.

A. D. 69.—Revolt of the Batavians under Civilis. See Batavians: A. D. 69.

A. D. 69.—Galba, Otho, Vitellius.—Vespasian.—The Vitellian conflict.—On the overthrow and death of Nero, June, A. D. 68, the veteran soldier Galba, proclaimed imperator by his legions in Spain, and accepted by the Roman senate, mounted the imperial throne. His brief reign was terminated in January of the following year by a sudden revolt of the prætorian guard, instigated by Salvius Otho, one of the profligate favorites of Nero, who had betrayed his former patron and was disappointed in the results. Galba was slain and Otho made emperor, to reign, in his turn, for a brief term of three months. Revolt against Otho was quick to show itself in the provinces, east and west. The legions on the Rhine set up a rival emperor, in the person of their commander, Aulus Vitellius, whose single talent was in gluttony, and who had earned by his vices the favor of four beastly rulers, from Tiberius to Nero, in succession. Gaul having declared in his favor, Vitellius sent forward two armies by different routes into Italy. Otho met them, with such forces as he could gather, at Bedriacum, between Verona and Cremona, and suffered there a defeat which he accepted as decisive. He slew himself, and Vitellius made his way to Rome without further opposition, permitting his soldiers to plunder the country as they advanced. But the armies of the east were not disposed to accept an emperor by the election of the armies of the west, and they, too, put forward a candidate for the purple. Their choice was better guided, for it fell on the sturdy soldier, Titus Flavius Vespasianus, then commanding in Judea. The advance corps of the forces supporting Vespasian (called "Flavians," or "Flavianites") entered Cisalpine Gaul from Illyricum in the autumn of 69, and encountered the Vitellians at Bedriacum, on the same field where the latter had defeated the Othonians a few weeks before. The Vitellians were defeated. Cremona, a flourishing Roman colony, which capitulated to the conquerors, was perfidiously given up to a merciless soldiery and totally destroyed,—one temple, alone, escaping. Vitellius, in despair, showed an eagerness to resign the throne, and negotiated his resignation with a brother of Vespasian, residing in Rome. But the mob of fugitive Vitellian soldiers which had collected in the capital interposed violently to prevent this abdication. Flavius Sabinus—the brother of Vespasian—took refuge, with his supporters, in the Capitolium, or temple of Jupiter, on the Capitoline Hill. But the sacred precincts were stormed by the Vitellian mob, the Capitol—the august sanctuary of Rome—was burned and Sabinus was slain. The army which had won the victory for Vespasian at Bedriacum, commanded by Antonius Primus, soon appeared at the gates of the city, to avenge this outrage. The unorganized force which attempted opposition was driven before it in worse disorder. Victors and vanquished poured into Rome together, slaughtering and being slaughtered in the streets. The rabble of the city joined in the bloody hunt, and in the plundering that went with it. "Rome had seen the conflicts of armed men in the streets under Sulla and Cinna, but never before such a hideous mixture of levity and ferocity." Vitellius was among the slain, his brief reign ending on the 21st of December, A. D. 69. Vespasian was still in the east, and did not enter Rome until the summer of the following year—Tacitus, *History, bk.* 1–3.

A. D. 70.—Siege and destruction of Jerusalem by Titus. See Jews: A. D. 66–70.

A. D. 70-96.—The Flavian family.—Vespasian, Titus, and Domitian.—"Unfortunately Tacitus fails us . . . at this point, and this time completely. Nothing has been saved of his 'Histories' from the middle of the year 70, and we find ourselves reduced to the mere biographies of Suetonius, to the fragments of Dion, to the abridgments of Aurelius Victor and Eutropius. The majestic stream from which we have drawn and which flowed with brimming banks is now only a meagre thread of water. Of all the emperors Vespasian is the one who loses the most by this, for he was, says S. Augustine, a very good prince and very worthy of being beloved. He came into power at an age when one is no longer given to change, at 60 years. He had never been fond of gaming or debauchery, and he maintained his health by a frugal diet, even passing one day every month without eating. His life was simple and laborious. . . . He had no higher aim than to establish order in the state and in the finances; but he accomplished this, and if his principate, like all the others, made no preparations for the future, it did much for the present. It was a restorative reign, the effects of which were felt for several generations; this service is as valuable as the most brilliant victories. Following the example of the second Julius, the first of the Flavians resolved to seek in the senate the support of his government. This assembly, debased by so many years of tyranny, needed as much as it did a century before to be submitted to a severe revision. . . . Vespasian acted with resolution. Invested with the title of censor in 73, with his son Titus for colleague, he struck from the rolls of the two orders the members deemed unworthy, replaced them by the most distinguished persons of the Empire, and, by virtue of his powers as sovereign pontiff, raised several of them to the patriciate. A thousand Italian or provincial families came to be added to the 200 aristocratic families which had survived, and constituted with these the higher Roman society, from which the candidates for all civil, military, and religious functions were taken. . . . This aristocracy, borrowed by Vespasian from the provincial cities, where it had been trained to public affairs, where it had acquired a taste for economy, simplicity, and order, brought into Rome pure morals. . . . It will furnish the great emperors of the second century, the skilled lieutenants who will second them, and senators who will hereafter conspire only at long intervals. . . . To the senate, thus renewed and become the true representation of the Empire, Vespasian submitted all important matters. . . . Suetonius renders him this testimony, that it would be difficult to cite a single individual unjustly punished in his reign, at least unless it were in his absence or without his knowledge. He loved to dispense justice himself in the Forum. . . . The legions, who had made and unmade five emperors in two years, were no longer attentive to the ancient discipline. He brought them back to it. . . . The morals of the times were bad; he did more than the laws to reform them—he set

good examples. . . . Augustus had raised two altars to Peace; Vespasian built a temple to her, in which he deposited the most precious spoils of Jerusalem; and . . . the old general closed, for the sixth time, the doors of the temple of Janus. He built a forum surrounded by colonnades, in addition to those already existing, and commenced, in the midst of the city, the vast amphitheatre, a mountain of stone, of which three-fourths remain standing to-day. . . . A colossal statue raised near by for Nero, but which Vespasian consecrated to the Sun, gave it its name, the Coliseum. . . . We have no knowledge of the wars of Vespasian, except that three times in the year 71 he assumed the title of 'imperator,' and three times again the following year. But when we see him making Cappadocia an imperial proconsular province with numerous garrisons to check the incursions which desolated it; and, towards the Danube, extending his influence over the barbarians even beyond the Borysthenes; when we read in Tacitus that Velleda, the prophetess of the Bructeri, was at that time brought a captive to Rome; that Cerialis vanquished the Brigantes and Frontinus the Silures, we must believe that Vespasian made a vigorous effort along the whole line of his outposts to impress upon foreign nations respect for the Roman name. . . . Here is the secret of that severe economy which appeared to the prodigal and light-minded a shameful stinginess. . . . Vespasian . . . was 69 years old, and was at his little house in the territory of Reate when he felt the approach of death. 'I feel that I am becoming a god,' he said to those around him, laughing in advance at his apotheosis. . . . 'An emperor,' he said, 'ought to die standing.' He attempted to rise and expired in this effort, on the 23rd of June, 79. The first plebeian emperor has had no historian, but a few words of his biographer suffice for his renown: 'rem publicam stabilivit et ornavit,' 'by him the State was strengthened and glorified.'. . . Vespasian being dead, Titus assumed the title of Augustus. . . . His father had prepared him for this by taking him as associate in the Empire; he had given to him the title of Cæsar, the censorship, the tribunitian power, the prefecture of the prætorium, and seven consulates. Coming into power at the age of maturity, rich in experience and satiated with pleasures by his very excesses, he had henceforth but one passion, that of the public welfare. At the outset he dismissed his boon companions; in his father's lifetime he had already sacrificed to Roman prejudices his tender sentiments for the Jewish queen Berenice, whom he had sent back to the East. In taking possession of the supreme pontificate he declared that he would keep his hands pure from blood, and he kept his word: no one under his reign perished by his orders." It was during the short reign of Titus that Herculaneum and Pompeii were overwhelmed by an eruption of Vesuvius (August 23, A. D. 79), while other calamities afflicted Italy. "Pestilence carried off thousands of people even in Rome [see PLAGUE: A. D. 78–266]; and at last a conflagration, which raged three days, consumed once more the Capitol, the library of Augustus, and Pompey's theatre. To Campania Titus sent men of consular rank with large sums of money, and he devoted to the relief of the survivors the property that had fallen to the treasury through the death of those who had perished in the disaster without leaving heirs. At Rome he took upon himself the work of repairing everything, and to provide the requisite funds he sold the furniture of the imperial palace. . . . This reign lasted only 26 months, from the 23rd of June, A. D. 79, to the 13th of September, A. D. 81. As Titus was about to visit his paternal estate in the Sabine territory he was seized by a violent fever, which soon left no hope of his recovery. There is a report that he partly opened the curtains of his litter and gazed at the sky with eyes full of tears and reproaches. 'Why,' he exclaimed, 'must I die so soon? In all my life I have, however, but one thing to repent.' What was this? No one knows." Titus was succeeded by his brother Domitian, then thirty years old. "The youth of Domitian had been worthy of the times of Nero, and he had wearied his father and brother by his intrigues. Nevertheless he was sober, to the extent of taking but one meal a day, and he had a taste for military exercises, for study and poetry, especially since the elevation of his family. Vespasian had granted him honours, but no power, and, at the death of Titus, he had only the titles of Cæsar and Prince of the Youth. In his hurry to seize at last that Empire so long coveted, he abandoned his dying brother to rush to Rome, to the camp of the prætorians. . . . On the day of their coronation there are few bad princes. Almost all begin well, but, in despotic monarchies, the majority end badly, particularly when the reigns are of long duration. . . . Domitian reigned 15 years, one year longer than Nero, and his reign reproduced the same story: at first a wise government, then every excess. Happily the excesses did not come till late. . . . Fully as vain as the son of Agrippina, Domitian heaped every title upon his own head and decreed deification to himself. His edicts stated: 'Our lord and our god ordains. . . .' The new god did not scorn vulgar honours. . . . He was consul 17 times, and 22 times did he have himself proclaimed 'imperator' for victories that had not always been gained. He recalled Nero too by his fondness for shows and for building. . . . There were several wars under Domitian, all defensive excepting the expedition against the Catti [see CHATTI], which was only a great civil measure to drive away the hostile marauders from the frontier. If Pliny the Younger and Tacitus are to be believed, these wars were like those which Caligula waged: Domitian's victories were defeats; his captives, purchased slaves; his triumphs, audacious falsehoods. Suetonius is not so severe. . . . Domitian's cruelty appeared especially, and perhaps we should say only, after the revolt of a person of high rank, Antonius Saturninus, who pretended to be a descendant of the triumvir. . . . He was in command of two legions in Germany whom he incited to revolt, and he called the Germans to his aid. An unexpected thaw stopped this tribe on the right bank of the Rhine, while Appius Norbanus Maximus, governor of Aquitania, crushed Antonius on the opposite shore. . . . This revolt must belong to the year 93, which, as Pliny says, is that in which Domitian's great cruelties began. . . . Domitian lived in a state of constant alarm; every sound terrified him, every man seemed to him an assassin, every occurrence was an omen of evil." He endured this life of gloomy terror for three years, when his dread forebodings were realized, and he was

murdered by his own attendants, September 18, A. D. 96.—V. Duruy, *Hist. of Rome, ch.* 77–78 (*v.* 4).

A. D. 96-138.—Brief reign of Nerva.—Adoption and succession of Trajan.—His persecution of Christians.—His conquests beyond the Danube and in the east.—Hadrian's relinquishment of them.—"On the same day on which Domitian was assassinated, M. Cocceius Nerva was proclaimed Emperor by the Prætorians, and confirmed by the people. He owed his elevation principally to Petronius, Prefect of the Prætorians, and Parthenius, chamberlain to the late Emperor. He was of Cretan origin, and a native of Narni in Umbria, and consequently the first Emperor who was not of Italian descent. . . . He was prudent, upright, generous, and of a gentle temper; but a feeble frame and weak constitution, added to the burden of 64 years, rendered him too reserved, timid, and irresolute for the arduous duties of a sovereign prince. . . . The tolerant and reforming administration of the new Emperor soon became popular. Rome breathed again after the bloody tyranny under which she had been trampled to the dust. The perjured 'delator' was threatened with the severest penalties. The treacherous slave who had denounced his master was put to death. Exiles returned to their native cities, and again enjoyed their confiscated possessions. . . . Determined to administer the government for the benefit of the Roman people, he (Nerva) turned his attention to the question of finance, and to the burdensome taxation which was the fruit of the extravagance of his predecessors. . . . He diminished the enormous sums which were lavished upon shows and spectacles, and reduced, as far as was possible, his personal and household expenses. . . . It was not probable that an Emperor of so weak and yielding a character, notwithstanding his good qualities as a prince and a statesman, would be acceptable to a licentious and dominant soldiery. But a few months had elapsed when a conspiracy was organized against him by Calpurnius Crassus. It was, however, discovered; and the ringleader, having confessed his crime, experienced the Emperor's usual generosity, being only punished by banishment to Tarentum. . . . Meanwhile the Prætorians, led on by Ælianus Carperius, who had been their Prefect under Domitian, besieged Nerva in his palace, with cries of vengeance upon the assassins of his predecessor, murdered Petronius and Parthenius, and compelled the timid Emperor publicly to express his approbation of the deed, and to testify his obligation to them for wreaking vengeance on the guilty. . . . Nerva was in declining years, and, taught by circumstances that he was unequal to curb or cope with the insolence of the soldiery, adopted Trajan as his son and successor [A. D. 97]. Soon after, he conferred upon him in the Senate the rank of Cæsar, and the name of Germanicus, and added the tribuneship and the title of Emperor. This act calmed the tumult, and was welcomed with the unanimous consent of the Senate and the people. . . . Soon after the adoption of Trajan he died of a fit of ague which brought on fever, at the gardens of Sallust, after a reign of sixteen months, in the sixty-sixth year of his age [A. D. 98]. . . . The choice which Nerva had made proved a fortunate one. M. Ulpius Nerva Trajanus was a Spaniard, a native of Italica, near Seville. . . . He was of an ancient and distinguished family, and his father had filled the office of consul. Although a foreigner, he was a Roman in habits, sympathies, and language; for the south of Spain had become so completely Roman that the inhabitants generally spoke Latin. When a young man he had distinguished himself in a war against the Parthians. . . . At the time of his adoption by Nerva he was in command of a powerful army in Lower Germany, his head-quarters being at Cologne. He was in the prime of life, possessed of a robust constitution, a commanding figure, and a majestic countenance. He was a perfect soldier, by taste and education, and was endowed with all the qualities of a general. . . . He was a strict disciplinarian, but he knew all his veterans, spoke to them by their names, and never let a gallant action pass unrewarded. . . . The news of Nerva's death was conveyed to him at Cologne by his cousin Hadrian, where he immediately received the imperial power. During the first year of his reign he remained with the army in Germany, engaged in establishing the discipline of the troops and in inspiring them with a love of their duty. . . . The ensuing year he made his entry into Rome on foot, together with his empress, Pompeia Plotina, whose amiability and estimable character contributed much to the popularity of her husband. Her conduct, together with that of his sister, Marciana, exercised a most beneficial influence upon Roman society. They were the first ladies of the imperial court who by their example checked the shameless licentiousness which had long prevailed amongst women of the higher classes. . . . The tastes and habits of his former life led to a change in the peaceful policy which had so long prevailed. The first war in which he was engaged was with the Dacians, who inhabited the country beyond the Danube [see DACIA: A. D. 102–106]. . . . A few years of peace ensued, which Trajan endured with patient reluctance; and many great public works undertaken during the interval show his genius for civil as well as for military administration. . . . But his presence was soon required in the East, and he joyfully hailed the opportunity thus offered him for gaining fresh laurels. The real object of this expedition was ambition — the pretext, that Exedarius, or Exodares, king of Armenia, had received the crown from the king of Parthia, instead of from the Emperor of Rome, as Tiridates had from the hands of Nero. For this insult he demanded satisfaction. Chosroes, the king of Parthia, at first treated his message with contempt; but afterwards, seeing that war was imminent, he sent ambassadors with presents to meet Trajan at Athens, and to announce to him the deposition of Exedarius, and to entreat him to confer the crown of Armenia upon Parthamasiris, or Parthamaspes. Trajan received the ambassadors coldly, told them that he was on his march to Syria, and would there act as he thought fit. Accordingly he crossed into Asia, and marched by way of Cilicia, Syria, and Seleucia to Antioch. The condemnation of the

martyr bishop St. Ignatius marked his stay in that city [A. D. 115]. It seems strange that the persecution of the Christians should have met with countenance and support from an emperor like Trajan; but the fact is, the Roman mind could not separate the Christian from the Jew. The religious distinction was beneath their notice; they contemplated the former merely as a sect of the latter. The Roman party in Asia were persuaded that the Jews were meditating and preparing for insurrection; and the rebellions of this and the ensuing reign proved that their apprehensions were not unreasonable. Hence, at Antioch, the imperial influence was on the side of persecution; and hence when Pliny, the gentle governor of Pontus and Bithynia, wrote to Trajan for instructions respecting the Christians in his province, his 'rescript' spoke of Christianity as a dangerous superstition, and enjoined the punishment of its professors if discovered, although he would not have them sought for. Having received the voluntary submission of Abgarus, prince of Osrhoene in Mesopotamia, he marched against Armenia. Parthamasiris, who had assumed the royal state, laid his diadem at his feet, in the hopes that he would return it to him as Nero had to Tiridates. Trajan claimed his kingdom as a province of the Roman people, and the unfortunate monarch lost his life in a useless struggle for his crown. This was the commencement of his triumphs: he received the voluntary submission of the kings of Iberia, Sarmatia, the Bosphorus, Colchis, Albania; and he assigned kings to most of the barbarous tribes that inhabited the coast of the Euxine. Still he proceeded on his career of conquest. He chastised the king of Adiabene, who had behaved to him with treachery, and took possession of his dominions, subjugated the rest of Mesopotamia, constructed a bridge of boats over the Tigris, and commenced a canal to unite the two great rivers of Assyria. His course of conquest was resistless; he captured Seleucia, earned the title of Parthicus by taking Ctesiphon, the capital of Parthia [A. D. 116], imposed a tribute on Mesopotamia, and reduced Assyria to the condition of a Roman province. He returned to winter at Antioch, which was in the same winter almost destroyed by an earthquake. Trajan escaped through a window, not without personal injury. . . . The river Tigris bore the victorious Emperor from the scene of his conquest down to the Persian Gulf; he subjugated Arabia Felix, and, like a second Alexander, was meditating and even making preparations for an invasion of India by sea; but his ambitious designs were frustrated by troubles nearer at hand. Some of the conquered nations revolted, and his garrisons were either expelled or put to the sword. He sent his generals to crush the rebels; one of them, Maximus, was conquered and slain; the other, Lusius Quietus, gained considerable advantages and was made governor of Palestine, which had begun to be in a state of insurrection [see JEWS: A. D. 116]. He himself marched to punish the revolted Hagareni (Saracens), whose city was called Atra, in Mesopotamia. . . . Trajan laid siege to it, but was obliged to raise the siege with great loss. Soon after this he was seized with illness. . . . Leaving his army therefore to the care of Hadrian, whom he had made governor of Syria, he embarked for Rome at the earnest solicitation of the Senate. On arriving at Selinus in Cilicia (afterwards named Trajanopolis), he was seized with diarrhœa, and expired in the twentieth year of his reign [August, A. D. 117]. . . . He died childless, and it is said had not intended to nominate a successor, following in this the example of Alexander. Hadrian owed his adoption to Plotina. . . . Dio positively asserts that she concealed her husband's death for some days, and that the letter informing the Senate of his last intentions was signed by her, and not by Trajan. Hadrian received the despatches declaring his adoption on the 9th of August, and those announcing Trajan's death two days afterwards. . . . As soon as he was proclaimed Emperor at Antioch, he sent an apologetic despatch to the Senate requesting their assent to his election; the army, he said, had chosen him without waiting for their sanction, lest the Republic should remain without a prince. The confirmation which he asked for was immediately granted. . . . The state of Roman affairs was at this moment a very critical one, and did not permit the new Emperor to leave the East. Emboldened by the news of Trajan's illness, the conquered Parthians had revolted and achieved some great successes; Sarmatia on the north, Mauritania, Egypt, and Syria on the south, were already in a state of insurrection. The far-sighted prudence of Hadrian led him to fear that the empire was not unlikely to fall to pieces by its own weight, and that the Euphrates was its best boundary. It was doubtless a great sacrifice to surrender all the rich and populous provinces beyond that river which had been gained by the arms of his predecessor. It was no coward fear or mean envy of Trajan which prompted Hadrian, but he wisely felt that it was worth any price to purchase peace and security. Accordingly he withdrew the Roman armies from Armenia, Assyria and Mesopotamia, constituted the former of these an independent kingdom, surrendered the two latter to the Parthians, and restored their deposed king Chosroes to his throne. . . . After taking these measures for establishing peace in the East, he left Catilius Severus governor of Syria, and returned by way of Illyria to Rome, where he arrived the following year. . . . A restless curiosity, which was one of the principal features in his character, would not permit him to remain inactive at Rome; he determined to make a personal survey of every province throughout his vast dominions, and for this reason he is so frequently represented on medals as the Roman Hercules. He commenced his travels with Gaul, thence he proceeded to Germany, where he established order and discipline amongst the Roman forces, and then crossed over to Britain. . . . It would be uninteresting to give a mere catalogue of the countries which he visited during the ensuing ten years of his reign. In the fifteenth winter of it he arrived in Egypt, and rebuilt the tomb of Pompey the Great at Pelusium. Thence he proceeded to Alexandria which was at that period the university of the world. . . . He had scarcely passed through Syria when the Jews revolted, and continued in arms for three years [see JEWS: A. D. 130–134]. . . . Hadrian spent the winter at Athens, where he gratified his architectural taste by completing the temple of Jupiter Olympius. . . . Conscious . . . of the infirmities of disease and of advancing years, he adopted L. Aurelius Verus, a man

of pleasure and of weak and delicate health, totally unfit for his new position. . . . Age and disease had now so altered his [Hadrian's] character that he became luxurious, self-indulgent, suspicious, and even cruel. Verus did not live two years, and the Emperor then adopted Titus Antoninus, on condition that he should in his turn adopt M. Annius Verus, afterwards called M. Aurelius, and the son of Aurelius Verus." Hadrian's malady "now became insupportably painful, his temper savage even to madness, and many lives of senators and others were sacrificed to his fury. His sufferings were so excruciating that he was always begging his attendants to put him to death. At last he went to Baiæ, where, setting at defiance the prescriptions of his physicians, he ate and drank what he pleased. Death, therefore, soon put a period to his sufferings, in the sixty-third year of his age and the twenty-first of his restless reign [A. D. 138]. Antoninus was present at his death, his corpse was burnt at Puteoli (Pozzuoli), and his ashes deposited in the mausoleum (moles Hadriani) which he had himself built, and which is now the Castle of St. Angelo."—R. W. Browne, *Hist. of Rome from A. D. 96, ch.* 1–2.

Also in: C. Merivale, *Hist. of the Romans under the Empire, ch.* 63–66 (*v.* 7).—T. Arnold and others, *Hist. of the Roman Empire* (*Encyclop. Metropolitana*), *ch.* 4–6.

A. D. 138-180.—The Antonines.—Antoninus Pius.— Marcus Aurelius.—"On the death of Hadrian in A. D. 138, Antoninus Pius succeeded to the throne, and, in accordance with the late Emperor's conditions, adopted Marcus Aurelius and Lucius Commodus. Marcus had been betrothed at the age of 15 to the sister of Lucius Commodus, but the new Emperor broke off the engagement, and betrothed him instead to his daughter Faustina. The marriage, however, was not celebrated till seven years afterwards, A. D. 146. The long reign of Antoninus Pius is one of those happy periods that have no history. An almost unbroken peace reigned at home and abroad. Taxes were lightened, calamities relieved, informers discouraged; confiscations were rare, plots and executions were almost unknown. Throughout the whole extent of his vast domain the people loved and valued their Emperor, and the Emperor's one aim was to further the happiness of his people. He, too, like Aurelius, had learnt that what was good for the bee was good for the hive. . . . He disliked war, did not value the military title of Imperator, and never deigned to accept a triumph. With this wise and eminent prince, who was as amiable in his private relations as he was admirable in the discharge of his public duties, Marcus Aurelius spent the next 23 years of his life. . . . There was not a shade of jealousy between them; each was the friend and adviser of the other, and, so far from regarding his destined heir with suspicion, the Emperor gave him the designation 'Cæsar,' and heaped upon him all the honours of the Roman commonwealth. It was in vain that the whisper of malignant tongues attempted to shake this mutual confidence. . . . In the year 161, when Marcus was now 40 years old, Antoninus Pius, who had reached the age of 75, caught a fever at Lorium. Feeling that his end was near, he summoned his friends and the chief men of Rome to his bedside, and there (without saying a word about his other adopted son, who is generally known by the name of Lucius Verus) solemnly recommended Marcus to them as his successor; and then, giving to the captain of the guard the watchword of 'Equanimity,' as though his earthly task was over he ordered to be transferred to the bedroom of Marcus the little golden statue of Fortune, which was kept in the private chamber of the Emperors as an omen of public prosperity. The very first act of the new Emperor was one of splendid generosity, namely, the admission of his adoptive brother Lucius Verus into the fullest participation of imperial honours. . . . The admission of Lucius Verus to a share of the Empire was due to the innate modesty of Marcus. As he was a devoted student, and cared less for manly exercises, in which Verus excelled, he thought that his adoptive brother would be a better and more useful general than himself, and that he could best serve the State by retaining the civil administration, and entrusting to his brother the management of war. Verus, however, as soon as he got away from the immediate influence and ennobling society of Marcus, broke loose from all decency, and showed himself to be a weak and worthless personage. . . . Two things only can be said in his favour; the one, that, though depraved, he was wholly free from cruelty; and the other, that he had the good sense to submit himself entirely to his brother. . . . Marcus had a large family by Faustina, and in the first year of his reign his wife bore twins, of whom the one who survived became the wicked and detested Emperor Commodus. As though the birth of such a child were in itself an omen of ruin, a storm of calamity began at once to burst over the long tranquil State. An inundation of the Tiber . . . caused a distress which ended in wide-spread famine. Men's minds were terrified by earthquakes, by the burning of cities, and by plagues of noxious insects. To these miseries, which the Emperors did their best to alleviate, was added the horror of wars and rumours of wars. The Parthians, under their king Vologeses, defeated and all but destroyed a Roman army, and devastated with impunity the Roman province of Syria. The wild tribes of the Catti burst over Germany with fire and sword; and the news from Britain was full of insurrection and tumult. Such were the elements of trouble and discord which overshadowed the reign of Marcus Aurelius from its very beginning down to its weary close. As the Parthian war was the most important of the three, Verus was sent to quell it, and but for the ability of his generals — the greatest of whom was Avidius Cassius — would have ruined irretrievably the fortunes of the Empire. These generals, however, vindicated the majesty of the Roman name [A. D. 165–166 — see Parthia], and Verus returned in triumph, bringing back with him from the East the seeds of a terrible pestilence which devastated the whole Empire [see Plague: A. D. 78–266] and by which, on the outbreak of fresh wars, Verus himself was carried off at Aquileia. . . . Marcus was now the undisputed lord of the Roman world. . . . But this imperial elevation kindled no glow of pride or self-satisfaction in his meek and chastened nature. He regarded himself as being in fact the servant of all. . . . He was one of those who held that nothing should be done hastily, and that few crimes were worse than the waste of time. It is to such views and

such habits that we owe the composition of his works. His 'Meditations' were written amid the painful self-denial and distracting anxieties of his wars with the Quadi and the Marcomanni [A. D. 168–180,—see SARMATIAN AND MARCOMANNIAN WARS OF MARCUS AURELIUS], and he was the author of other works which unhappily have perished. Perhaps of all the lost treasures of antiquity there are few which we should feel a greater wish to recover than the lost autobiography of this wisest of Emperors and holiest of Pagan men. . . . The Court was to Marcus a burden; he tells us himself that Philosophy was his mother, Empire only his stepmother; it was only his repose in the one that rendered even tolerable to him the burdens of the other. . . . The most celebrated event of the war [with the Quadi] took place in a great victory . . . which he won in A. D. 174, and which was attributed by the Christians to what is known as the 'Miracle of the Thundering Legion' [see THUNDERING LEGION]. . . . To the gentle heart of Marcus all war, even when accompanied with victories, was eminently distasteful; and in such painful and ungenial occupations no small part of his life was passed. . . . It was his unhappy destiny not to have trodden out the embers of this [the Sarmatian] war before he was burdened with another far more painful and formidable. This was the revolt of Avidius Cassius, a general of the old blunt Roman type, whom, in spite of some ominous warnings, Marcus both loved and trusted. The ingratitude displayed by such a man caused Marcus the deepest anguish; but he was saved from all dangerous consequences by the wide-spread affection which he had inspired by his virtuous reign. The very soldiers of the rebellious general fell away from him, and, after he had been a nominal Emperor for only three months and six days, he was assassinated by some of his own officers. . . . Marcus travelled through the provinces which had favoured the cause of Avidius Cassius, and treated them all with the most complete and indulgent forbearance. . . . During this journey of pacification, he lost his wife Faustina, who died suddenly in one of the valleys of Mount Taurus. History . . . has assigned to Faustina a character of the darkest infamy, and it has even been made a charge against Aurelius that he overlooked or condoned her offences. . . . No doubt Faustina was unworthy of her husband; but surely it is the glory and not the shame of a noble nature to be averse from jealousy and suspicion. . . . 'Marcus Aurelius cruelly persecuted the Christians.' Let us briefly consider this charge. . . . Marcus in his 'Meditations' alludes to the Christians once only, and then it is to make a passing complaint of the indifference to death, which appeared to him, as it appeared to Epictetus, to arise, not from any noble principles, but from mere obstinacy and perversity. That he shared the profound dislike with which Christians were regarded is very probable. That he was a cold-blooded and virulent persecutor is utterly unlike his whole character. . . . The true state of the case seems to have been this: The deep calamities in which during the whole reign of Marcus the Empire was involved, caused wide-spread distress, and roused into peculiar fury the feelings of the provincials against men whose atheism (for such they considered it to be) had kindled the anger of the gods. . . . Marcus, when appealed to, simply let the existing law take its course. . . . The martyrdoms took place in Gaul and Asia Minor, not in Rome. . . . The persecution of the churches in Lyons and Vienne happened in A. D. 177. Shortly after this period fresh wars recalled the Emperor to the North. . . . He was worn out with the toils, trials and travels of his long and weary life. He sunk under mental anxieties and bodily fatigues, and after a brief illness died in Pannonia, either at Vienna or at Sirmium, on March 17, A. D. 180, in the 59th year of his age and the 20th of his reign."—F. W. Farrar, *Seekers after God: Marcus Aurelius.*—"One moment, thanks to him, the world was governed by the best and greatest man of his age. Frightful decadences followed; but the little casket which contained the 'Thoughts' on the banks of the Granicus was saved. From it came forth that incomparable book in which Epictetus was surpassed, that Evangel of those who believe not in the supernatural, which has not been comprehended until our day. Veritable, eternal Evangel, the book of 'Thoughts,' which will never grow old, because it asserts no dogma."—E. Renan, *English Conferences: Marcus Aurelius.*

ALSO IN: W. W. Capes, *The Age of the Antonines.*—C. Merivale, *Hist. of the Romans under the Empire, ch.* 67–68 (*v.* 7).—P. B. Watson, *Marcus Aurelius Antoninus.*—G. Long, *Thoughts of the Emperor M. Aurelius Antoninus, introd.*

A. D. 180-192.—The reign of Commodus.—"If a man were called to fix the period in the history of the world during which the condition of the human race was most happy and prosperous, he would, without hesitation, name that which elapsed from the death of Domitian to the accession of Commodus. The vast extent of the Roman empire was governed by absolute power, under the guidance of virtue and wisdom. The armies were restrained by the firm but gentle hand of four successive emperors whose characters and authority commanded involuntary respect. . . . It has been objected to Marcus, that he sacrificed the happiness of millions to a fond partiality for a worthless boy; and that he chose a successor in his own family rather than in the republic. Nothing, however, was neglected by the anxious father, and by the men of virtue and learning whom he summoned to his assistance, to expand the narrow mind of young Commodus, to correct his growing vices, and to render him worthy of the throne for which he was designed. . . . The beloved son of Marcus succeeded to his father, amidst the acclamations of the senate and armies; and when he ascended the throne, the happy youth saw round him neither competitor to remove, nor enemies to punish. In this calm elevated station it was surely natural that he should prefer the love of mankind to their detestation, the mild glories of his five predecessors to the ignominious fate of Nero and Domitian. Yet Commodus was not, as he has been represented, a tiger born with an insatiate thirst of human blood, and capable, from his infancy, of the most inhuman actions. Nature had formed him of a weak, rather than a wicked disposition. His simplicity and timidity rendered him the slave of his attendants, who gradually corrupted his mind. His cruelty, which at first obeyed the dictates of others, degenerated into habit, and at length became the ruling passion of his soul. . . . During the three first years of his reign, the

forms, and even the spirit, of the old administration were maintained by those faithful counsellors to whom Marcus had recommended his son, and for whose wisdom and integrity Commodus still entertained a reluctant esteem. The young prince and his profligate favorites revelled in all the license of sovereign power; but his hands were yet unstained with blood; and he had even displayed a generosity of sentiment, which might perhaps have ripened into solid virtue. A fatal incident decided his fluctuating character. One evening, as the emperor was returning to the palace through a dark and narrow portico in the amphitheatre, an assassin, who waited his passage, rushed upon him with a drawn sword, loudly exclaiming, 'The senate sends you this.' The menace prevented the deed; the assassin was seized by the guards, and immediately revealed the authors of the conspiracy. It had been formed, not in the State, but within the walls of the palace. . . . But the words of the assassin sunk deep into the mind of Commodus, and left an indelible impression of fear and hatred against the whole body of the senate. Those whom he had dreaded as importunate ministers he now suspected as secret enemies. The Delators, a race of men discouraged, and almost extinguished, under the former reigns, again became formidable as soon as they discovered that the emperor was desirous of finding disaffection and treason in the senate. . . . Suspicion was equivalent to proof; trial to condemnation. The execution of a considerable senator was attended with the death of all who might lament or revenge his fate; and when Commodus had once tasted human blood, he became incapable of pity or remorse. . . . Pestilence and famine contributed to fill up the measure of the calamities of Rome. . . . His cruelty proved at last fatal to himself. He had shed with impunity the noblest blood of Rome: he perished as soon as he was dreaded by his own domestics. Marcia, his favorite concubine, Eclectus, his chamberlain, and Lætus, his Prætorian præfect, alarmed by the fate of their companions and predecessors, resolved to prevent the destruction which every hour hung over their heads, either from the mad caprice of the tyrant, or the sudden indignation of the people. Marcia seized the occasion of presenting a draught of wine to her lover, after he had fatigued himself with hunting some wild beasts. Commodus retired to sleep; but whilst he was laboring with the effects of poison and drunkenness, a robust youth, by profession a wrestler, entered his chamber, and strangled him without resistance" (December 31, A. D. 192).—E. Gibbon, *Decline and Fall of the Roman Empire, ch.* 3–4.

Also in: J. B. L. Crevier, *Hist. of the Roman Emperors, bk.* 21 (*v.* 7).

A. D. 192-284.—From Commodus to Diocletian.—Twenty-three Emperors in the Century.—Thirteen murdered by their own soldiers or servants.—Successful wars of Severus, Aurelian, and Probus.—On the murder of Commodus, "Helvius Pertinax, the prefect of the city, a man of virtue, was placed on the throne by the conspirators, who would fain justify their deed in the eyes of the world, and their choice was confirmed by the senate. But the Prætorians had not forgotten their own power on a similar occasion; and they liked not the virtue and regularity of the new monarch. Pertinax was, therefore, speedily deprived of throne and life. Prætorian insolence now attained its height. Regardless of the dignity and honour of the empire, they set it up to auction. The highest bidder was a senator, named Didius Julianus [March, 193]. . . . The legions disdained to receive an emperor from the life-guards. Those of Britain proclaimed their general Clodius Albinus; those of Asia, Pescennius Niger; the Pannonian legions, Septimius Severus. This last was a man of bravery and conduct: by valour and stratagem he successively vanquished his rivals [defeating Albinus in an obstinate battle at Lyons, A. D. 197, and finishing the subjugation of his rivals in the east by reducing Byzantium after a siege of three years]. He maintained the superiority of the Roman arms against the Parthians and Caledonians [see Britain: A. D. 208–211]. His reign was vigorous and advantageous to the state; but he wanted either the courage or the power to fully repress the license and insubordination of the soldiery. Severus left the empire [A. D. 211] to his two sons. Caracalla, the elder, a prince of violent and untamable passions, disdained to share empire with any. He murdered his brother and colleague, the more gentle Geta, and put to death all who ventured to disapprove of the deed. A restless ferocity distinguished the character of Caracalla: he was ever at war, now on the banks of the Rhine, now on those of the Euphrates. His martial impetuosity daunted his enemies; his reckless cruelty terrified his subjects. . . . During a Parthian war Caracalla gave offence to Macrinus, the commander of his body-guard, who murdered him [A. D. 217]. Macrinus seized the empire, but had not power to hold it. He and his son Diadumenianus [after defeat in battle at Immæ, near Antioch] . . . were put to death by the army, who proclaimed a supposed son [and actually a second cousin] of their beloved Caracalla. This youth was named Elagabalus, and was priest of the Sun in the temple of Emesa, in Syria. Every vice stained the character of this licentious effeminate youth, whose name is become proverbial for sensual indulgence: he possessed no redeeming quality, had no friend, and was put to death by his own guards, who, vicious as they were themselves, detested vice in him. Alexander Severus, cousin to Elagabalus, but of a totally opposite character, succeeded that vicious prince [A. D. 222]. All estimable qualities were united in the noble and accomplished Alexander. . . . The love of learning and virtue did not in him smother military skill and valour; he checked the martial hordes of Germany, and led the Roman eagles to victory against the Sassanides, who had displaced the Arsacides in the dominion over Persia, and revived the claims of the house of Cyrus over Anterior Asia. Alexander, victorious in war, beloved by his subjects, deemed he might venture on introducing more regular discipline into the army. The attempt was fatal, and the amiable monarch lost his life in the mutiny that resulted [A. D. 235]. Maximin, a soldier, originally a Thracian shepherd, distinguished by his prodigious size, strength and appetite, a stranger to all civic virtues and all civic rules, rude, brutal, cruel, and ferocious, seated himself on the throne of the noble and virtuous prince, in whose murder he had been the chief agent. At Rome, the senate conferred the vacant dignity on Gordian, a noble, wealthy

and virtuous senator, and on his son of the same name, a valiant and spirited youth. But scarcely were they recognized when the son fell in an engagement, and the father slew himself [A. D. 237]. Maximin was now rapidly marching towards Rome, full of rage and fury. Despair gave courage to the senate; they nominated Balbinus and Pupienus [Maximus Pupienus], one to direct the internal, the other the external affairs. Maximin had advanced as far as Aquileia [which he besieged without success], when his horrible cruelties caused an insurrection against him, and he and his son, an amiable youth, were murdered [A. D. 238]. The army was not, however, willing to acquiesce in the claim of the senate to appoint an emperor. Civil war was on the point of breaking out [and Balbinus and Pupienus were massacred by the Prætorians], when the conflicting parties agreed in the person of the third Gordian, a boy of but thirteen years of age [A. D. 238]. Gordian III. was . . . chiefly guided by his father-in-law, Misitheus, who induced him to engage in war against the Persians. In the war, Gordian displayed a courage worthy of any of his predecessors; but he shared what was now become the usual fate of a Roman emperor. He was murdered by Philip, the captain of his guard [A. D. 244]. Philip, an Arabian by birth, originally a captain of freebooters, seized on the purple of his murdered sovereign. Two rivals arose and contended with him for the prize, but accomplished nothing. A third competitor, Decius, the commander of the army of the Danube, defeated and slew him near Verona [A. D. 249]. During the reign of Philip, Rome attained her thousandth year."—T. Keightley, *Outlines of Hist.* (*Lardner's Cabinet Cyclop.*), *pt.* 1, *ch.* 9.—"Decius is memorable as the first emperor who attempted to extirpate the Christian religion by a general persecution of its professors. His edicts are lost; but the records of the time exhibit a departure from the system which had been usually observed by enemies of the church since the days of Trajan. The authorities now sought out Christians; the legal order as to accusations was neglected; accusers ran no risk; and popular clamour was admitted instead of formal information. The long enjoyment of peace had told unfavourably on the church. . . . When, as Origen had foretold, a new season of trial came, the effects of the general relaxation were sadly displayed. On being summoned, in obedience to the emperor's edict, to appear and offer sacrifice, multitudes of Christians in every city rushed to the forum. . . . It seemed, says St. Cyprian, as if they had long been eager to find an opportunity for disowning their faith. The persecution was especially directed against the bishops and clergy. Among its victims were Fabian of Rome, Babylas of Antioch, and Alexander of Jerusalem; while in the lines of other eminent men (as Cyprian, Origen, Gregory Thaumaturgus, and Dionysius of Alexandria) the period is marked by exile or other sufferings. The chief object, however, was not to inflict death on the Christians, but to force them to recantation. With this view they were subjected to tortures, imprisonment and want of food; and under such trials the constancy of many gave way. Many withdrew into voluntary banishment; among these was Paul, a young man of Alexandria, who took up his abode in the desert of the Thebaid, and is celebrated as the first Christian hermit."—J. C. Robertson, *Hist. of the Christian Church*, *bk.* 1, *ch.* 6 (*v.* 1).—"This persecution [of Decius] was interrupted by an invasion of the Goths, who, for the first time, crossed the Danube in considerable numbers, and devastated Mœsia [see GOTHS: A. D. 244–251]. Decius marched against them, and gained some important advantages; but in his last battle, charging into the midst of the enemy to avenge the death of his son, he was overpowered and slain (A. D. 251). A great number of the Romans, thus deprived of their leader, fell victims to the barbarians; the survivors, grateful for the protection afforded them by the legions of Gallus, who commanded in the neighbourhood, proclaimed that general emperor. Gallus concluded a dishonourable peace with the Goths, and renewed the persecutions of the Christians. His dastardly conduct provoked general resentment; the provincial armies revolted, but the most dangerous insurrection was that headed by Æmilianus, who was proclaimed emperor in Mœsia. He led his forces into Italy, and the hostile armies met at Interamna (Terni); but just as an engagement was about to commence, Gallus was murdered by his own soldiers (A. D. 253), and Æmilianus proclaimed emperor. In three months Æmilianus himself met a similar fate, the army having chosen Valerian, the governor of Gaul, to the sovereignty. Valerian, though now sixty years of age, possessed powers that might have revived the sinking fortunes of the empire, which was now invaded on all sides. The Goths, who had formed a powerful monarchy on the lower Danube and the northern coasts of the Black Sea, extended their territories to the Borysthenes (Dneiper) and Tanais (Don): they ravaged Mœsia, Thrace and Macedon; while their fleets . . . devastated the coasts both of the European and Asiatic provinces [see GOTHS: A. D. 258–267]. The great confederation of the Franks became formidable on the lower Rhine [see FRANKS: A. D. 253], and not less dangerous was that of the Allemanni on the upper part of that river. The Carpians and Sarmatians laid Mœsia waste; while the Persians plundered Syria, Cappadocia, and Cilicia. Gallienus, the emperor's son, whom Valerian had chosen for his colleague, and Aurelian, destined to succeed him in the empire, gained several victories over the Germanic tribes; while Valerian marched in person against the Scythians and Persians, who had invaded Asia. He gained a victory over the former in Anatolia, but, imprudently passing the Euphrates, he was surrounded by Sapor's army near Edessa . . . and was forced to surrender at discretion (A. D. 259) [see PERSIA: A. D. 226–627]. During nine years Valerian languished in hopeless captivity, the object of scorn and insult to his brutal conqueror, while no effort was made for his liberation by his unnatural son. Gallienus succeeded to the throne. . . . At the moment of his accession, the barbarians, encouraged by the captivity of Valerian, invaded the empire on all sides. Italy itself was invaded by the Germans [see ALEMANNI: A. D. 259], who advanced to Ravenna, but they were forced to retire by the emperor. Gallienus, after this exertion, sunk into complete inactivity; his indolence roused a host of competitors for the empire in the different provinces, commonly called 'the thirty tyrants,' though the number of pretenders did not

exceed 19. . . . Far the most remarkable of them was Odenatus, who assumed the purple at Palmyra, gained several great victories over the Persians, and besieged Sapor in Ctesiphon. . . . But this great man was murdered by some of his own family; he was succeeded by his wife, the celebrated Zenobia, who took the title of Queen of the East. Gallienus did not long survive him; he was murdered while besieging Aureolus, one of his rivals, in Mediolanum (Milan); but before his death he transmitted his rights to Claudius, a general of great reputation (A. D. 268). Most of the other tyrants had previously fallen in battle or by assassination. Marcus Aurelius Claudius, having conquered his only rival, Aureolus, marched against the Germans and Goths, whom he routed with great slaughter [see GOTHS: A. D. 268–270]. He then prepared to march against Zenobia, who had conquered Egypt; but a pestilence broke out in his army, and the emperor himself was one of its victims (A. D. 270). . . . His brother was elected emperor by acclamation; but in 17 days he so displeased the army, by attempting to revive the ancient discipline, that he was deposed and murdered. Aurelian, a native of Sirmium in Pannonia, was chosen emperor by the army; and the senate, well acquainted with his merits, joyfully confirmed the election. He made peace with the Goths, and led his army against the Germans, who had once more invaded Italy [see ALEMANNI: A. D. 270]. Aurelian was at first defeated; but he soon retrieved his loss, and cut the whole of the barbarian army to pieces. His next victory was obtained over the Vandals, a new horde that had passed the Danube; and having thus secured the tranquility of Europe, he marched to rescue the eastern provinces from Zenobia," whom he vanquished and brought captive to Rome (see PALMYRA). This accomplished, the vigorous emperor proceeded to the suppression of a formidable revolt in Egypt, and then to the recovery of Gaul, Spain, and Britain, "which had now for thirteen years been the prey of different tyrants. A single campaign restored these provinces to the empire; and Aurelian, returning to Rome, was honoured with the most magnificent triumph that the city had ever beheld. . . . But he abandoned the province of Dacia to the barbarians, withdrawing all the Roman garrisons that had been stationed beyond the Danube. Aurelian's virtues were sullied by the sternness and severity that naturally belongs to a peasant and a soldier. His officers dreaded his inflexibility," and he was murdered, A. D. 275, by some of them who had been detected in peculations and who dreaded his wrath. The senate elected as his successor Marcus Claudius Tacitus, who died after a reign of seven months. Florian, a brother of Tacitus, was then chosen by the senate; but the Syrian army put forward a competitor in the person of its commander, Marcus Aurelius Probus, and Florian was presently slain by his own troops. "Probus, now undisputed master of the Empire, led his troops from Asia to Gaul, which was again devastated by the German tribes; he not only defeated the barbarians, but pursued them into their own country, where he gained greater advantages than any of his predecessors [see GAUL: A. D. 277 and GERMANY: A. D. 277]. Thence he passed into Thrace, where he humbled the Goths; and, returning to Asia, he completely subdued the insurgent Isaurians, whose lands he divided among his veterans," and commanded peace on his own terms from the king of Persia. But even the power with which Probus wielded his army could not protect him from its licentiousness, and in a sudden mutiny (A. D. 282) he was slain. Carus, captain of the prætorian guards, was then raised to the throne by the army, the senate assenting. He repelled the Sarmatians and defeated the Persians, who had renewed hostilities; but he died, A. D. 283, while besieging Ctesiphon. His son Numerianus was chosen his successor; "but after a few months' reign, he was assassinated by Aper, his father-in-law and captain of his guards. The crime, however, was discovered, and the murderer put to death by the army. Dioclesian, said to have been originally a slave, was unanimously saluted Emperor by the army. He was proclaimed at Chalcedon, on the 17th of December, A. D. 284; an epoch that deserves to be remembered, as it marks the beginning of a new era, called 'the Era of Dioclesian,' or 'the Era of Martyrs,' which long prevailed in the church, and is still used by the Copts, the Abyssinians, and other African nations." — W. C. Taylor, *Student's Manual of Ancient Hist., ch.* 17, *sect.* 6–7.

A. D. 284-305.—Reconstitution of the Empire by Diocletian.—Its division and subdivision between two Augusti and two Cæsars.—Abdication of Diocletian.—"The accession of Diocletian to power marks a new epoch in the history of the Roman empire. From this time the old names of the republic, the consuls, the tribunes, and the Senate itself, cease, even if still existing, to have any political significance. The government becomes avowedly a monarchical autocracy, and the officers by whom it is administered are simply the nominees of the despot on the throne. The empire of Rome is henceforth an Oriental sovereignty. Aurelian had already introduced the use of the Oriental diadem. The nobility of the empire derive their positions from the favor of the sovereign; the commons of the empire, who have long lost their political power, cease to enjoy even the name of citizens. The provinces are still administered under the imperial prefects by the magistrates and the assemblies of an earlier date, but the functions of both the one and the other are confined more strictly than ever to matters of police and finance. Hitherto, indeed, the Senate, however intrinsically weak, had found opportunities for putting forth its claims to authority. . . . The chosen of the legions had been for some time past the commander of an army, rather than the sovereign of the state. He had seldom quitted the camp, rarely or never presented himself in the capital. . . . The whole realm might split asunder at any moment into as many kingdoms as there were armies, unless the chiefs of the legions felt themselves controlled by the strength or genius of one more eminent than the rest. . . . The danger of disruption, thus far averted

mainly by the awe which the name of Rome inspired, was becoming yearly more imminent, when Diocletian arose to re-establish the organic connection of the parts, and breathe a new life into the heart of the body politic. The jealous edict of Gallienus . . . had forbidden the senators to take service in the army, or to quit the limits of Italy. The degradation of that once illustrious order, which was thus rendered incapable of furnishing a candidate for the diadem, was completed by its indolent acquiescence in this disqualifying ordinance. The nobles of Rome relinquished all interest in affairs which they could no longer aspire to conduct. The emperors, on their part, ceased to regard them as a substantive power in the state; and in constructing his new imperial constitution Diocletian wholly overlooked their existence. . . . While he disregarded the possibility of opposition at Rome, he contrived a new check upon the rivalry of his distant lieutenants, by associating with himself three other chiefs, welded together by strict alliance into one imperial family, each of whom should take up his residence in a separate quarter of the empire, and combine with all the others in maintaining their common interest. His first step was to choose a single colleague in the person of a brave soldier of obscure origin, an Illyrian peasant, by name Maximianus, whom he invested with the title of Augustus in the year 286. The associated rulers assumed at the same time the fanciful epithets of Jovius and Herculius, auspicious names, which made them perhaps popular in the camps, where the commanding genius of the one and the laborious fortitude of the other were fully recognized. Maximianus was deputed to control the legions in Gaul, to make head against domestic sedition, as well as against the revolt of Carausius [see BRITAIN: A. D. 288–297], a pretender to the purple in Britain, while Diocletian encountered the enemies or rivals who were now rising up in various quarters in the East. His dangers still multiplied, and again the powers of the state were subdivided to meet them. In the year 292 Diocletian created two Cæsars; the one, Galerius, to act subordinately to himself in the East; the other, Constantius Chlorus, to divide the government of the western provinces with Maximian. The Cæsars were bound more closely to the Augusti by receiving their daughters in marriage; but though they acknowledged each a superior in his own half of the empire, and admitted a certain supremacy of Diocletian over all, yet each enjoyed kingly rule in his own territories, and each established a court and capital, as well as an army and a camp. Diocletian retained the wealthiest and most tranquil portion of the realm, and reigned in Nicomedia [see NICOMEDIA] over Asia Minor, Syria, and Egypt; while he intrusted to the Cæsar Galerius, established at Sirmium, the more exposed provinces on the Danube. Maximian occupied Italy, the adjacent islands, and Africa, stationing himself, however, not in Rome, but at Milan. Constantius was required to defend the Rhenish frontier; and the martial provinces of Gaul, Spain, and Britain were given him to furnish the forces necessary for maintaining that important trust. The capital of the Western Cæsar was fixed at Treves. Inspired with a common interest, and controlled by the ascendency of Diocletian himself, all the emperors acted with vigor in their several provinces. Diocletian recovered Alexandria and quieted the revolt of Egypt [see ALEXANDRIA: A. D. 296]. Maximian routed the unruly hordes of Maurentia, and overthrew a pretender to sovereignty in that distant quarter. Constantius discomfited an invading host of Alemanni, kept in check Carausius, who for a moment had seized upon Britain, and again wrested that province from Allectus, who had murdered and succeeded to him. Galerius brought the legions of Illyria to the defence of Syria against the Persians, and though once defeated on the plains of Carrhæ, at last reduced the enemy to submission [see PERSIA: A. D. 226–627]. Thus victorious in every quarter, Diocletian celebrated the commencement of his twentieth year of power with a triumph at the ancient capital, and again taking leave of the imperial city, returned to his customary residence at Nicomedia. The illness with which he was attacked on his journey suggested or fixed his resolution to relieve himself from his cares, and on May 1, in the year 305, being then fifty-nine years of age, he performed the solemn act of abdication at Morgus, in Mæsia, the spot where he had first assumed the purple at the bidding of his soldiers. Strange to say, he did not renounce the object of his ambition alone. On the same day a similar scene was enacted by his colleague Maximian at Milan; but the abdication of Maximian was not, it is said, a spontaneous sacrifice, but imposed upon him by the influence or authority of his elder and greater colleague. Diocletian had established the principle of succession by which the supreme power was to descend. Having seen the completion of all his arrangements, and congratulated himself on the success, thus far, of his great political experiments, he crowned his career of moderation and self-restraint by strictly confining himself during the remainder of his life to the tranquil enjoyment of a private station. Retiring to the residence he had prepared for himself at Salona, he found occupation and amusement in the cultivation of his garden."— C. Merivale, *General Hist. of Rome, ch.* 70.

A. D. 303-305.—The persecution of Christians under Diocletian.—"Dreams concerning the overthrow of the Empire had long been cast into the forms of prophecies amongst the Christians. . . . There were some to repeat the predictions and to count the proofs of overthrow impending upon the Empire. But there were more, far more, to desire its preservation. Many even laboured for it. The number of those holding offices of distinction at the courts and in the armies implies the activity of a still larger number in inferior stations. . . . Never, on the other hand, had the generality of Christians been the objects of deeper or more bitter suspicions. . . . By the lower orders, they would be hated as conspiring against the customs of their province or the glories of their race. By men of position and of education, they would be despised as opposing every interest of learning, of property, and of rank. Darker still were the sentiments of the sovereigns. By them the

Christians were scorned as unruly subjects, building temples without authority, appointing priests without license, while they lived and died for principles the most adverse to the laws and to the rulers of the Empire. . . . Everywhere they were advancing. Everywhere they met with reviving foes. At the head of these stood the Cæsar, afterwards the Emperor Galerius. He who had been a herdsman of Dacia was of the stamp to become a wanton ruler. He showed his temper in his treatment of the Heathen. He showed it still more clearly in his hostility towards the Christians. . . . He turned to Diocletian. The elder Emperor was in the mood to hear his vindictive son-in-law. Already had Diocletian fulminated his edicts against the Christians. Once it was because his priests declared them to be denounced in an oracle from Apollo, as opposing the worship of that deity. At another time, it was because his soothsayers complained of the presence of his Christian attendants as interfering with the omens on which the Heathen depended. Diocletian was superstitious. But he yielded less to his superstition as a man than to his imperiousness as a sovereign, when he ordered that all employed in the imperial service should take part in the public sacrifices under pain of scourging and dismissal. . . . At this crisis he was accosted by Galerius. Imperious as he was, Diocletian was still circumspect. . . . Galerius urged instant suppression. 'The world,' replied his father-in-law, 'will be thrown into confusion, if we attack the Christians.' But Galerius insisted. Not all the caution of the elder Emperor was proof against the passions thus excited by his son-in-law. The wives of Diocletian and Galerius, both said to have been Christians, interceded in vain. Without consulting the other sovereigns, it was determined between Diocletian and Galerius to sound the alarum of persecution throughout their realms. Never had persecution begun more fearfully. Without a note of warning, the Christians of Nicomedia were startled, one morning, by the sack and demolition of their church. . . . Not until the next day, however, was there any formal declaration of hostilities. An edict then appeared commanding instant and terrible proceedings against the Christians. Their churches were to be razed. Their Scriptures were to be destroyed. They themselves were to be deprived of their estates and offices. . . . Some days or weeks, crowded with resistance as well as suffering, went by. Suddenly a fire broke out in the palace at Nicomedia. It was of course laid at the charge of the Christians. . . . Some movements occurring in the eastern provinces were also ascribed to Christian machinations. . . . The Empresses, suspected of sharing the faith of the sufferers, were compelled to offer public sacrifice. Fiercer assaults ensued. A second edict from the palace ordered the arrest of the Christian priests. A third commanded that the prisoners should be forced to sacrifice according to the Heathen ritual under pain of torture. When the dungeons were filled, and the racks within them were busy with their horrid work, a fourth edict, more searching and more pitiless than any, was published. By this the proper officers were directed to arrest every Christian whom they could discover, and bring him to one of the Heathen temples. . . . Letters were despatched to demand the co-operation of the Emperor Maximian and the Cæsar Constantius. The latter, it is said, refused; yet there were no limits that could be set to the persecution by any one of the sovereigns. . . . None suffered more than the Christians in Britain. . . . The intensity of the persecution was in no degree diminished by the extent over which it spread. . . . Some were thrown into dungeons to renounce their faith or to die amidst the agonies of which they had no fear. Long trains of those who survived imprisonment were sent across the country or beyond the sea to labour like brutes in the public mines. In many cities the streets must have been literally blocked up with the stakes and scaffolds where death was dealt alike to men and women and little children. It mattered nothing of what rank the victims were. The poorest slave and the first officer of the imperial treasury were massacred with equal savageness. . . . The memory of man embraces no such strife, if that can be called a strife in which there was but one side armed, but one side slain."—S. Eliot, *History of the Early Christians, bk.* 3, *ch.* 10 (*v.* 1).

A. D. 305-323.—The wars of Constantine and his rivals.—His triumph.—His reunion of the Empire.—On the abdication of Diocletian and Maximian, Constantius and Galerius, who had previously held the subordinate rank of Cæsars, succeeded to the superior throne, as Augusti. A nephew of Galerius, named Maximin, and one Severus, who was his favorite, were then appointed Cæsars, to the exclusion of Constantine, son of Constantius, and Maxentius, son of Maximian, who might have naturally expected the elevation. Little more than a year afterwards, Constantius died, in Britain, and Constantine was proclaimed Augustus and Emperor, in his place, by the armies of the West. Galerius had not courage to oppose this military election, except so far as to withhold from Constantine the supreme rank of Augustus, which he conferred on his creature, Severus. Constantine acquiesced, for the moment, and contented himself with the name of Cæsar, while events and his own prudence were preparing for him a far greater elevation. In October, 306, there was a successful rising at Rome against Severus, Maxentius was raised to the throne by the voice of the feeble senate and the people, and his father, Maximian, the abdicated monarch, came out of his retirement to resume the purple, in association at first, but afterwards in rivalry with his son. Severus was besieged at Ravenna and, having surrendered, was condemned to death. Galerius undertook to avenge his death by invading Italy, but retreated ignominiously. Thereupon he invested his friend Licinius with the emblems and the rank of the deceased Severus. The Roman world had then six emperors—each claiming the great title of "Augustus": Galerius, Licinius, and Maximin in the East (including Africa), making common cause against Maximian, Maxentius and Constantine in the West. The first, in these combinations, to fall out, were the father and son, Maximian and Maxentius, both claiming authority in Italy. The old emperor appealed to his former army and it declared against him. He fled, taking shelter, first, with his enemy Galerius, but soon

repairing to the court of Constantine, who had married his daughter Fausta. A little later, the dissatisfied and restless old man conspired to dethrone his son-in-law and was put to death. The next year (May, A. D. 311) Galerius died at Nicomedia, and his dominions were divided between Licinius and Maximin. The combinations were now changed, and Constantine and Licinius entered into an alliance against Maxentius and Maximin. Rome and Italy had wearied by this time of Maxentius, who was both vicious and tyrannical, and invited Constantine to deliver them. He responded by a bold invasion of Italy, with a small army of but 40,000 men; defeated the greater army of Maxentius at Turin; occupied the imperial city of Milan; took Verona, after a siege and a desperate battle fought outside its walls, and finished his antagonist in a third encounter (Oct. 28, A. D. 312), at Saxa Rubra, within nine miles of Rome. Maxentius perished in the flight from this decisive field and Constantine possessed his dominions. In the next year, Maximin, rashly venturing to attack Licinius, was defeated near Heraclea, on the Propontis, and died soon afterwards. The six emperors of the year 308 were now (A. D. 313) reduced to two, and the friendship between them was ostentatious. But it endured little longer than a single year. Licinius was accused of conspiring against Constantine, and the latter declared war. The first battle was fought near Cibalis, in Pannonia, the second on the plain of Mardia, in Thrace, and Constantine was the victor in both. Licinius sued for peace and obtained it (December, A. D. 315) by the cession of all his dominion in Europe, except Thrace. For eight years, Constantine was contented with the great empire he then possessed. In 323 he determined to grasp the entire Roman world. Licinius opposed him with a vigor unexpected and the war was prepared for on a mighty scale. It was practically decided by the first great battle, at Hadrianople, on the 3d of July, 323. Licinius, defeated, took refuge in Byzantium, which Constantine besieged. Escaping from Byzantium into Asia, Licinius fought once more at Chrysopolis and then yielded to his fate. He died soon after. The Roman empire was again united and Constantine was its single lord.—E. Gibbon, *Decline and Fall of the Roman Empire, ch.* 14.

A. D. 306.—Constantine's defeat of the Franks. See Franks: A. D. 306.

A. D. 313.—Constantine's Edict of Milan.—Declared toleration of Christianity.—After the extension of the sovereignty of Constantine over the Italian provinces as well as Gaul and the West, he went, in January, A. D. 313, to Milan, and there held a conference with Licinius, his eastern colleague in the empire. One of the results of that conference was the famous Edict of Milan, which recognized Christianity and admitted it to a footing of equal toleration with the paganisms of the empire—in terms as follows: "Wherefore, as I, Constantine Augustus, and I, Licinius Augustus, came under favourable auspices to Milan, and took under consideration all affairs that pertained to the public benefit and welfare, these things among the rest appeared to us to be most advantageous and profitable to all. We have resolved among the first things to ordain, those matters by which reverence and worship to the Deity might be exhibited. That is, how we may grant likewise to the Christians, and to all, the free choice to follow that mode of worship which they may wish. That whatsoever divinity and celestial power may exist may be propitious to us, and to all that live under our government. Therefore, we have decreed the following ordinance, as our will, with a salutary and most correct intention, that no freedom at all shall be refused to Christians, to follow or to keep their observances or worship. But that to each one power be granted to devote his mind to that worship which he may think adapted to himself. That the Deity may in all things exhibit to us His accustomed favour and kindness. . . . And this we further decree, with respect to the Christians, that the places in which they were formerly accustomed to assemble, concerning which also we formerly wrote to your fidelity, in a different form, that if any persons have purchased these, either from our treasurer, or from any other one, these shall restore them to the Christians, without money and without demanding any price. . . . They who as we have said restore them without valuation and price may expect their indemnity from our munificence and liberality."—Eusebius, *Ecclesiastical Hist., bk.* 10, *ch.* 5.

A. D. 318-325.—The Arian Controversy and the Council of Nicæa. See Arianism; and Nicæa: A. D. 325.

A. D. 323.—The conversion of Constantine.—His Christianity.—His character.—"The alleged supernatural conversion of Constantine has afforded a subject of doubt and debate from that age to the present. Up to the date of his war against Maxentius, the Emperor believed, like his father, in one god, whom he represented to himself, not with the attributes of Jupiter, best and greatest, father of gods and men, but under the form of Apollo, with the attributes of the glorified youth of manhood, the god of light and life. . . . His conversion to Christianity took place at the period of the war with Maxentius. The chief contemporary authorities on the subject are Lactantius and Eusebius. Lactantius, an African by birth, was a rhetorician (or, as we should call him, professor) at Nicomedia, of such eminence that Constantine entrusted to him the education of his eldest son, Crispus. Writing before the death of Licinius, i. e. before the year 314 A. D., or within two, or at most three, years of the event, Lactantius says, 'Constantine was admonished in his sleep to mark the celestial sign of God on the shields, and so to engage in the battle. He did as he was commanded and marked the name of Christ on the shields by the letter X drawn across them, with the top circumflexed. Armed with this sign his troops proceed,' etc. Eusebius, Bishop of Cæsarea, the historian of the early Church, the most learned Christian of his time, was, after Constantine's conquest of the East, much about the court, in the confidence of the Emperor, and one of his chief advisers in ecclesiastical matters. In his Life of Constantine, published twenty-six years after the Emperor's death, he gives us an interesting account of the moral process of the Emperor's conversion. Reflecting on the approaching contest with Maxentius, and hearing of the

extraordinary rites by which he was endeavouring to win the favour of the gods, 'being convinced that he needed some more powerful aid than his military forces could afford him, on account of the wicked and magical enchantments which were so diligently practised by the tyrant, he began to seek for divine assistance. . . . And while he was thus praying with fervent entreaty, a most marvellous sign appeared to him from heaven, the account of which it might have been difficult to receive with credit, had it been related by any other person. But since the victorious emperor himself long afterwards declared it to the writer of this history, when he was honoured with his acquaintance and society, and confirmed his statement by an oath, who could hesitate to credit the relation, especially since the testimony of after time has established its truth? He said that at mid-day, when the sun was beginning to decline, he saw, with his own eyes, the trophy of a cross of light in the heavens, above the sun, and bearing the inscription, "Conquer by this." At this sight he himself was struck with amazement, and his whole army also, which happened to be following him on some expedition, and witnessed the miracle. He said, moreover, that he doubted within himself what the import of this apparition could be. And while he continued to ponder and reason on its meaning, night imperceptibly drew on; and in his sleep the Christ of God appeared to him with the same sign which he had seen in the heavens, and commanded him to procure a standard made in the likeness of that sign, and to use it as a safeguard in all engagements with his enemies.'" The standard which is said to have had this origin was the famous Labarum.—E. L. Cutts, *Constantine the Great, ch.* 11.—"He [Constantine] was not lacking in susceptibility to certain religious impressions; he acknowledged the peculiar providence of God in the manner in which he had been delivered from dangers, made victorious over all his pagan adversaries, and finally rendered master of the Roman world. It flattered his vanity to be considered the favourite of God, and his destined instrument to destroy the empire of the evil spirits (the heathen deities). The Christians belonging to court were certainly not wanting on their part to confirm him in this persuasion. . . . Constantine must indeed have been conscious that he was striving not so much for the cause of God as for the gratification of his own ambition and love of power; and that such acts of perfidy, mean revenge, or despotic jealousy, as occurred in his political course, did not well befit an instrument and servant of God, such as he claimed to be considered. . . . Even Eusebius, one of the best among the bishops at his court, is so dazzled by what the emperor had achieved for the outward extension and splendour of the church, as to be capable of tracing to the purest motives of a servant of God all the acts which a love of power that would not brook a rival had, at the expense of truth and humanity, put into the heart of the emperor in the war against Licinius. . . . Bishops in immediate attendance on the emperor so far forgot indeed to what master they belonged, that, at the celebration of the third decennium of his reign (the tricennalia), one of them congratulated him as constituted by God the ruler over all in the present world, and destined to reign with the Son of God in the world to come. The feelings of Constantine himself were shocked at such a parallel."—A. Neander, *General Hist. of the Christian Religion and Church, period* 2, *sect.* 1, *A.*—"As he approached the East, he [Constantine] adopted oriental manners; he affected the gorgeous purple of the monarchs of Persia; he decorated his head with false hair of different colours, and with a diadem covered with pearls and gems. He substituted flowing silken robes, embroidered with flowers, for the austere garb of Rome, or the unadorned purple of the first Roman emperors. He filled his palace with eunuchs, and lent an ear to their perfidious calumnies; he became the instrument of their base intrigues, their cupidity, and their jealousy. He multiplied spies, and subjected the palace and the empire, alike, to a suspicious police. He lavished the wealth of Rome on the sterile pomp of stately buildings. . . . He poured out the best and noblest blood in torrents, more especially of those nearly connected with himself. The most illustrious victim of his tyranny was Crispus, his son by his first wife, whom he had made the partner of his empire, and the commander of his armies. . . . In a palace which he had made a desert, the murderer of his father-in-law, his brothers-in-law, his sister, his wife, his son, and his nephew, must have felt the stings of remorse, if hypocritical priests and courtier bishops had not lulled his conscience to rest. We still possess the panegyric in which they represent him as a favourite of Heaven, a saint worthy of our highest veneration; we have also several laws by which Constantine atoned for all his crimes, in the eyes of the priests, by heaping boundless favours on the church. The gifts he bestowed on it, the immunities he granted to persons and to property connected with it, soon directed ambition entirely to ecclesiastical dignities. The men who had so lately been candidates for the honours of martyrdom, now found themselves depositaries of the greatest wealth and the highest power. How was it possible that their characters should not undergo a total change?"—J. C. L. de Sismondi, *Hist. of the Fall of the Roman Empire, ch.* 4 (*v.* 1).—See, also, CHRISTIANITY: A. D. 312-337.

A. D. 330.—Transference of the capital of the Empire to Byzantium (Constantinople). See CONSTANTINOPLE: A. D. 330.

A. D. 337-361.—Redivision of the Empire.—Civil wars between the sons of Constantine and their successors.—Elevation of Julian to the throne.—Before the death of Constantine, "his three sons, Constantine, Constantius, and Constans, had already been successively raised to the rank of Cæsar about the tenth, twentieth, and thirtieth years of his reign. The royal family contained also two other young princes, sons of Dalmatius, one of the half-brothers of Constantine; the elder of these nephews of the Emperor was called Dalmatius, after his father, the other Hannibalianus. . . . Constantine shared—not the Empire, but—the imperial power among his three sons. The eldest, Constantine, was to hold the first rank among the three Augusti, and to take the western Gallic provinces under his especial administration; Constantius was to take the east, viz., Asia, Syria, and Egypt; Constans was to take the central portion of the Empire, Italy, Africa, and Western Illyricum."—E. L. Cutts, *Constantine the Great, ch.* 33.—The father of these three

princes was no sooner dead (A. D. 337) than they made haste to rid themselves of all the possible rivals in a family which seemed too numerous for peace. Two uncles and seven cousins — including Dalmatius and Hannibalianus — with other connections by marriage and otherwise, were quickly put out of the way under one and another pretence and with more or less mockery of legal forms. The three brothers then divided the provinces between them on much the same plan as before; but Constantine, the eldest, now reigned in the new capital of his father, which bore his name. There was peace between them for three years. It was broken by Constantine, who demanded the surrender to him of a part of the dominions of Constans. War ensued and Constantine was killed in one of the earliest engagements of it. Constans took possession of his dominions, refusing any share of them to Constantius, and reigned ten years longer, when he was destroyed, A. D. 350, by a conspiracy in Gaul, which raised to his throne one Magnentius, a soldier of barbarian extraction. Magnentius was acknowledged in Gaul and Italy; but the troops in Illyricum invested their own general, Vetranio, with the purple. Constantius, in the East, now roused himself to oppose these rebellions, and did so with success. Vetranio, an aged man, was intimidated by artful measures and driven to surrender his unfamiliar crown. Magnentius advanced boldly to meet an enemy whom he despised, and was defeated in a great battle fought September 21, A. D. 351, at Mursa (Essek, in modern Hungary, on the Drave). Retreating to Italy, and from Italy to Gaul, he maintained the war for another year, but slew himself finally in despair and the empire had a single ruler, once more. The sole emperor, Constantius, now found his burden of power too great, and sought to share it. Two young nephews had been permitted to live, when the massacre of the house of Constantine occurred, and he turned to these. He raised the elder, Gallus, to the rank of Cæsar, and gave him the government of the præfecture of the East. But Gallus conducted himself like a Nero and was disgraced and executed in little more than three years. The younger nephew, Julian, escaped his brother's fate by great prudence of behavior and by the friendship of the Empress Eusebia. In 355, he, in turn, was made Cæsar and sent into Gaul. Distinguishing himself there in several campaigns against the Germans (see GAUL: A. D. 355–361), he provoked the jealousy of Constantius and of the eunuchs who ruled the imperial court. To strip him of troops, four Gallic legions were ordered to the East, for the Persian war. They rose in revolt, at Paris, proclaimed Julian emperor and forced him to assume the dangerous title. He promptly sent an embassy to Constantius asking the recognition and confirmation of this procedure; but his overtures were rejected with disdain. He then declared war, and conducted an extraordinary expedition into Illyricum, through the Black Forest and down the Danube, occupying Sirmium and seizing the Balkan passes before he was known to have left Gaul. But the civil war so vigorously opened was suddenly arrested at this stage by the death of Constantius (A. D. 361), and Julian became sole emperor without more dispute. He renounced Christianity and is known in history as Julian the Apostate.—E. Gibbon, *Decline and Fall of the Roman Empire, ch.* 18–22.

A. D. 361-363.—Julian and the Pagan revival. —"Heathenism still possessed a latent power greater than those supposed who persuaded the Emperors that now it could be easily extirpated. The state of affairs in the West differed from that in the East. In the West it was principally the Roman aristocracy, who with few exceptions still adhered to their ancient religion, and with them the great mass of the people. In the East, on the contrary, Christianity had made much more progress among the masses, and a real aristocracy could scarcely be said to exist. In its stead there was an aristocracy of learning, whose hostility was far more dangerous to Christianity than the aversion of the Roman nobility. The youth still thronged to the ancient and illustrious schools of Miletus, Ephesus, Nicomedia, Antioch, and above all Athens, and the teachers in these schools were almost without exception heathen. . . . There the ancient heathen spirit was imbibed, and with it a contempt for barbarian Christianity. The doctrinal strife in the Christian Church was held up to ridicule, and, alas! with too much reason. For, according to the Emperor's favor and caprice, one doctrine stood for orthodoxy to-day and another to-morrow. To-day it was decreed that Christ was of the same essence with the Father, and all who refused to acknowledge this were deposed and exiled. To-morrow the court theology had swung round, it was decreed that Christ was a created being, and now it was the turn of the other party to go into banishment. The educated heathen thought themselves elevated far above all this in their classic culture. With what secret anger they beheld the way in which the temples were laid waste, the works of art broken to pieces, the memorials of an age of greatness destroyed, and all in favor of a barbarian religion destitute of culture. The old rude forms of Heathenism, indeed, they themselves did not desire, but the refined Heathenism of the Neoplatonic school seemed to them not merely the equal but the superior of Christianity. . . . These were the sources of the re-action against Christianity. Their spirit was embodied in Julian. In him it ascended for the last time the imperial throne, and made the final attempt to stop the triumphal progress of Christianity. But it succeeded only in giving to the world irresistible evidence that the sceptre of the spirit of Antiquity was forever broken. . . . What influenced Julian was chiefly enthusiasm for Greek culture. Even in a religious aspect Polytheism seemed to him superior to Monotheism, because more philosophic. Neoplatonism filled the whole soul of the young enthusiast, and seemed to him to comprehend all the culture of the ancient world in a unified system. But of course his vanity had a great share in the matter, for he naturally received the most devoted homage among the Hellenists, and his rhetorical friends did not stint their flattery. . . He made his entry . . . [into Constantinople] as a declared heathen. Although at the beginning of his campaign he had secretly sacrificed to Bellona, yet

he had attended the church in Vienne. But on the march he put an end to all ambiguity, and publicly offered sacrifices to the ancient gods. The Roman Empire once more had a heathen Emperor. At first all was joy; for as universally as Constantius was hated, Julian was welcomed as a deliverer. Even the Christians joined in this rejoicing. They too had found the arbitrary government of the last few years hard enough to bear. And if some who looked deeper began to feel anxiety, they consoled themselves by the reflection that even a heathen Emperor could not injure the Church so much as a Christian Emperor who used his power in promoting whatever seemed to him at the time to be orthodoxy in the dogmatic controversies of the age. And Julian proclaimed, not the suppression of Christianity, but only complete religious liberty. He himself intended to be a heathen, but no Christian should be disturbed in his faith. Julian was certainly thoroughly in earnest in this. To be a persecutor of the Church, was the last thing he would have thought of. Besides, he was much too fully persuaded of the untruth of Christianity and the truth of Heathenism to persecute. Julian was an enthusiast, like all the rhetoricians and philosophers who surrounded him. He regarded himself as called by a divine voice to the great work of restoring Heathenism, and this was from the beginning avowedly his object. And he was no less firmly convinced that this restoration would work itself out without any use of force; as soon as free scope was given to Heathenism it would, by its own powers, overcome Christianity. . . . The Emperor himself was evidently in all respects a heathen from sincere conviction. In this regard at least he was honest and no hypocrite. The flagrant voluptuousness, which had corrupted the court, was banished, and a large number of useless officials dismissed. The life of the court was to be simple, austere, and pure. Men had never before seen an Emperor who conducted himself with such simplicity, whose table was so economically supplied, and who knew no other employments than hard work, and devoted worship of the gods. A temple was built in the palace, and there Julian offered a daily sacrifice. Often he might be seen serving at the sacrifice himself, carrying the wood and plunging the knife into the victim with his own hand. He remembered every festival which should be celebrated, and knew how to observe the whole half-forgotten ritual most punctiliously. He was equally zealous in performing the duties of his office as Pontifex Maximus. Everywhere he revived the ancient worship which had fallen into neglect. Here a closed temple was re-opened, there a ruined shrine restored, images of the gods were set up again, and festivals which had ceased to be celebrated, were restored. . . . Soon conversions became plentiful; governors, officials, soldiers, made themselves proficient in the ancient cultus; and even a bishop, Pegasius of New Ilium, whom Julian had previously learned to know as a secret friend of the gods, when he had been the Emperor's guide to the classic sites of Troy, changed his religion, and from a Christian bishop became a heathen high-priest. . . . The dream of a restoration of Heathenism nevertheless soon began to prove itself a dream. Though now surrounded by heathen only, Julian could not help feeling that he was really isolated in their midst. He himself was naturally a mystic, and lived in his ideals. His Heathenism was one purified by poetic feeling. But there was little or nothing of this to be found actually existing. His heathen friends were courtiers, who agreed with him without inward conviction. . . . He was far too serious and severely moral for their tastes. They preferred the theatre to the temple, they liked amusement best, and found the daily attendance at worship and the monotonous ceremonies and sacrifices very dull. A measurably tolerant Christian Emperor would doubtless have suited them better than this enthusiastically pious heathen. Blinded as Julian was by his ideal views, he soon could not escape the knowledge that things were not going well. If Heathenism was to revive, it must receive new life within. The restoration must be also a reformation. Strangely enough Julian felt compelled to borrow from Christianity the ways and means for such a reformation. The heathen priests, like the Christian, were to instruct the people, and exhort them to holy living. The heathen, like the Christians, were to care for the poor. . . . While new strength was thus to be infused into Heathenism, other measures were adopted to weaken Christianity. An imperial edict, June 17, A. D. 362, forbade the Christians to act as teachers of the national literature, the ancient classics. It was, the Emperor explained, a contradiction for Christians to expound Homer, Thucydides, or Demosthenes, when they regarded them as godless men and aliens. He would not compel them to change their convictions, but also he could not permit the ancient writers to be expounded by those who took them to task for impiety. . . . This, of course, was not a persecution, if the use of force alone makes a persecution, yet it was a persecution, and in a sense a worse one than any which went before. Julian tried to deprive the Christians of that which should be common to all men,— education. . . . Nevertheless he had to confess to himself that the restoration of Heathenism was making no progress worth speaking of. . . He spent his whole strength, he sacrificed himself, he lived only for the Empire over which Providence had made him lord, and yet found himself alone in his endeavor. Even his heathen friends, the philosophers and rhetoricians, kept at a distance. . . . With such thoughts as these, Julian journeyed to Antioch, in Syria, in order to make preparations there for the great campaign he purposed to make against the Persians. There new disappointments awaited him. He found the shrines of his gods forsaken and desolate. . . . The temple of Apollo was restored with the greatest splendor. Julian went there to offer a sacrifice to the god. He expected to find a multitude of worshippers, but no one even brought oil for a lamp or incense to burn in honor of the deity. Only an old man approached to sacrifice a goose. . . . Shortly afterwards, the newly restored temple burned down in the night. Now the Emperor's wrath knew no bounds. He ascribed the guilt to the Christians; and although the temple, as is probable, caught fire through the fault of a heathen philosopher, who carried a dedicatory lamp about in it without due precautions, many Christians were arrested and tortured. The Church had its martyrs once more; and Julian, discontented with himself and the whole world besides, advanced to new

measures. The cathedral of Antioch was closed and its property confiscated. Julian decreed that the Christians, whose God had forbidden them to kill, should not be intrusted with any office with which judicial functions were connected. . . . Julian himself became more and more restless. He hurried from temple to temple, brought sacrifice after sacrifice; he knelt for hours before his gods and covered their statues with kisses. Then at night he sat in the silence at his writing-table, and gave vent to his bitterness and disgust with every thing. Then he wrote his works full of brilliant wit, thought out and expressed with Greek refinement, but full of bitterest hatred especially against the Galileans and their Carpenter's Son. . . . Finally, his immense preparations for the campaign against the Persians were finished. Julian started, after finally setting over the Antiochians a wretch as governor, with the remark that the man did not deserve to be a governor, but they deserved to be governed by such a one."—G. Uhlhorn, *The Conflict of Christianity with Heathenism, bk.* 3, *ch.* 3.

A. D. 363-379.—Christianity reascendant.—Secret hostility of Paganism.—Reign of Valentinian and Valens.—Approach of the Huns.—The struggle with the Goths.—Elevation of Theodosius to the throne.—When Julian's successor, Jovian, "who did not reign long enough to lead back to Constantinople the army which he had marched from the banks of the Tigris, made public profession of Christianity, he, at the same time, displaced a great number of brave officers and able functionaries, whom Julian had promoted in proportion to their zeal for paganism. From that period, up to the fall of the empire, a hostile sect, which regarded itself as unjustly stripped of its ancient honours, invoked the vengeance of the gods on the heads of the government, exulted in the public calamities, and probably hastened them by its intrigues, though inextricably involved in the common ruin. The pagan faith, which was not attached to a body of doctrine, nor supported by a corporation of priests, nor heightened by the fervour of novelty, scarcely ever displayed itself in open revolt, or dared the perils of martyrdom; but pagans still occupied the foremost rank in letters:—the orators, the philosophers (or, as they were otherwise called, sophists), the historians, belonged, almost without an exception, to the ancient religion. It still kept possession of the most illustrious schools, especially those of Athens and Alexandria; the majority of the Roman senate were still attached to it; and in the breasts of the common people, particularly the rural population, it maintained its power for several centuries, branded, however, with the name of magic. . . . Less than eight months after his elevation to the throne, on the 17th of February, 364, Jovian died in a small town of Galatia. After the expiration of ten days, the army which he was leading home from Persia, at a solemn assembly held at Nice, in Bithynia, chose as his successor the son of a captain from a little village of Pannonia, the count Valentinian, whom his valour and bodily prowess had raised to one of the highest posts of the army. . . . Spite of his savage rudeness, and the furious violence of his temper, the Roman empire found in him an able chief at the moment of its greatest need. Unhappily, the extent of the empire required, at least, two rulers. The army felt this, and demanded a second. . . . Valentinian . . . chose his brother. Valens, with whom he shared his power, had the weak, timid, and cruel character which ordinarily distinguishes cowards. Valentinian, born in the West, . . . reserved the government of it to himself. He ceded to his brother a part of Illyricum on the Danube, and the whole of the East. He established universal toleration by law, and took no part in the sectarian controversies which divided Christendom. Valens adopted the Arian faith, and persecuted the orthodox party. The finances of the empire demanded a reform, which neither of the emperors was in a condition to undertake. They wanted money, and they were ignorant where to seek the long exhausted sources of public wealth. . . . Vast provinces in the interior were deserted; enlistments daily became more scanty and difficult; the magistrates of the 'curiæ' or municipalities, who were responsible both for the contributions and the levies of their respective towns, sought by a thousand subterfuges to escape the perilous honour of the magistrature [see Curia, Municipal, of the Later Roman Empire]. . . . During the twelve years that Valentinian reigned over the West (A. D. 364–376), he redeemed his cruelties by several brilliant victories [see Alemanni: A. D. 365–367]. . . . Valentinian had undertaken the defence of Gaul in person, and generally resided at Treves, then the capital of that vast prefecture; but at the time he was thus occupied, invasions not less formidable had devastated the other provinces of the West [see Britain: A. D. 367–370]. . . . At this period Valens reigned over the Greeks, whose language he did not understand (A. D. 364–378). His eastern frontier was menaced by the Persians, his northern by the Goths. . . . Armenia and Iberia became subject to Persia; but as the people of both these countries were Christian, they remained faithful to the interests of Rome, though conquered by her enemy. . . . The dominion of the Goths extended along the shores of the Danube and the Black Sea, and thirty years had elapsed since they had made any incursion into the Roman territory. But during that period they had gone on increasing in greatness and in power. . . . Spite of the formidable neighbourhood of the Goths and the Persians—spite of the cowardice and the incapacity of Valens—the East had remained at peace, protected by the mere name of Valentinian, whose military talents, promptitude, and severity were known to all the barbarian tribes. But the career of this remarkable man, so dreaded by his enemies and by his subjects, had now reached its term." He died in a fit of rage, from the bursting of a blood-vessel in his chest, November 17, A. D. 375. "His two sons,—Gratian, who was scarcely come to manhood, and Valentinian, still a child,—shared the West between them. . . . Never, however, was the empire in greater

need of an able and vigorous head. The entire nation of the Huns, abandoning to the Sienpi its ancient pastures bordering on China, had traversed the whole north of Asia by a march of 1,300 leagues." The Goths, overwhelmed and flying before them, begged permission to cross the Danube and take refuge in Mœsia and Thrace. They were permitted to do so; but such extortions and outrages were practiced on them, at the same time, that they were exasperated to a passionate hatred. This bore fruit in a general rising in 377. Two years of war ensued, marked by two great battles, that of Ad Salices, or The Willows, which neither side could fully claim, and that of Adrianople, August 9, 378, in which Valens perished, and more than 60,000 of his soldiers fell (see GOTHS: A. D. 376, and 378). "The forces of the East were nearly annihilated at the terrible battle of Adrianople. . . . The Goths . . . advanced, ravaging all around them, to the foot of the walls of Constantinople; and, after some unimportant skirmishes, returned westward through Macedonia, Epirus, and Dalmatia. From the Danube to the Adriatic, their passage was marked by conflagration and blood. . . . No general in the East attempted to take advantage of the anarchy in favour of his own ambition; no army offered the purple to its chief; all dreaded the responsibility of command at so tremendous a crisis. All eyes were turned on the court of Treves, the only point whence help was hoped for. But Gratian, eldest son of Valentinian, and emperor of the West, was only 19. He . . . marched upon Illyricum with his army, when he learned the event of the battle of Adrianople, and the death of Valens, who had been so eager to secure the undivided honours of victory, that he would not wait for his arrival. Incapable of confronting such a tempest, he retreated to Sirmium. The news of an invasion of the Allemans into Gaul recalled him to the defence of his own territory. Danger started up on every hand at once. The empire stood in need of a new chief, and one of approved valour. Gratian had the singular generosity to choose from among his enemies, and from a sense of merit alone. Theodosius, the Spaniard, his father's general, who had successively vanquished the Scots and afterwards the Moors, and who had been unjustly condemned to the scaffold at the beginning of Gratian's reign, had left a son 33 years of age, who bore his name. The younger Theodosius had distinguished himself in the command he held in Mœsia, but was living in retirement and disgrace on his estates in Spain, when, with the confidence of a noble mind, Gratian chose him out, presented him to the army on the 19th of January, 379, and declared him his colleague, and emperor of the East."—J. C. L. de Sismondi, *The Fall of the Roman Empire, ch.* 5 (*v.* 1).

A. D. 378.—Gratian's overthrow of the Alemanni in Gaul. See ALEMANNI: A. D. 378.

A. D. 379-395.—Theodosius and the Goths.—His Trinitarian Edict.—Revolt of Maximus.—Death of Gratian.—Overthrow of Maximus by Theodosius.—Usurpation of Eugenius, and his fall.—Death of Theodosius.—"The first duty that Theodosius had to undertake was to restore the self-confidence and trust in victory of the Roman army, terribly shaken as these qualities had been by the disastrous rout of Hadrianople. This he accomplished by waging a successful guerilla war with the Gothic marauders. Valens had played into the hands of the barbarians by risking everything on one great pitched battle. Theodosius adopted the very opposite policy. He outmanoeuvred the isolated and straggling bands of the Goths, defeated them in one skirmish after another that did not deserve the name of a battle, and thus restored the courage and confidence of the Imperial troops. By the end of 379 he seems to have succeeded in clearing the territory south of the Balkan range of the harassing swarms of the barbarians. In February, 380, he fell sick at Thessalonica (which was his chief basis of operations throughout this period), and this sickness, from which he did not fully recover for some months, was productive of two important results, (1) his baptism as a Trinitarian Christian, (2) a renewal of the war against fresh swarms of barbarians. (1) Theodosius appears up to this point of his career not to have definitively ranged himself on either side of the great Arian controversy, though he had a hereditary inclination towards the Creed of Nicaea. Like his father, however, he had postponed baptism in accordance with the prevalent usage of his day: but now upon a bed of sickness which seemed likely to be one of death, he delayed no longer, but received the rite at the hands of Ascholius, the Catholic Bishop of Thessalonica. Before he was able to resume his post at the head of the legions, he published his celebrated Edict: 'To the people of Constantinople.— We desire that all the nations who are governed by the rule of our Clemency shall practise that religion which the Apostle Peter himself delivered to the Romans, and which it is manifest that the pontiff Damasus, and Peter, Bishop of Alexandria, a man of Apostolic sanctity, do now follow: that according to the discipline of the Apostles and the teaching of the Evangelists they believe in the one Godhead of Father, Son, and Holy Spirit, in equal Majesty, and in the holy Trinity. We order all who follow this law to assume the name of Catholic Christians, decreeing that all others, being mad and foolish persons, shall bear the infamy of their heretical dogmas, and that their Conventicles shall not receive the name of Churches: to be punished first by Divine vengeance, and afterwards by that exertion of our power to chastise which we have received from the decree of heaven.' Thus then at length the Caesar of the East was ranged on the side of Trinitarian orthodoxy. Constantine in the latter part of his reign, Constantius, Valens, had all been Arians or semi-Arians, some of them bitter in their heterodoxy. Julian had been a worshipper of the gods of Olympus. Thus for nearly two generations the influence of the Court of Constantinople had been thrown into the scale against the teaching of Athanasius, which was generally accepted throughout the Western realm. Now by the accession of Theodosius to the Trinitarian side, religious unity was restored to the Empire: but at the same time a chasm, an impassable chasm, was opened between the Empire itself and its new Teutonic guests, nearly all of whom held fast to the Arian teaching of their great Apostle Ulfilas. (2) The other consequence of the sickness of Theodosius was, as I have said, a fresh incursion of barbarian hordes,

swarming across the Danube and climbing all the high passes of the Balkans. The work of clearing the country of these marauders had to be all done over again. . . . At length, in the closing months of 380, the provinces south of the Balkans (Macedonia and Thrace) were once more cleared of their barbarian intruders. Peace, in which Gratian concurred, was concluded with the Goths who still doubtless abounded in Moesia [see GOTHS: A. D. 379–382]. . . . The insurrection at Antioch [A. D. 387] displayed the character of Theodosius in a favourable light, as a strong but merciful and magnanimous ruler of men. Very different was the effect on his fame of the insurrection which broke out three years later (390) in the Macedonian city of Thessalonica [see THESSALONICA: A. D. 390]. . . . In the year 383 a military revolt broke out in Britain against the young Emperor Gratian. . . . The army revolted and proclaimed Magnus Clemens Maximus, Emperor. He was, like Theodosius, a native of Spain, and though harsh and perhaps rapacious, a man of ability and experience, not unworthy of the purple if he had come to it by lawful means. Gratian on his side had evidently given some real cause for dissatisfaction to his subjects. . . . Hence it was that when Maximus with the army of Britain landed in Gaul, he shook down the fabric of his power without difficulty. Gratian, finding himself deserted by his troops, escaped from the battle-field, but was overtaken and killed at Lyons. For more than four years, Maximus, satisfied with ruling over the three great Western provinces which had fallen to the share of Gratian, maintained at any rate the appearance of harmony with his two colleagues. . . . At length, in the autumn of 387, Maximus deemed that the time had come for grasping the whole Empire of the West. Lulling to sleep the suspicions of Valentinian and his mother by embassies and protestations of friendship, he crossed the Alps with an army and marched towards Aquileia, where the young Emperor was then dwelling in order to be as near as possible to the dominions of his friendly colleague and protector. Valentinian did not await the approach of his rival, but going down to the port of Grado, took ship and sailed for Thessalonica, his mother and sisters accompanying him. The Emperor and the Senate of Constantinople met the Imperial fugitives at Thessalonica, and discussed the present position of affairs. . . . What the entreaties of the mother might have failed to effect, the tears of the daughter [Galla] accomplished. Theodosius, whose wife Flaccilla had died two years before (385), took Galla for his second wife, and vowed to avenge her wrongs and replace her brother on the throne. He was some time in preparing for the campaign, but, when it was opened, he conducted it with vigour and decision. His troops pressed up the Save valley, defeated those of Maximus in two engagements, entered Aemona (Laybach) in triumph, and soon stood before the walls of Aquileia [July, 388], behind which Maximus was sheltering himself. . . . A mutiny among the troops of Maximus did away with the necessity for a siege," and the usurper, betrayed and delivered to Theodosius, was speedily put to death. Theodosius "handed over to Valentinian II. the whole of the Western Empire, both his own especial share and that which had formerly been held by his brother Gratian. The young Emperor was now 17 years of age; his mother, Justina, had died apparently on the eve of Theodosius's victory, and he governed, or tried to govern alone." But one of his Frankish generals, named Arbogast, gathered all the power of the government into his hands, reduced Valentinian to helpless insignificance, and finally, in May, 392, caused him to be strangled. "The Frankish general, who durst not shock the prejudices of the Roman world by himself assuming the purple, hung that dishonoured robe upon the shoulders of a rhetorician, a confidant, and almost a dependent of his own, named Eugenius. This man, like most of the scholars and rhetoricians of the day, had not abjured the old faith of Hellas. As Arbogast also was a heathen, though worshipping Teutonic rather than Olympian gods, this last revolution looked like a recurrence to the days of Julian, and threatened the hardly-won supremacy of Christianity." Again Theodosius was summoned to the rescue of the West, and, after two years of careful preparation, marched against Eugenius by the same route that he had taken before. The two armies met at a place "half-way between Aemona and Aquileïa, where the Julian Alps are crossed, and where a little stream called the Frigidus (now the Wipbach) burst suddenly from a limestone hill." The battle was won by Theodosius after a terrible struggle, lasting two days (September 5–6, A. D. 394). Eugenius was taken prisoner and put to death; Arbogast fell by his own hand. "Theodosius, who was still in the prime of life, had now indeed 'the rule of the world,' without a rival or a colleague except his own boyish sons. . . . Had his life been prolonged, as it well might have been for twenty or thirty years longer, many things might have gone differently in the history of the world. But, little more than four months after the victory of the Frigidus, Theodosius died [January 17, A. D. 395] of dropsy, at Milan."—T. Hodgkin, *The Dynasty of Theodosius, ch.* 4.

A. D. 388.—Formal establishment of Christianity.—Until the year 384, "paganism was still the constitutional religion of the [Roman] senate. The hall or temple in which they assembled was adorned by the statue and altar of Victory. . . . The senators were sworn on the altar of the goddess to observe the laws of the emperor and of the empire; and a solemn offering of wine and incense was the ordinary prelude of their public deliberations. The removal of this ancient monument was the only injury which Constantius had offered to the superstition of the Romans. The altar of Victory was again restored by Julian, tolerated by Valentinian, and once more banished from the senate by the zeal of Gratian. But the emperor yet spared the statues of the gods which were exposed to the public veneration: four hundred and twenty-four temples or chapels still remained to satisfy the devotion of the people, and in every quarter of Rome the delicacy of the Christians was offended by the fumes of idolatrous sacrifice. But the Christians formed the least numerous party in the senate of Rome." The senate addressed several petitions to Gratian, to the young Valentinian, and to Theodosius for the restoration of the altar of Victory. They were supported by the elo-

quence of the orator Symmachus, and opposed by the energy of Ambrose, the powerful Archbishop of Milan. The question is said to have been, in the end, submitted to the senate, itself, by the Emperor Theodosius (A. D. 388) — he being present in person — "Whether the worship of Jupiter or that of Christ should be the religion of the Romans? The liberty of suffrages, which he affected to allow, was destroyed by the hopes and fears that his presence inspired. . . . On a regular division of the senate, Jupiter was condemned and degraded by the sense of a very large majority."—E. Gibbon, *Decline and Fall of the Roman Empire, ch.* 28.

A. D. 391-395.—Suppression of Paganism. —"The religious liberty of the Pagans, though considerably abridged by Gratian, was yet greater than had been allowed by the laws of Constantine and his immediate successors. The priests and vestals were deprived of their immunities; the revenues of the temples were confiscated for the service of the State; but the heathen rites of their forefathers were still allowed to those who were conscientiously attached to them, provided they abstained from nocturnal sacrifices and magical incantations. But when Theodosius, in the early part of his reign, prohibited the immolation of victims, their superstition was attacked in its most vital part, and, in the course of a few years, the success of his measures against heresy, and his triumph over Maximus, emboldened him to proceed to steps of a still more decisive kind, and to attempt the entire subversion of the already tottering fabric of paganism. A commission was issued to the præfect of the East, directing him to close all heathen temples within his jurisdiction; and while the imperial officers were engaged in this task, assisted by the clergy, and especially by the monks, with a vigour not always strictly legal, Theodosius gradually increased the rigour of his legislative prohibitions. A law was passed in the year 391, declaring that to enter a heathen temple, with a religious purpose, was an offence liable to a fine of fifteen pounds of gold; and in the following year, not only all public, but even all private and domestic, exercise of heathen rites was interdicted under the severest penalties. In some few instances, the intemperate and tumultous proceedings of the monks in destroying the temples, excited the opposition of the fanatical heathen peasantry, and at Alexandria a serious commotion, fatal to many Christians, was occasioned by the injudicious measures of the patriarch Theophilus. But, generally speaking, the pagans showed little disposition to incur the rigorous penalties of the laws, still less to become martyrs for a religion so little calculated to inspire real faith or fortitude. Some show of zeal in the cause of paganism was made at Rome, where the votaries of the ancient superstition still had a strong party, both among the senate and populace. But the eloquent exertions of Symmachus, the champion of heathenism, were easily baffled by Ambrose, who encountered him with equal ability, better argument, and a confident reliance on the support of his sovereign; and not long after, a more important victory was gained, in an enactment by the senate, carried, through the influence of Theodosius, by an overwhelming majority, that Christianity should for the future be the sole religion of the Roman State. This decisive measure sealed the ruin of paganism in Rome and its dependencies. The senators and nobles hastened to conform, nominally at least, to the dominant religion; the inferior citizens followed their example, and St. Jerome was in a little while able to boast that every heathen altar in Rome was forsaken, and every temple had become a place of desolation."—J. B. S. Carwithen and A. Lyall, *Hist. of the Christian Church, pp.* 63-65.

A. D. 394-395.—Final division of the Empire between the sons of Theodosius.—Arcadius in the East, Honorius in the West.—Ministries of Rufinus and Stilicho.—Advent of Alaric the Visigoth.—"The division of the Empire between East and West on the accession of the sons of Theodosius [A. D. 395], though it was possibly meant to be less complete than some preceding partitions, proved to be the final one. It is worth while to indicate the line of division, which is sufficiently accurately traced for us in the Notitia. In Africa it was the well-known frontier marked by 'the Altars of the Philaeni,' which separated Libya (or Cyrenaica) on the East from Africa Tripolitana on the West. Modern geographers draw exactly the same line (about 19° E. of Greenwich) as the boundary of Barca and Tripoli. On the Northern shore of the Mediterranean the matter is a little more complicated. Noricum, Pannonia, Savia, and Dalmatia belonged to the West, and Dacia — not the original but the later province of Dacia — to the East. This gives us for the frontier of the Western Empire the Danube as far as Belgrade, and on the Adriatic the modern town of Lissa. The inland frontier is traced by geographers some 60 miles up the Save from Belgrade, then southwards by the Drina to its source, and so across the mountains to Lissa. Thus Sclavonia, Croatia, and Dalmatia in the Austrian Empire, and Croatia, most of Bosnia, Herzegovina, and Montenegro in the state which was lately called Turkey in Europe, belonged to the Western Empire. The later province of Dacia, which fell to the Eastern share, included Servia (Old and New), the south-east corner of Bosnia, the north of Albania, and the west of Bulgaria. By this partition the Prefecture of Illyricum, as constituted by Diocletian, was divided into two nearly equal parts. . . . What makes the subject somewhat perplexing to the student is the tendency to confuse Illyricum the 'province' and Illyricum the 'prefecture,'" the latter of which embraced, in modern geographical terms, Servia, Western Bulgaria, Macedon, Epirus and Greece. —T. Hodgkin, *Italy and Her Invaders, bk.* 1, *ch.* 4, *note C, and ch.* 3 (*v.* 1).—"This decree for a partition, published by Theodosius shortly before his death, appears to have been generally expected and approved. The incapacity of Arcadius and Honorius, of whom the former had only attained his 18th and the latter his 11th year, had not then been discovered. These princes showed more and more clearly, as time went on, that they inherited no share of their father's abilities, their weakness being such as to render their sovereignty little more than nominal. . . . It was never intended that the two jurisdictions should be independent of each other, but rather that the Emperors should be colleagues and coadjutors, the defenders of one

commonwealth. . . . At the time of the decree, belief in the unity and immortality of the 'Sancta Respublica Romana' was universal. . . . Enactments were invariably made in the names of both Emperors; and, so often as a vacancy of either throne occurred, the title of the Caesar elect remained incomplete until his elevation had been approved and confirmed by the occupant of the other. . . . Theodosius left the Roman world in peace, and provided with a disciplined army sufficient, if rightly directed, for its defence; but his choice of the men to whom he confided the guidance of his sons was unfortunate. Rufinus, to whom the guardianship of Arcadius was entrusted, by birth a Gascon, owed his advancement to his eloquence as an advocate, and his plausible duplicity had so far imposed on the confiding nature of Theodosius as to obtain for him the prefecture of the East. Stilicho, the guardian of Honorius, was by descent a Vandal, and is styled by St. Jerome a semi-barbarian. . . . His military abilities, combined with a prepossessing exterior, induced Theodosius to confer upon him the chief command of the imperial forces, and the hand of his niece, Serena."—R. H. Wrightson, *The Sancta Respublica Romana, ch.* 1.—"Stilicho . . . was popular with the army, and for the present the great bulk of the forces of the Empire was at his disposal; for the regiments united to suppress Eugenius had not yet been sent back to their various stations. Thus a struggle was imminent between the ambitious minister who had the ear of Arcadius, and the strong general who held the command and enjoyed the favour of the army. . . . It was the cherished project of Rufinus to unite Arcadius with his only daughter. . . . But he imprudently made a journey to Antioch, in order to execute vengeance personally on the count of the East, who had offended him; and during his absence from Byzantium an adversary stole a march on him. This adversary was the eunuch Eutropius, the lord chamberlain. . . . Determining that the future Empress should be bound to himself and not to Rufinus, he chose Eudoxia, a girl of singular beauty, the daughter of a distinguished Frank, but herself of Roman education. . . . Eutropius showed a picture of the Frank maiden to the Emperor, and engaged his affections for her; the nuptials were arranged by the time Rufinus returned to Constantinople, and were speedily celebrated (27th April 395). This was a blow to Rufinus, but he was still the most powerful man in the East. The event which at length brought him into contact with Stilicho was the rising of the Visigoths, who had been settled by Theodosius in Moesia and Thrace. . . . Under the leadership of Alaric they raised the ensign of revolt, and spread desolation in the fields and homesteads of Macedonia, Moesia, and Thrace, even advancing close to the walls of Constantinople [see Goths: A. D. 395]. . . . It was impossible to take the field against the Goths, because there were no forces available, as the eastern armies were still with Stilicho in the West. Arcadius therefore was obliged to summon Stilicho to send or bring them back immediately, to protect his throne. This summons gave that general the desired opportunity to interfere in the politics of Constantinople; and having, with energetic celerity, arranged matters on the Gallic frontier, he marched overland through Illyricum, and confronted Alaric in Thessaly, whither the Goth had traced his devastating path from the Propontis. . . . It seems that before Stilicho arrived, Alaric had experienced a defeat at the hands of garrison soldiers in Thessaly; at all events he shut himself up in a fortified camp and declined to engage with the Roman general. In the meantime Rufinus induced Arcadius to send a peremptory order to Stilicho to despatch the eastern troops to Constantinople and depart himself whence he had come; the Emperor resented, or pretended to resent, the presence of his cousin as an officious interference. Stilicho yielded so readily that his willingness seems almost suspicious. . . . He consigned the eastern soldiers to the command of a Gothic captain, Gainas, and himself departed to Salona, allowing Alaric to proceed on his wasting way into the lands of Hellas." When Gainas and his army arrived at the gates of Constantinople, the Emperor came out to meet them, with Rufinus by his side. The troops suddenly closed round the latter and murdered him. "We can hardly suppose that the lynching of Rufinus was the fatal inspiration of a moment, but whether it was proposed or approved of by Stilicho, or was a plan hatched among the soldiers on their way to Constantinople, is uncertain."—J. B. Bury, *Hist. of the Later Roman Empire, bk.* 2, *ch.* 1 (*v.* 1).

A. D. 396-398.—Commission of Alaric under the Eastern Empire.—Suppression of the revolt of Gildo in Africa.—Commanding position of Stilicho.—"For the next five or six years the chief power over the feeble soul of Arcadius was divided between three persons, his fair Frankish Empress Eudoxia, Eutropius, the haggard old eunuch who had placed her on the throne, and Gainas the Goth, commander of the Eastern army. Again, in the year 396, did Stilicho, now commanding only the Western forces, volunteer to deliver Greece from the Visigoths. The outset of the campaign was successful. The greater part of Peloponnesus was cleared of the invader, who was shut up in the rugged mountain country on the confines of Elis and Arcadia. The Roman army was expecting soon to behold him forced by famine to an ignominious surrender, when they discovered that he had pierced the lines of circumvallation at an unguarded point, and marched with all his plunder northwards to Epirus. What was the cause of this unlooked-for issue of the struggle? . . . The most probable explanation . . . is that Fabian caution co-operated with the instinct of the Condottiere against pushing his foe too hard. There was always danger for Rome in driving Alaric to desperation: there was danger privately for Stilicho if the dead Alaric should render him no longer indispensable. Whatever might be the cause, by the end of 396 Alaric was back again in his Illyrian eyrie, and thenceforward whatever threats might be directed towards the East the actual weight of his arms was felt only by the West. Partly, at least, this is to be accounted for by the almost sublime cowardice of the ministers of Arcadius, who rewarded his Grecian raids by clothing him with the sacred character of an officer of the Empire in their portion of Illyricum [see Goths: A. D. 395]. The precise title under which he exercised jurisdiction is not stated. . . . During an interval of quiescence, which lasted apparently about four years, the Visigothic King was using the forms of Roman

law, the machinery of Roman taxation, the almost unbounded authority of a Roman provincial governor, to prepare the weapon which was one day to pierce the heart of Rome herself. The Imperial City, during the first portion of this interval, was suffering the pangs of famine. . . . Since the foundation of Constantinople . . . Egypt had ceased to nourish the elder Rome. . . . Rome was thus reduced to an almost exclusive dependence on the harvests of Africa proper (that province of which Carthage was the capital), of Numidia, and of Mauretania. . . . But this supply . . . in the year 397 was entirely stopped by the orders of Gildo, who had made himself virtual master of these three provinces." The elder Theodosius had suppressed in 374 a revolt in Mauretania headed by one Firmus. "The son of a great sheep-farmer, Nabal, he [Firmus] had left behind him several brothers, one of whom, Gildo, had in the year 386 gathered up again some portion of his brother's broken power. We find him, seven years later (in 393), holding the rank of Count of Africa in the Roman official hierarchy. . . . He turned to his own account the perennial jealousy existing between the ministers of the Eastern and Western Courts, renounced his allegiance to Rome, and preferred to transfer it to Constantinople. What brought matters to a crisis was his refusal to allow the grain crops of 397 to be conveyed to Rome. . . . The Roman Senate declared war in the early winter months of 398 against Gildo. Stilicho, who, of course, undertook the fitting out of the expedition, found a suitable instrument for Rome's chastisement in one who had had cruel wrongs of his own to avenge upon Gildo. This was yet another son of Nabal, Mascezel." Mascezel, at the head of nearly 40,000 men, accomplished the overthrow of his brother, who slew himself, or was slain, when he fell into Roman hands. "Thus the provinces of Africa were for the time won back again for the Empire of the West, and Rome had her corn again. . . . The glory and power of Stilicho were now nearly at their highest point. Shortly before the expedition against Gildo he had given his daughter Maria in marriage to Honorius, and the father-in-law of the Emperor might rightly be deemed to hold power with a securer grasp than his mere chief minister."—T. Hodgkin, *Italy and Her Invaders, bk.* 1, *ch.* 4 (*v.* 1).

A. D. 400-403.—First Gothic invasion of Italy under Alaric.—Stilicho's repulse of the invaders. See GOTHS (VISIGOTHS): A. D. 400–403.

A. D. 400-518.—The Eastern Empire.—Expulsion of Gothic soldiery from Constantinople.—Conflict of John Chrysostom and the Empress Eudoxia.—Reigns of Theodosius II., Pulcheria, Marcianus, Leo I., Zeno, and Anastasius.—Persistent vitality of the Byzantine government.—"While Alaric's eyes were turned on Italy, but before he had actually come into conflict with Stilicho, the Court of Constantinople had been the seat of grave troubles. Gainas, the Gothic 'Magister militum' of the East, and his creature, the eunuch Eutropius, had fallen out, and the man of war had no difficulty in disposing of the wretched harem-bred Grand Chamberlain. . . . The Magister militum now brought his army over to Constantinople, and quartered it there to overawe the emperor. It appeared quite likely that ere long the Germans would sack the city; but the fate that befell Rome ten years later was not destined for Constantinople. A mere chance brawl put the domination of Gainas to a sudden end [July, A. D. 400]. . . . The whole population turned out with extemporized arms and attacked the German soldiery. . . . Isolated bodies of the Germans were cut off one by one, and at last their barracks were surrounded and set on fire. The rioters had the upper hand; 7,000 soldiers fell, and the remnant thought themselves lucky to escape. Gainas at once declared open war on the empire, but . . . he was beaten in the field and forced to fly across the Danube, where he was caught and beheaded by Uldes, king of the Huns. . . . The departure of Alaric and the death of Gainas freed the Eastern Romans from the double danger that [had] impended over them. . . . The weak Arcadius was enabled to spend the remaining seven years of his life in comparative peace and quiet. His court was only troubled by an open war between his spouse, the Empress Ælia Eudoxia, and John Chrysostom, the Patriarch of Constantinople. John was a man of saintly life and apostolic fervour, but rash and inconsiderate alike in speech and action. . . . The patriarch's enemies were secretly supported by the empress, who had taken offence at the outspoken way in which John habitually denounced the luxury and insolence of her court. She favoured the intrigues of Theophilus, Patriarch of Alexandria, against his brother prelate, backed the Asiatic clergy in their complaints about John's oppression of them, and at last induced the Emperor to allow the saintly patriarch to be deposed by a hastily-summoned council, the 'Synod of the Oak,' held outside the city. The populace rose at once to defend their pastor; riots broke out, Theodosius was chased back to Egypt, and the Emperor, terrified by an earthquake which seemed to manifest the wrath of heaven, restored John to his place. Next year, however, the war between the empress and the patriarch broke out again. . . . The Emperor, at his wife's demand, summoned another council, which condemned Chrysostom, and on Easter Day, A. D. 404, seized the patriarch in his cathedral by armed force, and banished him to Asia. That night a fire, probably kindled by the angry adherents of Chrysostom, broke out in St. Sophia, which was burnt to the ground. From thence it spread to the neighbouring buildings, and finally to the Senate-house, which was consumed with all the treasures of ancient Greek art of which Constantine had made it the repository. Meanwhile the exiled John was banished to a dreary mountain fastness in Cappadocia, and afterwards condemned to a still more remote prison at Pityus on the Euxine. He died on his way thither. . . . The feeble and inert Arcadius died in A. D. 408, at the early age of thirty-one; his imperious consort had preceded him to the grave, and the empire of the East was left to Theodosius II., a child of seven years, their only son. . . . The little emperor was duly crowned, and the administration of the East undertaken in his name by the able Anthemius, who held the office of Praetorian Praefect. History relates nothing but good of this minister; he made a wise commercial treaty with the king of Persia; he repelled with ease a Hunnish invasion of Moesia; he built a flotilla on the Danube, where Roman war-ships had not been seen since the

death of Valens, forty years before; he reorganized the corn supply of Constantinople; and did much to get back into order and cultivation the desolated north-western lands of the Balkan Peninsula. . . . The empire was still more indebted to him for bringing up the young Theodosius as an honest and god-fearing man. The palace under Anthemius' rule was the school of the virtues; the lives of the emperor and his three sisters, Pulcheria, Arcadia, and Marina, were the model and the marvel of their subjects. Theodosius inherited the piety and honesty of his grandfather and namesake, but was a youth of slender capacity, though he took some interest in literature, and was renowned for his beautiful penmanship. His eldest sister, Pulcheria, was the ruling spirit of the family, and possessed unlimited influence over him, though she was but two years his senior. When Anthemius died in A. D. 414, she took the title of Augusta, and assumed the regency of the East. Pulcheria was an extraordinary woman: on gathering up the reins of power she took a vow of chastity, and lived as a crowned nun for thirty-six years; her fear had been that, if she married, her husband might cherish ambitious schemes against her brother's crown; she therefore kept single herself and persuaded her sisters to make a similar vow. Austere, indefatigable, and unselfish, she proved equal to ruling the realms of the East with success, though no woman had ever made the attempt before. When Theodosius came of age he refused to remove his sister from power, and treated her as his colleague and equal. By her advice he married in A. D. 421, the year that he came of age, the beautiful and accomplished Athenaïs, daughter of the philosopher Leontius. . . . Theodosius' long reign passed by in comparative quiet. Its only serious troubles were a short war with the Persians, and a longer one with Attila, the great king of the Huns, whose empire now stretched over all the lands north of the Black Sea and Danube, where the Goths had once dwelt. In this struggle the Roman armies were almost invariably unfortunate. The Huns ravaged the country as far as Adrianople and Philippopolis, and had to be bought off by the annual payment of 700 lbs. of gold [£31,000]. . . . The reconstruction of the Roman military forces was reserved for the successors of Theodosius II. He himself was killed by a fall from his horse in 450 A. D., leaving an only daughter, who was married to her cousin Valentinian III., Emperor of the West. Theodosius, with great wisdom, had designated as his successor, not his young son-in-law, a cruel and profligate prince, but his sister Pulcheria, who at the same time ended her vow of celibacy and married Marcianus, a veteran soldier and a prominent member of the Senate. The marriage was but formal, for both were now well advanced in years: as a political expedient it was all that could be desired. The empire had peace and prosperity under their rule, and freed itself from the ignominious tribute to the Huns. Before Attila died in 452, he had met and been checked by the succours which Marcianus sent to the distressed Romans of the West. When Marcianus and Pulcheria passed away, the empire came into the hands of a series of three men of ability. They were all bred as high civil officials, not as generals; all ascended the throne at a ripe age; not one of them won his crown by arms, all were peaceably designated either by their predecessors, or by the Senate and army. These princes were Leo I. (457–474), Zeno (474–491), Anastasius (491–518). Their chief merit was that they guided the Roman Empire in the East safely through the stormy times which saw its extinction in the West. While, beyond the Adriatic, province after province was being lopped off and formed into a new Germanic kingdom, the emperors who reigned at Constantinople kept a tight grip on the Balkan Peninsula and on Asia, and succeeded in maintaining their realm absolutely intact. Both East and West were equally exposed to the barbarian in the fifth century, and the difference of their fate came from the character of their rulers, not from the diversity of their political conditions."—C. W. C. Oman, *Story of the Byzantine Empire, ch.* 4–5.—"In spite of the dissimilarity of their personal conduct, the general policy of their government [i. e. of the six emperors between Arcadius and Justinian] is characterised by strong features of resemblance. . . . The Western Empire crumbled into ruins, while the Eastern was saved, in consequence of these emperors having organised the system of administration which has been most unjustly calumniated, under the name of Byzantine. The highest officers, and the proudest military commanders, were rendered completely dependent on ministerial departments and were no longer able to conspire or rebel with impunity. The sovereign was no longer exposed to personal danger, nor the treasury to open peculation. But, unfortunately, the central executive power could not protect the people from fraud with the same ease as it guarded the treasury; and the emperors never perceived the necessity of intrusting the people with the power of defending themselves from the financial oppression of the subaltern administration."—G. Finlay, *Greece under the Romans, ch.* 2, *sect.* 11.

A. D. 404-408.—The Western Empire: The last gladiatorial show.—Retreat of Honorius and the imperial court to Ravenna.—Invasion of Radagaisus.—Alliance with Alaric the Goth.—Fall and death of Stilicho.—"After the retreat of the barbarians, Honorius was directed to accept the dutiful invitation of the senate, and to celebrate in the imperial city the auspicious era of the Gothic victory and of his sixth consulship. The suburbs and the streets, from the Milvian bridge to the Palatine mount, were filled by the Roman people, who, in the space of a hundred years, had only thrice been honoured with the presence of their sovereigns [whose residence had been at Constantinople, at Treves, or at Milan]. . . . The emperor resided several months in the capital. . . . The people were repeatedly gratified by the attention and courtesy of Honorius in the public games. . . . In these games of Honorius, the inhuman combats of gladiators polluted for the last time the amphitheatre of Rome. . . . The recent danger to which the person of the emperor had been exposed in the defenceless palace of Milan urged him to seek a retreat in some inaccessible fortress of Italy, where he might securely remain, while the open country was covered by a deluge of barbarians; . . . and in the 20th year of his age the Emperor of the West, anxious only for his personal safety, retired to the perpetual confinement of the walls and morasses of Ravenna.

The example of Honorius was imitated by his feeble successors, the Gothic kings, and afterwards the exarchs, who occupied the throne and palace of the emperors; and till the middle of the 8th century Ravenna was considered as the seat of government and the capital of Italy. The fears of Honorius were not without foundation, nor were his precautions without effect. While Italy rejoiced in her deliverance from the Goths, a furious tempest was excited among the nations of Germany, who yielded to the irresistible impulse that appears to have been gradually communicated from the eastern extremity of the continent of Asia [by the invasion of the Huns, which Gibbon considers to have been the impelling cause of the great avalanche of barbarians from the north that swept down upon Italy under Radagaisus in 406—see RADAGAISUS]. . . . Many cities of Italy were pillaged or destroyed; and the siege of Florence by Radagaisus is one of the earliest events in the history of that celebrated republic, whose firmness checked and delayed the unskilful fury of the barbarians." Stilicho came to the relief of the distressed city, "and the famished host of Radagaisus was in its turn besieged." The barbarians, surrounded by well guarded entrenchments, were forced to surrender, after many had perished from want of food. The chief was beheaded; his surviving followers were sold as slaves. Meantime, Alaric, the Gothic king, had been taken into the pay of the Empire. "Renouncing the service of the Emperor of the East, Alaric concluded with the Court of Ravenna a treaty of peace and alliance, by which he was declared master-general of the Roman armies throughout the præfecture of Illyricum; as it was claimed, according to the true and ancient limits, by the minister of Honorius." This arrangement with Alaric caused great dissatisfaction in the army and among the people, and was a potent cause of the fall and death of Stilicho, which occurred A. D. 408. He was arrested and summarily executed, at Ravenna, on the mandate of his ungrateful and worthless young master, whose trembling throne he had upheld for thirteen years.—E. Gibbon, *Decline and Fall of the Roman Empire, ch.* 30 (*v.* 3).

A. D. 406-500.—The breaking of the Rhine barrier.—The great Teutonic invasion and occupation of the Western Empire.—"Up to the year 406 the Rhine was maintained as the frontier of the Roman Empire against the numerous barbarian races and tribes that swarmed uneasily in central Europe. From the Flavian Emperors until the time of Probus (282), the great military line from Coblenz to Kehlheim on the Danube had been really defended, though often overstepped and always a strain on the Romans, and thus a tract of territory (including Baden and Würtemberg) on the east shore of the Upper Rhine, the titheland as it was called, belonged to the Empire. But in the fourth century it was as much as could be done to keep off the Alemanni and Franks who were threatening the provinces of Gaul. The victories of Julian and Valentinian produced only temporary effects. On the last day of December 406 a vast company of Vandals, Suevians, and Alans crossed the Rhine. The frontier was not really defended; a handful of Franks who professed to guard it for the Romans were easily swept aside, and the invaders desolated Gaul at pleasure for the three following years. Such is the bare fact which the chroniclers tell us, but this migration seems to have been preceded by considerable movements on a large scale along the whole Rhine frontier, and these movements may have agitated the inhabitants of Britain and excited apprehensions there of approaching danger. Three tyrants had been recently elected by the legions in rapid succession; the first two, Marcus and Gratian, were slain, but the third Augustus, who bore the auspicious name of Constantine, was destined to play a considerable part for a year or two on the stage of the western world [see BRITAIN: A. D. 407]. It seems almost certain that these two movements, the passage of the Germans across the Rhine and the rise of the tyrants in Britain, were not without causal connection; and it also seems certain that both events were connected with the general Stilicho. The tyrants were elevated in the course of the year 406, and it was at the end of the same year that the Vandals crossed the Rhine. Now the revolt of the legions in Britain was evidently aimed against Stilicho. . . . There is direct contemporary evidence . . . that it was by Stilicho's invitation that the barbarians invaded Gaul; he thought that when they had done the work for which he designed them he would find no difficulty in crushing them or otherwise disposing of them. We can hardly avoid supposing that the work which he wished them to perform was to oppose the tyrant of Britain—Constantine, or Gratian, or Marcus, whoever was tyrant then; for it is quite certain that, like Maximus, he would pass into Gaul, where numerous Gallo-Roman adherents would flock to his standards. Stilicho died before Constantine was crushed, and the barbarians whom he had so lightly summoned were still in the land, harrying Gaul, destined soon to harry and occupy Spain and seize Africa. From a Roman point of view Stilicho had much to answer for in the dismemberment of the Empire; from a Teutonic point of view, he contributed largely to preparing the way for the foundation of the German kingdoms."—J. B. Bury, *A History of the Later Roman Empire, bk.* 2, *ch.* 6 (*v.* 1).—"If modern history must have a definite beginning, the most convenient beginning for it is the great Teutonic invasion of Gaul in the year 407. Yet the nations of modern Europe do not spring from the nations which then crossed the Rhine, or from any intermixture between them and the Romans into whose land they made their way. The nations which then crossed the Rhine were the Vandals, Suevians, and Alans. . . . None of these nations made any real settlements in Gaul; Gaul was to them simply the high road to Spain. There they did settle, though the Vandals soon forsook their settlement, and the Alans were soon rooted out of theirs. The Suevian kept his ground for a far longer time; we may, if we please, look on him as the Teutonic forefather of Leon, while we look on the Goth as the Teutonic forefather of Castile. Here we have touched one of the great national names of history; the Goth, like the Frank, plays quite another part in Western Europe from the Alan, the Suevian, and the Vandal. . . . Now both Franks and Goths had passed into the Empire long before the invasion of 407. One branch of the Franks . . . was actually settled on Roman lands, and, as Roman subjects, did their best to withstand the great

invasion. What then makes that invasion so marked an epoch? . . . The answer is that the invasion of 407 not only brought in new elements, but put the existing elements into new relations to one another. Franks and Goths put on a new character and begin a new life. The Burgundians pass into Gaul, not as a road to Spain, but as a land in which to find many homes. They press down to the south-eastern corner of the land, while the Frank no longer keeps himself in his north-eastern corner, while in the south-west the Goth is settled as for a while the liegeman of Cæsar, and in the north-west a continental Britain springs into being. Here in truth are some of the chiefest elements of the modern world, and though none of them are among the nations that crossed the Rhine in 407, yet the new position taken by all of them is the direct consequence of that crossing. In this way, in Gaul and Spain at least, the joint Vandal, Alan, and Suevian invasion is the beginning of the formation of the modern nations, though the invading nations themselves form no element in the later life of Gaul and only a secondary element in the later life of Spain. The later life of these lands, and that of Italy also, has sprung of the settlement of Teutonic nations in a Roman land, and of the mutual influences which Roman and Teuton have had on one another. Roman and Teuton lived side by side, and out of their living side by side has gradually sprung up a third thing different from either, a thing which we cannot call either Roman or Teutonic, or more truly a thing which we may call Roman and Teutonic and some other things as well, according to the side of it which we look at. This third thing is the Romance element in modern Europe, the Romance nations and their Romance tongues."—E. A. Freeman, *The Chief Periods of European History, pp.* 87–90.—"The true Germanic people who occupied Gaul were the Burgundians, the Visigoths, and the Franks. Many other people, many other single bands of Vandals, Alani, Suevi, Saxons, &c., wandered over its territory; but of these, some only passed over it, and the others were rapidly absorbed by it; these are partial incursions which are without any historical importance. The Burgundians, the Visigoths, and the Franks, alone deserve to be counted among our ancestors. The Burgundians definitively established themselves in Gaul between the years 406 and 413; they occupied the country between the Jura, the Saône, and the Durance; Lyons was the centre of their dominion. The Visigoths, between the years 412 and 450, spread themselves over the provinces bounded by the Rhone, and even over the left bank of the Rhone to the south of the Durance, the Loire, and the Pyrenees: their king resided at Toulouse. The Franks, between the years 481 and 500, advanced in the north of Gaul, and established themselves between the Rhine, the Scheldt, and the Loire, without including Brittany and the western portions of Normandy; Clovis had Soissons and Paris for his capitals. Thus, at the end of the fifth century, was accomplished the definitive occupation of the territory of Gaul by the three great German tribes. The condition of Gaul was not exactly the same in its various parts, and under the dominion of these three nations. There were remarkable differences between them. The Franks were far more foreign, German, and barbarous, than the Burgundians and the Goths. Before their entrance into Gaul, these last had had ancient relations with the Romans; they had lived in the eastern empire, in Italy; they were familiar with the Roman manners and population. We may say almost as much for the Burgundians. Moreover, the two nations had long been Christians. The Franks, on the contrary, arrived from Germany in the condition of pagans and enemies. Those portions of Gaul which they occupied became deeply sensible of this difference, which is described with truth and vivacity in the seventh of the 'Lectures upon the History of France,' of M. Augustin Thierry. I am inclined, however, to believe that it was less important than has been commonly supposed. If I do not err, the Roman provinces differed more among themselves than did the nations which had conquered them. You have already seen how much more civilized was southern than northern Gaul, how much more thickly covered with population, towns, monuments, and roads. Had the Visigoths arrived in as barbarous a condition as that of the Franks, their barbarism would yet have been far less visible and less powerful in Gallia Narbonensis and in Aquitania; Roman civilization would much sooner have absorbed and altered them. This, I believe, is what happened; and the different effects which accompanied the three conquests resulted rather from the differences of the conquered than from that of the conquerors."—F. Guizot, *Hist. of Civilization, v.* 2, *lect.* 8.—"The invasion of the barbarians was not like the torrent which overwhelms, but rather like a slow, persistent force which undermines, disintegrates, and crumbles. The Germans were not strangers to the Roman Empire when they began their conquests. . . . It is well known that many of the Roman Emperors were barbarians who had been successful soldiers in the Imperial army; that military colonies were established on the frontiers composed of men of various races under the control of Roman discipline; that the Goths, before they revolted against the authority of the Emperor, were his chosen troops; that the great Alaric was a Roman general; that the shores of the Danube and the Rhine, which marked the limits of the Empire, were lined with cities which were at the same time Roman colonies and peopled with men of the Teutonic races. When the barbarians did actually occupy the territory their movement seems at first to have been characterized by a strange mixture of force with a sentiment of awe and reverence for the Roman name. In Italy and in Gaul they appropriated to themselves two-thirds of the lands, but they sought to govern their conquests by means of the Roman law and administration, a machine which proved in their hands, by the way, a rather clumsy means of government. They robbed the provincials of all the movable property they possessed, but the suffering they inflicted is said not to have been as great as that caused by the exactions of the Roman taxgatherer. The number of armed invaders has doubtless been exaggerated. The whole force of the Burgundian tribe, whose territory, in the southeast of modern France, extended to the Rhone at Avignon, did not, it is said, exceed sixty thousand in all, while the armed bands of Clovis, who changed the destinies not only of Gaul but of Europe, were not greater than one-tenth of that number.

The great change in their life was, as I have said, that they ceased to be wanderers; they became, in a measure at least, fixed to the soil; and in contrast with the Romans, they preferred to live in the country and not in the towns. In this they followed their Teutonic habits, little knowing what a mighty change this new distribution of population was to cause in the social condition of Europe. They retained, too, their old military organization, and, after attempts more or less successful to use the Roman administration for the ordinary purposes of government, they abandoned it, and ruled the countries they conquered by simple military force, under their Dukes and Counts, the Romans generally being allowed in their private relations to govern themselves by the forms of the Roman law." —C. J. Stillé, *Studies in Mediæval History, ch.* 2.— "The coming in of the Germans brought face to face the four chief elements of our civilization: the Greek with its art and science, much of it for the time forgotten; the Roman with its political institutions and legal ideas, and furnishing the empire as the common ground upon which all stood; the Christian with its religious and moral ideas; and the German with other political and legal ideas, and with a reinforcement of fresh blood and life. By the end of the sixth century these all existed side by side in the nominal Roman empire. It was the work of the remaining centuries of the middle ages to unite them into a single organic whole — the groundwork of modern civilization. But the introduction of the last element, the Germans, was a conquest — a conquest rendered possible by the inability of the old civilization any longer to defend itself against their attack. It is one of the miracles of history that such a conquest should have occurred, the violent occupation of the empire by the invasion of an inferior race, with so little destruction of civilization, with so complete an absorption, in the end, of the conqueror by the conquered. It must be possible to point out some reasons why the conquest of the ancient world by the Germans was so little what was to be expected. In a single word, the reason is to be found in the impression which the world they had conquered made upon the Germans. They conquered it, and they treated it as a conquered world. They destroyed and plundered what they pleased, and it was not a little. They took possession of the land and they set up their own tribal governments in place of the Roman. And yet they recognized, in a way, even the worst of them, their inferiority to the people they had overcome. They found upon every side of them evidences of a command over nature such as they had never acquired: cities, buildings, roads, bridges, and ships; wealth and art, skill in mechanics and skill in government, the like of which they had never known; ideas firmly held that the Roman system of things was divinely ordained and eternal; a church strongly organized and with an imposing ceremonial, officered by venerable and saintly men, and speaking with an overpowering positiveness and an awful authority that did not yield before the strongest barbarian king. The impression which these things made upon the mind of the German must have been profound. In no other way can the result be accounted for. Their conquest was a physical conquest, and as a physical conquest it was complete, but it scarcely went farther. In government and law there was little change for the Roman; in religion and language, none at all. Other things, schools and commercial arrangements for instance, the Germans would have been glad to maintain at the Roman level if they had known how. Half unconsciously they adopted the belief in the divinely founded and eternal empire, and in a vague way recognized its continuance after they had overthrown it."— G. B. Adams, *Civilization During the Middle Ages, ch.* 5.—See, also, Gaul: A. D. 406–409, 5–8th Centuries, and 5–10th Centuries.

A. D. 408-410.— The three sieges and the sacking of the Imperial city by Alaric.—Death of the Gothic chieftain.—Having rid himself of the great minister and general whose brain and arm were the only hope of his dissolving empire, Honorius proceeded to purge his army and the state of barbarians and heretics. He "removed all who professed religious opinions different from his own, from every public office; . . . and, to complete the purification of his army, ordered a general massacre of all the women and children of the barbarians, whom the soldiers in his service had delivered up as hostages. In one day and hour these innocent victims were given up to slaughter and their property to pillage. These hostages had been left in all the Italian cities by the barbarian confederates, as a guarantee for their fidelity to Rome; when they learned that the whole had perished, in the midst of peace, in contempt of all oaths, one furious and terrific cry of vengeance arose, and 30,000 soldiers, who had been the faithful servants of the empire, at once passed over to the camp of Alaric [then in Illyria], and urged him to lead them on to Rome. Alaric, in language the moderation of which Honorius and his ministers ascribed to fear, demanded reparation for the insults offered him, and strict observance of the treaties concluded with him. The only answer he obtained was couched in terms of fresh insult, and contained an order to evacuate all the provinces of the empire." On this provocation, Alaric crossed the Alps, in October, A. D. 408, meeting no resistance till he reached Ravenna. He threatened that city, at first, but the contemptible Emperor of the West was safe in his fen-fastness, and the Goth marched on to Rome. He "arrived before Rome [in the autumn of A. D. 408] 619 years after that city had been threatened by Hannibal. During that long interval her citizens had never looked down from her walls upon the banner of an enemy [a foreign invader] waving in their plains. . . . Alaric did not attempt to take Rome by assault: he blockaded the gates, stopped the navigation of the Tiber, and soon famine took possession of a city which was eighteen miles in circumference and contained above a million of inhabitants. . . . At length, the Romans had recourse to the clemency of Alaric; and, by means of a ransom of five thousand pounds of gold and a great quantity of precious effects, the army was induced to retire into Tuscany." The standard of Alaric was now joined by 40,000 barbarian slaves, who escaped from their Italian masters, and by a large reinforcement of Goths from the Danube, led by the brother-in-law of Alaric, Ataulphus, or Athaulphus (Adolphus, in its modern form) by name. The Visigothic king offered peace to the empire if it would relinquish to him a kingdom in Noricum, Dalmatia and Venetia, with a yearly payment of gold; in the

end his demands fell until they extended to Noricum, only. But the fatuous court at Ravenna refused all terms, and Alaric marched back to Rome. Once more, however, he spared the venerable capital, and sought to attain his ends by requiring the senate to renounce allegiance to Honorius and to choose a new emperor. He was obeyed and Priscus Attalus, the præfect of the city, was formally invested with the purple. This new Augustus made Alaric and Ataulphus his chief military officers, and there was peace for a little time. But Attalus, unhappily, took his elevation with seriousness and did not recognize the commands that were hidden in the advice which he got from his Gothic patron. Alaric found him to be a fool and stripped his purple robe from his shoulders within less than a year. Then, failing once more to negotiate terms of peace with the worthless emperor shut up in Ravenna, he laid siege to Rome for the third time — and the last. "On the 24th of April, 410, the year 1163 from the foundation of the august city, the Salarian gate was opened to him in the night, and the capital of the world, the queen of nations, was abandoned to the fury of the Goths. Yet this fury was not without some tinge of pity; Alaric granted a peculiar protection to the churches, which were preserved from all insult, together with their sacred treasures, and all those who had sought refuge within their walls. While he abandoned the property of the Romans to pillage, he took their lives under his protection; and it is affirmed that only a single senator perished by the sword of the barbarians. The number of plebeians who were sacrificed appears not to have been thought a matter of sufficient importance even to be mentioned. At the entrance of the Goths, a small part of the city was given up to the flames; but Alaric soon took precautions for the preservation of the rest of the edifices. Above all, he had the generosity to withdraw his army from Rome on the sixth day, and to march it into Campania, loaded, however, with an immense booty. Eleven centuries later, the army of the Constable de Bourbon showed less veneration." Alaric survived the sack of Rome but a few months, dying suddenly in the midst of preparations that he made for invading Sicily. He was buried in the bed of the little river Bisentium, which flows past the town of Cozenza, the stream being diverted for the purpose and then turned back to its course.—J. C. A. D. 423-450.—Death of Honorius.—Reign of Valentinian III. and his mother Placidia.—Legal separation of the Eastern and Western Empires.—The disastrous reign of Honorius, emperor of the West, was ended by his death in 423. The nearest heir to the throne was his infant nephew, Valentinian, son of his sister Placidia. The latter, after being a captive in the hands of the Goths and after sharing the Visigothic throne for some months, as wife of king Ataulphus, had been restored to her brother on her Gothic husband's death. Honorius forced her, then, to marry his favorite, the successful general, Constantius, whom he raised to the rank of Augustus and associated with himself on the throne of the West. But Constantius soon died, leaving his widow with two children — a daughter and a son. Presently, on some quarrel with Honorius, Placidia withdrew from Ravenna and took refuge at Constantinople, where her nephew Theodosius occupied the Eastern throne. She and her children were there when Honorius died, and in their absence the Western throne was usurped by a rebel named John, or Joannes, the Notary, who reigned nearly two years. With the aid of forces from the Eastern Empire he was unseated and beheaded and the child Valentinian was invested with the imperial purple, A. D. 425. For the succeeding twenty-five years his mother, Placidia, reigned in his name. As compensation to the court at Constantinople for the material aid received from it, the rich province of Dalmatia and the troubled provinces of Pannonia and Noricum, were now severed from the West and ceded to the Empire of the East. At the same time, the unity of the Roman government was formally and finally dissolved. "By a positive declaration, the validity of all future laws was limited to the dominions of their peculiar author; unless he should think proper to communicate them, subscribed with his own hand, for the approbation of his independent colleague."—E. Gibbon, *Decline and Fall of the Roman Empire, ch.* 33.

A. D. 455.—Pillage of the city by the Vandals.—"The sufferings and the ignominy of the Roman empire were increased by a new calamity which happened in the year of Valentinian's death [murdered by an usurper, Petronius Maximus A. D. 455]. Eudoxia, the widow of that emperor, who had afterwards become [through compulsion] the wife of Maximus, avenged the murder of her first husband by plotting against her second; reckless how far she involved her country in the ruin. She invited to Rome Genseric, king of the Vandals, who, not content with having conquered and devastated Africa,

made every effort to give a new direction to the rapacity of his subjects, by accustoming them to maritime warfare, or, more properly speaking, piracy. His armed bands, who, issuing from the shores of the Baltic, had marched over the half of Europe, conquering wherever they went, embarked in vessels which they procured at Carthage, and spread desolation over the coasts of Sicily and Italy. On the 12th of June, 455, they landed at Ostia. Maximus was killed in a seditious tumult excited by his wife. Defence was impossible; and, from the 15th to the 29th of June, the ancient capital of the world was pillaged by the Vandals with a degree of rapacity and cruelty to which Alaric and the Goths had made no approach. The ships of the pirates were moored along the quays of the Tiber, and were loaded with a booty which it would have been impossible for the soldiers to carry off by land."—J. C. L. de Sismondi, *Fall of the Roman Empire, ch.* 8 (*v.* 1).—"On the whole, it is clear from the accounts of all the chroniclers that Gaiseric's [or Genseric's] pillage of Rome, though insulting and impoverishing to the last degree, was in no sense destructive to the Queen of cities. Whatever he may have done in Africa, in Rome he waged no war on architecture, being far too well employed in storing away gold and silver and precious stones, and all manner of costly merchandise in those insatiable hulks which were riding at anchor by Ostia. Therefore, when you stand in the Forum of Rome or look upon the grass-grown hill which was once the glorious Palatine, blame if you like the Ostrogoth, the Byzantine, the Lombard, above all, the Norman, and the Roman baron of the Middle Ages, for the heart-breaking ruin that you see there, but leave the Vandal uncensured, for, notwithstanding the stigma conveyed in the word 'vandalism,' he is not guilty here."—T. Hodgkin, *Italy and Her Invaders, bk.* 3, *ch.* 2 (*v.* 2).

A. D. 455-476.—Barbarian masters and imperial puppets.—From Count Ricimer to Odoacer.—The ending of the line of Roman Emperors in the West, called commonly the Fall of the Western Empire.—"After the death of Valentinian III., the unworthy grandson of the great Theodosius [March 16, A. D. 455], the first thought of the barbarian chiefs was, not to destroy or usurp the Imperial name, but to secure to themselves the nomination of the emperor. Avitus, chosen in Gaul under the influence of the West Gothic King of Toulouse, Theoderic II., was accepted for a time as the western emperor, by the Roman Senate and by the Court of Constantinople. But another barbarian, Ricimer the Sueve, ambitious, successful, and popular, had succeeded to the command of the 'federated' foreign bands which formed the strength of the imperial army in Italy. Ricimer would not be a king, but he adopted as a settled policy the expedient, or the insulting jest, of Alaric. . . . He deposed Avitus, and probably murdered him. Under his direction, the Senate chose Majorian. Majorian was too able, too public-spirited, perhaps too independent, for the barbarian Patrician; Majorian, at a moment of ill-fortune was deposed and got rid of." After Majorian, one Severus (A. D. 461–467), and after Severus a Greek, Anthemius (A. D. 467–472), nominated at Constantinople, wore the purple at the command of Count Ricimer. When, after five years of sovereignty, Anthemius quarreled with his barbarian master, the latter chose a new emperor — the senator Olybrius — and conducted him with an army to the gates of Rome, in which the imperial court had once more settled itself. Anthemius, supported by the majority of the senate and people, resisted, and Rome sustained a siege of three months. It was taken by storm, on the 11th of July, A. D. 472, and suffered every outrage at the hands of the merciless victors. Anthemius was slain and his enemy, Ricimer, died a few weeks later. Olybrius followed the latter to the grave in October. Ricimer's place was filled by his nephew, a refugee Burgundian king, Gundobad, who chose for emperor an unfortunate officer of the imperial guard, named Glycerius. Glycerius allowed himself to be deposed the next year by Julius Nepos and accepted a bishopric in place of the throne; but later circumstances gave the emperor-bishop an opportunity to assassinate his supplanter and he did not hesitate to do so. By this time, the real power had passed to another barbarian "patrician" and general, Orestes, former secretary of Attila, and Orestes proclaimed his own son emperor. To this son "by a strange chance, as if in mockery of his fortune, had been given the names of the first king and the first emperor of Rome, Romulus Augustus, soon turned in derision into the diminutive 'Augustulus.' But Orestes failed to play the part of Ricimer. A younger and more daring barbarian adventurer, Odoacer the Herule, or Rugian, bid higher for the allegiance of the army. Orestes was slain, and the young emperor was left to the mercy of Odoacer. In singular and significant contrast to the common usage when a pretender fell, Romulus Augustulus was spared. He was made to abdicate in legal form; and the Roman Senate, at the dictation of Odoacer, officially signified to the Eastern emperor, Zeno, their resolution that the separate Western Empire should cease, and their recognition of the one emperor at Constantinople, who should be supreme over West and East. Amid the ruin of the empire and the state, the dethroned emperor passed his days, in such luxurious ease as the times allowed, at the Villa of Lucullus at Misenum; and Odoacer, taking the Teutonic title of king, sent to the emperor at Constantinople the imperial crown and robe which were to be worn no more at Rome or Ravenna for more than three hundred years. Thus in the year 476 ended the Roman empire, or rather, the line of Roman emperors, in the West."—R. W. Church, *Beginning of the Middle Ages, ch.* 1.—"When, at Odoacer's bidding, Romulus Augustulus, the boy whom a whim of fate had chosen to be the last native Cæsar of Rome, had formally announced his resignation to the senate, a deputation from that body proceeded to the Eastern court to lay the insignia of royalty at the feet of the Eastern Emperor Zeno. The West, they declared, no longer required an Emperor of its own; one monarch sufficed for the world; Odoacer was qualified by his wisdom and courage to be the protector of their state, and upon him Zeno was entreated to confer the title of patrician and the administration of the Italian provinces. The Emperor granted what he could not refuse, and Odoacer, taking the title of King ['not king of Italy, as is often said'— foot-note], continued the consular office, respected the civil and ecclesiasti-

cal institutions of his subjects, and ruled for fourteen years as the nominal vicar of the Eastern Emperor. There was thus legally no extinction of the Western Empire at all, but only a reunion of East and West. In form, and to some extent also in the belief of men, things now reverted to their state during the first two centuries of the Empire, save that Byzantium instead of Rome was the centre of the civil government. The joint tenancy which had been conceived by Diocletian, carried further by Constantine, renewed under Valentinian I. and again at the death of Theodosius, had come to an end; once more did a single Emperor sway the sceptre of the world, and head an undivided Catholic Church."—J. Bryce, *The Holy Roman Empire, ch.* 3.

Also in: T. Hodgkin, *Italy and Her Invaders, bk.* 3, *ch.* 4–8.—J. B. Bury, *Hist. of the Later Roman Empire, pref. and bk.* 3, *ch.* 5 (*v.* 1).

A. D. 476.—Causes of the decay of the Empire and the significance of its fall in the West.—"Thus in the year 476 ended the Roman empire, or rather, the line of Roman emperors, in the West. Thus it had become clear that the foundations of human life and society, which had seemed under the first emperors eternal, had given way. The Roman empire was not the 'last word' in the history of the world; but either the world was in danger of falling into chaos, or else new forms of life were yet to appear, new ideas of government and national existence were to struggle with the old for the mastery. The world was not falling into chaos. Europe, which seemed to have lost its guidance and its hope of civilization in losing the empire, was on the threshold of a history far grander than that of Rome, and was about to start in a career of civilization to which that of Rome was rude and unprogressive. In the great break-up of the empire in the West, some parts of its system lasted, others disappeared. What lasted was the idea of municipal government, the Christian Church, the obstinate evil of slavery. What disappeared was the central power, the imperial and universal Roman citizenship, the exclusive rule of the Roman law, the old Roman paganism, the Roman administration, the Roman schools of literature. Part of these revived; the idea of central power under Charles the Great, and Otto his great successor; the appreciation of law, though not exclusively Roman law; the schools of learning. And under these conditions the new nations—some of mixed races, as in France, Spain, and Italy; others simple and homogeneous, as in Germany, England, and the Scandinavian peninsula—begin their apprenticeship of civilization."—R. W. Church, *The Beginning of the Middle Ages, ch.* 1.—"The simple facts of the fall of the Empire are these. The Imperial system had been established . . . to protect the frontier. This it did for two centuries with eminent success. But in the reign of Marcus Aurelius . . . there occurred an invasion of the Marcomanni, which was not repulsed without great difficulty, and which excited a deep alarm and foreboding throughout the Empire. In the third century the hostile powers on every frontier began to appear more formidable. The German tribes, in whose discord Tacitus saw the safety of the Empire, present themselves now no longer in separate feebleness, but in powerful confederations. We hear no more the insignificant names of Chatti and Chauci; the history of the third century is full of Alemanni, Franks, and Goths. On the eastern frontier, the long decayed power of the Parthians now gives place to a revived and vigorous Persian Empire. The forces of the Empire are more and more taxed to defend it from these powerful enemies. . . . It is evident that the Roman world would not have steadily receded through centuries before the barbaric, had it not been decidedly inferior in force. To explain, then, the fall of the Empire, it is necessary to explain the inferiority in force of the Romans to the barbarians. This inferiority of the Romans, it is to be remembered, was a new thing. At an earlier time they had been manifestly superior. When the region of barbarism was much larger; when it included warlike and aggressive nations now lost to it, such as the Gauls; and when, on the other hand, the Romans drew their armies from a much smaller area, and organized them much less elaborately, the balance had inclined decidedly the other way. In those times the Roman world, in spite of occasional reverses, had on the whole steadily encroached on the barbaric. . . . Either, therefore, a vast increase of power must have taken place in the barbaric world, or a vast internal decay in the Roman. Now the barbaric world had actually received two considerable accessions of force. It had gained considerably, through what influences we can only conjecture, in the power and habit of co-operation. As I have said before, in the third century we meet with large confederations of Germans, whereas before we read only of isolated tribes. Together with this capacity of confederation we can easily believe that the Germans had acquired new intelligence, civilization, and military skill. Moreover, it is practically to be considered as a great increase of aggressive force, that in the middle of the fourth century they were threatened in their original settlements by the Huns. The impulse of desperation which drove them against the Roman frontier was felt by the Romans as a new force acquired by the enemy. But we shall soon see that other and more considerable momenta must have been required to turn the scale. . . . We are forced, . . . to the conclusion that the Roman Empire, in the midst of its greatness and civilization, must have been in a stationary and unprogressive, if not a decaying condition. Now what can have been the cause of this unproductiveness or decay? It has been common to suppose a moral degeneration in the Romans, caused by luxury and excessive good fortune. To support this it is easy to quote the satirists and cynics of the Imperial time, and to refer to such accounts as Ammianus gives of the mingled effeminacy and brutality of the aristocracy of the capital in the fourth century. But the history of the wars between Rome and the barbaric world does not show us the proofs we might expect of this decay of spirit. We do not find the Romans ceasing to be victorious in the field, and beginning to show themselves inferior in valor to their enemies. The luxury of the capital could not affect the army. . . . Nor can it be said that luxury corrupted the generals, and through them the army. On the contrary, the Empire produced a remarkable series of capable generals. . . . Whatever the remote and ultimate cause may have been, the immediate cause to which the fall of the Empire can be traced is a physical, not a

moral, decay. In valor, discipline, and science, the Roman armies remained what they had always been, and the peasant emperors of Illyricum were worthy successors of Cincinnatus and Caius Marius. But the problem was how to replenish those armies. Men were wanting; the Empire perished for want of men. The proof of this is in the fact that the contest with barbarism was carried on by the help of barbarian soldiers. . . . It must have been because the Empire could not furnish soldiers for its own defence, that it was driven to the strange expedient of turning its enemies and plunderers into its defenders. . . . Nor was it only in the army that the Empire was compelled to borrow men from barbarism. To cultivate the fields whole tribes were borrowed. From the time of Marcus Aurelius, it was a practice to grant lands within the Empire, sometimes to prisoners of war, sometimes to tribes applying for admission. . . . The want of any principle of increase in the Roman population is attested at a much earlier time. In the second century before Christ, Polybius bears witness to it; and the returns of the census from the Second Punic War to the time of Augustus show no steady increase in the number of citizens that cannot be accounted for by the extension of citizenship to new classes. . . . Precisely as we think of marriage, the Roman of Imperial times thought of celibacy,—that is, as the most comfortable but the most expensive condition of life. Marriage with us is a pleasure for which a man must be content to pay; with the Romans it was an excellent pecuniary investment, but an intolerably disagreeble one. Here lay, at least in the judgment of Augustus, the root of the evil. To inquire into the causes of this aversion to marriage in this place would lead me too far. We must be content to assume that, owing partly to this cause and partly to the prudential check of infanticide, the Roman population seems to have been in ordinary times almost stationary. The same phenomenon had shown itself in Greece before its conquest by the Romans. There the population had even greatly declined; and the shrewd Polybius explains that it was not owing to war or plague, but mainly to a general repugnance to marriage, and reluctance to rear large families, caused by an extravagantly high standard of comfort. . . . Perhaps enough has now been said to explain that great enigma, which so much bewilders the reader of Gibbon; namely, the sharp contrast between the age of the Antonines and the age which followed it. A century of unparalleled tranquillity and virtuous government is followed immediately by a period of hopeless ruin and dissolution. A century of rest is followed, not by renewed vigor, but by incurable exhaustion. Some principle of decay must clearly have been at work, but what principle? We answer: it was a period of sterility or barrenness in human beings; the human harvest was bad. And among the causes of this barrenness we find, in the more barbarous nations, the enfeeblement produced by the too-abrupt introduction of civilization, and universally the absence of industrial habits, and the disposition to listlessness which belongs to the military character."—J. R. Seeley, *Roman Imperialism, pp.* 47–61.—"At no period within the sphere of historic records was the commonwealth of Rome anything but an oligarchy of warriors and slave-owners, who indemnified themselves for the restraint imposed on them by their equals in the forum by aggression abroad and tyranny in their households. The causes of its decline seem to have little connexion with the form of government established in the first and second centuries. They were in full operation before the fall of the Republic, though their baneful effects were disguised and perhaps retarded by outward successes, by extended conquests, and increasing supplies of tribute or plunder. The general decline of population throughout the ancient world may be dated even from the second century before our era. The last age of the Republic was perhaps the period of the most rapid exhaustion of the human race; but its dissolution was arrested under Augustus, when the population recovered for a time in some quarters of the empire, and remained at least stationary in others. The curse of slavery could not but make itself felt again, and demanded the destined catastrophe. Whatever evil we ascribe to the despotism of the Cæsars, we must remark that it was Slavery that rendered political freedom and constitutional government impossible. Slavery fostered in Rome, as previously at Athens, the spirit of selfishness and sensuality, of lawlessness and insolence, which cannot consist with political equality, with political justice, with political moderation. The tyranny of the emperors was . . . only the tyranny of every noble extended and intensified. The empire became no more than an ergastulum or barracoon on a vast scale, commensurate with the dominions of the greatest of Roman slaveholders. . . . We have noticed already the pestilence which befel Italy and many of the provinces in the reign of Aurelius. There is reason to believe that this scourge was no common disorder, that it was of a type new at least in the West, and that, as a new morbific agent, its ravages were more lasting, as well as more severe, than those of an ordinary sickness. . . . At another time, when the stamina of ancient life were healthier and stronger, such a visitation might possibly have come and gone, and, however fatal at the moment, have left no lasting traces; but periods seem to occur in national existence when there is no constitutional power of rallying under casual disorders. The sickness which in the youth of the commonwealth would have dispelled its morbid humours and fortified its system, may have proved fatal to its advancing years, and precipitated a hale old age into palsied decrepitude. The vital powers of the empire possessed no elasticity; every blow now told upon it with increasing force; the blows it slowly or impatiently returned were given by the hands of hired barbarians, not by the strength of its own right arm. Not sickness alone, but famines, earthquakes, and conflagrations, fell in rapid succession upon the capital and the provinces. Such casualties may have occurred at other periods not less frequently or disastrously; but these were observed, while the others passed unnoticed, because the courage of the nation was now broken no less than its physical vigour, and, distressed and terrified, it beheld in every natural disorder the stroke of fate, the token of its destined dissolution. Nor indeed was the alarm unfounded. These transient faintings and sicknesses were too truly the symptoms of approaching collapse. The long line of northern frontier, from Odessus to the island of the Batavi, was skirted by a

fringe of fire, and through the lurid glare loomed the wrathful faces of myriads, Germans, Scythians, and Sarmatians, all armed for the onslaught in sympathy or concert."—C. Merivale, *Hist. of the Romans under the Empire, ch.* 18 (*v.* 7).—"Under the humane pretext of gratifying the world with a flattering title, an Antoninus, in one of his edicts, called by the name of Roman citizens the tributaries of the Roman empire, those men whom a proconsul might legally torture, flog with rods, or crush with labour and taxes. Thus the power of that formerly inviolable title, before which the most shameless tyranny stopped short, was contradicted; thus perished that ancient safety-cry which made the executioners fall back; I am a Roman citizen. From that period Rome no longer existed; there was a court and provinces: we do not understand by that word what it now signifies in the vulgar languages, but what it signified primitively in the Roman language, a country conquered by arms; we mean to say, that the primitive distinction between conquering Rome and those it had conquered, then became established between the men in the palace and those out of the palace; that Rome itself lived only for one family, and a handful of courtiers, as formerly the nations it had conquered had only lived by it. It was then that the name of subjugated, subjecti, which our language has corrupted into that of subjects, was transported from the conquered inhabitants of the East or Gaul, to the victorious inhabitants of Italy, attached in future to the yoke of a small number of men, as these had been attached to their yoke; the property of those men, as well as the others, had been their property, worthy, in a word, of the degrading title of subjects, subjecti, which must be taken literally. Such was the order of things which had been gradually forming since the time of Augustus; each emperor gloried in hastening the moment of its perfection; Constantine gave it the finishing stroke. He effaced the name of Rome from the Roman standards, and put in its place the symbol of the religion which the empire had just embraced. He degraded the revered name of the civil magistrature below the domestic offices of his house. An inspector of the wardrobe took precedence of the consuls. The aspect of Rome importuned him; he thought he saw the image of liberty still engraved on its old walls; fear drove him thence; he fled to the coasts of Byzantia, and there built Constantinople, placing the sea as a barrier between the new city of the Cæsars and the ancient city of the Brutus. If Rome had been the home of independence, Constantinople was the home of slavery; from thence issued the dogmas of passive obedience to the Church and throne; there was but one right—that of the empire; but one duty—that of obedience. The general name of citizen, which was equivalent, in language, to men living under the same law, was replaced by epithets graduated according to the credit of the powerful or the cowardice of the weak. The qualifications of Eminence, Royal Highness, and Reverence, were bestowed on what was lowest and most despicable in the world. The empire, like a private domain, was transmitted to children, wives, and sons-in-law; it was given, bequeathed, substituted; the universe was exhausting itself for the establishment of the family; taxes increased immoderately; Constantinople alone was exempted; that privilege of Roman liberty was the price of its infamy. The rest of the cities and nations were treated like beasts of burden, which are used without scruple, flogged when they are restive, and killed when there is cause to fear them. Witness the population of Antioch, condemned to death by the pious Theodosius; and that of Thessalonica, entirely massacred by him for a tax refused, and an unfortunate creature secured from the justice of his provosts. Meanwhile savage and free nations armed against the enslaved world, as if to chastise it for its baseness. Italy, oppressed by the empire, soon found pitiless revengers in its heart. Rome was menaced by the Goths. The people, weary of the imperial yoke, did not defend themselves. The men of the country, still imbued with the old Roman manners and religion, those men, the only ones whose arms were still robust and souls capable of pride, rejoiced to see among them free men and gods resembling the ancient gods of Italy. Stilico, the general to whom the empire entrusted its defence, appeared at the foot of the Alps; he called to arms, and no one arose; he promised liberty to the slaves, he lavished the treasures of the fisc; and out of the immense extent of the empire, he only assembled 40,000 men, the fifth part of the warriors that Hannibal had encountered at the gates of free Rome."—A. Thierry, *Narratives of the Merovingian Era and Historical Essays, essay* 13.—"It was not the division into two empires, nor merely the power of external enemies, that destroyed the domination of Rome. Republican Rome had ended in monarchy by the decadence of her institutions and customs, by the very effect of her victories and conquests, by the necessity of giving to this immense dominion a dominus. But after she had begun to submit to the reality of a monarchy, she retained the worship of republican forms. The Empire was for a long time a piece of hypocrisy; for it did not dare to give to its rulers the first condition of stability, a law of succession. The death of every emperor was followed by troubles, and the choice of a master of the world was often left to chance. At length the monarchy had to be organized, but thenceforth it was absolute, without restraint or opposition. Its proposed aim was to exploit the world, an aim which in practice was carried to an extreme. Hence it exhausted the orbis romanus."—E. Lavisse, *General View of the Political History of Europe, ch.* 1.

A. D. 486.—The last Roman sovereignty in Gaul. See Gaul: A. D. 457–486.

A. D. 488.—Theodoric the king of the Ostrogoths authorized and commissioned by the Emperor Zeno to conquer a kingdom in Italy. See Goths (Ostrogoths): A. D. 473–488.

A. D. 488-526.—The Ostrogothic kingdom of Theodoric.—It was in the autumn of the year 488 that Theodoric, commissioned by the Eastern Emperor, Zeno, to wrest Italy from Odoacer (or Odovacar), broke up his camp or settlement on the Danube, in the neighborhood of Sistova, and moved towards the west. The movement was a national migration—of wives and children as well as of warriors—and the total number is estimated at not less than 200,000. Following the course of the Danube, the Gothic host met with no opposition until it came to Singidunum, near the junction of the Save. There, on the banks of a stream called the Ulca, they fought a great

battle with the Gepidæ, who held possession of Pannonia, and who disputed their advance. Victorious in this encounter, Theodoric pushed on, along the course of the Save; but the movement of his cumbrous train was so slow and the hardships of the march so great, that nearly a year passed before he had surmounted the passes of the Julian Alps and entered Italy. He found Odoacer waiting to give him battle on the Isonzo; but the forces of the latter were not courageous enough or not faithful enough for their duty, and the invading Goths forced the passage of the stream on the 28th of August, 489. Odoacer retreated to Verona, followed by Theodoric, and there, on the 30th of September, a great and terrible battle was fought, from which not many of the Rugian and Herulian troops of Odoacer escaped. Odoacer, himself, with some followers, got clear of the rout and made their way to the safe stronghold of Ravenna. For a time, Odoacer's cause seemed abandoned by all who had supported him; but it was a treacherous show of submission to the victor. Theodoric, ere long, found reactions at work which recruited the forces of his opponent and diminished his own. He was driven to retreat to Ticinum (Pavia) for the winter. But having solicited and received aid from the Visigoths of southern Gaul, he regained, in the summer of 490 (August 11) in a battle on the Adda, not far from Milan, all the ground that he had lost, and more. Odoacer was now driven again into Ravenna, and shut up within its walls by a blockade which was endured until February in the third year afterwards (493), when famine compelled a surrender. Theodoric promised life to his rival and respect to his royal dignity; but he no sooner had the old self-crowned king Odoacer in his power than he slew him with his own hand. Notwithstanding this savagery in the inauguration of it, the reign of the Ostrogothic king in Italy appears to have been, on the whole, wise and just, with more approximation to the chivalric half-civilization of later mediæval times than appears in the government of any of his Gothic or German neighbors. "Although Theoderic did not care to run the risk of offending both his Goths and the Court of Constantinople by calling himself Cæsar or Emperor, yet those titles would have exactly expressed the character of his rule — so far at least as his Roman subjects were concerned. When the Emperor Anastasius in 497 acknowledged him as ruler of Italy, he sent him the purple cloak and the diadem of the Western emperors; and the act showed that Anastasius quite understood the difference between Theoderic's government and that of Odovacar. In fact, though not in name, the Western empire had been restored with much the same institutions it had had under the best of the Cæsars." The reign of Theodoric, dating it, as he did, from his first victory on Italian soil, was thirty-seven years in duration. When he died, August 30, A. D. 526, he left to his grandson, Athalaric, a kingdom which extended, beyond Italy, over Rhætia, Noricum, Pannonia and Illyricum (the modern Austrian empire south and west of the Danube), together with Provence in southern Gaul and a district north of it embracing much of modern Dauphiné. His government extended, likewise, over the Visigothic kingdom, as guardian of its young king, his grandson. But this great kingdom of the heroic Ostrogoth was not destined to endure. One who lived the common measure of life might have seen the beginning of it and the end. It vanished in one quarter of a century after he who founded it was laid away in his great tomb at Ravenna, leaving nothing to later history which can be counted as a survival of it,— not even a known remnant of the Ostrogothic race.— H. Bradley, *Story of the Goths, ch.* 16–20.— "Theodoric professed a great reverence for the Roman civilization. He had asked for and obtained from the Emperor Anastasius the imperial insignia that Odovakar had disdainfully sent back to Constantinople, and he gave up the dress of the barbarians for the Roman purple. Although he lived at Ravenna he was accustomed to consult the Roman senate, to whom he wrote: 'We desire, conscript fathers, that the genius of liberty may look with favor upon your assembly.' He established a consul of the West, three prætorian prefects, and three dioceses,— that of northern Italy, that of Rome, and that of Gaul. He retained the municipal government, but appointed the decurions himself. He reduced the severity of the taxes, and his palace was always open to those who wished to complain of the iniquities of the judges. . . . Thus a barbarian gave back to Italy the prosperity which she had lost under the emperors. The public buildings, aqueducts, theatres, and baths were repaired, and palaces and churches were built. The uncultivated lands were cleared and companies were formed to drain the Pontine marshes and the marshes of Spoleto. The iron mines of Dalmatia and a gold mine in Bruttii were worked. The coasts were protected from pirates by numerous flotillas. The population increased greatly. Theodoric, though he did not know how to write, gathered around him the best literary merit of the time,— Boethius, the bishop Ennodius, and Cassiodorus. The latter, whom he made his minister, has left us twelve books of letters. Theodoric seems in many ways like a first sketch of Charlemagne. Though himself an Arian, he respected the rights of the Catholics from the first. . . . When, however, the Emperor Justin I. persecuted the Arians in the East, he threatened to retaliate, and as a great commotion was observed among his Italian subjects, he believed that a conspiracy was being formed against himself. . . . The prefect Symmachus and his son-in-law, Boethius, were implicated. Theodoric confined them in the tower of Pavia, and it was there that Boethius wrote his great work, The Consolations of Philosophy. They were both executed in 525. Theodoric, however, finally recognized their innocence, and felt such great regret that his reason is said to have been unbalanced and that remorse hastened his end."— V. Duruy, *Hist. of the Middle Ages, bk.* 1, *ch.* 3.— "The personal greatness of Theodoric overshadowed Emperor and Empire; from his palace at Ravenna, by one title or another, by direct dominion, as guardian, as elder kinsman, as representative of the Roman power, as head by natural selection of the whole Teutonic world, he ruled over all the western lands save one; and even to the conquering Frank he could say, Thus far shalt thou come and no further. In true majesty such a position was more than Imperial; moreover there was nothing in the rule of Theodoric which touched the Roman life of Italy. . . . As far as we can see, it was the very greatness of Theodoric which kept his power

from being lasting. Like so many others of the very greatest of men, he set on foot a system which he himself could work, but which none but himself could work. He sought to set up a kingdom of Goths and Romans, under which the two nations should live side by side, distinct but friendly, each keeping its own law and doing its own work. And for one life-time the thing was done. Theodoric could keep the whole fabric of Roman life untouched, with the Goth standing by as an armed protector. He could, as he said, leave to the Roman consul the honours of government and take for the Gothic king only the toils. Smaller men neither could nor would do this. . . . It was the necessary result of his position that he gave Italy one generation of peace and prosperity such as has no fellow for ages on either side of it, but that, when he was gone, a fabric which had no foundation but his personal qualities broke down with a crash."—E. A. Freeman, *Chief Periods of European Hist., lect.* 3.

A. D. 527-565.—The reign of Justinian.—"In the year after the great Theoderic died (526), the most famous in the time of Eastern emperors, since Constantine, began his long and eventful reign (527–567). Justinian was born a Slavonian peasant, near what was then Sardica, and is now Sofia; his original Slave name, Uprawda, was latinized into Justinian, when he became an officer in the imperial guard. Since the death of the second Theodosius (450), the Eastern emperors had been, as they were continually to be, men not of Roman or Greek, but of barbarian or half barbarian origin, whom the imperial city and service attracted, naturalized, and clothed with civilized names and Roman character. Justinian's reign, so great and so unhappy, was marked by magnificent works, the administrative organization of the empire, the great buildings at Constantinople, the last and grandest codification of Roman law [see Corpus Juris Civilis]. But it was also marked by domestic shame, by sanguinary factions [see Circus, Factions of the Roman], by all the vices and crimes of a rapacious and ungrateful despotism. Yet it seemed for a while like the revival of the power and fortune of Rome. Justinian rose to the highest ideas of imperial ambition; and he was served by two great masters of war, foreigners in origin like himself, Belisarius the Thracian, and Narses the Armenian, who were able to turn to full account the resources, still enormous, of the empire, its immense riches, its technical and mechanical skill, its supplies of troops, its military traditions, its command of the sea. Africa was wrested from the Vandals [see Vandals: A. D. 533–534]; Italy from the successors of Theoderic [see below]; much of Spain from the West Goths."—R. W. Church, *The Beginning of the Middle Ages, ch.* 6.—"In spite of the brilliant events which have given the reign of Justinian a prominent place in the annals of mankind, it is presented to us in a series of isolated and incongruous facts. Its chief interest is derived from the biographical memorials of Belisarius, Theodora, and Justinian; and its most instructive lesson has been drawn from the influence which its legislation has exercised on foreign nations. The unerring instinct of mankind has, however, fixed on this period as one of the greatest eras in man's annals. The actors may have been men of ordinary merit, but the events of which they were the agents effected the mightiest revolutions in society. The frame of the ancient world was broken to pieces, and men long looked back with wonder and admiration at the fragments which remained, to prove the existence of a nobler race than their own. The Eastern Empire, though too powerful to fear any external enemy, was withering away from the rapidity with which the State devoured the resources of the people. . . . The life of Belisarius, either in its reality or its romantic form, has typified his age. In his early youth, the world was populous and wealthy, the empire rich and powerful. He conquered extensive realms and mighty nations and led kings captive to the footstool of Justinian, the lawgiver of civilisation. Old age arrived; Belisarius sank into the grave suspected and impoverished by his feeble and ungrateful master; and the world, from the banks of the Euphrates to those of the Tagus, presented the awful spectacle of famine and plague [see Plague: A. D. 542–594], of ruined cities, and of nations on the brink of extermination. The impression on the hearts of men was profound."—G. Finlay, *Greece under the Romans, ch.* 3, *sect.* 1.

A. D. 528-556.—The Persian Wars and the Lazic War of Justinian. See Persia: A. D. 226–627; also, Lazica.

A. D. 535-553.—Fall of the Gothic kingdom of Theodoric.—Recovery of Italy by the Emperor Justinian.—The long Gothic siege of Rome.—The siege, capture and pillage by Totila.—The forty days of lifeless desolation in the great city.—On the death of the great Theodoric, the Ostrogothic crown passed, not to his daughter, Amalasuntha, but to her son, Athalaric, a child of eight or ten years. The boy-king died at the age of sixteen, and Amalasuntha assumed the regal power and title, calling one of her cousins, named Theodatus, or Theodahad, to the throne, to share it with her. She had powerful enemies in the Gothic court and the ungrateful Theodatus was soon in conspiracy with them. Amalasuntha and her partisans were overcome, and the unhappy queen, after a short imprisonment on a little island in the lake of Bolsena, was put to death. These dissensions in the Gothic kingdom gave encouragement to the Eastern emperor, the ambitious Justinian, to undertake the reconquest of Italy. His great general, Belisarius, had just vanquished the Vandals (see Vandals: A. D. 533–534) and restored Carthaginian Africa to the imperial domain. With far smaller forces than that achievement demanded, Belisarius was now sent against the Goths. He landed, first, in Sicily (A. D. 535), and the whole island was surrendered to him, almost without a blow. The following spring (having crossed to Carthage meantime and quelled a formidable revolt), he passed the straits from Messina and landed his small army in Italy. Marching northwards, he encountered his first opposition at Neapolis—modern Naples—where he was detained for twenty days by the stout resistance of the city. It was surprised, at length, by a storming party

which crept through one of the aqueducts of the town, and it suffered fearfully from the barbarians of the Roman army before Belisarius could recover control of his savage troops. Pausing for a few months to organize his easy conquest of southern Italy, he received, before he marched to Rome, the practical surrender of the capital. On the 9th of December, 536, he entered the city and the Gothic garrison marched out. The Goths, meantime, had deposed the cowardly Theodatus and raised to the throne their most trusty warrior, Witigis. They employed the winter of 537 in gathering all their available forces at Ravenna, and in the spring they returned to Rome, 150,000 strong, to expel the Byzantine invader. Belisarius had busily improved the intervening months, and the long-neglected fortifications of the city were wonderfully restored and improved. At the beginning of March, the Goths were thundering at the gates of Rome; and then began the long siege, which endured for a year and nine days, and which ended in the discomfiture of the huge army of the besiegers. Their retreat was a flight and great numbers were slain by the pursuing Romans. "The numbers and prowess of the Goths were rendered useless by the utter incapacity of their commander. Ignorant how to assault, ignorant how to blockade, he allowed even the sword of Hunger to be wrested from him and used against his army by Belisarius. He suffered the flower of the Gothic nation to perish, not so much by the weapons of the Romans as by the deadly dews of the Campagna." After the retreat of the Goths from Rome, the conquest of Italy would have been quickly completed, no doubt, if the jealousy of Justinian had not hampered Belisarius, by sending the eunuch Narses — who proved to be a remarkable soldier, in the end — to divide the command with him. As it was, the surrender to Belisarius of the Gothic capital, Ravenna, by the Gothic king, Witigis, in the spring of 540, seemed to make the conquest an accomplished fact. The unconquered Gothic warriors then held but two important cities — Verona and Pavia. Milan they had retaken after losing it, and had practically destroyed, massacring the inhabitants (see MILAN: A. D. 539). But now they chose a new king, Ildibad, who reigned promisingly for a year and was slain; then another, who wore the crown but five months; and, lastly, they found a true royal chief in the knightly young warrior Baduila, or Totila, by whose energy and valor the Gothic cause was revived. Belisarius had been recalled by his jealous master, and the quarrels of eleven generals who divided his authority gave every opportunity to the youthful king. Defeating the Roman armies in two battles, at Faenza and in the valley of Mugello, near Florence, he crossed the Apennines, passed by Rome, besieged and took Naples and Cumæ and overran all the southern provinces of Italy, in 542 and 543, finding everywhere much friendliness among the people, whom the tax-gatherers of Justinian had alienated by their merciless rapacity. In 544, Belisarius, restored to favor and command only because of the desperate need of his services, came back to Italy to recover what his successors had lost; but he came almost alone. Without adequate troops, he could only watch, from Ravenna, and circumscribe a little, the successes of his enterprising antagonist. The latter, having strengthened his position well, in central as well as in southern Italy, applied himself to the capture of Rome. In May, 546, the Gothic lines were drawn around the city and a blockade established which soon produced famine and despair. An attempt by Belisarius to break the leaguer came to naught, and Rome was betrayed to Totila on the 17th of December following. He stayed the swords of his followers when they began to slay, but gave them full license to plunder. When the great city had been stripped and most of its inhabitants had fled, he resolved to destroy it utterly; but he was dissuaded from that most barbarous design by a letter of remonstrance from Belisarius. Contenting himself, then, with throwing down a great part of the walls, he withdrew his whole army — having no troops to spare for an adequate garrison — and took with him every single surviving inhabitant (so the historians of the time declare), so that Rome, for the space of six weeks or more (January and February, 547), was a totally deserted and silent city. At the end of that time, Belisarius threw his army inside of the broken walls, and repaired them with such celerity that Totila was baffled when he hastened back to expel the intruders. Three times the Goths attacked and were repulsed; the best of their warriors were slain; the prestige of their leader was lost. But, once more, jealousies and enmities at Constantinople recalled Belisarius and the Goths recovered ground. In 549 they again invested Rome and it was betrayed to them, as before, by a part of the garrison. Totila now made the great city — great even in its ruins — his capital, and exerted himself to restore its former glories. His arms for a time were everywhere successful. Sicily was invaded and stripped of its portable wealth. Sardinia and Corsica were occupied; the shores of Greece were threatened. But in 552 the tide of fortune was turned once more in favor of Justinian, — this time by his second great general, the eunuch Narses. In one decisive battle fought that year, in July, at a point on the Flaminian Way where it crosses the Apennines, the army of the Goths was broken and their king was slain. The remnant which survived crowned another king, Teias; but, he, too, perished, the following March, in a battle fought at the foot of Mount Vesuvius, and the Ostrogothic kingdom was at an end. Rome was already recovered — the fifth change of masters it had undergone during the war — and one by one, all the strong places in the hands of the Goths were given up. The restoration of Italy to the Empire was complete. — T. Hodgkin, *Italy and Her Invaders, bk.* 4, *ch.* 16; *bk.* 5, *ch.* 1-24. — "Of all ages in history the sixth is the one in which the doctrine that the Roman Empire came to an end at some time in the fifth sounds most grotesque. Again the Roman armies march to victory, to more than victory, to conquest, to conquests more precious than the conquests of Cæsar or of Trajan, to conquests which gave back Rome herself to her own Augustus. We may again be met with the argument that we have ourselves used so often; that the Empire had to win back its lost provinces does indeed prove that it had lost them; but no one seeks to prove that the provinces had not been lost; what the world is loth to understand is that there was still life enough in the Roman power to win them back again. I say the Roman

power; what if I said the Roman commonwealth? It may startle some to hear that in the sixth century, nay in the seventh, the most common name for the Empire of Rome is still 'respublica.' No epithet is needed; there is no need to say that the 'respublica' spoken of is 'respublica Romana.' It is the Republic which wins back Italy, Africa, and Southern Spain from their Teutonic masters. . . . The point of the employment of the word lies in this, that it marks the unbroken being of the Roman state; in the eyes of the men of the sixth century the power which won back the African province in their own day was the same power which had first won it well-nigh seven hundred years before. The consul Belisarius was the true successor of the consul Scipio."—E. A. Freeman, *The Chief Periods of European History, lect.* 4.

A. D. 541.—Extinction of the office of Consul. See Consul, Roman.

A. D. 554-800.—The Exarchate of Ravenna.—On the final overthrow and annihilation of the Gothic monarchy in Italy by the decisive victories of the eunuch Narses, its throne at Ravenna was occupied by a line of vice-royal rulers, named exarchs, who represented the Eastern Roman emperor, being appointed by him and exercising authority in his name. "Their jurisdiction was soon reduced to the limits of a narrow province; but Narses himself, the first and most powerful of the exarchs, administered above fifteen years the entire kingdom of Italy. . . . A duke was stationed for the defence and military command of each of the principal cities; and the eye of Narses pervaded the ample prospect from Calabria to the Alps. The remains of the Gothic nation evacuated the country or mingled with the people. . . . The civil state of Italy, after the agitation of a long tempest, was fixed by a pragmatic sanction, which the emperor promulgated at the request of the pope. Justinian introduced his own jurisprudence into the schools and tribunals of the West. . . . Under the exarchs of Ravenna, Rome was degraded to the second rank. Yet the senators were gratified by the permission of visiting their estates in Italy, and of approaching without obstacle the throne of Constantinople: the regulation of weights and measures was delegated to the pope and senate; and the salaries of lawyers and physicians, of orators and grammarians, were destined to preserve or rekindle the light of science in the ancient capital. . . . During a period of 200 years Italy was unequally divided between the kingdom of the Lombards and the exarchate of Ravenna. . . . Eighteen successive exarchs were invested, in the decline of the empire, with the full remains of civil, of military and even of ecclesiastical power. Their immediate jurisdiction, which was afterwards consecrated as the patrimony of St. Peter, extended over the modern Romagna, the marshes or valleys of Ferrara and Commachio, five maritime cities from Rimini to Ancona, and a second inland Pentapolis, between the Adriatic coast and the hills of the Apennine. Three subordinate provinces—of Rome, of Venice, and of Naples—which were divided by hostile lands from the palace of Ravenna, acknowledged, both in peace and war, the supremacy of the exarch. The duchy of Rome appears to have included the Tuscan, Sabine, and Latin conquests of the first 400 years of the city, and the limits may be distinctly traced along the coast, from Civita Vecchia to Terracina, and with the course of the Tiber from Ameria and Narni to the port of Ostia. The numerous islands from Grado to Chiozza composed the infant dominion of Venice; but the more accessible towns on the continent were overthrown by the Lombards, who beheld with impotent fury a new capital rising from the waves. The power of the dukes of Naples was circumscribed by the bay and the adjacent isles, by the hostile territory of Capua, and by the Roman colony of Amalphi. . . . The three islands of Sardinia, Corsica, and Sicily still adhered to the empire. . . . Rome was oppressed by the iron sceptre of the exarchs, and a Greek, perhaps a eunuch, insulted with impunity the ruins of the Capitol. But Naples soon acquired the privilege of electing her own dukes; the independence of Amalphi was the fruit of commerce; and the voluntary attachment of Venice was finally ennobled by an equal alliance with the Eastern empire."—E. Gibbon, *Decline and Fall of the Roman Empire, ch.* 43 *and* 45.

A. D. 565-628.—Decline of the Eastern Empire.—Thickening calamities.—Reigns of Justinus II., Tiberius Constantinus, Maurice, and Phocas.—Brief brightening of events by Heraclius.—His campaigns against the Persians.—"The thirty years which followed the death of Justinian are covered by three reigns, those of Justinus II. (565–578), Tiberius Constantinus (578–582), and Maurice (582–602). These three emperors were men of much the same character as the predecessors of Justinian; each of them was an experienced official of mature age, who was selected by the reigning emperor as his most worthy successor. . . . Yet under them the empire was steadily going down hill: the exhausting effects of the reign of Justinian were making themselves felt more and more, and at the end of the reign of Maurice a time of chaos and disaster was impending, which came to a head under his successor. . . . The misfortunes of the Avaric and Slavonic war [see Avars] were the cause of the fall of the Emperor Maurice. . . . Maurice sealed his fate when, in 602, he issued orders for the discontented army of the Danube to winter north of the river, in the waste marshes of the Slavs. The troops refused to obey the order, and chased away their generals. Then electing as their captain an obscure centurion, named Phocas, they marched on Constantinople. Maurice armed the city factions, the 'Blues' and 'Greens,' and strove to defend himself. But when he saw that no one would fight for him, he fled across the Bosphorus with his wife and children, to seek refuge in the Asiatic provinces, where he was less unpopular than in Europe. Soon he was pursued by orders of Phocas, whom the army had now saluted as emperor, and caught at Chalcedon. The cruel usurper had him executed, along with all his five sons, the youngest a child of only three years of age. . . . For the first time since Constantinople had become the seat of empire the throne had been won by armed rebellion and the murder of the legitimate ruler.

. . . Phocas was a mere brutal soldier — cruel, ignorant, suspicious, and reckless, and in his incapable hands the empire began to fall to pieces with alarming rapidity. He opened his reign with a series of cruel executions of his predecessor's friends, and from that moment his deeds of bloodshed never ceased. . . . The moment that Phocas had mounted the throne, Chosroës of Persia declared war on him, using the hypocritical pretext that he wished to revenge Maurice, for whom he professed a warm personal friendship. This war was far different from the indecisive contests in the reigns of Justinian and Justin II. In two successive years the Persians burst into North Syria and ravaged it as far as the sea; but in the third they turned north and swept over the hitherto untouched provinces of Asia Minor. In 608 their main army penetrated across Cappadocia and Galatia right up to the gates of Chalcedon. The inhabitants of Constantinople could see the blazing villages across the water on the Asiatic shore. . . . Plot after plot was formed in the capital against Phocas, but he succeeded in putting them all down, and slew the conspirators with fearful tortures. For eight years his reign continued. . . . Africa was the only portion of the Roman Empire which in the reign of Phocas was suffering neither from civil strife nor foreign invasion. It was well governed by the aged exarch Heraclius, who was so well liked in the province that the emperor had not dared to depose him. Urged by desperate entreaties from all parties in Constantinople to strike a blow against the tyrant, and deliver the empire from the yoke of a monster, Heraclius at last consented." He sent his son — who bore the same name, Heraclius — with a fleet, to Constantinople. Phocas was at once abandoned by his troops and was given up to Heraclius, whose sailors slew him. "Next day the patriarch and the senate hailed Heraclius [the younger] as emperor, and he was duly crowned in St. Sophia on October 5, A. D. 610. . . . Save Africa and Egypt and the district immediately around the capital, all the provinces were overrun by the Persian, the Avar and the Slav. The treasury was empty, and the army had almost disappeared, owing to repeated and bloody defeats in Asia Minor. Heraclius seems at first to have almost despaired. . . . For the first twelve years of his reign he remained at Constantinople, endeavouring to reorganize the empire, and to defend at any rate the frontiers of Thrace and Asia Minor. The more distant provinces he hardly seems to have hoped to save, and the chronicle of his early years is filled with the catalogue of the losses of the empire. . . . In 614 the Persian army appeared before the holy city of Jerusalem, took it after a short resistance and occupied it with a garrison. But the populace rose and slaughtered the Persian troops, when Shahrbarz had departed with his main army. This brought him back in wrath: he stormed the city and put 90,000 Christians to the sword, only sparing the Jewish inhabitants. Zacharias, Patriarch of Jerusalem, was carried into captivity, and with him went what all Christians then regarded as the most precious thing in the world — the wood of the 'True Cross' [see JERUSALEM: A. D. 615]. . . . The horror and rage roused by the loss of the 'True Cross' and the blasphemies of King Chosroës brought about the first real outburst of national feeling that we meet in the history of the Eastern Empire. . . . Heraclius made no less than six campaigns (A. D. 622–627) in his gallant and successful attempt to save the half-ruined empire. He won great and well-deserved fame, and his name would be reckoned among the foremost of the world's warrior-kings if it had not been for the misfortunes which afterwards fell on him in his old age. His first campaign cleared Asia Minor of the Persian hosts, not by a direct attack, but by skilful strategy. . . . In his next campaigns Heraclius endeavoured to liberate the rest of the Roman Empire by a similar plan: he resolved to assail Chosroës at home, and force him to recall the armies he kept in Syria and Egypt to defend his own Persian provinces. In 623–4 the Emperor advanced across the Armenian mountains and threw himself into Media. . . . Chosroës . . . fought two desperate battles to cover Ctesiphon. His generals were defeated in both, but the Roman army suffered severely. Winter was at hand, and Heraclius fell back on Armenia. In his next campaign he recovered Roman Mesopotamia. . . . But 626 was the decisive year of the war. The obstinate Chosroës determined on one final effort to crush Heraclius, by concerting a joint plan of operations with the Chagan of the Avars. While the main Persian army watched the emperor in Armenia, a great body under Shahrbarz slipped south of him into Asia Minor and marched on the Bosphorus. At the same moment the Chagan of the Avars, with the whole force of his tribe and of his Slavonic dependents, burst over the Balkans and beset Constantinople on the European side. The two barbarian hosts could see each other across the water, and even contrived to exchange messages, but the Roman fleet, sailing incessantly up and down the strait, kept them from joining forces. . . . In the end of July 80,000 Avars and Slavs, with all sorts of siege implements, delivered simultaneous assaults along the land front of the city, but they were beaten back with great slaughter." They suffered even more on trying to encounter the Roman galleys with rafts. "Then the Chagan gave up the siege in disgust and retired across the Danube." Meantime Heraclius was wasting Media and Mesopotamia, and next year he ended the war by a decisive victory near Nineveh, as the result of which he took the palace of Dastagerd, "and divided among his troops such a plunder as had never been seen since Alexander the Great captured Susa. . . . In March, 628, a glorious peace ended the 26 years of the Persian war. Heraclius returned to Constantinople in the summer of the same year with his spoils, his victorious army, and his great trophy, the 'Holy Wood.' . . . The quiet for which he yearned was to be denied him, and the end of his reign was to be almost as disastrous as the commencement. The great Saracen invasion was at hand, and it was at the very moment of Heraclius' triumph that Mahomet sent out his famous circular letter to the kings of the earth, inviting them to embrace Islam."—C. W. C. Oman, *The Story of the Byzantine Empire, ch.* 9–10.

A. D. 568-573.—Invasion of the Lombards. —Their conquest of northern Italy.—Their kingdom. See LOMBARDS: A. D. 568–573; and 573–754.

A. D. 590-640.—Increasing influence and importance of the Bishop of Rome.—Circumstances under which his temporal authority grew.—"The fall of the shadowy Empire of the West, and the union of the Imperial power in the person of the ruler of Constantinople, brought a fresh accession of dignity and importance to the Bishop of Rome. The distant Emperor could exercise no real power over the West. The Ostrogothic kingdom in Italy scarcely lasted beyond the lifetime of its great founder Theodoric. The wars of Justinian only served to show how scanty were the benefits of the Imperial rule. The invasion of the Lombards united all dwellers in Italy in an endeavour to escape the lot of servitude and save their land from barbarism. In this crisis it was found that the Imperial system had crumbled away, and that the Church alone possessed a strong organisation. In the decay of the old municipal aristocracy the people of the towns gathered round their bishops, whose sacred character inspired some respect in the barbarians, and whose active charity lightened the calamities of their flocks. In such a state of things Pope Gregory the Great raised the Papacy [A. D. 590] to a position of decisive eminence, and marked out the course of its future policy. The piety of emperors and nobles had conferred lands on the Roman Church, not only in Italy, but in Sicily, Corsica, Gaul, and even in Asia and Africa, until the Bishop of Rome had become the largest landholder in Italy. To defend his Italian lands against the incursions of the Lombards was a course suggested to Gregory by self-interest; to use the resources which came to him from abroad as a means of relieving the distress of the suffering people in Rome and Southern Italy was a natural prompting of his charity. In contrast to this, the distant Emperor was too feeble to send any effective help against the Lombards, while the fiscal oppression of his representatives added to the miseries of the starving people. The practical wisdom, administrative capacity, and Christian zeal of Gregory I. led the people of Rome and the neighbouring regions to look upon the Pope as their head in temporal as well as in spiritual matters. The Papacy became a national centre to the Italians, and the attitude of the Popes towards the Emperor showed a spirit of independence which rapidly passed into antagonism and revolt. Gregory I. was not daunted by the difficulties nor absorbed by the cares of his position at home. When he saw Christianity threatened in Italy by the heathen Lombards, he boldly pursued a system of religious colonisation. While dangers were rife at Rome, a band of Roman missionaries carried Christianity to the distant English, and in England first was founded a Church which owed its existence to the zeal of the Roman bishop. Success beyond all that he could have hoped for attended Gregory's pious enterprise. The English Church spread and flourished, a dutiful daughter of her mother-church of Rome. England sent forth missionaries in her turn, and before the preaching of Willibrod and Winifred heathenism died away in Friesland, Franconia, and Thuringia. Under the new name of Boniface, given him by Pope Gregory II., Winifred, as Archbishop of Mainz, organised a German Church, subject to the successor of S. Peter. The course of events in the East also tended to increase the importance of the See of Rome. The Mohammedan conquests destroyed the Patriarchates of Antioch and Jerusalem, which alone could boast of an apostolical foundation. Constantinople alone remained as a rival to Rome; but under the shadow of the Imperial despotism it was impossible for the Patriarch of Constantinople to lay claim to spiritual independence. The settlement of Islam in its eastern provinces involved the Empire in a desperate struggle for its existence. Henceforth its object no longer was to reassert its supremacy over the West, but to hold its ground against watchful foes in the East. Italy could hope for no help from the Emperor, and the Pope saw that a breach with the Empire would give greater independence to his own position, and enable him to seek new allies elsewhere."—M. Creighton, *Hist. of the Papacy during the Period of the Reformation, introd., ch.* 1 (*v.* 1).

A. D. 641-717.—The Eastern Empire.—The period between the death of Heraclius and the advent of Leo III. (the Isaurian) is covered, in the Eastern Empire, by the following reigns: Constantine III. and Heracleonas (641); Constans II. (641–668); Constantine IV. (668–685); Justinian II. (685–711); Leontius and Absimarus (usurpers, who interrupted the reign of Justinian II. from 695 to 698 and from 698 to 704); Philippicus (711–713); Anastasius II. (713–716); Theodosius III. (716–717).

A. D. 717-800.—The Eastern Roman Empire: should it take the name of the Byzantine Empire?—and when?—"The precise date at which the eastern Roman empire ceased to exist has been variously fixed. Gibbon remarks, 'that Tiberius [A. D. 578–582] by the Arabs, and Maurice [A. D. 582–602] by the Italians, are distinguished as the first of the Greek Cæsars, as the founders of a new dynasty and empire.' But if manners, language, and religion are to decide concerning the commencement of the Byzantine empire, the preceding pages have shown that its origin must be carried back to an earlier period; while, if the administrative peculiarities in the form of government be taken as the ground of decision, the Roman empire may be considered as indefinitely prolonged with the existence of the title of Roman emperor, which the sovereigns of Constantinople continued to retain as long as Constantinople was ruled by Christian princes. . . . The period . . . at which the Roman empire of the East terminated is decided by the events which confined the authority of the imperial government to those provinces where the Greeks formed the majority of the population; and it is marked by the adoption of Greek as the language of the government, by the prevalence of Greek civilisation, and by the identification of the nationality of the people, and the policy of the emperors with the Greek church. For, when the Saracen conquests had severed from the empire all those provinces which possessed a native population distinct from the Greeks, by language, literature, and religion, the central government of Constantinople was grad-

ually compelled to fall back on the interests and passions of the remaining inhabitants, who were chiefly Greeks. . . . Yet, as it was by no means identified with the interests and feelings of the native inhabitants of Hellas, it ought correctly to be termed Byzantine, and the empire is, consequently, justly called the Byzantine empire. . . . Even the final loss of Egypt, Syria, and Africa only reveals the transformation of the Roman empire, when the consequences of the change begin to produce visible effects on the internal government. The Roman empire seems, therefore, really to have terminated with the anarchy which followed the murder of Justinian II. [A. D. 711], the last sovereign of the family of Heraclius; and Leo III., or the Isaurian [A. D. 717–741], who identified the imperial administration with ecclesiastical forms and questions, must be ranked as the first of the Byzantine monarchs, though neither the emperor, the clergy, nor the people perceived at the time the moral change in their position, which makes the establishment of this new era historically correct. Under the sway of the Heraclian family [A. D. 610–711], the extent of the empire was circumscribed nearly within the bounds which it continued to occupy during many subsequent centuries. . . . The geographical extent of the empire at the time of its transition from the Roman to the Byzantine empire affords evidence of the influence which the territorial changes produced by the Saracen conquests exercised in conferring political importance on the Greek race. The frontier towards the Saracens of Syria commenced at Mopsuestia in Cilicia, the last fortress of the Arab power. It ran along the chains of Mounts Amanus and Taurus to the mountainous district to the north of Edessa and Nisibis, called, after the time of Justinian, the Fourth Armenia, of which Martyropolis was the capital. It then followed nearly the ancient limits of the empire until it reached the Black Sea, a short distance to the east of Trebizond. . . . In Europe, Mount Hæmus [the Balkans] formed the barrier against the Bulgarians, while the mountainous ranges which bound Macedonia to the north-west, and encircle the territory of Dyrrachium, were regarded as the limits of the free Sclavonian states. . . . Istria, Venice, and the cities on the Dalmatian coast, still acknowledged the supremacy of the empire. . . . In the centre of Italy, the exarchate of Ravenna still held Rome in subjection, but the people of Italy were entirely alienated. . . . The cities of Gaëta, Naples, Amalfi, and Sorento, the district of Otranto, and the peninsula to the south of the ancient Sybaris, now called Calabria, were the only parts [of southern Italy] which remained under the Byzantine government. Sicily, though it had begun to suffer from the incursions of the Saracens, was still populous and wealthy."—G. Finlay, *Greece under the Romans, ch.* 5, *sect.* 1 *and* 7.—Dissenting from the view presented above, Professor Freeman says: "There is no kind of visible break, such as is suggested by the change of name, between the Empire before Leo and the Empire after him. The Emperor of the Romans reigned over the land of Romania after him as well as before him. . . . Down to the fall of Constantinople in the East, down to the abdication of Francis II. in the West, there was no change of title; the Emperor of the Romans remained Emperor of the Romans, however shifting might be the extent of his dominions. But from 800 to 1453 there were commonly two, sometimes more, claimants of the title. The two Empires must be distinguished in some way; and, from 800 to 1204, 'Eastern' and 'Western' seem the simplest forms of distinction. But for 'Eastern' it is just as easy, and sometimes more expressive, to say 'Byzantine'; only it is well not to begin the use of either name as long as the Empire keeps even its nominal unity. With the coronation of Charles the Great [800] that nominal unity comes to an end. The Old Rome passes away from even the nominal dominion of the prince who reigns in the New."—E. A. Freeman, *Historical Essays, series* 3, *p.* 244.—See Byzantine Empire.

A. D. 846-849.—Attack by the Saracens.—"A fleet of Saracens from the African coast presumed to enter the mouth of the Tiber, and to approach a city which even yet, in her fallen state, was revered as the metropolis of the Christian world. The gates and ramparts were guarded by a trembling people; but the tombs and temples of St. Peter and St. Paul were left exposed in the suburbs of the Vatican and of the Ostian Way. Their invisible sanctity had protected them against the Goths, the Vandals, and the Lombards; but the Arabs disdained both the Gospel and the legend; and their rapacious spirit was approved and animated by the precepts of the Koran. The Christian idols were stripped of their costly offerings. . . . In their course along the Appian Way, they pillaged Fundi and besieged Gaëta." The diversion produced by the siege of Gaëta gave Rome a fortunate respite. In the interval, a vacancy occurred on the papal throne, and Pope Leo IV. by unanimous election, was raised to the place. His energy as a temporal prince saved the great city. He repaired its walls, constructed new towers and barred the Tiber by an iron chain. He formed an alliance with the cities of Gaëta, Naples, and Amalfi, still vassals of the Greek empire, and brought their galleys to his aid. When, therefore, in 849, the Saracens from Africa returned to the attack, they met with a terrible repulse. An opportune storm assisted the Christians in the destruction of their fleet, and most of the small number who escaped death remained captives in the hands of the Romans and their allies.—E. Gibbon, *Decline and Fall of the Roman Empire, ch.* 52.

A. D. 903-964.—The reign of the courtesans and their brood.—Interference of Otho the Great.—His revival of the Empire.—"During these changes [in the breaking up of the empire of Charlemagne], Rome became a sort of theocratic democracy, governed by women and priests; a state of things which, in the barbarism of the middle ages, was only possible at Rome. Theodora, a woman of patrician descent, equally celebrated for her beauty and her daring, obtained great power in Rome, which she prolonged by the charms of her two daughters. The city of Saint Peter was ruled by this trio of courtesans. The mother, Theodora, by her familiar commerce with several of the Roman barons, had obtained possession of the castle of Saint Angelo, at the entrance of Rome, on one of the principal bridges over the Tiber; and she had made it an abode of pleasure and a fortress, whence she corrupted and oppressed the Church. Her daughters, Marozia and Theodora, disposed of the pontificate by their own arts, or through their lovers, and occasionally bestowed it on the lovers themselves. Sergius III., after a contested election and seven years' exile, was recalled to the see of Rome by the interest of Marozia, by whom he had had a son, who afterwards became Pope. The younger Theodora was no less ambitious and influential than her sister. She loved a young clerk of the Roman Church, for whom she had first obtained the bishopric of Bologna, and then the archbishopric of Ravenna. Finding it irksome to be separated from him by a distance of 200 miles, she procured his nomination to the papacy, in order to have him near her; and he was elected Pope in 912, under the title of John X. . . . After a pontificate of fourteen years, John was displaced by the same means to which he owed his elevation." Marozia, who had married Guy, Duke of Tuscany, conspired with her husband against the Pope and he was put out of the way. That accomplished, "Marozia allowed the election of two Popes successively, whose pontificate was obscure and short; and then she raised to the papal see a natural son of hers, it is said, by Pope Sergius III., her former lover. This young man took the name of John XI., and Marozia, his mother, having soon after lost her husband, Guy, was sought in marriage by Hugh, King of Italy, and his brother by the mother's side. But it would appear that the people of Rome were growing weary of the tyranny of this shameless and cruel woman." King Hugh was driven from Rome by a revolt, in which another son of Marozia, named Alberic, took the lead. "Alberic, the leader of this popular rising, was proclaimed consul by the Romans, who still clung to the traditions of the republic; he threw his mother, Marozia, into prison, and set a guard over his brother, Pope John; and thus, invested with the popular power, he prepared to defend the independence of Rome against the pretensions of Hugh and the forces of Lombardy. Alberic, master of Rome under the title of patrice and senator, exercised, during twenty-three years, all the rights of sovereignty. The money was coined with his image, with two sceptres across; he made war and peace, appointed magistrates and disposed of the election and of the power of the Popes, who, in that interval, filled the See of Rome, John XI., Leo VII., Stephen IX., Martin III., and Agapetus II. The name of this subject and imprisoned papacy was none the less revered beyond the limits of Rome. . . . Alberic died lord of Rome, and had bequeathed his power to his son Octavian, who, two years afterwards, on the death of Agapetus II., caused himself, young as he was, to be named Pope by those who already acknowledged him as patrice."—A. F. Villemain, *Life of Gregory VII., introd., period* 6.—"He [Octavian] was elected Pope on the 23d of March, A. D. 956. His promotion was a disgraceful calamity. He brought to the chair of St. Peter only the vices and dissolute morals of a young debauchee; and though Luitprand must have exaggerated the disorders of this Pope, yet there remains enough of truth in the account to have brought down the scandal of the pontificate through succeeding ages, like a loud blasphemy, which makes angels weep and hell exult. Octavian assumed the name of John XII. This first example of a change of name on ascending the pontifical chair has since passed into a custom with all the Sovereign Pontiffs."—Abbé J. E. Darras, *General Hist. of the Catholic Church, period* 4, *ch.* 7.—Finding it hard to defend his independence against the king of Italy, Pope John XII. made the mistake, fatal to himself, of soliciting help from the German king Otho the Great. Otho came, made himself master of Italy, revived the empire of Charlemagne, was crowned with the imperial crown of Rome, by the Pope [see Roman Empire, The Holy; and Germany: A. D. 936-973], and then purged the Roman See by causing the bestial young pope who crowned him to be deposed. John was subsequently reinstated by the Romans, but died soon after,—A. D. 964.—H. H. Milman, *Hist. of Latin Christianity, bk.* 5, *ch.* 12.—The state of things at Rome described in the above has been fitly styled by some writers "a pornocracy."

A. D. 962-1057.—Futile attempts of the German Emperors to reform the Papacy.—Chronic disorganization of the city.—"It had not been within the power of the Emperor Otto I. to establish a permanent reformation in Rome. . . . The previous scandalous scenes were renewed, and a slight amelioration of things under the Popes Gregory V. and Silvester II., whom Otto III. placed on the papal throne [A. D. 997-1003], was but transitory. . . . For the third time it became necessary for an emperor, in this instance Henry III., to constitute himself the preserver and purifier of the papacy, first at Sutri and afterwards at Rome. At that period the papal chair was occupied within twelve years by five German popes [Clement II. to Victor II.—A. D. 1046-1057], since amongst the Roman clergy no fitting candidate could be found. These popes, with one exception, died almost immediately, poisoned by the unhealthy atmosphere of Rome; one only, Leo IX., under Hildebrand's guidance, left any lasting trace of his pontificate, and laid the foundation of that Gregorian system which resulted in papal supremacy. . . . Rome was assuming more and more the character of a sacerdotal city; the old wealthy patrician families had either disappeared or migrated to Constantinople; and as the seat of government was either at Constantinople or Ravenna, there was no class of state officials in Rome. But the clergy had become rich upon the revenues of the vast possessions of St. Peter. . . . Without manufactures, trade, or industry of their own, the people of Rome were induced

to rely upon exactions levied upon the foreigner, and upon profits derived from ecclesiastical institutions. . . . Hence the unvarying sameness in the political history of Rome from the 5th to the 15th century."—J. I. von Döllinger, *Studies in European History, ch.* 3.—See PAPACY: A. D. 887–1046.

A. D. 1077-1102.—Donation of the Countess Matilda to the Holy See. See PAPACY: A. D. 1077–1102.

A. D. 1081-1084.—Surrender to Henry IV.—Terrible Norman visitation.—Four years after his humiliation of himself before the pope at Canossa (see CANOSSA), Henry IV. ("King of the Romans" and claiming the imperial coronation, which the pope refused him), entered Italy with an army to enforce his demands. He had recovered his authority in Germany; the rival set up against him was slain; northern Italy was strong in his support. For three successive years Henry marched his army to the walls of Rome and made attempts to enter, by force, or intrigue, or by stress of blockade, and every year, when the heats of summer came, he found himself compelled to withdraw. At last, the Romans, who had stood firm by Gregory VII., tired of the siege, or the gold which purchased their fidelity (some say) gave out, and they opened their gates. Pope Gregory took refuge in his impregnable Castle of St. Angelo, and Henry, bringing with him the anti-pope whom his partisans had set up, was crowned by the latter in the Church of St. Peter. But the coveted imperial crown was little more than settled upon his head when news came of the rapid approach of Robert Guiscard, the Norman conqueror of southern Italy, with a large army, to defend the legitimate pope. Henry withdrew from Rome in haste and three days afterwards Robert Guiscard's army was under its walls. The Romans feared to admit these terrible champions of their pope; but the vigilance and valor of the Normans surprised a gate, and the great city was in their power. They made haste to conduct Gregory to his Lateran Palace and to receive his blessing; then they "spread through the city, treating it with all the cruelty of a captured town, pillaging, violating, murdering, wherever they met with opposition. The Romans had been surprised, not subdued. For two days and nights they brooded over their vengeance; on the third day they broke out in general insurrection. . . . The Romans fought at advantage, from their possession of the houses and their knowledge of the ground. They were gaining the superiority; the Normans saw their peril. The remorseless Guiscard gave the word to fire the houses. . . . The distracted inhabitants dashed wildly into the streets, no longer endeavouring to defend themselves, but to save their families. They were hewn down by hundreds. . . . Nuns were defiled, matrons forced, the rings cut from their living fingers. Gregory exerted himself, not without success, in saving the principal churches. It is probable, however, that neither Goth nor Vandal, neither Greek nor German, brought such desolation on the city as this capture by the Normans. From this period dates the desertion of the older part of the city, and its gradual extension over the site of the modern city, the Campus Martius. . . . Many thousand Romans were sold publicly as slaves; many carried into the remotest parts of Calabria." When Guiscard withdrew his destroying army from the ruins of Rome, Gregory went with him and never returned. He died not long after at Salerno.—H. H. Milman, *Hist. of Latin Christianity, bk.* 7, *ch.* 3.

A. D. 1145-1155.—The Republic of Arnold of Brescia.—Arnold of Brescia—so-called from his native city in Lombardy—was a disciple of Abelard, and not so much a religious as a political reformer. "On all the high mysterious doctrines of the Church, the orthodoxy of Arnold was unimpeachable; his personal life was that of the sternest monk; he had the most earnest sympathy with the popular religion. . . . He would reduce the clergy to their primitive and apostolic poverty; confiscate all their wealth, escheat all their temporal power. . . . His Utopia was a great Christian republic, exactly the reverse of that of Gregory VII." In 1145, Arnold was at Rome, where his doctrines had gone before him, and where the citizens had already risen in rebellion against the rule of the pope. "His eloquence brought over the larger part of the nobles to the popular side; even some of the clergy were infected by his doctrines. The republic, under his influence, affected to resume the constitution of elder Rome. . . . The Capitol was rebuilt and fortified; even the church of St. Peter was sacrilegiously turned into a castle. The Patrician took possession of the Vatican, imposed taxes, and exacted tribute by violence from the pilgrims. Rome began again to speak of her sovereignty of the world." The republic maintained itself until 1155, when a bolder pope—the Englishman, Adrian or Hadrian IV.—had mounted the chair of St. Peter, and confronted Arnold with unflinching hostility. The death of one of his Cardinals, killed in a street tumult, gave the pope an opportunity to place the whole city under an interdict. "Religion triumphed over liberty. The clergy and the people compelled the senate to yield. Hadrian would admit of no lower terms than the abrogation of the republican institutions; the banishment of Arnold and his adherents. The republic was at an end, Arnold an exile; the Pope again master in Rome." A few months later, Arnold of Brescia, a prisoner in the hands of Frederick Barbarossa, then coming to Rome for the imperial crown, was given up to the Pope and was executed in some summary way, the particulars of which are in considerable dispute.—H. H. Milman, *Hist. of Latin Christianity, bk.* 8, *ch.* 6–7.

13-14th Centuries.—The turbulence of the Roman nobles.—The strife of the Colonna and the Ursini.—"In the beginning of the 11th century Italy was exposed to the feudal tyranny, alike oppressive to the sovereign and the people. The rights of human nature were vindicated by her numerous republics, who soon extended their liberty and dominion from the city to the adjacent country. The sword of the nobles was broken; their slaves were enfranchised; their castles were demolished; they assumed the habits of society and obedience. . . . But the feeble and disorderly government of Rome was unequal to the task of curbing her rebellious sons, who scorned the authority of the magistrate within and without the walls. It was no longer a civil contention between the nobles and plebeians for the government of the state. The barons asserted in arms their personal independence; their palaces and castles were fortified against a siege; and their private quarrels were maintained by the numbers of their vassals and retainers. In origin and affection they were aliens to their country; and a genuine Roman, could such have been produced, might have renounced these haughty strangers, who disdained the appellation of citizens, and proudly styled themselves the princes of Rome. After a dark series of revolutions, all records of pedigree were lost; the distinction of surnames was abolished; the blood of the nations was mingled in a thousand channels; and the Goths and Lombards, the Greeks and Franks, the Germans and Normans, had obtained the fairest possessions by royal bounty or the prerogative of valour. . . . It is not my design to enumerate the Roman families which have failed at different periods, or those which are continued in different degrees of splendour to the present time. The old consular line of the Frangipani discover their name in the generous act of breaking or dividing bread in a time of famine; and such benevolence is more truly glorious than to have enclosed, with their allies the Corsi, a spacious quarter of the city in the chains of their fortifications. The Savelli, as it should seem a Sabine race, have maintained their original dignity; the obsolete surname of the Capizucchi is inscribed on the coins of the first senators; the Conti preserve the honour, without the estate, of the counts of Signia; and the Annibaldi must have been very ignorant, or very modest, if they had not descended from the Carthaginian hero. But among, perhaps above, the peers and princes of the city, I distinguish the rival houses of Colonna and Ursini [or Orsini]. . . . About the end of the thirteenth century the most powerful branch [of the Colonna] was composed of an uncle and six brothers, all conspicuous in arms or in the honours of the Church. Of these Peter was elected senator of Rome, introduced to the Capitol in a triumphant car, and hailed in some vain acclamations with the title of Cæsar; while John and Stephen were declared Marquis of Ancona and Count of Romagna by Nicholas IV., a patron so partial to their family that he has been delineated in satirical portraits, imprisoned, as it were, in a hollow pillar. After his decease their haughty behaviour provoked the displeasure of the most implacable of mankind. The two cardinals, the uncle and the nephew, denied the election of Boniface VIII.; and the Colonna were oppressed for a moment by his temporal and spiritual arms. He proclaimed a crusade against his personal enemies; their estates were confiscated; their fortresses on either side of the Tiber were besieged by the troops of St. Peter and those of the rival nobles; and after the ruin of Palestrina, or Præneste, their principal seat, the ground was marked with a ploughshare, the emblem of perpetual desolation [see PAPACY: A. D. 1294–1348]. . . . Some estimate may be formed of their wealth by their losses, of their losses by the damages of 100,000 gold florins which were granted them against the accomplices and heirs of the deceased pope. All the spiritual censures and disqualifications were abolished by his prudent successors; and the fortune of the house was more firmly established by this transient hurricane. . . . But the first of the family in fame and merit was the elder Stephen, whom Petrarch loved and esteemed as a hero superior to his own times and not unworthy of ancient Rome. . . . Till the ruin of his declining age, the ancestors, the character, and the children of Stephen Colonna exalted his dignity in the Roman republic and at the Court of Avignon. The Ursini migrated from Spoleto; the sons of Ursus, as they are styled in the twelfth century, from some eminent person who is only known as the father of their race. But they were soon distinguished among the nobles of Rome by the number and bravery of their kinsmen, the strength of their towers, the honours of the senate and sacred college, and the elevation of two popes, Celestin III. and Nicholas III., of their name and lineage. . . . The Colonna embraced the name of Ghibellines and the party of the empire; the Ursini espoused the title of Guelphs and the cause of the Church. The eagle and the keys were displayed in their adverse banners; and the two factions of Italy most furiously raged when the origin and nature of the dispute were long since forgotten. After the retreat of the popes to Avignon they disputed in arms the vacant republic; and the mischiefs of discord were perpetuated by the wretched compromise of electing each year two rival senators. By their private hostilities the city and country were desolated."—E. Gibbon, *Decline and Fall of the Roman Empire, ch.* 69.—"Had things been left to take their natural course, one of these families, the Colonna, for instance, or the Orsini, would probably have ended by overcoming its rivals, and have established, as was the case in the republics of Romagna and Tuscany, a 'signoria,' or local tyranny, like those which had once prevailed in the cities of Greece. But the presence of the sacerdotal power, as it had hindered the growth of feudalism, so also it stood in the way of such a development as this, and in so far aggravated the confusion of the city."—J. Bryce, *The Holy Roman Empire, ch.* 16.

A. D. 1347-1354.—The revolution of Rienzi, the last Tribune.—"The Holy City had no gov-

ernment. She was no longer the Imperial Rome, nor the Pontifical Rome. The Teutonic Cæsars had abandoned her. The Popes had also fled from the sacred hill of the Vatican to the slimy Gallic city, Avignon. . . . The real masters of the city were the princes or barons, who dwelt in their fortified castles in the environs, or their strong palaces within. The principal among them were masters of different parts of the city. The celebrated old family of the Colonnas reigned, it may be said, over the north of the city, towards the Quirinal. . . . The new family of the Orsini extended their sway along the Tiber from the Campo-di-Fiore, to the Church of St. Peter, comprising the castle of St. Angelo. The Savelli, less powerful, possessed a part of the Aventine, with the theatre of Marcellus, and the Conti, the huge tower which bears their name, on Cæsar's Forum. Other members of the nobility, in the country, were possessors of small fortified cities, or castles. . . . Rome, subjected to such a domination, had become almost deserted. The population of the seven-hilled city had come down to about 30,000 souls. When the barons were at peace with each other, which, however, was a rare occurrence, they combined to exercise their tyranny over the citizens and the serfs, to rob and plunder the farmers, travellers, and pilgrims. Petrarch wrote to the Pope at this period, that Rome had become the abode of demons, the receptacle of all crimes, a hell for the living. . . . Rienzi was then 28 years old. . . . His function of notary (assessore) to the Roman tribunals, would seem to infer that he was considered a peaceful, rational citizen. It appears, however, that he brought in the exercise of his official duties, the excited imagination and generosity of heart which characterized his nature. He gloried in being surnamed the Consul of orphans, of widows, and of the poor. His love for the humble soon became blended with an intense hatred for the great: one of his brothers was killed accidentally by a Roman baron, without his being able to obtain any satisfaction. . . . Rienzi had always been noted for his literary and poetical taste; he was considered as deeply versed in the knowledge of antiquity, and as the most skilful in deciphering and explaining the numerous inscriptions with which Rome abounded. . . . The least remains of antiquity became for him a theme of declamatory addresses to the people, on the present state of Rome, on the iniquities that surrounded him. Followed by groups that augmented daily, and which listened to him with breathless interest, he led them from ruin to ruin, to the Forum, to the tombs of the Christian martyrs, thus associating every glory, and made the hearts of the people throb by his mystical eloquence. . . . No remedy being brought to the popular grievances, an insurrection broke out. The senator was expelled; thirteen good men (buoni uomini) were installed in the Capitol and invested with dictatorial powers. It was a Guelfic movement; Rienzi was mixed with it; but without any preëminent participation. This new government resolved to send an embassy to the Pope, at Avignon, and Rienzi formed part of it. Such was the first real public act in the life of Cola di Rienzi. The embassy was joined by Petrarch. . . . The Pope would not hear of leaving his new splendid palace, and the gentle population of Avignon, for the heap of ruins and the human turbulence of Rome." But "Cardinal Aymeric was named to represent the Pope at Rome, as Legate, and a Colonna and an Orsini invested with the senatorial dignity, in order to restore order in the Eternal City, in the name of the Pontiff. Rienzi indulged in the most extravagant exultation. He wrote a highly enthusiastic address to the Roman people. But his illusion was not of long duration. The new Legate only attended to the filling of the Papal Treasury. The nobility, protected by the new senators, continued their course of tyranny. Rienzi protested warmly against such a course of iniquities, in the council. One day he spoke with a still greater vehemence of indignation, when one of the members of the council struck him in the face, others hissed out at him sneeringly, calling him the Consul of orphans and widows. From that day he never appeared at any of its meetings; his hatred had swollen, and must explode. . . . He went straight to the people (popolo minuto), and prepared a revolution. To render his exhortations to the people more impressive, he made use of large allegorical pictures, hastily drawn, and which form a curious testimony of his mystical imagination, as well as of his forensic eloquence. . . . Finally, he convoked the people at the Capitol for the 20th of May, 1347, the day of Pentecost, namely, under the invocation of the Holy Ghost. Rienzi had heard, with fervour, thirty masses during the preceding night. On that day he came out at 12 o'clock armed, with his head uncovered, followed by 25 partisans; three unfurled standards were carried before him, bearing allegorical pictures. This time his address was very brief—merely stating, that from his love for the Pope and the salvation of the people, he was ready to encounter any danger. He then read the laws which were to insure the happiness of Rome. They were, properly speaking, a summary of reforms, destined to relieve the people from their sufferings, and intended to realize, what he proclaimed, must become the good state [or Good Estate], il buono stato. . . . By this outline of a new constitution, the people were invested with the property and government of the city as well as of its environs; the Pontifical See, bereft of the power it had exercised during several centuries; and the nobility deprived of what they considered as their property, to assist the public poverty. The revolution could not be more complete; and it is needless to add, that Rienzi was clamorously applauded, and immediately invested with full powers to realize and organize the buono stato, of which he had given the programme. He declined the title of Rector, and preferred the more popular name of Tribune. Nothing was fixed as to the duration of this extraordinary popular magistracy. The new government was installed at the Capitol, the Senators expelled, and the whole revolution executed with such rapidity, that the new Tribune might well be strengthened in his belief that he was acting under the protection of the Holy Ghost. He was careful, nevertheless, not to estrange the Pontifical authority, and requested that the apostolical vicar should be offered to be adjoined to him, which the prelate accepted, however uncertain and perilous the honour appeared to be. During the popular enthusiasm, old Stephen Colonna, with the more formidable of the barons, who had been away, returned to Rome in haste;

he expressed publicly his scorn, and when the order came from Rienzi for him to quit the city, he replied that he would soon come and throw that madman out of one of the windows of the Capitol. Rienzi ordered the bells to be rung, the people instantly assembled in arms, and that proudest of the barons was obliged to fly to Palestrina. The next day it was proclaimed that all the nobles were to come, to swear fealty to the Roman people, and afterwards withdraw to their castles, and protect the public roads. John, the son of old Colonna, was the first who presented himself at the Capitol, but it was with the intention of braving and insulting the Tribune. When he beheld the popular masses in close array, he felt awed, and took the oath to protect the people — protect the roads — succour the widows and orphans, and obey the summons of the Tribune. The Orsini, Savelli, Gaetani, and many others, came after him and followed his example. Rienzi, now sole master, without opponents, gave a free course to the allurements of authority. . . . The tolls, taxes, and imposts which pressed upon the people were abolished by Rienzi, in the first instance, and afterwards, the taxes on the bridges, wine, and bread; but he endeavoured to compensate such an enormous deficit by augmenting the tax on salt, which was not yet unpopular, besides an impost on funded property. He was thus making hasty, serious, even dangerous engagements with the people, which it might not be in his power to keep. . . . For the present, calmness and security were reigning in the city. . . . The Tribune received the congratulations of all the ambassadors; the changes he had effected appeared miraculous. . . . He believed implicitly that he was the founder of a new era. The homage profusely lavished upon him by all the Italian Republics, and even by despotic sovereigns confirmed him in his conviction. . . . One nobleman alone, the Prefect of Vico, secretly supported by the agent of the Pontifical patrimony, refused to submit and to surrender the three or four little cities in his jurisdiction. Rienzi led rapidly against him an army of 8,000 men, and attacked the rebellious Prefect so suddenly and skilfully, that the latter surrendered unconditionally. This success inflamed the head and imagination of Rienzi, and with it commenced the mystical extravagances and follies which could not fail to cause his ruin." —Prof. De Vericour, *Rienzi, the last of the Tribunes* (*Dublin Univ. Mag.*, 1860.—*Eclectic Mag.*, *Sept.*, 1860).—"Rienzi's head was turned by his success. He assumed the pomp of a sovereign. He distributed titles, surrounded himself with ceremonies, and multiplied feasts and processions. . . . He desired to be ennobled, and to have the title of Knight, as well as Tribune. To celebrate his installation as Knight, a splendid series of ceremonies was arranged," at the end of which he "made an address, in which he cited the Pope, and Lewis of Bavaria, and Charles of Bohemia, to give reasons for any claims they had on Rome; and pointing his sword to three points of the compass, he exclaimed, 'This is mine, and this is mine, and this is mine.'. . . Folly had quite got the better of him now, and his vanity was leading him swiftly to ruin. . . . Shortly afterwards he issued a proclamation that he had discovered a conspiracy against the people and himself, and declared that he would cut off the heads of all those concerned in it. The conspirators were seized and brought forward, and among them were seen the chief of the princely families of Rome. Solemn preparations were made for their execution, when Rienzi, suddenly and without reason, not only pardoned them all, but conferred upon them some of the most important charges and offices of the state. No sooner were these nobles and princes free out of Rome than they began seriously to conspire to overthrow Rienzi and his government. They assembled their soldiers, and, after devastating the country, threatened to march upon Rome itself. The Tribune, who was no soldier, attempted to intimidate his enemies by threats; but finding that the people grew clamorous for action, he at last took up arms, and made a show of advancing against them. But after a few days, during which he did nothing except to destroy still more of the Campagna, he returned to Rome, clothed himself in the Imperial robes, and received a legate from the Pope. . . . His power soon began to crumble away under him; and when, shortly afterwards, he endeavoured to prevail upon the people to rise and drive out the Count of Minorbino, who had set his authority at defiance, he found that his day was past. . . . He then ordered the trumpets of silver to sound, and, clothed in all his pomp, he marched through Rome, accompanied by his small band of soldiers, and on the 15th October, 1347, intrenched himself in the Castle St. Angelo. Still the influence of his name and his power was so great, that it was not till three days after that the nobles ventured to return to Rome, and then they found that Cola's power had vanished. It faded away like a carnival pageant, as that gay procession entered the Castle St. Angelo. There he remained until the beginning of March, and then fled, and found his way to Civita Vecchia, where he stayed with a nephew of his for a short time. But his nephew having been arrested, he again returned to Rome secretly, and was concealed in Castle St. Angelo by one of the Orsini who was friendly to him and his party. . . . Cola soon after fled to Naples, fearing lest he should be betrayed into the hands of the Cardinals. Rome now fell into a state of anarchy and confusion even worse than when he assumed the reins of power. Revolutions occurred. Brigandage was renewed. . . . In 1353 Rienzi returned with Cardinal Albornos, the legate of the Pope. He was received with enthusiasm, and again installed in power. But he was embarrassed in all his actions by the Cardinal, who sought only to make use of him, while he himself exercised all the power. The title of Senator of Rome was conferred on him, and the people forgave him. . . . But Rienzi had lost the secret of his power in losing his enthusiasm. . . . At last, in October 1353, a sedition broke out, and the mob rushed to the Capitol with cries of 'Death to the traitor Rienzi!'. . . He appeared on the balcony clothed in his armour as Knight, and, with the standard of the people in his hand, demanded to be heard. But the populace refused to listen to him. . . . At last he decided to fly. Tearing off his robes, he put on the miserable dress of the porter, rushed down the flaming stairs and through the burning chambers, . . . and at last reached the third floor. . . . At this very moment his arm was seized, and a voice said, 'Where are you going?' He saw that all was lost. But, at bay,

he did nothing mean. Again there was a flash of heroic courage, not unworthy of him. He threw off his disguise, and disdaining all subterfuges, said, 'I am the Tribune!' He was then led out through the door . . . to the base of the basalt lions, where he had made his first great call upon the people. Standing there, undaunted by its tumultuous cries, he stood for an hour with folded arms, and looked around upon the raging crowd. At last, profiting by a lull of silence, he lifted his voice to address them, when suddenly an artisan at his side, fearing perhaps the result of his eloquence, and perhaps prompted by revenge, plunged his pike in his breast, and he fell. The wild mob rushed upon his corpse."—W. W. Story, *Castle St. Angelo, ch.* 4.

A. D. 1600-1656.—The great families and the Roman population.—"A numerous, powerful, and wealthy aristocracy surrounded the papal throne; the families already established imposed restraints on those that were but newly rising; from the self-reliance and authoritative boldness of monarchy, the ecclesiastical sovereignty was passing to the deliberation, sobriety, and measured calmness of aristocratic government. . . . There still flourished those old and long-renowned Roman races, the Savelli, Conti, Orsini, Colonna, and Gaetani. . . . The Colonna and Orsini made it their boast, that for centuries no peace had been concluded between the princes of Christendom, in which they had not been included by name. But however powerful these houses may have been in earlier times, they certainly owed their importance in those now before us to their connection with the Curia and the popes. . . . Under Innocent X., there existed for a considerable time, as it were, two great factions, or associations of families. The Orsini, Cesarini, Borghesi, Aldobrandini, Ludovisi, and Giustiniani were with the Pamfili; while opposed to them, was the house of Colonna and the Barberini. . . . In the middle of the seventeenth century there were computed to be fifty noble families in Rome of three hundred years standing, thirty-five of two hundred, and sixteen of one hundred years. None were permitted to claim a more ancient descent, or were generally traced to an obscure, or even a low origin. . . . But by the side of the old families there rose up various new ones. All the cardinals and prelates of the Curia proceeded according to the pope's example, and each in proportion to his means employed the surplus of his ecclesiastical revenue for the aggrandizement of his kindred, the foundation of a new family. There were others which had attained to eminence by judicial appointments, and many were indebted for their elevation to being employed as bankers in the affairs of the Dataria. Fifteen families of Florence, eleven from Genoa, nine Portuguese, and four French, are enumerated as having risen to more or less consideration by these means, according to their good fortune or talents; some of them, whose reputation no longer depended on the affairs of the day, became monarchs of gold; as for example, the Guicciardini and Doni, who connected themselves, under Urban VIII., with the Giustiniani, Primi, and Pallavicini. But even, without affairs of this kind, families of consideration were constantly repairing to Rome, not only from Urbino, Rieti, and Bologna, but also from Parma and Florence. . . . Returns of the Roman population are still extant, and by a comparison of the different years, we find a most remarkable result exhibited, as regards the manner in which that population was formed. Not that its increase was upon the whole particularly rapid, this we are not authorized to assert. In the year 1600 the inhabitants were about 110,000; fifty-six years afterwards they were somewhat above 120,000, an advance by no means extraordinary; but another circumstance here presents itself which deserves attention. At an earlier period, the population of Rome had been constantly fluctuating. Under Paul IV. it had decreased from 80,000 to 50,000; in a score or two of years it had again advanced to more than 100,000. And this resulted from the fact that the court was then formed principally of unmarried men, who had no permanent abode there. But, at the time we are considering, the population became fixed into settled families. This began to be the case towards the end of the sixteenth century, but took place more particularly during the first half of the seventeenth. . . . After the return of the popes from Avignon, and on the close of the schism, the city, which had seemed on the point of sinking into a mere village, extended itself around the Curia. But it was not until the papal families had risen to power and riches—until neither internal discords nor external enemies were any longer to be feared, and the incomes drawn from the revenues of the church or state secured a life of enjoyment without the necessity for labour, that a numerous permanent population arose in the city."—L. Ranke, *Hist. of the Popes, bk.* 8, *sect.* 7 (*v.* 2).

ROSETTA STONE.—"The Rosetta Stone is a fragment of a stela discovered in the year 1799 by M. Boussard, a French artillery officer, while digging entrenchments round the town of that name. It contains a copy of a decree made by the priests of Egypt, assembled at Memphis, in honour of Ptolemy Epiphanes. This decree is engraved on the stone in three languages, or rather in three different writings. The first is the hieroglyphic, the grand old writing of the monuments; the second is the demotic character as used by the people; and the third is the Greek. But the text in Greek character is the translation of the two former. Up to this time, hieroglyphs had remained an impenetrable mystery even for science. But a corner of the veil was about to be lifted: in proceeding from the known to the unknown, the sense at all events was at length to be arrived at of that mysterious writing which had so long defied all the efforts of science. Many erudite scholars tried to solve the mystery, and Young, among others, very nearly brought his researches to a satisfactory issue. But it was Champollion's happy lot to succeed in entirely tearing away the veil. Such is the Rosetta Stone, which thus became the instrument of one of the greatest discoveries which do honour to the nineteenth century."—A. Mariette-Bey, *Monuments of Upper Egypt* (*Itinéraire*) *p.* 29.—See, also, HIEROGLYPHICS.

ROSICRUCIANS.—ILLUMINATI.—"About the year 1610, there appeared anonymously a little book, which excited great sensation throughout Germany. It was entitled, The Discovery of the Brotherhood of the Honourable Order of the Rosy Cross, and dedicated to all the scholars and magnates of Europe. It commenced with an imaginary dialogue between the Seven Sages of Greece, and other worthies of antiquity, on the best method of accomplishing a

general reform in those evil times. The suggestion of Seneca is adopted, as most feasible, namely a secret confederacy of wise philanthropists, who shall labour everywhere in unison for this desirable end. The book then announces the actual existence of such an association. One Christian Rosen Kreuz, whose travels in the East had enriched him with the highest treasures of occult lore, is said to have communicated his wisdom, under a vow of secresy, to eight disciples, for whom he erected a mysterious dwelling-place called The Temple of the Holy Ghost. It is stated further, that this long-hidden edifice had been at last discovered, and within it the body of Rosen Kreuz, untouched by corruption, though, since his death, 120 years had passed away. The surviving disciples of the institute call on the learned and devout, who desire to co-operate in their projects of reform, to advertise their names. They themselves indicate neither name nor place of rendezvous. They describe themselves as true Protestants. They expressly assert that they contemplate no political movement in hostility to the reigning powers. Their sole aim is the diminution of the fearful sum of human suffering, the spread of education, the advancement of learning, science, universal enlightenment, and love. Traditions and manuscripts in their possession have given them the power of gold-making, with other potent secrets; but by their wealth they set little store. They have arcana, in comparison with which the secret of the alchemist is a trifle. But all is subordinate, with them, to their one high purpose of benefiting their fellows both in body and soul. . . . I could give you conclusive reasons, if it would not tire you to hear them, for the belief that this far-famed book was written by a young Lutheran divine named Valentine Andreä. He was one of the very few who understood the age, and had the heart to try and mend it. . . . This Andreä writes the Discovery of the Rosicrucian Brotherhood, a jeu-d'esprit with a serious purpose, just as an experiment to see whether something cannot be done by combined effort to remedy the defect and abuses — social, educational, and religious, so lamented by all good men. He thought there were many Andreäs scattered throughout Europe — how powerful would be their united systematic action! . . . Many a laugh, you may be sure, he enjoyed in his parsonage with his few friends who were in the secret, when they found their fable everywhere swallowed greedily as unquestionable fact. On all sides they heard of search instituted to discover the Temple of the Holy Ghost. Printed letters appeared continually, addressed to the imaginary brotherhood, giving generally the initials of the candidate, where the invisibles might hear of him, stating his motives and qualifications for entrance into their number, and sometimes furnishing samples of his cabbalistic acquirements. Still, no answer. Not a trace of the Temple. Profound darkness and silence, after the brilliant flash which had awakened so many hopes. Soon the mirth grew serious. Andreä saw with concern that shrewd heads of the wrong sort began to scent his artifice, while quacks reaped a rogue's harvest from it. . . . A swarm of impostors pretended to belong to the Fraternity, and found a readier sale than ever for their nostrums. Andreä dared not reveal himself. All he could do was to write book after book to expose the folly of those whom his handiwork had so befooled, and still to labour on, by pen and speech, in earnest aid of that reform which his unhappy stratagem had less helped than hindered. . . . Confederacies of pretenders appear to have been organized in various places; but Descartes says he sought in vain for a Rosicrucian lodge in Germany. The name Rosicrucian became by degrees a generic term, embracing every species of occult pretension, — arcana, elixirs, the philosopher's stone, theurgic ritual, symbols, initiations. In general usage the term is associated more especially with that branch of the secret art which has to do with the creatures of the elements. . . . And from this deposit of current mystical tradition sprang, in great measure, the Freemasonry and Rosicrucianism of the 18th century, — that golden age of secret societies. Then flourished associations of every imaginable kind, suited to every taste. . . . Some lodges belonged to Protestant societies, others were the implements of the Jesuits. Some were aristocratic, like the Strict Observance; others democratic, seeking in vain to escape an Argus-eyed police. Some — like the Illuminati under Weishaupt Knigge, and Von Zwackh, numbering (among many knaves) not a few names of rank, probity, and learning — were the professed enemies of mysticism and superstition. Others existed only for the profitable juggle of incantations and fortune-telling. . . . The best perished at the hands of the Jesuits, the worst at the hands of the police."—R. A. Vaughan, *Hours with the Mystics, bk.* 8, *ch.* 9 (*v.* 2).

ROTENNU, RUTENNU, OR RETENNU, The.—"The Syrian populations, who, to the north of the Canaanites [17th century B. C.], occupied the provinces called in the Bible by the general name of Aram, as far as the river Euphrates, belonged to the confederation of the Rotennu, or Retennu, extending beyond the river and embracing all Mesopotamia (Naharaina). . . . The Rotennu had no well-defined territory, nor even a decided unity of race. They already possessed powerful cities, such as Nineveh and Babylon, but there were still many nomadic tribes within the ill-defined limits of the confederacy. Their name was taken from the city of Resen, apparently the most ancient, and originally the most important, city of Assyria. The germ of the Rotennu confederation was formed by the Semitic Assyro-Chaldæan people, who were not yet welded into a compact monarchy."—F. Lenormant, *Manual of the Ancient Hist. of the East, bk.* 3, *ch.* 3.

ROUND TOWERS OF IRELAND.—"At various periods between the sixth and twelfth centuries (some of them still later, but the greater number, perhaps, in the ninth and tenth centuries), were erected those singular buildings, the round towers, which have been so enveloped in mystery by the arguments and conjectures of modern antiquaries. . . . The real uses of the Irish round towers, both as belfries and as ecclesiastical keeps or castles, have been satisfactorily established by Dr. Petrie, in his important and erudite work on the ecclesiastical architecture of Ireland. . . . These buildings were well contrived to supply the clergy with a place of safety for themselves, the sacred vessels, and other objects of value, during the incursions of the Danes, and other foes; and the upper stories, in which there were four windows, were perfectly well adapted for the ringing of the largest bells then used in Ireland."—M. Haverty, *Hist. of Ireland, p.* 115.

Also in: S. Bryant, *Celtic Ireland, ch.* 7.

ROUNDHEADS. — The Parliamentary or popular party in the great English civil war were called Roundheads because they generally wore their hair cut short, while the Cavaliers of the king's party held to the fashion of flowing locks. According to the Parliamentary clerk Rushworth, the first person who applied the name was one David Hyde, who threatened a mob of citizens which surrounded the Houses of Parliament on the 27th of December, 1641, crying "No Bishops," that he would "cut the throats of these round-headed dogs."—D. Masson, *Life of John Milton, v.* 2, *bk.* 2, *ch.* 6.

ROYAL ROAD OF ANCIENT PERSIA, The.—"Herodotus describes the great road of the Persian period from Ephesos by the Cilician Gates to Susa. It was called the 'Royal Road,' because the service of the Great King passed along it; and it was, therefore, the direct path of communication for all government business. . . . It is an accepted fact that in several other cases roads of the Persian Empire were used by the Assyrian kings long before the Persian time, and, in particular, that the eastern part of the 'Royal Road,' from Cilicia to Susa, is much older than the beginning of the Persian power. . . . Herodotus represents it as known to Aristagoras, and therefore, existing during the 6th century, B. C., and the Persians had had no time to organise a great road like this before 500; they only used the previously existing road. Moreover, the Lydian kings seem to have paid some attention to their roads, and perhaps even to have measured them, as we may gather from Herodotus's account of the roads in the Lycus valley, and of the boundary pillar erected by Crœsus at Kydrara."—W. RUSSIA.

A. D. 862.—Scandinavian Origin of the name and the National Organization.—"'In the year 859,' says Nestor [the oldest Russian chronicler, a monk of Kiev, who wrote early in the 12th century] 'came the Varangians from beyond the sea and demanded tribute from the Chud and from the Slavonians, the Meria, the Ves, and the Krivichi; but the Khazars took tribute of the Polians, the Severians and of the Viatichi.' Then he continues: 'In the year 862 they drove the Varangians over the sea, and paid them no tribute, and they began to govern themselves, and there was no justice among them, and clan rose against clan, and there was internal strife between them, and they began to make war upon each other. And they said to each other: Let us seek for a prince who can reign over us and judge what is right. And they went over the sea to the Varangians, to Rus, for so were these Varangians called: they were called Rus as others are called Svie (Swedes), others Nurmane (Northmen, Norwegians), others Angliane (English, or Angles of Sleswick?), others Gote (probably the inhabitants of the island of Gothland). The Chud, the Slavonians, the Krivichi, and the Ves said to Rus: Our land is large and rich, but there is no order in it; come ye and rule and reign over us. And three brothers were chosen with their whole clan, and they took with them all the Rus, and they came. And the eldest, Rurik, settled in Novgorod, and the second, Sineus, near Bielo-ozero, and the third, Truvor, in Izborsk. And the Russian land, Novgorod, was called after these Varangians; they are the Novgorodians of Varangian descent; previously the Novgorodians were Slavonians. But after the lapse of two years Sineus and his brother Truvor died and Rurik assumed the government and divided the towns among his men, to one Polotsk, to another Rostov, to another Bielo-ozero.' Such is Nestor's naive description of the foundation of the Russian state. If it be read without prejudice or sophistical comment, it cannot be doubted that the word Varangians is used here as a common term for the inhabitants of Scandinavia, and that Rus was meant to be the name of a particular Scandinavian tribe; this tribe, headed by Rurik and his brothers, is said to have crossed the sea and founded a state whose capital, for a time, was Novgorod, and this state was the nucleus of the present Russian empire. Next, Nestor tells us that in the same year two of Rurik's men, 'who were not of his family,' Askold and Dir, separated themselves from him with the intention to go to Constantinople. They went down the Dnieper; but when they arrived at Kiev, the capital of the Polians, who at that time were tributary to the Khazars, they preferred to stay there, and founded in that town an independent principality. Twenty years after, in 882, this principality was incorporated by Rurik's successor, Oleg: by a stratagem he made himself master of the town and killed Askold and Dir, and from this time Kiev, 'the mother of all Russian towns,' as it was called, remained the capital of the Russian state and the centre of the Russian name. . . . From the time historical critics first became acquainted with Nestor's account, that is to say from the beginning of the last century, until about fifteen or twenty years ago [written in 1877], scarcely any one ventured to doubt the accuracy of his statement. Plenty of evidence was even gradually produced from other sources to corroborate in the most striking manner the tradition of the Russian chronicles."—V. Thomsen, *Relations between Ancient Russia and Scandinavia, lect.* 1.

A. D. 865.—First attack of the Russians on Constantinople. See CONSTANTINOPLE: A. D. 865.

A. D. 865-900.—Early relations with the Byzantine Empire.—"The first Russian naval expedition against Constantinople in 865 would probably have been followed by a series of plundering excursions, like those carried on by the Danes and Normans on the coasts of England and France, had not the Turkish tribe called the Patzinaks rendered themselves masters of the lower course of the Dnieper, and become instruments in the hands of the emperors to arrest the activity of the bold Varangians. The northern rulers of Kief were the same rude warriors that infested England and France, but the Russian people was then in a more advanced state of society than the mass of the population in Britain and Gaul. The majority of the Russians were freemen; the majority of the inhabitants of Britain and Gaul were serfs. The commerce of

the Russians was already so extensive as to influence the conduct of their government, and to modify the military ardour of their Varangian masters. . . . After the defeat in 865, the Russians induced their rulers to send envoys to Constantinople to renew commercial intercourse, and invite Christian missionaries to visit their country; and no inconsiderable portion of the people embraced Christianity, though the Christian religion continued long after better known to the Russian merchants than to the Varangian warriors. The commercial relations of the Russians with Cherson and Constantinople were now carried on directly, and numbers of Russian traders took up their residence in these cities. The first commercial treaty between the Russians of Kief and the Byzantine empire was concluded in the reign of Basil I. The intercourse increased from that time."—G. Finlay, *Hist. of the Byzantine Empire, from* 716 *to* 1057, *bk.* 2, *ch.* 2, *sect.* 1.

10th Century.—The introduction of Christianity. See Christianity: 10th Century.

A. D. 980-1054.—Family divisions and their consequence.—"Under Wladimir I. (980–1015), and under Jaroslaf I. (1019–1054), the power of the grand-duchy of Kiew was respectable. But Jaroslaf having divided it between his sons conduced to enfeeble it. In the 12th century, the supremacy passed from the grand-duchy of Kiew to the grand-duchy of Wladimir, without extricating Russia from division and impotence. The law of primogeniture not existing in Russia, where it was not introduced into the Czarean family until the 14th century, the principalities were incessantly divided."—S. Menzies, *Hist. of Europe, ch.* 36.

A. D. 988.—Acquisition of Cherson. See Cherson: A. D. 988.

A. D. 1054-1237.—The early Russian territory and its divisions.—"It must not be forgotten that the oldest Russia was formed mainly of lands which afterwards passed under the rule of Poland and Lithuania. . . . The Dnieper, from which Russia was afterwards cut off, was the great central river of the elder Russia; of the Don and the Volga she held only the upper course. The northern frontier barely passed the great lakes of Ladoga and Onega, and the Gulf of Finland itself. It seems not to have reached what was to be the Gulf of Riga, but some of the Russian princes held a certain supremacy over the Finnish and Lettish tribes of that region. In the course of the 11th century, the Russian state, like that of Poland, was divided among princes of the reigning family, acknowledging the superiority of the great prince of Kief. In the next century the chief power passed from Kief to the northern Vladimir on the Kiasma. Thus the former Finnish land of Susdal on the upper tributaries of the Volga became the cradle of the second Russian power. Novgorod the Great, meanwhile, under elective princes, claimed, like its neighbour Pskof, to rank among commonwealths. Its dominion was spread far over the Finnish tribes to the north and east; the White Sea, and, far more precious, the Finnish Gulf, had now a Russian seaboard. It was out of Vladimir and Novgorod that the Russia of the future was to grow. Meanwhile a crowd of principalities, Polotsk, Smolensk, the Severian Novgorod, Tchernigof, and others, arose on the Duna and Dnieper. Far to the east arose the commonwealth of Viatka, and on the frontiers of Poland and Hungary arose the principality of Halicz or Galicia, which afterwards grew for a while into a powerful kingdom. Meanwhile in the lands on the Euxine the old enemies, Patzinaks and Chazars, gave way to the Cumans, known in Russian history as Polovtzi and Parthi. They spread themselves from the Ural river to the borders of Servia and Danubian Bulgaria, cutting off Russia from the Caspian. In the next century Russians and Cumans — momentary allies — fell before the advance of the Mongols, commonly known in European history as Tartars. Known only as ravagers in the lands more to the west, over Russia they become overlords for 250 years. All that escaped absorption by the Lithuanian became tributary to the Mongol. Still the relation was only a tributary one; Russia was never incorporated in the Mongol dominion, as Servia and Bulgaria were incorporated in the Ottoman dominion. But Kief was overthrown; Vladimir became dependent; Novgorod remained the true representative of free Russia in the Baltic lands."—E. A. Freeman, *Hist. Geog. of Europe, ch.* 11, *sect.* 2.

A. D. 1235.—Formation of the grand-duchy of Lithuania, embracing a large area of Russian territory. See Lithuania: A. D. 1235.

A. D. 1237-1239.—Mongol conquest. See Mongols: A. D. 1229–1294.

A. D. 1237-1480.—Prosperity and greatness of Novgorod as a commercial republic.—Two centuries of Tartar domination.—Growing power of Lithuania and Poland.—Rise of the Duchy of Moscow, the nucleus of the future Russian Empire.—"Alone among the cities the ancient Novgorod has boasted its exemption from plunder [at the hands of the Tartars]. The great city, though fallen since the days of Rurik from being the capital of an Empire, had risen to the dignity of a Republic. It had found wealth in trade; and at successive epochs had introduced the riches of Constantinople to the North, the merchandise of the great Hanse Towns to the South. It had profited by the example, and had emulated the prosperity, of the rich cities of Germany. It had striven also to attain their freedom; and, though still continuing to acknowledge a vague allegiance to the Russian Princes, it had been able, by its wealth and its remoteness from control, to win or to assume privileges, until it had resembled Bremen or Lubeck in the sovereignty of its assemblies, and had surpassed those cities by the assumption of a style declaratory of its independence. It boasted further of a prince, St. Alexander Nevsky, to whom a glorious victory over the Swedes had already given a name, and whose virtues were hereafter to enrol him among the Saints; and it had a defence in the marshes and forests which surrounded it and which had already once deterred the invaders. But even the great city could not continue to defy the Tartar horde, and its submission is at once the last and most conclusive proof of the supremacy of their power. Thenceforth the nation felt the bitterness of servitude. The Tartars did not occupy the country they had conquered; they retired to establish their settlements upon the Volga, where they became known as the Golden Horde: but they ex-

acted the tribute and the homage of the Russian Princes. . . . Five centuries have been unable to obliterate the traces which this period has imprinted upon the national character. The Tartars oppressed and extorted tribute from the Russian princes; the princes in their turn became the oppressors and extortioners of their people. Deceit and lying, the refuge of the weak, became habitual. Increasing crime and increasing punishments combined to brutalise the people. The vice of drunkenness was universal. Trade indeed was not extinguished; and religion prospered so abundantly that of all the many monasteries of Russia there are but few that do not owe their origin to this time. . . . Meanwhile the provinces of the West were falling into the hands of other enemies. The Tartar wave had swept as far as Poland, but it had then recoiled, and had left the countries westward of the Dnieper to their fate. All links of the connection that had bound these regions to the Princes of Vladimir, were now broken. Vitepsk, Polotsk, Smolensk, and even provinces still nearer Moscow, were gradually absorbed by the growing power of Lithuania, which, starting from narrow limits between the Dwina and the Niemen, was destined to overshadow Russia [see LITHUANIA: A. D. 1235]. The provinces of the South for a time maintained a certain unity and independence under the name of the Duchy of Halicz or Kief; but these also, through claims of inheritance or feudal right, became eventually merged in the dominions of their neighbours. Poland obtained Black Russia, which has never since returned to its earlier masters. Lithuania acquired Volhynia and Red Russia, and thus extended her wide empire from the Baltic as far as the Red Sea. Then came the union of these powers by the acceptance in 1383 of the Grand Duke Jagellon as King of Poland; and all hopes for the Russian princes of recovering their possessions seemed lost. The ancient empire of Yaroslaf was thus ended; and its history is parted from that of mediæval Russia by the dark curtain of two centuries in which the Russian people were a race but not a nation. The obscure descendants of Rurik still occupied his throne, and ruled with some appearance of hereditary succession. They even chose this period of their weakness to solace their vanity by the adoption of the style of Sovereigns of All the Russias. But they were the mere vassals of the Golden Horde. . . . It was not until the reign of Dimitry IV., that any sign was shown of reviving independence. Time, by weakening the Tartars, had then brought freedom nearer to the Russians. The Horde, which had been united under Bati, when it had first precipitated itself upon Europe, had become divided by the ambition of rebellious Khans, who had aspired to establish their independent power; and the Russians had at length a prince who was able to profit by the weakness of his enemies. Dimitry, who reigned from 1362 to 1389, is celebrated as having checked the divisions which civil strife and appanages had inflicted upon his country, and as having also gloriously repulsed the Lithuanians from the walls of Moscow, now rising to be his capital. But his greatest deed, and that by which he lives in the remembrance of every Russian, is his victory upon the Don, which gave to him thenceforth the name of Donskoi. The Tartars, indignant at his prominence, had united with the Lithuanians. For the first time the Russians turned against their tyrants, and found upon the field of Khoulikof [1383] that their freedom was still possible. They did not achieve indeed for many years what they now began to hope. Their strength was crippled by renewed attacks of Tartars from the south and of Lithuanians from the west; and they could not dare to brave the revengeful enmity of the Horde. For a hundred years they still paid tribute, and the successors of Dimitry still renewed their homage at the camp upon the Volga. But progress gradually was made. The Grand Prince Vassili Dimitrievitch [1389–1425] was able to extend his rule over a territory that occupied the space of six or seven of the modern governments round Moscow; and though the country, under Vassili Vassilievitch [1425–1462], became enfeebled by a renewal of civil strife, the increasing weakness of the Tartar power continued to prepare the way for the final independence that was accomplished by the close of the 15th century. The reign of Ivan III. became the opening of a new epoch in Russian history. He restored his people, long sunk out of the gaze of Europe, to a place among its nations, and recalled them in some degree from the barbarism of the East to the intercourse and civilization of the West. The Russia of old time was now no more; but the Grand Prince, or Duke of Moscow, as he was called, was still the heir of Rurik and of Yaroslaf, and in the growth of his Duchy their Empire reappeared. . . . Without the fame of a warrior, but with the wisdom of a statesman, with a strong hand and by the help of a long reign, he built up out of the fragments that surrounded him an Empire that exceeded vastly that of his immediate predecessor. . . . The fall of the republic of Novgorod [1478] and the final extinction of the Golden Horde, are the events which are most prominent. Riches had been the bane of the great city. They had fostered insolence, but they had given a distaste for war. The citizens had often rebelled; they had accepted the protection of Lithuania, and had later meditated, and even for a time accomplished, a union with Poland. But they had had no strength to defend the liberty to which they had aspired. . . .When Ivan advanced, determined, as he said, to reign at Novgorod as he reigned at Moscow, they were unable to repel or to endure a siege, and they surrendered themselves into his hand. Once he had pardoned them; now their independence was taken from them. Their assembly was dissolved; their great bell, the emblem of their freedom, was carried to Moscow. The extinction of the Golden Horde was due to time and policy, rather than to any deeds which have brought glory to the Russian people [see MONGOLS: A. D. 1238–1391]. . . . Released in this manner from the most dangerous both of domestic and of foreign foes the power of Ivan rapidly advanced. The broad province of Perm, that had begun to boast a half accomplished independence, had been early forced to acknowledge her subjection. The Khan of Kazan was now made tributary; and the rule of Ivan was extended from the Oural to the Neva. Provinces, as important, though less extensive, were acquired in the south. The Russian princes and cities that had preserved their independence were all, with the one exception of Riazan, compelled to acknowledge the sovereignty of Moscow. . . .

At the same time the Lithuanians were thrust back. Their greatness had gone by; and the territories of Tula, Kalouga, and Orel, now ceasing to own allegiance to a declining power, were incorporated with the rising Empire. That Empire had already reached the Dnieper, and was already scheming to recover the ancient capital of its princes."—C. F. Johnstone, *Historical Abstracts, ch.* 6.

15th Century.—Effects of the Tartar domination.—Sources of autocracy.—"The invasion of the Mongols, in the beginning of the 13th century, snapped the thread of Russia's destinies. . . . Nature, after preparing the invasion, herself marked its bounds. The Tatars, now masters of the steppes in the southeast, which felt to them very much like home, grew ill at ease as soon as they began to lose themselves in the forests of the north. They did not settle there. These regions were too European to suit their half-nomadic habits, and they cared more for tribute-payers than for subjects. So the 'kniazes' received their principalities back from the hands of the Mongols—as fiefs. They had to submit to the presence near their person of a sort of Tatar 'residents,'—the 'baskâks,' whose duty it was to take the census and to collect the taxes. They were compelled to take the long, long journey to the 'Horde,' often encamped in the heart of Asia, in order to receive their investiture from the successors of Djinghiz, and ended by becoming the vassals of a vassal of the 'Great-Khan.' At this price Russia retained her religion, her dynasties, and—thanks to her clergy and her princes—her nationality. Never yet was nation put through such a school of patience and abject submission. . . . Under this humiliating and impoverishing domination the germs of culture laid in the old principalities withered up. . . . The Tatar domination developed in the Russians faults and faculties of which their intercourse with Byzance had already brought them the germs, and which, tempered by time, have since contributed to develop their diplomatic gifts. . . . The oppression by man, added to the oppression by the climate, deepened certain traits already sketched in by nature in the Great-Russian's soul. Nature inclined him to submission, to endurance, to resignation; history confirmed these inclinations. Hardened by nature, he was steeled by history. One of the chief effects of the Tatar domination and all that makes up Russian history, is the importance given to the national worship. . . . The domination of an enemy who was a stranger to Christianity fortified the sufferers' attachment to their worship. Religion and native land were merged into one faith, took the place of nationality and kept it alive. It was then that the conception sprang up which still links the quality of Russian to the profession of Greek orthodoxy, and makes of the latter the chief pledge of patriotism. . . . Upon Russia's political sovereignty the Tatar domination had two parallel effects: it hastened national unity and it strengthened autocracy. The country which, under the appanage system, was falling to pieces, was bound together by foreign oppression as by a chain of iron. Having constituted himself suzerain of the 'Grand-Kniazes,' whom he appointed and dethroned at will, the Khan conferred on them his authority. The Asiatic tyranny of which they were the delegates empowered them to govern tyrannically. Their despotism over the Russians was derived from their servitude under the Tatars. . . . Every germ of free government, whether aristocratic or democratic, was stifled. Nothing remained but one power, the 'Velíki-Kniaz,' the autocrat,—and such now, after more than 500 years, still is the basis of the state."—A. Leroy-Beaulieu, *The Empire of the Tsars and the Russians, pt.* 1, *bk.* 4, *ch.* 3.

A. D. 1533-1682.—From Ivan the Terrible to Peter the Great.—The Poles at Moscow.—Origin of the dynasty of the Romanoffs.—"Apart from the striking and appalling character of Ivan himself, whom Miçkiewicz, the Polish poet, calls, in his lectures on the Slavonians, 'the most finished tyrant known in history—frivolous and debauched like Nero, stupid and ferocious like Caligula, full of dissimulation like Tiberius or Louis XI.,' the reign of Ivan the Terrible is interesting as marking the beginning of the intercourse between Russia and Western Europe, and especially between Russia and England. The natural approach to Russia from the west was, of course, through Poland; but the Poles impeded systematically, and for political reasons, the introduction of arts and artificers into Russia, and Sigismund wrote a letter to Elizabeth, warning her against the Muscovite power as a danger to civilization, only not formidable for the moment because it was still semi-barbarous. Ivan the Terrible was the third of the independent Tsars; and already under Ivan, sometimes called the 'Great'—to whom indeed belongs the honour of having finally liberated Russia from the Tartar yoke—endeavours had been made to enter into relations with various European nations. Foreigners, too, were encouraged to visit Russia and settle there. The movement of foreigners towards Russia increased with each succeeding reign; and beginning with the first Tsar of Muscovy it became much more marked under the third, that Ivan the Terrible, under whose reign the mariners in the service of the English company of 'merchant adventurers' entered the White Sea, and, in their own language, 'discovered' Russia. Russia was, indeed, until that time, so far as Western Europe was concerned, an unknown land, cut off from Western civilization for political and warlike reasons by the Poles, and for religious reasons by the Catholic Church. On the 18th of March, 1584, Ivan was sitting half dressed, after his bath, 'solacing himself and making merie with pleasant songs, as he used to doe.' He called for his chess-board, had placed the men, and was just setting up the king, when he fell back in a swoon and died. . . . The death of Ivan was followed by strong dislike against the English at Moscow; and the English diplomatist and match-maker, Sir Jerome Bowes, after being ironically informed that 'the English king was dead,' found himself seized and thrown into prison. He was liberated through the representations of another envoy, who pointed out that it would be imprudent to excite Elizabeth's wrath; and though for a time intercourse between Russia and Western Europe was threatened, through the national hatred of foreigners as manifested by the councillors of the Tsar, yet when the weak-minded Feodor fell beneath the influence of his brother-in-law Boris Godounoff, the previous policy, soon

to become traditional, of cultivating relations with Western Europe, was resumed. . . . Nineteen years have yet to pass before the election of the first of the Romanoffs to the throne; for strange as it may seem, the first member of the dynasty of the Romanoffs was chosen and appointed to the imperial rule by an assembly representing the various estates. Meanwhile the order of succession had been broken. Several pretenders to the throne had appeared, one of whom, Demetrius, distinctively known as the 'Imposter,' attained for a time supreme power. Demetrius, married to a Polish lady, Marina Mniszek, was aided by her powerful family to maintain his position in Moscow; for the Mniszeks assembled and sent to the Russian capital a body of 4,000 men. Then Ladislas [son of the king] of Poland interfered, and after a time [1610] Moscow fell beneath the power of the Poles [see POLAND: A. D. 1590–1648]. Soon, however, the national feeling of Russia was aroused. A butcher, or cattle dealer of Nijni Novgorod, named Minin, whose patriotism has made him one of the most popular figures in Russian history, got together the nucleus of a national army, and called upon the patriotic nobleman, Prince Pojarski, to place himself at its head. Pojarski and Minin marched together to Moscow, and their success in clearing the capital of the foreign invaders [1612] is commemorated by a group of statuary which stands in the principal square of Moscow. . . . Among the tombs of the metropolitans buried in . . . [the cathedral of the Assumption at Moscow] are those of Philaret and Hermogenes, who were thrown into prison by the Poles for refusing to consent to the accession of Ladislas, the Polish prince, to the Russian throne. Hermogenes died soon after his arrest. Philaret, at the expulsion of the Poles, was carried away captive by them in their retreat from Moscow (1612), and was kept nine years a prisoner in Poland. On his return to Russia, he found his son, Michael Feodorovitch, elected to the throne. The belief, then, of the Russian people in Michael's patriotism, seems to have been founded on a knowledge of the patriotism of his father. The surname of the metropolitan who had defied the Polish power and had suffered nine years' imprisonment in Poland was Romanoff; Philaret was the name he had adopted on becoming a monk. His baptismal name was Feodor, and hence the patronymic Feodorovitch attached to the name of Michael, the first of the Romanoffs. There is little to say about the reign of Michael Feodorovitch, the circumstances having once been set forth under which he was elected to the vacant throne; and his son and successor, Alexis Michailovitch, is chiefly remembered as father of Peter the Great."—H. S. Edwards, *The Romanoffs, ch.* 1–2.

A. D. 1547.—Assumption of the title, Czar, or Tzar, by the Grand Prince of Moscow.—"In January 1547, Ivan [IV., known as Ivan the Terrible] ordered the Metropolitan Macarius to proceed with his coronation. He assumed at the ceremony not only the title of Grand Prince, but that of Tzar. The first title no longer answered to the new power of the sovereign of Moscow, who counted among his domestics, princes and even Grand Princes. The name of Tzar is that which the books in the Slavonic language, ordinarily read by Ivan, give to the kings of Judæa, Assyria, Egypt, Babylon, and to the emperors of Rome and Constantinople. Now, was not Ivan in some sort the heir of the Tzar Nebuchadnezzar, the Tzar Pharaoh, the Tzar Ahasuerus, and the Tzar David, since Russia was the sixth empire spoken of in the Apocalypse? Through his grandmother Sophia Palæologus, he was connected with the family of the Tzars of Byzantium; through his ancestor Vladimir Monomachus, he belonged to the Porphyrogeniti; and through Constantine the Great, to Cæsar. . . . We may imagine what prestige was added to the dignity of the Russian sovereign by this dazzling title, borrowed from Biblical antiquity, from Roman majesty, from the orthodox sovereigns of Byzantium."—A. Rambaud, *Hist. of Russia, v.* 1, *ch.* 15.—"This title [Czar] . . . is not a corruption of the word 'Cæsar,' as many have supposed [see CÆSAR, THE TITLE], but is an old Oriental word which the Russians acquired through the Slavonic translation of the Bible, and which they bestowed at first on the Greek emperors, and afterwards on the Tartar Khans. In Persia it signifies throne, supreme authority; and we find it in the termination of the names of the kings of Assyria and Babylon, such as Phalassar, Nabonasser, &c.—Karamsin."—W. K. Kelly, *Hist. of Russia, v.* 1, *p.* 125, *foot-note.*—"Von Hammer, in his last note to his 31st book, says, 'The title Czar or Tzar is an ancient title of Asiatic sovereigns. We find an instance of it in the title 'The Schar,' of the sovereign of Gurdistan; and in that of Tzarina . . . of the Scythians.'"—Sir E. S. Creasy, *Hist. of the Ottoman Turks, p.* 213, *foot-note.*

A. D. 1569-1571.—First collision with the Turks.—Their repulse from Astrakhan.—Moscow stormed and sacked by the Crim Tartars.—Peace with the Porte.—At the time (1566) of the accession of Selim II. to the Ottoman throne, the Russians "had been involved in fierce and frequent wars with the Sultan's vassals, the Crim Tartars; but the Porte had taken no part in these contests. But the bold genius of the Vizier Sokolli now attempted the realisation of a project, which, if successful, would have barred the southern progress of Russia, by firmly planting the Ottoman power on the banks of the Don and the Volga, and along the shores of the Caspian Sea. . . . Sokolli proposed to unite the rivers Don and Volga by a canal, and then send a Turkish armament up the sea of Azoph and the Don, thence across by the intended channel to the Volga, and then down the latter river into the Caspian; from the southern shores of which sea the Ottomans might strike at Tabriz and the heart of the Persian power. . . . Azoph already belonged to the Turks, but in order to realise the great project entertained it was necessary to occupy Astrakhan also. Accordingly, 3,000 Janissaries and 20,000 horse were sent [1569] to besiege Astrakhan, and a cooperative force of 30,000 Tartars was ordered to join them, and to aid in making the canal. 5,000 Janissaries and 3,000 pioneers were at the same time sent to Azoph to commence and secure the great work at its western extremity. But the generals of Ivan the Terrible did their duty to their stern master ably in this emergency. The Russian garrison of Astrakhan sallied on its besiegers, and repulsed them with considerable loss. And a Russian army, 15,000 strong, under Prince

Serebinoff, came suddenly on the workmen and Janissaries near Azoph, and put them to headlong flight. It was upon this occasion that the first trophies won from the Turks came into Russian hands. An army of Tartars, which marched to succour the Turks, was also entirely defeated by Ivan's forces; and the Ottomans, dispirited by their losses and reverses, withdrew altogether from the enterprise. . . . Russia was yet far too weak to enter on a war of retaliation with the Turks. She had subdued the Tartar Khanates of Kasan and Astrakhan; but their kinsmen of the Crimea were still formidable enemies to the Russians, even without Turkish aid. It was only two years after the Ottoman expedition to the Don and Volga that the Khan of the Crimea made a victorious inroad into Russia, took Moscow by storm, and sacked the city (1571). The Czar Ivan had, in 1570, sent an ambassador, named Nossolitof, to Constantinople, to complain of the Turkish attack on Astrakhan, and to propose that there should be peace, friendship, and alliance between the two empires. . . . The Russian ambassador was favourably received at the Sublime Porte, and no further hostilities between the Turks and Russians took place for nearly a century."—Sir E. S. Creasy, *Hist. of the Ottoman Turks, ch.* 11.

A. D. 1655-1659.—The great schism, known as the Rascol.—"In the reign of Alexis took place the great revision of the Bible, carried out by the energy of Nicon, the Patriarch, who, finding that the church-books were full of ridiculous blunders caused by ignorant copyists, procured a quantity of the best Greek manuscripts from Mount Athos, and other places. In 1655, and the following year, he summoned two councils of the church, at which the newly translated service-books were promulgated and the old ones called in. In consequence of this change, a great schism took place in the Russian Church, a number of people attaching a superstitious veneration to the old books, errors and all. Thus was formed the large sect of the Staro-obriadtsi or Raskolniks, still existing in Russia, who have suffered great persecutions at many periods of her history."—W. R. Morfill, *The Story of Russia, ch.* 6.—"The most important innovation, which afterwards became the symbol and the war-cry of the religious rebellion, referred to the position of the fingers in making the sign of the cross. The Russians of Nicon's time when they crossed themselves held two fingers together, while the Oriental churches and the Greeks enjoined their adherents to cross themselves with three fingers united into one point. The two-fingered cross of the Muscovites was used in the Orient only for giving the priestly benediction. . . . Patriarch Nicon was anxious to return to ancient traditions. Reserving the two-fingered cross for priestly benedictions only, he re-established the three-fingered Greek cross, or, as his opponents called it, 'the pinch-of-snuff cross,' for the private act of devotion. Then, too, in certain cases, for instance in stamping the round wafers, he introduced the use of the equilateral, four-sided cross. . . . The Russians celebrated the mass on seven wafers, while the Greeks and Orientals used only five. In the processions of the Church the Russians were in the habit of first turning their steps westward—going with the sun; the Greeks marched eastward—against the sun. In all these points Patriarch Nicon conformed to the traditions of the Greek mother-church. In conformity with this rule, moreover, he directed that the hallelujahs should be 'trebled,' or sung thrice, as with the Greeks, the Russians having up till then only 'doubled' it—singing, instead of the third hallelujah, its Russian equivalent, 'God be praised.' Finally, or we should rather say above all, Nicon introduced a fresh spelling of the name of Jesus. The fact is that, probably in consequence of the Russian habit of abbreviating some of the commonest scriptural names, the second letter in the name Jesus had been dropped altogether; it was simply spelt Jsus, without any sign of abbreviation. Patriarch Nicon corrected this orthographical error, replacing the missing letter. Was this all? Yes, this was all. As far as doctrinal matters were concerned, nothing more serious was at stake in the great religious schism of the 17th century, known by the name of the Rascol. And yet it was for these trifles—a letter less in a name, a finger more in a cross, the doubling instead of the trebling of a word—that thousands of people, both men and women, encountered death on the scaffold or at the stake. It was for these things that other scores of thousands underwent the horrible tortures of the knout, the strappado, the rack, or had their bodies mutilated, their tongues cut, their hands chopped off."—Stepniak, *The Russian Peasantry* (*Am. ed.*), *pp.* 237–239.

A. D. 1689.—Accession of Peter the Great.

A. D. 1697-1704.—Peter the Great: his travels in pursuit of knowledge; his apprenticeship to the useful arts; his civilizing work in Muscovy.—"Many princes before [Peter the Great] had renounced crowns, wearied out with the intolerable load of public affairs; but no man had ever divested himself of the royal character, in order to learn the art of governing better: this was a stretch of heroism which was reserved for Peter the Great alone. He left Russia in [1697], having reigned as yet but [a few] years, and went to Holland disguised under a common name, as if he had been a menial servant of that same Lefort, whom he sent in quality of ambassador-extraordinary to the States-General. As soon as he arrived at Amsterdam, he enrolled his name among the shipwrights of the admiralty of the Indies, and wrought in the yard like the other mechanics. At his leisure hours he learned such parts of the mathematics as are useful to a prince,—fortification, navigation, and the art of drawing plans. He went into the workmen's shops, and examined all their manufactures: nothing could escape his observation. From thence he passed over into England, where hav-

ing perfected himself in the art of ship-building, he returned to Holland, carefully observing every thing that might turn to the advantage of his country. At last, after two years of travel and labor, to which no man but himself would have willingly submitted, he again made his appearance in Russia, with all the arts of Europe in his train. Artists of every kind followed him in abundance. Then were seen, for the first time, large Russian ships in the Baltic, and on the Black Sea and the ocean. Stately buildings, of a regular architecture, were raised among the Russian huts. He founded colleges, academies, printing-houses, and libraries. The cities were brought under a regular police. The dress and customs of the people were gradually changed, though not without some difficulty; and the Muscovites learned by degrees the true nature of a social state. Even their superstitious rites were abolished; the dignity of the patriarch was suppressed ; and the czar declared himself the head of the Church. This last enterprise, which would have cost a prince less absolute than Peter both his throne and his life, succeeded almost without opposition, and insured to him the success of all his other innovations. After having humbled an ignorant and a barbarous clergy, he ventured to make a trial of instructing them, though, by that means, he ran the risk of rendering them formidable. . . . The czar not only subjected the Church to the State, after the example of the Turkish emperors, but, what was a more masterly stroke of policy, he dissolved a militia of much the same nature with that of the janizaries: and what the sultans had attempted in vain, he accomplished in a short time: he disbanded the Russian janizaries, who were called Strelitz, and who kept the czars in subjection. These troops, more formidable to their masters than to their neighbors, consisted of about 30,000 foot, one half of which remained at Moscow, while the other was stationed upon the frontiers. The pay of a Strelitz was no more than four roubles a year; but this deficiency was amply compensated by privileges and extortions. Peter at first formed a company of foreigners, among whom he enrolled his own name, and did not think it below him to begin the service in the character of a drummer, and to perform the duties of that mean office; so much did the nation stand in need of examples! By degrees he became an officer. He gradually raised new regiments; and, at last, finding himself master of a well-disciplined army, he broke the Strelitz, who durst not disobey. The cavalry were nearly the same with that of Poland, or France, when this last kingdom was no more than an assemblage of fiefs. The Russian gentlemen were mounted at their own expense, and fought without discipline, and sometimes without any other arms than a sabre or a bow, incapable of obeying, and consequently of conquering. Peter the Great taught them to obey, both by the example he set them and by the punishments he inflicted; for he served in the quality of a soldier and subaltern officer, and as czar he severely punished the Boyards, that is, the gentlemen, who pretended that it was the privilege of their order not to serve but by their own consent. He established a regular body to serve the artillery, and took 500 bells from the churches to found cannon. . . . He was himself a good engineer; but his chief excellence lay in his knowledge of naval affairs: he was an able sea-captain, a skilful pilot, a good sailor, an expert shipwright, and his knowledge of these arts was the more meritorious, as he was born with a great dread of the water. In his youth he could not pass over a bridge without trembling. . . . He caused a beautiful harbor to be built at the mouth of the Don, near Azof, in which he proposed to keep a number of galleys; and some time after, thinking that these vessels, so long, light, and flat, would probably succeed in the Baltic, he had upwards of 300 of them built at his favorite city of Petersburg. He showed his subjects the method of building ships with fir only, and taught them the art of navigation. He had even learned surgery, and, in a case of necessity, has been known to tap a dropsical person. He was well versed in mechanics, and instructed the artists. . . . He was always travelling up and down his dominions, as much as his wars would allow him; but he travelled like a legislator and natural philosopher, examining nature everywhere, endeavoring to correct or perfect her; sounding with his own hands the depths of seas and rivers, repairing sluices, visiting docks, causing mines to be searched for, assaying metals, ordering accurate plans to be drawn, in the execution of which he himself assisted. He built, upon a wild and uncultivated spot, the imperial city of Petersburg. . . . He built the harbor of Cronstadt, on the Neva, and Sainte-Croix, on the frontiers of Persia; erected forts in the Ukraine and Siberia; established offices of admiralty at Archangel, Petersburg, Astrakhan, and Azof; founded arsenals, and built and endowed hospitals. All his own houses were mean, and executed in a bad taste; but he spared no expenses in rendering the public buildings grand and magnificent. The sciences, which in other countries have been the slow product of so many ages, were, by his care and industry, imported into Russia in full perfection. He established an academy on the plan of the famous societies of Paris and London. . . . Thus it was that a single man changed the face of the greatest empire in the universe. It is however a shocking reflection, that this reformer of mankind should have been deficient in that first of all virtues, the virtue of humanity. Brutality in his pleasures, ferocity in his manners, and cruelty in his punishments, sullied the lustre of so many virtues. He civilized his subjects, and yet remained himself a barbarian. He would sometimes with his own hands execute sentences of death upon the unhappy criminals; and, in the midst of a revel, would show his dexterity in cutting off heads."—Voltaire, *Hist. of Charles XII., King of Sweden, bk.* 1.

A. D. 1703-1718. — The founding of St. Petersburg.—"Immediately after the capture of

Nyenskanz [1703], a council of war was convened to consider the question of defending and utilising the mouth of the Neva, and whether it would be better to strengthen the little fort which had just been taken, or to seek a fit site for a commercial town nearer the sea. The latter course was decided upon. Near its mouth the Neva takes a sharp turn and divides into three or four branches, which by subsequent redivision form a number of islands, large and small. These marshy islands, overgrown with forests and thickets, and liable to be covered with water during the westerly winds, were inhabited by a few Finnish fishermen, who were accustomed to abandon their mud huts at the approach of high water, and seek a refuge on the higher ground beyond. It was on the first of these islands, called by the Finns Yanni-Saari, or Hare Island, where the river was still broad and deep, that Peter laid the foundation of a fortress and a city, named St. Petersburg, after his patron saint. . . . For this work many carpenters and masons were sent from the district of Novgorod, who were aided by the soldiers. Wheelbarrows were unknown (they are still little used in Russia), and in default of better implements the men scraped up the earth with their hands, and carried it to the ramparts on pieces of matting or in their shirts. Peter wrote to Ramodanofsky, asking him to send the next summer at least 2,000 thieves and criminals destined for Siberia, to do the heavy work under the direction of the Novgorod carpenters. At the same time with the construction of the bastions, a church was built in the fortress and dedicated to St. Peter and St. Paul. . . . Just outside of the fortress Peter built for himself a small hut, which he called his palace. It was about fifty-five feet long by twenty wide, built of logs roofed with shingles, and contained only three rooms, lighted by little windows set in leaden frames. In respect for this, his earliest residence in St. Petersburg, Peter subsequently had another building erected outside of it to preserve it from the weather, and in this state it still remains, an object of pilgrimage to the curious and devout. . . . In spite of disease and mortality among the men, in spite of the floods, which even in the first year covered nearly the whole place and drowned some who were too ill to move, the work went on. But in its infancy St. Petersburg was constantly in danger from the Swedes, both by sea and land. . . . St. Petersburg was the apple of Peter's eye. It was his 'paradise,' as he often calls it in his letters. It was always an obstacle, and sometimes the sole obstacle, to the conclusion of peace. Peter was willing to give up all he had conquered in Livonia and Esthonia, and even Narva, but he would not yield the mouth of the Neva. Nevertheless, until the war with Sweden had been practically decided by the battle of Poltava, and the position of St. Petersburg had been thus secured, although it had a certain importance as a commercial port, and as the fortress which commanded the mouth of the Neva, it remained but a village. The walls of the fortress were finally laid with stone, but the houses were built of logs at the best, and for many years, in spite of the marshy soil, the streets remained unpaved. If fate had compelled the surrender of the city, there would not have been much to regret. Gradually the idea came to Peter to make it his capital. In 1714 the Senate was transported thither from Moscow, but wars and foreign enterprises occupied the Tsar's attention, and it was not until 1718 that the colleges or ministries were fully installed there, and St. Petersburg became in fact the capital of the Empire."—E. Schuyler, *Peter the Great, ch.* 46 (*v.* 2).

A. D. 1725-1739.—The reigns of Catherine I., Peter II., and Anne Ivanovna.—Fruitless war with Turkey.—Depredations in the Crimea.—"The death of Peter found the Russian Court divided into two powerful factions. The reactionary party, filled with Russians of the old school, who had looked upon the reforms of Peter with no favourable eye, such as the Golitsins and the Dolgorukis, were anxious to raise to the throne Peter, the son of Alexis [Peter the Great's son, whom he had caused to be put to death], a mere boy; whereas the party of progress, led by Menshikov, wished that Catherine, the Tsar's widow, should succeed. . . . The party of reform finally triumphed. Catherine was elected the successor of her husband, and the chief authority fell into the hands of Alexander Menshikov. . . . The brief reign of Catherine is distinguished only by two events which added any glory to Russia. The Academy of Sciences was founded in 1726, and Behring, a Dane, was sent on an exploring expedition to Kamchatka. He has left his name indelibly written on the geography of the world. . . . The Empress died on the 17th of May, 1727, a little more than two years after her accession to the throne, aged about 39 years. . . . A ukase of Peter permitted Catherine to choose her successor. She accordingly nominated Peter, the son of the unfortunate Alexis, and, in default of Peter and his issue, Elizabeth and Anne, her daughters. Anne died in 1728, the year after her mother; she had married Karl Friedrich, the Duke of Holstein, . . . and was the mother of the unfortunate Peter III. Menshikov was appointed the guardian of the young Tsar till he had reached the age of 17." In four months Menshikov was in disgrace and the young Tsar had signed a ukase which condemned him to Siberian banishment. He died in 1729, and was followed to the grave a year later by the boy autocrat whose fiat had been his ruin. On the death of Peter II., the will of Catherine, in favor of her daughters, was set aside, and the Council of the Empire conferred the crown on Anne [Anne Ivanovna], the widowed Duchess of Courland, who was a daughter of Ivan, elder brother of Peter the Great. An attempt was made to impose on her a constitution, somewhat resembling the Pacta Conventa of the Poles, but she evaded it. "The Empress threw herself entirely into the hands of German favourites, especially a Courlander of low extraction, named Biren, said to have been the son of a groom. . . . The Empress was a woman of vulgar mind, and the Court was given up to unrefined orgies. . . .

Her reign was not an important one for Russia either as regards internal or foreign affairs. The right of primogeniture which had been introduced into the Russian law of real property by Peter the Great, was abolished; it was altogether alien to the spirit of Slavonic institutions. A four years' war with Turkey led to no important results."—W. R. Morfill, *The Story of Russia, ch.* 8.—"The Russians could have no difficulty in finding a pretence for the war [with Turkey], because the khan of the Turkish allies and dependents, the Tatars on the coast of the Black Sea and the Sea of Asof, and in the Crimea, could never wholly restrain his wandering hordes from committing depredations and making incursions into the neighbouring pasture-lands of Russia. . . . In 1735 a Russian corps marched into the Crimea, ravaged a part of the country, and killed a great number of Tatars; but having ventured too far without a sufficient stock of provisions, they were obliged to retreat, and sustained so great a loss in men that what had been accomplished bore no proportion to this misfortune. The almost total failure of this first attempt, which had cost the Russians 10,000 men, by no means deterred them from pursuing their designs of conquest. Count Munich marched with a large army from the Ukraine into the Crimea (1736). The Tatars . . . suffered the Russian troops to advance unmolested, thinking themselves safe behind their entrenchments. . . . But entrenchments of that kind were unable to resist the impetuosity of the Russian troops. They were surmounted; the Tatars repulsed; and a great part of the Crimea lay at the mercy of the conquerors. In the month of June they entered the Crimean fortress of Perekop. The Russian troops now retaliated the devastations committed by the Tatars in the Empire; but they found it impossible to remain long. . . . Whatever the army was in want of had to be fetched with extreme difficulty from the Ukraine; so that Munich at length found himself, towards autumn, under the necessity of withdrawing with his troops by the shortest way to the Ukraine. . . . While Munich was in the Crimea, endeavouring to chastise the Tatars for their depredations, Lascy had proceeded with another army against Asof. The attack proved successful; and on the 1st of July the fort of Asof had already submitted to his arms. . . . The Ottomans published a manifesto against Russia, but they were neither able afterwards to protect the Crimea nor Moldavia, for they were soon threatened with an attack from Austria also. By the treaty with Russia, the emperor was bound to furnish 30,000 auxiliaries in case of a war with the Turks; but a party in the Austrian cabinet persuaded the emperor that it would be more advantageous to make war himself. . . . In the year 1737 a new expedition was undertaken from the Ukraine at an immense cost. . . . A new treaty had been concluded with Austria before this campaign, in which the two empires agreed to carry on the war in common, according to a stipulated plan. In order to gain a pretence for the war, Austria had previously acted as if she wished to force her mediation upon the Turks. The first year's campaign was so unfortunate that the Austrians were obliged to give up all idea of prosecuting their operations, and to think of the protection and defence of their own frontiers." But "the Russians were every where victorious, and made the names of their armies a terror both in the east and the west. Lascy undertook a new raid into the Crimea. Munich first threatened Bender, then reduced Otchakof without much difficulty, and left a few troops behind him when he withdrew . . . who were there besieged by a large combined army of Turks and Tatars, supported by a fleet. The Russians not only maintained the fortress, which was, properly speaking, untenable, but they forced the Turks to retire with a loss of 10,000 men. The Russian campaign in 1738 was as fruitless, and cost quite as many men, as the Austrian, but it was at least the means of bringing them some military renown." In 1739, the Russians, under Munich, advanced in the direction of Moldavia, violating Polish territory. "The Turkish and Tatar army which was opposed to the Russians was beaten and routed [at Stavoutchani] on the first attack. . . . Immediately afterwards the whole garrison, struck with a panic, forsook the fortress of Khotzim, which had never been once attacked, and it was taken possession of by the Russians, who were astonished at the ease of the conquest. Jassy was also taken, and Munich even wished to attack Bender, when the news of the peace of Belgrade . . . made him infuriate, because he saw clearly enough that Russia alone was not equal to carry on the war. . . . By the peace of Belgrade, Austria not only suffered shame and disgrace, but lost all the possessions which had been gained by Eugene in the last war, her best military frontier, and her most considerable fortresses. . . . By virtue of this treaty, Austria restored to Turkey Belgrade, Shabacz, the whole of Servia, that portion of Bosnia which had been acquired in the last war, and Austrian Vallachia. Russia was also obliged to evacuate Khotzim and Otchakof; the fortifications of the latter were, however, blown up; as well as those of Perekop; Russia retained Asof, and a boundary line was determined, which offered the Russians the most favourable opportunities for extending their vast empire southward, at the cost of the Tatars and Turks."—W. K. Kelly, *Hist. of Russia, ch.* 33 (*v.* 1).

A. D. 1732-1733.—Interference in the election of king of Poland. See POLAND: A. D. 1732–1733.

A. D. 1740-1762.—Two regencies and two revolutions.—The reign of Empress Elizabeth. —The Empress Anne died in 1740. Her deceased sister, Catherine, had left a daughter, Anna, married to Anthony Ulrich, Prince of Brunswick, and this daughter had an infant son, Ivan. By the will of the Empress the child Ivan was named as her successor, and Biren was appointed Regent. He enjoyed the regency but a short time, when he was overcome by a palace conspiracy and sent in banishment to Siberia. The mother of the infant Czar was now made Regent; but her rule was brief. Another revolution, in the latter part of 1741, consigned her, with her son and husband, to a prison, and raised the Princess Elizabeth, second daughter of Peter the Great, to the Russian throne. "The Empress Anna might have ruled without control, and probably have transmitted the throne to her son Ivan, had Elizabeth been left to the quiet enjoy-

ment of her sensual propensities. Elizabeth indulged without concealment or restraint in amours with subalterns, and even privates of the guard whose barracks lay near her residence; she was addicted, like them, to strong drink, and had entirely gained their favour by her good humour and joviality. Her indolence made her utterly averse to business, and she would never have thought of encumbering herself with the cares of government had she not been restricted in her amusements, reproved for her behaviour, and, what was worst of all, threatened with a compulsory marriage with the ugly and disagreeable Anthony Ulrich, of Brunswick Bevern, brother of the Regent's husband. At the instigation, and with the money, of the French ambassador, La Chétardie, a revolution was effected. . . . Elizabeth, in the manifest which she published on the day of her accession, declared that the throne belonged to her by right of birth, in face of the celebrated ukase issued by her father in 1722, which empowered the reigning sovereign to name his successor. . . . On communicating her accession to the Swedish Government [which had lately declared war and invaded Finland with no success], she expressed her desire for peace, and her wish to restore matters to the footing on which they had been placed by the Treaty of Nystadt. The Swedes, who took credit for having assisted the revolution which raised her to the throne, demanded from the gratitude of the Empress the restitution of all Finnland, with the town of Wiborg and part of Carelia; but Elizabeth, with whom it was a point of honour to cede none of the conquests of her father, would consent to nothing further than the re-establishment of the Peace of Nystadt. On the renewal of the war the Swedes were again unsuccessful in every rencounter, as they had been before."— T. H. Dyer, *Hist. of Modern Europe, bk.* 6, *ch.* 3 (*v.* 3).—"This war had no result except to show the weakness of the Sweden of Charles XII. against regenerate Russia. The Scandinavian armies proved themselves very unworthy of their former reputation. Elizabeth's generals, Lascy and Keith, subdued all the forts in Finland. At Helsingfors 17,000 Swedes laid down their arms before a hardly more numerous Russian force. By the treaty of Abo [August 17, 1743], the Empress acquired South Finland as far as the river Kiümen, and caused Adolphus Frederic, Administrator of the Duchy of Holstein, and one of her allies, to be elected Prince Royal of Sweden, in place of the Prince Royal of Denmark. . . . In her internal policy . . . Elizabeth continued the traditions of the great Emperor. She developed the material prosperity of the country, reformed the legislation, and created new centres of population; she gave an energetic impulse to science and the national literature; she prepared the way for the alliance of France and Russia, emancipated from the German yoke; while in foreign affairs she put a stop to the threatening advance of Prussia." Elizabeth died in January, 1762.— A. Rambaud, *Hist. of Russia, v.* 2, *ch.* 6.

A. D. 1761-1762.—Brief reign of Peter III. — His peace with Frederick the Great.—His deposition and death.—His queen, Catherine II., on the throne.—"Charles Peter Ulric, duke of Holstein Gottorp, whom Elizabeth had nominated her successor, who had embraced the Greek religion, and who, at his baptism, had received the name of Peter Fedorovitch, had arrived at St. Petersburg immediately after her accession: he was then in his fourteenth year. The education of this unfortunate prince was neglected. . . . Military exercises were the only occupation for which he had any relish, and in them he was indulged. . . . His potations, which were frequent and long, were encouraged by his companions; and, in a few years, he became a complete bacchanalian." In 1744 the young prince was married to "Sophia Augusta, daughter of the prince of Anhalt Zerbst, who, on her conversion to the Greek faith,— a necessary preliminary to her marriage,— had received the baptismal name of Catherine. This union was entitled to the more attention, as in its consequences it powerfully affected, not only the whole of Russia, but the whole of Europe. Shortly before its completion, Peter was seized with the small-pox, which left hideous traces on his countenance. The sight of him is said so far to have affected Catherine that she fainted away. But though she was only in her sixteenth year, ambition had already over her more influence than the tender passion, and she smothered her repugnance. Unfortunately, the personal qualities of the husband were not of a kind to remove the ill impression: if he bore her any affection, which appears doubtful, his manners were rude, even vulgar. . . . What was still worse, she soon learned to despise his understanding; and it required little penetration to foresee that, whatever might be his title after Elizabeth's death, the power must rest with Catherine. Hence the courtiers in general were more assiduous in their attentions to her than to him,— a circumstance which did not much dispose him for the better. Finding no charms in his new domestic circle, he naturally turned to his boon companions; his orgies became frequent; and Catherine was completely neglected. Hence her indifference was exchanged into absolute dislike. . . . Without moral principles; little deterred by the fear of worldly censure, in a court where the empress herself was any thing but a model of chastity; and burning with hatred towards her husband, — she soon dishonoured his bed." Elizabeth died on the 29th of December, 1761, and Peter III. succeeded to the throne without opposition. The plotting against him on behalf of his wife, had long been active, but no plans were ripe for execution. He was suffered to reign for a year and a half; but the power which he received at the beginning slipped quickly away from him. He was humane in disposition, and adopted some excellent measures. He suppressed the secret chancery — an inquisitorial court said to be as abominable as the Spanish inquisition. He emancipated the nobles from the servility to the crown which Peter the Great

had imposed on them. He improved the discipline of the army, and gave encouragement to trade. But the good will which these measures might have won for him was more than cancelled by his undisguised contempt for Russia and the Russians, and especially for their religion, and by his excessive admiration for Frederick the Great, of Prussia, with whom his predecessor had been at war [but with whom he entered into alliance. — See GERMANY: A. D. 1761–1762]. The clergy and the army were both alienated from him, and were easily persuaded to support the revolution which Catherine and her favorites planned for his overthrow. Their scheme was carried out on the morning of the 9th of July, 1762, when Peter was in the midst of one of his orgies at Oranienbaum, some miles from the capital. Catherine went to the barracks of the troops, and regiment after regiment declared for her. "Accompanied by about 2,000 soldiers, with five times that number of citizens, who loudly proclaimed her sovereign of Russia, she went to the church of Our Lady of Kasan. Here every thing was prepared for her reception: the archbishop of Novogorod, with a host of ecclesiastics, awaited her at the altar; she swore to observe the laws and religion of the empire; the crown was solemnly placed on her head; she was proclaimed sole monarch of Russia, and the grand-duke Paul her successor." The dethroned czar, when the news of these events reached him, doubted and hesitated until he lost even the opportunity to take to flight. On the day following Catherine's coronation he signed an act of abdication. Within a week he was dead. According to accounts commonly credited, he was poisoned, and then strangled, because the poison did its deadly work too slowly. "Whether Catherine commanded this deed of blood, has been much disputed. There can be little doubt that she did. None of the conspirators would have ventured to such an extremity unless distinctly authorised by her." Two years later Catherine added another murder to her crimes by directing the assassination of Ivan, who had been dethroned as an infant by Elizabeth in 1741, and who had grown to manhood in hopeless imprisonment. — *Hist. of Russia* (*Lardner's Cabinet Cyclop.*), *v.* 2, *ch.* 10.

A. D. 1762-1796.—Character and reign of Catherine II.—Partition of Poland.—Wars with the Turks.—Acquisition of the Crimea and part of the Caucasus.—Extension of boundaries to the Dnieper.—"Thus was inaugurated the reign of Catherine II., a woman whose capacities were early felt to be great, but were great for evil as well as for good. . . . She was without scruple in the gratification of her passions, and without delicacy in their concealment; and a succession of lovers, installed ostentatiously in her palace, proclaimed to the world the shamelessness of their mistress. Yet she was great undoubtedly as a sovereign. With a clear and cultivated intellect, with high aims and breadth of views, and fearless because despising the opinions of others, she could plan and she could achieve her country's greatness; and in the extended dominions and improved civilization which she bequeathed to her successor is found a true claim to the gratitude of her subjects. The foreign transactions of the reign begin with the history of Poland. With Frederick of Prussia, Catherine may be said to have shared both the scheme of partition and the spoils that followed [see POLAND: A. D. 1763–1773]. If it is doubtful which originated the transaction, there is at least no doubt but that Russian policy had prepared the way for such a measure. . . . The war with Turkey [see TURKS: A. D. 1768–1774] was closed with equal profit and yet greater glory to the Russian Empire. The Russian armies had fought and conquered upon the soil of Moldavia, and had invaded and occupied the Crimea. At the same time the Russian fleets, no longer confining themselves to the Baltic or Black Seas, had sailed round Europe, and had appeared in the Archipelago. An insurrection of the Greeks had aided their design; and for a time the Bosphorus and Constantinople had been threatened. The great Empress of the North had dazzled Europe by the vastness of her power and designs; and Turkey, exhausted and unequal to further contest, was constrained to purchase peace. The possession of Azof, Kertch, Yenikale, and Kinburn, the free navigation of the Euxine and the Mediterranean, were the immediate gains of Russia. A stipulation for the better treatment of the Principalities, and for the rights of remonstrance, both in their behalf, and in that of the Greek church at Constantinople, gave the opening for future advantages. Another clause assured the independence of the Khan of the Crimea, and of the Tartars inhabiting the northern shores of the Black Sea. Under the name of liberty, these tribes were now, like Poland, deprived of every strength except their own; and the way was prepared for their annexation by Russia. The Peace of Kainardji, as this settlement was called, was signed in 1774. Within ten years dissensions had arisen within the Crimea, and both Turks and Russians had appeared upon the scene. The forces of Catherine passed the isthmus as allies of the reigning Khan; but they remained to receive his abdication, and to become the masters of his country [see TURKS: A. D. 1776–1792]. At the same time the Kuban was entered and subdued by Souvarof, and thus already the Caucasus was reached. Catherine was now at the height of her power. In a triumphant progress she visited her new dominions, and gave the august name of Sebastopol to a new city which was already destined to be the scourge of the Turkish Empire. She believed herself to be upon the road to Constantinople; and, in the interviews which she held with the Emperor Joseph II., she began to scheme for the partition of Turkey, as she had done for that of Poland. . . . The Empress now found herself assailed in two distinct quarters. Gustavus III. of Sweden, allying with the Sultan, invaded Finland; and in her palace at St. Petersburg the Empress heard the Swedish guns [see SCANDINAVIAN STATES (SWEDEN): A. D. 1720–1792]. She was relieved, however, on the north by the dissension in the Swedish army, which compelled the King to an inglorious retreat; and she became able to give an undivided attention to the affairs of the south. While an Austrian army, which supported her, was threatening the north-west of Turkey, her own forces conquered in the north-east. Under Souvarof the town of Oczakof was taken, and the battle of Rimnik was won. Ismail, that gave the key

of the Danube, next fell, and in the horrors of its fall drew forth a cry from Europe. The triumph of Catherine was assured; but already the clouds of revolution had risen in the west; Austria, too busy with the affairs of the Netherlands, had withdrawn from the fight; and the Empress herself, disquieted, and satisfied for the time with her successes, concluded the Peace of Jassy, which extended her frontiers to the Dniester, and gave her the coast on which so soon arose the rich city of Odessa. The acquisitions of Catherine upon the south were completed. Those upon the west had still to receive important additions. Poland, already once partitioned was again to yield new provinces to Russia [see POLAND: A. D. 1791–1792, and 1793–1796]. The internal government of the Empire was meant undoubtedly to rival these foreign successes, but unhappily fell short of them. . . . The long meditated secularization of the estates of the clergy was at last accomplished; the freedom of the serfs was now first urged; and, as a unique experiment in Russian history, the convoking of a kind of States General was made to discuss the project. But both project and parliament came to nothing. . . . There was much that was unreal in everything, and Europe, as well as the great Empress herself, was deceived. And so it came to pass that at the close of the reign there was the spectacle of much that had been begun but little finished. Before the death of Catherine [1796], in fact, her greatness may be said to have passed away."—C. F. Johnstone, *Historical Abstracts, ch.* 6.—"The activity of Catherine was prodigious, and her autocratic instincts extremely strong, and these impulses, affected by the French doctrines, which we must not forget set up despotism, if enlightened, as the perfection of wisdom, made her government attempt to accomplish all things and to meddle in every department of the national life. She tried to force civilisation into premature growths; established modern institutions of many kinds in a backward and half-barbaric empire; arranged industrial and economic projects and works in the minutest details; and rigidly prescribed even court dress and fashions. Ségur thus describes this omnipresent and ubiquitous interference:—'It is sought to create at the same time a third estate, to attract foreign commerce, to establish all kinds of manufactures, to extend agriculture, to increase paper money, to raise the exchanges, to reduce the interest of money, to found cities, to people deserts, to cover the Black Sea with a new navy, to conquer one neighbour and circumvent another, and finally to extend Russian influence all over Europe.' These liberal reforms and grand aspirations came, however, for the most part to nothing; and Catherine's internal government grew by degrees into a grievous, cruel and prying despotism. . . . The antithesis of the liberalism in words and of the tyranny in deeds in Catherine's reign may be attributed to four main causes. She gradually found out that reform and progress were impossible in the Russian Empire — half Asiatic, backward and corrupt — and she swung back to the old tyranny of the past. The great rising of the serfs under Pugacheff, too — a servile outbreak of the worst kind — changed to a great extent the type of her government, and gave it a harsh and cruel complexion:—'The domestic policy of Catherine bore, until the end, the traces of those terrible years, and showed, as it were, the bloody cicatrices of the blows given and received in a death struggle.' . . . The foreign policy of Catherine was more successful than her government and administration at home, and the reasons are sufficiently plain. She found grand opportunities to extend her power in the long quarrels between France and England, in the alliance she maintained with Frederick the Great — an alliance she clung to, though she felt the burden — in the instability and weakness of the Austrian councils, in the confusion and strife of the French Revolution, above all in the decay of Islam; and Russia justly hailed her as a great conqueror. . . . The Muscovite race would not see her misdeeds in the march of conquest she opened for it; and her reputation has steadily increased in its eyes. 'The spirit of the people passes, in its fulness, into her. It was this that enabled her to make a complete conquest of her empire, and by this we do not mean the power which she wrested from the weakness, the cowardice, and the folly of Peter III.; but the position which this German woman attained at the close of her life, and especially after her death, in the history, and the national life, and development of a foreign and hostile race. For it may be said that it is since her death, above all, that she has become what she appears now — the sublime figure, colossal alike and splendid, majestic and attractive, before which incline, with an equal impulse of gratitude, the humble Moujik and the man of letters, who shakes the dust of reminiscences and legends already a century old.' In one particular, Catherine gave proof of being far in advance of the ideas of her day, and of extraordinary craft and adroitness. She anticipated the growing power of opinion in Europe, and skilfully turned it to her side by the patronage of the philosophers of France. In Napoleon's phrase, she did not spike the battery, she seized it and directed its fire; she had Voltaire, Diderot, and D'Alembert, admiring mouthpieces, to apologise for, nay to extol, her government. This great force had prodigious influence in throwing a glamour over the evil deeds of her reign, and in deceiving the world as to parts of her conduct:—'All this forms part of a system — a system due to the wonderful intuition of a woman, born in a petty German court, and placed on the most despotic throne of Europe; due, too — and so better — to her clear apprehension of the great power of the modern world — public opinion. It is, we do not hesitate to believe and affirm, because Catherine discovered this force, and resolved to make use of it, that she was able to play the part she played in history. Half of her reputation in Europe was caused by the admiration of Voltaire, solicited, won, managed by her with infinite art, nay, paid for when necessary.'" — *The Empress Catherine II.* (*Edinburgh Rev., July*, 1893).—"In 1781 Catherine had already sent to Grimm the following résumé of the history of her reign, set forth by her new secretary and factotum, Besborodko, in the fantastic form of an inventory:—Governments instituted according to the new form, 29; Towns built, 144; Treaties made, 30; Victories won, 78; Notable edicts, decreeing laws, 88; Edicts on behalf of the people, 123; Total, 492. Four hundred and ninety-two active measures! This astonishing piece of book-keeping, which betrays so naïvely all that there was of romantic, extravagant,

childish, and very feminine, in the extraordinary genius that swayed Russia, and in some sort Europe, during thirty-four years, will no doubt make the reader smile. It corresponds, however, truly enough, to a sum-total of great things accomplished under her direct inspiration. . . . In the management of men . . . she is simply marvellous. She employs all the resources of a trained diplomatist, of a subtle psychologist, and of a woman who knows the art of fascination; she employs them together or apart, she handles them with unequalled 'maestria.' If it is true that she sometimes takes her lovers for generals and statesmen, it is no less true that she treats on occasion her generals and statesmen as lovers. When the sovereign can do nothing, the Circe intervenes. If it avails nothing to command, to threaten, or to punish, she becomes coaxing and wheedling. Towards the soldiers that she sends to death, bidding them only win for her victory, she has delicate attentions, flattering forethought, adorable little ways. . . . Should fortune smile upon the efforts she has thus provoked and stimulated, she is profusely grateful: honours, pensions, gifts of money, of peasants, of land, rain upon the artisans of her glory. But she does not abandon those who have had the misfortune to be unlucky. . . . Catherine's art of ruling was not, however, without its shortcomings, some of which were due to the mere fact of her sex, whose dependences and weaknesses she was powerless to overcome. 'Ah!' she cried one day, 'if heaven had only granted me breeches instead of petticoats, I could do anything. It is with eyes and arms that one rules, and a woman has only ears.' The petticoats were not solely responsible for her difficulties. We have already referred to a defect which bore heavily upon the conduct of affairs during her reign: this great leader of men, who knew so well how to make use of them, did not know how to choose them. . . . It seems that her vision of men in general was disturbed, in this respect, by the breath of passion which influenced all her life. The general, the statesman, of whom she had need, she seemed to see only through the male whom she liked or disliked. . . . These mistakes of judgment were frequent. But Catherine did more than this, and worse. With the obstinacy which characterised her, and the infatuation that her successes gave her, she came little by little to translate this capital defect into a 'parti pris,' to formulate it as a system; one man was worth another, in her eyes, so long as he was docile and prompt to obey. . . . And her idea that one man is worth as much as another causes her, for a mere nothing, for a word that offends her, for a cast of countenance that she finds unpleasing, or even without motive, for the pleasure of change and the delight of having to do with some one new, as she avows naïvely in a letter to Grimm, to set aside, disgraced or merely cashiered, one or another of her most devoted servants."—R. Waliszewski, *Romance of an Empress, v.* 2, *bk.* 2, *ch.* 1.

A. D. 1801.—Paul's despotism and assassination.—Accession of Alexander I.—The Emperor Paul's "choice of his Ministers was always directed by one dominant idea — that of surrounding himself with servants on whom he could entirely rely; for from the moment of his accession he foresaw and dreaded a Palace revolution. . . . He erred in the selection, and especially in the extent, of the means which he employed to save his life and his power; they only precipitated his deplorable end. Among the men whom he suspected, he persecuted some with implacable rigour, while he retained others at their posts and endeavoured to secure their fidelity by presents; this, however, only made them ungrateful. Never was there a sovereign more terrible in his severity, or more liberal when he was in a generous mood. But there was no certainty in his favour. A single word uttered intentionally or by accident in a conversation, the shadow of a suspicion, sufficed to make him persecute those whom he had protected. The greatest favourites of to-day feared to be driven from the Court on the morrow, and banished to a distant province. Yet the Emperor wished to be just. . . . All who belonged to the Court or came before the Emperor were thus in a state of continual fear." This fear, and the hatred which it inspired, produced in due time a conspiracy, headed by Counts Panin and Pahlen, of the Emperor's Council. Purporting to have for its object only the deposition of the Czar, the conspiracy was known and acquiesced in by the heir to the throne, the Grand-Duke Alexander, who had been persuaded to look upon it as a necessary measure for rescuing Russia from a demented ruler. "Paul was precipitating his country into incalculable disasters, and into a complete disorganisation and deterioration of the Government machine. . . . Although everybody sympathised with the conspiracy, nothing was done until Alexander had given his consent to his father's deposition." Then it was hurried to its accomplishment. The conspirators, including a large number of military and civil officials, supped together, on the evening of March 3, 1801. At midnight, most of them being then intoxicated, they went in a body to the palace, made their way to the Emperor's bed-chamber — resisted by only one young valet — and found him, in his night-clothes, hiding in the folds of a curtain. "They dragged him out in his shirt, more dead than alive; the terror he had inspired was now

repaid to him with usury. . . . He was placed on a chair before a desk. The long, thin, pale, and angular form of General Bennigsen [a Hanoverian officer, just admitted to the conspiracy, but who had taken the lead when others showed signs of faltering], with his hat on his head and a drawn sword in his hand, must have seemed to him a terrible spectre. 'Sire,' said the General, 'you are my prisoner and have ceased to reign; you will now at once write and sign a deed of abdication in favour of the Grand-Duke Alexander.' Paul was still unable to speak, and a pen was put in his hand. Trembling and almost unconscious, he was about to obey, when more cries were heard. General Bennigsen then left the room, as he has often assured me, to ascertain what these cries meant, and to take steps for securing the safety of the palace and of the Imperial family. He had only just gone out when a terrible scene began. The unfortunate Paul remained alone with men who were maddened by a furious hatred of him. . . . One of the conspirators took off his official scarf and tied it round the Emperor's throat. Paul struggled. . . . But the conspirators seized the hand with which he was striving to prolong his life, and furiously tugged at both ends of the scarf. The unhappy emperor had already breathed his last, and yet they tightened the knot and dragged along the dead body, striking it with their hands and feet." When Alexander learned that an assassination instead of a forced abdication had vacated the throne for him, he "was prostrated with grief and despair. . . . The idea of having caused the death of his father filled him with horror, and he felt that his reputation had received a stain which could never be effaced. . . . During the first years of his reign, Alexander's position with regard to his father's murderers was an extremely difficult and painful one. For a few months he believed himself to be at their mercy, but it was chiefly his conscience and a feeling of natural equity which prevented him from giving up to justice the most guilty of the conspirators. . . . The assassins all perished miserably."— Prince Adam Czartoryski, *Memoirs, v.* 1, *ch.* 9 *and* 11.

A. D. 1812 (June—September).—Napoleon's invasion.—Battles of Smolensk and Borodino.—The French advance to Moscow.—"With the military resources of France, which then counted 130 departments, with the contingents of her Italian kingdoms, of the Confederation of the Rhine, of the Grand Duchy of Warsaw, and with the auxiliary forces of Prussia and Austria, Napoleon could bring a formidable army into the field. On the first of June the Grand Army amounted to 678,000 men, 356,000 of whom were French, and 322,000 foreigners. It included not only Belgians, Dutchmen, Hanoverians, Hanseats, Piedmontese, and Romans, then confounded under the name of Frenchmen, but also the Italian army, the Neapolitan army, the Spanish regiments, natives of Germany. . . . Besides Napoleon's marshals, it had at its head Eugène, Viceroy of Italy; Murat, King of Naples; Jerome, King of Westphalia; the princes royal and heirs of nearly all the houses in Europe. The Poles alone in this war, which recalled to them that of 1612, mustered 60,000 men under their standards. Other Slavs from the Illyrian provinces, Carinthians, Dalmatians, and Croats, were led to assault the great Slav empire. It was indeed the 'army of twenty nations,' as it is still called by the Russian people. Napoleon transported all these races from the West to the East by a movement similar to that of the great invasions, and swept them like a human avalanche against Russia. When the Grand Army prepared to cross the Niemen, it was arranged thus:—To the left, before Tilsit, Macdonald with 10,000 French and 20,000 Prussians under General York of Wartenburg; before Kovno, Napoleon with the corps of Davoust, Oudinot, Ney, the Guard commanded by Bessières, the immense reserve cavalry under Murat—in all a total of 180,000 men; before Pilony, Eugène with 50,000 Italians and Bavarians; before Grodno, Jerome Bonaparte, with 60,000 Poles, Westphalians and Saxons, &c. We must add to these the 30,000 Austrians of Schwartzenberg, who were to fight in Gallicia as mildly against the Russians as the Russians had against the Austrians in 1809. Victor guarded the Vistula and the Oder with 30,000 men, Augereau the Elbe with 50,000. Without reckoning the divisions of Macdonald, Schwartzenberg, Victor, and Augereau, it was with about 290,000 men, half of whom were French, that Napoleon marched to cross the Niemen and threaten the centre of Russia. Alexander had collected on the Niemen 90,000 men, commanded by Bagration; on the Bug, tributary to the Vistula, 60,000 men, commanded by Barclay de Tolly; those were what were called the Northern army and the army of the South. On the extreme right, Wittgenstein with 30,000 men was to oppose Macdonald almost throughout the campaign; on the extreme left, to occupy the Austrian Schwartzenberg as harmlessly as possible,

Tormassof was placed with 40,000. Later this latter army, reinforced by 50,000 men from the Danube, became formidable, and was destined, under Admiral Tchitchagof, seriously to embarrass the retreat of the French. In the rear of all these forces was a reserve of 80,000 men — Cossacks and militia. . . . In reality, to the 290,000 men Napoleon had mustered under his hand, the Emperor of Russia could only oppose the 150,000 of Bagration and Barclay de Tolly. . . . At the opening of the campaign the head-quarters of Alexander were at Wilna. . . . They deliberated and argued much. To attack Napoleon was to furnish him with the opportunity he wished; to retire into the interior, as Barclay had advised in 1807, seemed hard and humiliating. A middle course was sought by adopting the scheme of Pfühl — to establish an intrenched camp at Drissa, on the Dwina, and to make it a Russian Torres Vedras. The events in the Peninsula filled all minds. Pfühl desired to act like Wellington at Torres Vedras." But his intrenched camp was badly placed; it was easily turned, and was speedily abandoned when Napoleon advanced beyond the Niemen, which he did on the 24th of June. The Russian armies fell back. "Napoleon made his entry into Wilna, the ancient capital of the Lithuanian Gedimin. He had said in his second proclamation, 'The second Polish war has begun!' The Diet of Warsaw had pronounced the re-establishment of the kingdom of Poland, and sent a deputation to Wilna to demand the adhesion of Lithuania, and to obtain the protection of the Emperor. . . . Napoleon, whether to please Austria, whether to preserve the possibility of peace with Russia, or whether he was afraid to make Poland too strong, only took half measures. He gave Lithuania an administration distinct from that of Poland. . . . A last attempt to negotiate a peace had failed. . . . Napoleon had proposed two unacceptable conditions — the abandonment of Lithuania, and the declaration of war against Great Britain. If Napoleon, instead of plunging into Russia, had contented himself with organising and defending the ancient principality of Lithuania, no power on earth could have prevented the re-establishment of the Polish-Lithuanian State within its former limits. The destinies of France and Europe would have been changed. . . . Napoleon feared to penetrate into the interior; he would have liked to gain some brilliant success not far from the Lithuanian frontier, and seize one of the two Russian armies. The vast spaces, the bad roads, the misunderstandings, the growing disorganisation of the army, caused all his movements to fail. Barclay de Tolly, after having given battle at Ostrovno and Vitepsk, fell back on Smolensk; Bagration fought at Mohilef and Orcha, and in order to rejoin Barclay retreated to Smolensk. There the two Russian generals held council. Their troops were exasperated by this continual retreat, and Barclay, a good tactician, with a clear and methodical mind, did not agree with Bagration, impetuous, like a true pupil of Souvorof. The one held firmly for a retreat, in which the Russian army would become stronger and stronger, and the French army weaker and weaker, as they advanced into the interior; the other wished to act on the offensive, full of risk as it was. The army was on the side of Bagration, and Barclay, a German of the Baltic provinces, was suspected and all but insulted. He consented to take the initiative against Murat, who had arrived at Krasnoé, and a bloody battle was fought (August 14). On the 16th, 17th, and 18th of August, another desperate fight took place at Smolensk, which was burnt, and 20,000 men perished. Barclay still retired, drawing with him Bagration. In his retreat Bagration fought Ney at Valoutina; it was a lesser Eylau: 15,000 men of both armies remained on the field of battle. Napoleon felt that he was being enticed into the interior of Russia. The Russians still retreated, laying waste all behind them. . . . The Grand Army melted before their very eyes. From the Niemen to Wilna, without ever having seen the enemy, it had lost 50,000 men from sickness, desertion and marauding; from Wilna to Mohilef nearly 100,000. . . . In the Russian army, the discontent grew with the retreating movement; . . . they began to murmur as much against Bagration as against Barclay. It was then that Alexander united the two armies under the supreme command of Koutouzof. . . . Koutouzof halted at Borodino. He had then 72,000 infantry, 18,000 regular cavalry, 7,000 Cossacks, 10,000 opoltchénié or militiamen, and 640 guns served by 14,000 artillerymen or pioneers; in all, 121,000 men. Napoleon had only been able to concentrate 86,000 infantry, 28,000 cavalry, and 587 guns, served by 16,000 pioneers or artillerymen. . . . On the 5th of September the French took the redoubt of Chevardino; the 7th was the day of the great battle: this was known as the battle of Borodino among the Russians, as that of the Moskowa in the bulletins of Napoleon, though the Moskowa flows at some distance from the field of carnage. . . . The battle began by a frightful cannonade of 1,200 guns, which was heard 30 leagues round. Then the French, with an irresistible charge, took Borodino on one side and the redoubts on the other; Ney and Murat crossed the ravine of Semenevskoé, and cut the Russian army nearly in two. At ten o'clock the battle seemed won, but Napoleon refused to carry out his first success by employing the reserve, and the Russian generals had time to bring up new troops in line. They recaptured the great redoubt, and Platof, the Cossack, made an incursion on the rear of the Italian army; an obstinate fight took place at the outworks. At last Napoleon made his reserve troops advance; again Murat's cavalry swept the ravine; Caulaincourt's cuirassiers assaulted the great redoubt from behind, and flung themselves on it like a tempest, while Eugène of Italy scaled the ramparts. Again the Russians had lost their outworks. Then Koutouzof gave the signal to retreat. . . . The French had lost 30,000 men, the Russians 40,000. . . . Koutouzof retired in good order, announcing to Alexander that they had made a steady resistance, but were retreating to protect Moscow." But after a council of war, he decided to leave Moscow to its fate, and the retreating Russian army passed through and beyond the city, and the French entered it at their heels.—A. Rambaud, *Hist. of Russia, v.* 2, *ch.* 12.—"The facts prove beyond doubt that Napoleon did not foresee the danger of an advance upon Moscow, and that Alexander I. and the Russian generals never dreamed of trying to draw him into the heart of the country. Napoleon was led on, not by any plan, — a plan had never been thought of, — but by the intrigues,

quarrels, and ambition of men who unconsciously played a part in this terrible war and never foresaw that the result would be the safety of Russia. . . . Amid these quarrels and intrigues, we are trying to meet the French, although ignorant of their whereabouts. The French encounter Neverovski's division, and approach the walls of Smolensk. It is impossible not to give battle at Smolensk. We must maintain our communications. The battle takes place, and thousands of men on both sides are killed. Contrary to the wishes of the tsar and the people, our generals abandon Smolensk. The inhabitants of Smolensk, betrayed by their governor, set fire to the city, and, with this example to other Russian towns, they take refuge in Moscow, deploring their losses and sowing on every side the seeds of hate against the enemy. Napoleon advances and we retreat, and the result is that we take exactly the measures necessary to conquer the French."—Count L. Tolstoi, *The Physiology of War: Napoleon and the Russian Campaign, ch.* 1.

Also in: C. Joyneville, *Life and Times of Alexander I., v.* 2, *ch.* 4.—Baron Jomini, *Life of Napoleon, ch.* 18 (*v.* 3).—Count P. de Segur, *Hist. of the Expedition to Russia, bk.* 1–8 (*v.* 1–2).

A. D. 1812 (September).—The French in Moscow.—The burning of the city.—"With rapid steps the French army advanced towards the heights whence they hoped to perceive at length the great city of Moscow; and, if the Russians were filled with the utmost sadness, the hearts of the French were equally inspired with feelings of joy and triumph, and the most brilliant illusions. Reduced from 420,000 (which was its number at the passage of the Niemen) to 100,000, and utterly exhausted, our army forgot all its troubles on its approach to the brilliant capital of Muscovy. . . . Imagination . . . was strongly excited within them at the idea of entering Moscow, after having entered all the other capitals of Europe with the exception of London, protected by the sea. Whilst Prince Eugene advanced on the left of the army, and Prince Poniatowski on its right, the bulk of the army, with Murat at its head, Davout and Ney in the centre, and the Guard in the rear, followed the great Smolensk road. Napoleon was in the midst of his troops, who, as they gazed upon him and drew near to Moscow, forgot the days of discontent, and uttered loud shouts in honour of his glory and their own. The proposal submitted by Miloradovitch was readily accepted, for the French had no desire to destroy Moscow, and it was agreed that not a shot should be fired during the evacuation, on condition that the Russian army should continue to defile across the city without a moment's halt. . . . The Russian rear-guard defiled rapidly to yield the ground to our advanced guard, and the King of Naples, followed by his staff and a detachment of cavalry, plunged into the streets of Moscow, and, traversing by turns the humblest quarters and the wealthiest, perceived everywhere the most profound solitude, and seemed to have entered a city of the dead. . . . The information which was now obtained — that the whole population of the city had fled — saddened the exultation of the commanders of our advanced guard, who had flattered themselves that they would have had the pleasure of surprising the inhabitants by their kindness. . . . On the morning of the 15th September, Napoleon entered Moscow, at the head of his invincible legions, but passed through a deserted city, and his soldiers were now, for the first time on entering a capital, the sole witnesses of their own glory. Their feelings on the occasion were sad ones. As soon as Napoleon had reached the Kremlin, he hastened to ascend the lofty tower of the great Ivan, and to survey from its elevation the magnificent city he had conquered. . . . A sullen silence, broken only by the tramp of the cavalry, had replaced that populous life which during the very previous evening had rendered the city one of the most animated in the world. The army was distributed through the various quarters of Moscow, Prince Eugene occupying the northwest quarter, Marshal Davout the southwest, and Prince Poniatowski the southeast. Marshal Ney, who had traversed Moscow from west to east, established his troops in the district comprised between the Riazan and Wladimir roads; and the Guard was naturally posted at the Kremlin and in its environs. The houses were full of provisions of every kind, and the first necessities of the troops were readily satisfied. The superior officers were received at the gates of palaces by numerous servants in livery, eager in offering a brilliant hospitality; for the owners of these palaces, perfectly unaware that Moscow was about to perish, had taken great pains, although they fully shared the national hatred against the French, to procure protectors for their rich dwellings by receiving into them French officers. . . . From their splendid lodgings, the officers of the French army wandered with equal delight through the midst of the city, which resembled a Tartar camp sown with Italian palaces. They contemplated with wonder the numerous towns of which the capital is composed, and which are placed in concentric circles, the one within the other. . . . A few days before, Moscow had contained a population of 300,000 souls, of whom scarcely a sixth part now remained, and of these the greater number were concealed in their houses or prostrated at the foot of the altars. The streets were deserts, and only echoed with the footsteps of our soldiers. . . . But although the solitude of the city was a source of great vexation to them, they had no suspicion of any approaching catastrophe, for the Russian army, which alone had hitherto devastated their country, had departed, and there appeared to be no fear of fire. The French army hoped, therefore, to enjoy comfort in Moscow, to obtain, probably, peace by means of its possession, and at least good winter-cantonments in case the war should be prolonged. But, on the afternoon they had entered, columns of flame arose from a vast building containing . . . quantities of spirits, and just as our soldiers had almost succeeded in mastering the fire in this spot, a violent conflagration suddenly burst forth in a collection of buildings called the Bazaar, situated to the northeast of the Kremlin, and containing the richest magazines, abounding in stores of the exquisite tissues of India and Persia, the rarities of Europe, colonial produce, and precious wines. The troops of the Guard immediately hastened up and attempted to subdue the flames; but their energetic efforts were unfortunately unsuccessful, and the immense riches of the establishment fell a prey to the fire, with the exception of some portions which our men were able to snatch from the devouring element. This fresh

accident was again attributed to natural causes, and considered as easily explicable in the tumult of an evacuation. During the night of the 15th of September, however, a sudden change came over the scene; for then as though every species of misfortune were to fall at the same moment on the ancient Muscovite capital, the equinoctial gales suddenly arose with the extreme violence usual to the season and in countries where wide-spread plains offer no resistance to the storm. This wind, blowing first from the east, carried the fire to the west into the streets comprised between the Iwer and Smolensk routes, which were the most beautiful and the richest in all Moscow. Within some hours the fire, spreading with frightful rapidity, and throwing out long arrows of flame, spread to the other westward quarters. And soon rockets were observed in the air, and wretches were seized in the act of spreading the conflagration. Interrogated under threat of instant death, they revealed the frightful secret,—the order given by Count Rostopschin for the burning of the city of Moscow as though it had been a simple village on the Moscow route. This information filled the whole army with consternation. Napoleon ordered that military commissions should be formed in each quarter of the city for the purpose of judging, shooting, and hanging incendiaries taken in the act, and that all the available troops should be employed in extinguishing the flames. Immediate recourse was had to the pumps, but it was found they had been removed; and this latter circumstance would have proved, if indeed any doubt on the matter had remained, the terrible determination with which Moscow had been given to the flames. In the mean time, the wind, increasing in violence every moment, rendered the efforts of the whole army ineffectual, and, suddenly changing, with the abruptness peculiar to equinoctial gales, from the east to the northwest, it carried the torrent of flame into quarters which the hands of the incendiaries had not yet been able to fire. After having blown during some hours from the northwest, the wind once more changed its direction, and blew from the southwest, as though it had a cruel pleasure in spreading ruin and death over the unhappy city, or, rather, over our army. By this change of the wind to the southwest the Kremlin was placed in extreme peril. More than 400 ammunition wagons were in the court of the Kremlin, and the arsenal contained some 400,000 pounds of powder. There was imminent danger, therefore, that Napoleon with his Guard, and the palace of the Czars, might be blown up into the air. . . . Napoleon, therefore, followed by some of his lieutenants, descended from the Kremlin to the quay of the Moskowa, where he found his horses ready for him, and had much difficulty in threading the streets, which, towards the northwest (in which direction he proceeded), were already in flames. The terrified army set out from Moscow. The divisions of Prince Eugene and Marshal Ney fell back upon the Zwenigarod and St. Petersburg roads, those of Marshal Davout fell back upon the Smolensk route, and, with the exception of the Guard, which was left around the Kremlin to dispute its possession with the flames, our troops drew back in horror from before the fire, which, after flaming up to heaven, darted back towards them as though it wished to devour them. The few inhabitants who had remained in Moscow, and had hitherto lain concealed in their dwellings, now fled, carrying away such of their possessions as they valued most highly, uttering lamentable cries of distress, and, in many instances, falling victims to the brigands whom Rostopochin had let loose, and who now exulted in the midst of the conflagration, as the genius of evil in the midst of chaos. Napoleon took up his quarters at the Château of Petrowskoié, a league's distance from Moscow on the St. Petersburg route, in the centre of the cantonments of the troops under Prince Eugene, awaiting there the subsidence of the conflagration, which had now reached such a height that it was beyond human power either to increase or extinguish it. As a final misfortune the wind changed on the following day from southwest to direct west, and then the torrents of flame were carried towards the eastern quarters of the city, the streets Messnitskaia and Bassmanaia, and the summer palace. As the conflagration reached its terrible height, frightful crashes were heard every moment,—roofs crushing inward, and stately façades crumbling headlong into the streets as their supports became consumed in the flames. The sky was scarcely visible through the thick cloud of smoke which overshadowed it, and the sun was only apparent as a blood-red globe. For three successive days—the 16th, the 17th, and the 18th of September—this terrific scene continued, and in unabated intensity. At length, after having devoured four-fifths of the city, the fire ceased, gradually quenched by the rain, which, as is usually the case, succeeded the violence of the equinoctial gales. As the flames subsided, only the spectre, as it were, of what had once been a magnificent city was visible; and, indeed, the Kremlin, and about a fifth part of the city, were alone saved,—their preservation being chiefly due to the exertions of the Imperial Guard. As the inhabitants of Moscow themselves entered the ruins, seeking what property still remained in them undestroyed, it was scarcely possible to prevent our soldiers from acting in the same manner. . . . Of this horrible scene the chiefest horror of all remains to be told: the Russians had left 15,000 wounded in Moscow, and, incapable of escaping, they had perished, victims of Rostopschin's barbarous patriotism."—A. Thiers, *Hist. of the Consulate and the Empire, bk.* 44 (*v.* 4).

A. D. 1812 (October—December).—The retreat from Moscow.—Its horrors.—"Napoleon waited in vain for propositions from the Czar; his own were scornfully rejected. Meanwhile the Russians were reorganizing their armies, and winter set in. On the 13th of October, the first frost gave warning that it was time to think of the retreat, which the enemy, already on the French flank, was threatening to cut off. Leaving Mortier with 10,000 men in the Kremlin, the army quitted Moscow on the 19th of October, thirty-five days after it had entered the city. It still numbered 80,000 fighting men and 600 cannons, but was encumbered with camp-followers and vehicles. At Malo-Jaroslavetz a violent struggle took place on the 24th. The town was captured and recaptured seven times. It was finally left in the hands of the French. Here, however, the route changed. The road became

increasingly difficult, the cold grew intense, the ground was covered with snow, and the confusion in the quartermaster's department was terrible. When the army reached Smolensk, there were only 50,000 men in the ranks (November 9). Napoleon had taken minute precautions to provide supplies and reinforcements all along his line of retreat; but the heedlessness of his subalterns, and the difficulty of being obeyed at such distances and in such a country, rendered his foresight useless. At Smolensk, where he hoped to find provisions and supplies, everything had been squandered. Meanwhile there was not a moment to lose; Wittgenstein, with the army of the North, was coming up on the French right. Tchitchagof was occupying Minsk behind the Beresina, with the army which had just come from the banks of the Danube. Kutusof was near at hand. The three Russian armies proposed to unite and bar the Beresina, which the French were obliged to cross. The French began their march, but the cold became suddenly intense; all verdure had disappeared, and there being no food for the horses, they died by the thousand. The cavalry was forced to dismount; it became necessary to destroy or abandon a large portion of the cannon and ammunition. The enemy surrounded the French columns with a cloud of Cossacks, who captured all stragglers. On the following days the temperature moderated. Then arose another obstacle,—the mud, which prevented the advance; and the famine was constant. Moreover, the retreat was one continuous battle. Ney, 'the bravest of the brave,' accomplished prodigies of valor. At Krasnoi the Emperor himself was obliged to charge at the head of his guard. When the Beresina was reached, the army was reduced to 40,000 fighting men, of whom one-third were Poles. The Russians had burned the bridge of Borisof, and Tchitchagof, on the other shore, barred the passage. Fortunately a ford was found. The river was filled with enormous blocks of ice; General Eblé and his pontoniers, plunged in the water up to their shoulders, built and rebuilt bridges across it. Almost all the pontoniers perished of cold or were drowned. Then, while on the right of the river Ney and Oudinot held back the army of Tchitchagof, and Victor on the left that of Wittgenstein, the guard, with Napoleon, passed over. Victor, after having killed or wounded 10,000 of Wittgenstein's Russians, passed over during the night. When, in the morning, the rear-guard began to cross the bridges, a crowd of fugitives rushed upon them. They were soon filled with a confused mass of cavalry, infantry, caissons, and fugitives. The Russians came up and poured a shower of shells upon the helpless crowd. This frightful scene has ever since been famous as the passage of the Beresina. The governor of Minsk had 24,000 dead bodies picked up and burned. Napoleon conducted the retreat towards Wilna, where the French had large magazines. At Smorgoni he left the army, to repair in all haste to Paris, in order to prevent the disastrous effects of the last events, and to form another army. The army which he had left struggled on under Murat. The cold grew still more intense, and 20,000 men perished in three days. Ney held the enemy a long time in check with desperate valor; he was the last to recross the Niemen (December 20). There the retreat ended, and with it this fatal campaign. Beyond that river the French left 300,000 soldiers, either dead or in captivity."—Victor Duruy, *Hist. of France, ch.* 66.—"Thousands of horses soon lay groaning on the route, with great pieces of flesh cut off their necks and most fleshy parts by the passing soldiery for food; whilst thousands of naked wretches were wandering like spectres, who seemed to have no sight or sense, and who only kept reeling on till frost, famine, or the Cossack lance put an end to their power of motion. In that wretched state no nourishment could have saved them. There were continual instances, even amongst the Russians, of their lying down, dozing, and dying within a quarter of an hour after a little bread had been supplied. All prisoners, however, were immediately and invariably stripped stark naked and marched in columns in that state, or turned adrift to be the sport and the victims of the peasantry, who would not always let them, as they sought to do, point and hold the muzzles of the guns against their own heads or hearts to terminate their suffering in the most certain and expeditious manner; for the peasantry thought that this mitigation of torture 'would be an offence against the avenging God of Russia, and deprive them of His further protection.' A remarkable instance of this cruel spirit of retaliation was exhibited on the pursuit to Wiazma. Milaradowitch, Beningsen, Korf, and the English General, with various others, were proceeding on the high-road, about a mile from the town, where they found a crowd of peasant-women, with sticks in their hands, hopping round a felled pine-tree, on each side of which lay about sixty naked prisoners, prostrate, but with their heads on the tree, which those furies were striking in accompaniment to a national air or song which they were yelling in concert; while several hundred armed peasants were quietly looking on as guardians of the direful orgies. When the cavalcade approached, the sufferers uttered piercing shrieks, and kept incessantly crying 'La mort, la mort, la mort!' Near Dorogobouche a young and handsome Frenchwoman lay naked, writhing in the snow, which was ensanguined all around her. On hearing the sound of voices she raised her head, from which extremely long black, shining hair flowed over the whole person. Tossing her arms about with wildest expression of agony, she kept frantically crying, 'Rendez moi mon enfant'—Restore me my babe. When soothed sufficiently to explain her story, she related, 'That on sinking from weakness, a child newly born had been snatched away from her; that she had been stripped by her associates, and then stabbed to prevent her falling alive into the hands of their pursuers.' . . . The slaughter of the prisoners with every imaginable previous mode of torture by the peasantry still continuing, the English General sent off a despatch to the Emperor Alexander 'to represent the horrors of these outrages and propose a check.' The Emperor by an express courier instantly transmitted an order 'to prohibit the parties under the severest menaces of his displeasure and punishment;' at the same time he directed 'a ducat in gold to be paid for any prisoner delivered up by peasant or soldier to any civil authority for safe custody.' The order was beneficial as well as creditable, but still the conductors were offered a higher price for their charge, and frequently were prevailed on to surrender their trust, for

they doubted the justifiable validity of the order. Famine also ruthlessly decimated the enemy's ranks. Groups were frequently overtaken, gathered round the burning or burnt embers of buildings which had afforded cover for some wounded or frozen; many in these groups were employed in peeling off with their fingers and making a repast of the charred flesh of their comrades' remains. The English General having asked a grenadier of most martial expression, so occupied, 'if this food was not loathsome to him?' 'Yes,' he said, 'it was; but he did not eat it to preserve life — that he had sought in vain to lose — only to lull gnawing agonies.' On giving the grenadier a piece of food, which happened to be at command, he seized it with voracity, as if he would devour it whole; but suddenly checking himself, he appeared suffocating with emotion: looking at the bread, then at the donor, tears rolled down his cheeks; endeavouring to rise, and making an effort as if he would catch at the hand which administered to his want, he fell back and had expired before he could be reached. Innumerable dogs crouched on the bodies of their former masters, looking in their faces, and howling their hunger and their loss; whilst others were tearing the still living flesh from the feet, hands, and limbs of moaning wretches who could not defend themselves, and whose torment was still greater, as in many cases their consciousness and senses remained unimpaired. The clinging of the dogs to their masters' corpses was most remarkable and interesting. At the commencement of the retreat, at a village near Selino, a detachment of fifty of the enemy had been surprised. The peasants resolved to bury them alive in a pit: a drummer boy bravely led the devoted party and sprang into the grave. A dog belonging to one of the victims could not be secured; every day, however, the dog went to the neighbouring camp, and came back with a bit of food in his mouth to sit and moan over the newly-turned earth. It was a fortnight before he could be killed by the peasants, afraid of discovery. The peasants showed the English General the spot and related the occurrence with exultation, as if they had performed a meritorious deed. The shots of the peasantry at stragglers or prisoners rang continuously through the woods; and altogether it was a complication of misery, of cruelty, of desolation, and of disorder, that can never have been exceeded in the history of mankind. Many incidents and crimes are indeed too horrible or disgusting for relation."— General Sir R. Wilson, *Narrative of Events during the Invasion of Russia, pp.* 255–261.— The same, *Private Journal, v.* 1, *pp.* 202–257.— When Napoleon abandoned the army, at Smorghoni, on the 6th of December, the King of Naples was left in command. "They marched with so much disorder and precipitation that it was only when they arrived at Wilna that the soldiers were informed of a departure as discouraging as it was unexpected. 'What!' said they among themselves, 'is it thus that he abandons those of whom he calls himself the father? Where then is that genius, who, in the height of prosperity, exhorted us to bear our sufferings patiently? He who lavished our blood, is he afraid to die with us? Will he treat us like the army of Egypt, to whom, after having served him faithfully, he became indifferent, when, by a shameful flight, he found himself free from danger?' Such was the conversation of the soldiers, which they accompanied by the most violent execrations. Never was indignation more just, for never were a class of men so worthy of pity. The presence of the emperor had kept the chiefs to their duty, but when they heard of his departure, the greater part of them followed his example, and shamefully abandoned the remains of the regiments with which they had been intrusted. . . . The road which we followed presented, at every step, brave officers, covered with rags, supported by branches of pine, their hair and beards stiffened by the ice. These warriors, who, a short time before, were the terror of our enemies, and the conquerors of Europe, having now lost their fine appearance, crawled slowly along, and could scarcely obtain a look of pity from the soldiers whom they had formerly commanded. Their situation became still more dreadful, because all who had not strength to march were abandoned, and every one who was abandoned by his comrades, in an hour afterwards inevitably perished. The next day every bivouac presented the image of a field of battle. . . . The soldiers burnt whole houses to avoid being frozen. We saw round the fires the half-consumed bodies of many unfortunate men, who, having advanced too near, in order to warm themselves, and being too weak to recede, had become a prey to the flames. Some miserable beings, blackened with smoke, and besmeared with the blood of the horses which they had devoured, wandered like ghosts round the burning houses. They gazed on the dead bodies of their companions, and, too feeble to support themselves, fell down, and died like them. . . . The route was covered with soldiers who no longer retained the human form, and whom the enemy disdained to make prisoners. Every day these miserable men made us witnesses of scenes too dreadful to relate. Some had lost their hearing, others their speech, and many, by excessive cold and hunger, were reduced to a state of frantic stupidity, in which they roasted the dead bodies of their comrades for food, or even gnawed their own hands and arms. Some were so weak that, unable to lift a piece of wood, or roll a stone towards the fires which they had kindled, they sat upon the dead bodies of their comrades, and, with a haggard countenance, steadfastly gazed upon the burning coals. No sooner was the fire extinguished, than these living spectres, unable to rise, fell by the side of those on whom they had sat. We saw many who were absolutely insane. To warm their frozen feet, they plunged them naked into the middle of the fire. Some, with a convulsive laugh, threw themselves into the flames, and perished in the most horrid convulsions, and uttering the most piercing cries; while others, equally insane, immediately followed them, and experienced the same fate."— E. A. D. 1853-1854.—Causes of the Crimean War with Turkey, England and France.—"The immediate cause of the war which broke out in 1853 was a dispute which had arisen between France and Russia upon the custody of the Holy Places in Jerusalem. The real cause was the intention of Russia to hasten the dismemberment of the Turkish Empire. Nicholas, in a memorable conversation, actually suggested to the British ambassador at St. Petersburg that England should receive Egypt and Crete as her own portion of the spoil. This conversation, which took place in January 1853, was at once reported to the British Government. It undoubtedly prepared the way for future trouble. . . . It had the effect of rendering the British Ministry suspicious of his intentions, at a moment when a good understanding with this country was of the first importance to the Czar of Russia. There can, then, be very little doubt that Nicholas committed a grave error in suggesting a partition, which may have seemed reasonable enough to Continental statesmen, but which was regarded with horror by England. Almost at the same moment he affronted France by declining to call Napoleon 'Monsieur mon frère.' . . . Nicholas had the singular indiscretion to render a British ministry suspicious of him, and a French emperor angry with him, in the same month. Napoleon could easily avenge the affront. . . . The Greek and Latin Churches both claimed the right of protecting the Holy Places of Palestine. Both appealed to a Mahometan arrangement in support of their claim: each declined to admit the pretensions of the other. The Latin Church in Palestine was under the protection of France; the Greek Church was under the protection of Russia; and France and Russia had constantly supported, one against the other, these rival claims. In the beginning of 1853 France renewed the controversy. She even threatened to settle the question by force. The man whom Nicholas would not call 'mon frère' was stirring a controversy thick with trouble for the Czar of Russia. It happened, moreover, that the controversy was one which, from its very nature, was certain to spread. Nearly eighty years before, by the Treaty of Kainardji, the Porte had undertaken to afford a constant protection to its Christian subjects, and to place a new Greek Church at Constantinople, which it undertook to erect, 'and the ministers who officiated at it under the specific protection of the Russian Empire.' The exact meaning of this famous article had always been disputed. In Western Europe it had been usually held that it applied only to the new Greek Church at Constantinople, and the ministers who officiated at it. But Russian statesmen had always contended that its meaning was much wider; and British statesmen of repute had supported the contention. The general undertaking which the Porte had given to Russia to afford a constant protection to its Christian subjects gave Russia —so they argued—the right to interfere when such protection was not afforded. In such a country as Turkey, where chronic misgovernment prevailed, opportunity was never wanting for complaining that the Christians were inadequately protected. The dispute about the Holy Places was soon superseded by a general demand of Russia for the adequate protection of the Christian subjects of the Porte. In the summer of 1853 the demand took the shape of an ultimatum; and, when the Turkish ministers declined to comply with the Russian demand, a Russian army crossed the Pruth and occupied the Principalities. In six months a miserable quarrel about the custody of the Holy Places had assumed dimensions which were clearly threatening war. At the advice of England the Porte abstained from treating the occupation of the Principalities as an act of war; and diplomacy consequently secured an interval for arranging peace. The Austrian Government framed a note, which is known as the Vienna Note, as a basis of a settlement. England and the neutral powers assented to the note; Russia accepted it; and it was then presented to the Porte. But Turkey, with the obstinacy which has always characterised its statesmen, declined to accept it. War might even then have been prevented if the British Government had boldly insisted on its acceptance, and had told Turkey that if she modified the conditions she need not count on England's assistance. One of the leading members of Lord Aberdeen's Ministry wished to do this, and declared to the last hour of his life that this course should have been taken. But the course was not taken. Turkey was permitted, or, according to Baron Stockmar, en-

couraged to modify the Vienna Note; the modifications were rejected by Russia; and the Porte, on the 26th of September, delivered an ultimatum, and on the 4th of October 1853 declared war. These events excited a very widespread indignation in this country. The people, indeed, were only imperfectly acquainted with the causes which had produced the quarrel; many of them were unaware that the complication had been originally introduced by the act of France; others of them failed to reflect that the refusal of the Porte to accept a note which the four Great Powers — of which England was one — had agreed upon was the immediate cause of hostilities. Those who were better informed thought that the note was a mistake, and that the Turk had exercised a wise discretion in rejecting it; while the whole nation instinctively felt that Russia, throughout the negotiations, had acted with unnecessary harshness. In October 1853, therefore, the country was almost unanimously in favour of supporting the Turk. The events of the next few weeks turned this feeling into enthusiasm. The Turkish army, under Omar Pasha, proved its mettle by winning one or two victories over the Russian troops. The Turkish fleet at Sinope was suddenly attacked and destroyed. Its destruction was, undoubtedly, an act of war: it was distorted into an act of treachery; a rupture between England and Russia became thenceforward inevitable; and in March 1854 England and France declared war."—S. Walpole, *Foreign Relations, ch.* 3.

A. D. 1854 (September).— The Crimean War: Landing of the Allies.—Battle of the Alma.— Sufferings of the invading army.— "England, then, and France entered the war as allies. Lord Raglan, formerly Lord Fitzroy Somerset, an old pupil of the Great Duke in the Peninsular War, and who had lost his right arm serving under Wellington at Waterloo, was appointed to command the English forces. Marshal St. Arnaud, a bold, brilliant soldier of fortune, was intrusted by the Emperor of the French with the leadership of the soldiers of France. The allied forces went out to the East and assembled at Varna, on the Black Sea shore, from which they were to make their descent on the Crimea. The war, meantime, had gone badly for the Emperor of Russia in his attempt to crush the Turks. The Turks had found in Omar Pasha a commander of remarkable ability and energy; and they had in one or two instances received the unexpected aid and counsel of clever and successful Englishmen. . . . The invasion of the Danubian provinces was already, to all intents, a failure. Mr. Kinglake and other writers have argued that but for the ambition of the Emperor of the French and the excited temper of the English people the war might well have ended then and there. The Emperor of Russia had found, it is contended, that he could not maintain an invasion of European Turkey; his fleet was confined to its ports in the Black Sea, and there was nothing for him but to make peace. But we confess we do not see with what propriety or wisdom the allies, having entered on the enterprise at all, could have abandoned it at such a moment, and allowed the Czar to escape thus merely scotched. . . . The allies went on. They sailed from Varna for the Crimea. . . . There is much discussion as to the original author of the project for the invasion of the Crimea. The Emperor Napoleon has had it ascribed to him; so has Lord Palmerston; so has the Duke of Newcastle; so, according to Mr. Kinglake, has the 'Times' newspaper. It does not much concern us to know in whom the idea originated, but it is of some importance to know that it was essentially a civilian's and not a soldier's idea. It took possession almost simultaneously, as far as we can observe, of the minds of several statesmen, and it had a sudden fascination for the public. The Emperor Nicholas had raised and sheltered his Black Sea fleet at Sebastopol. That fleet had sallied forth from Sebastopol to commit what was called the massacre of Sinope. Sebastopol was the great arsenal of Russia. It was the point from which Turkey was threatened; from which, it was universally believed, the embodied ambition of Russia was one day to make its most formidable effort of aggression. Within the fence of its vast seaforts the fleet of the Black Sea lay screened. From the moment when the vessels of England and France entered the Euxine the Russian fleet had withdrawn behind the curtain of these defences, and was seen upon the open waves no more. If, therefore, Sebastopol could be taken or destroyed, it would seem as if the whole material fabric, put together at such cost and labor for the execution of the schemes of Russia, would be shattered at a blow. . . . The invasion of the Crimea, however, was not a soldier's project. It was not welcomed by the English or the French commander. It was undertaken by Lord Raglan out of deference to the recommendations of the Government; and by Marshal St. Arnaud out of deference to the Emperor of the French, and because Lord Raglan, too, did not see his way to decline the responsibility of it. The allied forces were, therefore, conveyed to the south-western shore of the Crimea, and effected a landing in Kalamita Bay, a short distance north of the point at which the river Alma runs into the sea. Sebastopol itself lies about 30 miles to the south; and then, more southward still, divided by the bulk of a jutting promontory from Sebastopol, is the harbor of Balaklava. The disembarkation began on the morning of September 14th, 1854. It was completed on the fifth day; and there were then some 27,000 English, 30,000 French, and 7,000 Turks landed on the shores of Catherine the Great's Crimea. The landing was effected without any opposition from the Russians. On September 19th, the allies marched out of their encampments and moved southward in the direction of Sebastopol. They had a skirmish or two with a reconnoitring force of Russian cavalry and Cossacks; but they had no business of genuine war until they reached the nearer bank of the Alma. The Russians, in great strength, had taken up a splendid position on the heights that fringed the other side of the river. The allied forces reached the Alma about noon on September 20th. They found that they had to cross the river in the face of the Russian batteries armed with heavy guns on the highest point of the hills or bluffs, of scattered artillery, and of dense masses of infantry which covered the hills. The Russians were under the command of Prince Mentschikoff. It is certain that Prince Ments-

chikoff believed his position unassailable, and was convinced that his enemies were delivered into his hands when he saw the allies approach and attempt to effect the crossing of the river. . . . The attack was made with desperate courage on the part of the allies, but without any great skill of leadership or tenacity of discipline. It was rather a pell-mell sort of fight, in which the headlong courage and the indomitable obstinacy of the English and French troops carried all before them at last. A study of the battle is of little profit to the ordinary reader. It was an heroic scramble. There was little coherence of action between the allied forces. But there was happily an almost total absence of generalship on the part of the Russians. The soldiers of the Czar fought stoutly and stubbornly, as they have always done; but they could not stand up against the blended vehemence and obstinacy of the English and French. The river was crossed, the opposite heights were mounted, Prince Mentschikoff's great redoubt was carried, the Russians were driven from the field, the allies occupied their ground; the victory was to the Western Powers. . . . The Russians ought to have been pursued. They themselves fully expected a pursuit. They retreated in something like utter confusion. . . . But there was no pursuit. Lord Raglan was eager to follow up the victory; but the French had as yet hardly any cavalry, and Marshal St. Arnaud would not agree to any further enterprise that day. Lord Raglan believed that he ought not to persist; and nothing was done. . . . Except for the bravery of those who fought, the battle was not much to boast of. . . . At this distance of time it is almost touching to read some of the heroic contemporaneous descriptions of the great scramble of the Alma. . . . Very soon, however, a different note came to be sounded. The campaign had been opened under conditions differing from those of most campaigns that went before it. Science had added many new discoveries to the art of war. Literature had added one remarkable contribution of her own to the conditions amidst which campaigns were to be carried on. She had added the 'special correspondent.' . . . When the expedition was leaving England it was accompanied by a special correspondent from each of the great daily papers of London. The 'Times' sent out a representative whose name almost immediately became celebrated — Mr. William Howard Russell, the 'preux chevalier' of war correspondents in that day, as Mr. Archibald Forbes of the 'Daily News' is in this. . . . Mr. Russell soon saw that there was confusion; and he had the soundness of judgment to know that the confusion was that of a breaking-down system. Therefore, while the fervor of delight in the courage and success of our army was still fresh in the minds of the public at home, while every music-hall was ringing with the cheap rewards of valor, in the shape of popular glorifications of our commanders and our soldiers, the readers of the 'Times' began to learn that things were faring badly indeed with the conquering army of the Alma. The ranks were thinned by the ravages of cholera. The men were pursued by cholera to the very battle-field, Lord Raglan himself said. . . . The hospitals were in a wretchedly disorganized condition. Stores of medicines and strengthening food were decaying in places where no one wanted them or could well get at them, while men were dying in hundreds among our tents in the Crimea for lack of them. The system of clothing, of transport, of feeding, of nursing — everything had broken down. Ample provisions had been got together and paid for; and when they came to be needed no one knew where to get at them. The special correspondent of the 'Times' and other correspondents continued to din these things into the ears of the public at home. Exultation began to give way to a feeling of dismay. The patriotic anger against the Russians was changed for a mood of deep indignation against our own authorities and our own war administration. It soon became apparent to every one that the whole campaign had been planned on the assumption that it was to be like the career of the hero whom Byron laments, 'brief, brave, and glorious.' Our military authorities here at home — we do not speak of the commanders in the field — had made up their minds that Sebastopol was to fall, like another Jericho, at the sound of the war-trumpets' blast. Our commanders in the field were, on the contrary, rather disposed to overrate than to underrate the strength of the Russians. . . . It is very likely that if a sudden dash had been made at Sebastopol by land and sea, it might have been taken almost at the very opening of the war. But the delay gave the Russians full warning, and they did not neglect it. On the third day after the battle of the Alma the Russians sank seven vessels of their Black Sea fleet at the entrance of the harbor of Sebastopol. This was done full in the sight of the allied fleets, who at first, misunderstanding the movements going on among the enemy, thought the Russian squadron were about to come out from their shelter and try conclusions with the Western ships. But the real purpose of the Russians became soon apparent. Under the eyes of the allies the seven vessels slowly settled down and sank in the water, until at last only the tops of their masts were to be seen; and the entrance of the harbor was barred as by sunken rocks against any approach of an enemy's ship. There was an end to every dream of a sudden capture of Sebastopol."— J. McCarthy, *Hist. of Our Own Times, ch.* 27 (*v.* 2).

A. D. 1854 (September—October).—Opening of the siege of Sebastopol.— Four days after the battle of the Alma the allies reached the Belbek, so close to Sebastopol that "it became a matter of necessity to decide upon their next step. It appears to have been the wish of the English at once to take advantage of their victory and assault the north side. It is now known that such a step would almost certainly have been successful. . . . But again St. Arnaud offered objections." It was then determined "to undertake a flank march round the head of the harbour, and to take possession of the heights on the south. It was a difficult operation, for the country was unknown and rough, and while in the act of marching the armies were open to any assault upon their left flank. It was however carried out unmolested. . . . On the 26th the English arrived at the little landlocked harbour of Balaclava, at the foot of the steep hills forming the eastern edge of the plateau. The fleet, duly warned of the operation, had already arrived.

. . . Canrobert . . . had now succeeded the dying St. Arnaud. . . . A similar question to that which had arisen on the 24th now again rose. Should Sebastopol be attacked at once or not? Again it would appear that Lord Raglan, Sir Edmund Lyons, and others, were desirous of immediate assault. Again the French, more instructed in the technical rules of war, and supported by the opinion of Sir John Burgoyne, who commanded the English Engineers, declined the more vigorous suggestion, and it was determined at least to wait till the siege guns from the fleet were landed, and the artillery fire of the enemy weakened, in preparation for the assault. In the light of subsequent knowledge, and perhaps even with the knowledge then obtainable if rightly used, it appears that in all the three instances mentioned the bolder less regular course would have been the true wisdom. For Menschikoff had adopted a somewhat strange measure of defence. He had given up all hopes of using his fleet to advantage. He had caused some of his vessels to be sunk at the entrance of the harbour, which was thus closed; and having drawn the crews, some 18,000 in number, from the ships, he had intrusted to them the defence of the town, and had marched away with his whole army. The garrison did not now number more than 25,000, and they were quite unfit — being sailors — for operations in the field. The defences were not those of a regular fortress, but rather of an entrenched position. . . . There were in Sebastopol two men who, working together, made an extraordinary use of their opportunities. Korniloff, the Admiral, forcing himself to the front by sheer nobleness of character and enthusiasm, found in Colonel von Todleben, at that time on a voluntary mission in the town, an assistant of more than common genius. . . . The decision of the allies to await the landing of their siege train was more far-reaching than the generals at the time conceived, although some few men appear to have understood its necessary result. It in fact changed what was intended to be a rapid coup de main into a regular siege — and a regular siege of an imperfect and inefficient character, because the allied forces were not strong enough to invest the town. . . . Preparation had not been made to meet the change of circumstances. The work thrown upon the administration was beyond its powers; the terrible suffering of the army during the ensuing winter was the inevitable result. . . . The bombardment of the suburb, including the Malakoff and the Redan, fell to the English; the French undertook to carry it out against the city itself, directing their fire principally against the Flagstaff battery. . . . Slowly the siege trains were landed and brought into position in the batteries marked out by the engineers. . . . It was not till the 16th of October that these preparations were completed. . . . The energy of Korniloff and the skill of Todleben had by this time roused the temper of the garrison, and had rendered the defences far more formidable; and in the beginning of October means had been taken to persuade Menschikoff to allow considerable bodies of troops to return to the town. . . . On the 17th the great bombardment began. The English batteries gained the mastery over those opposed to them, but the efforts of the French, much reduced by the fire of the besieged, were brought to a speedy conclusion by a great explosion within their lines. Canrobert sent word to Lord Raglan that he should be unable to resume the fire for two days. The attack by the fleet had been to little purpose. . . . Every day till the 25th of October the fire of the allies was continued. But under cover of this fire (always encountered by the ceaseless energy of Todleben) the change had begun, and the French were attacking the Flagstaff bastion by means of regular approaches. On that day the siege was somewhat rudely interrupted. The presence of the Russian army outside the walls and the defect in the position of the allies became evident." — J. F. Bright, *Hist. of Eng.*, 1837–1880, *pp.* 251–256.

A. D. 1854 (October—November).—The Crimean War: Balaclava and Inkermann.— "The Russian general soon showed that he was determined not to allow the allies to carry on their operations against the town undisturbed. Large parties of Russian soldiers had for some time been reconnoitring in the direction of Balaclava, showing that an attack in that quarter was meditated. At length, on the 25th of October, an army of 30,000 Russians advanced against the English position, hoping to get possession of the harbours and to cut the allies off from their supplies, or at any rate to destroy the stores which had already been landed. The part of the works on which the Russian troops first came was occupied by redoubts, defended by a body of Turkish recruits, recently arrived from Tunis, who, after offering a very feeble resistance, fled in confusion. But when the Russians, flushed with this first success, attempted to pursue the advantage they had gained, they soon encountered a very different foe in the Highlanders, commanded by Sir Colin Campbell, who bore the brunt of the Russian attack with great firmness. The British cavalry particularly distinguished themselves in this action, routing a far superior force of Russian cavalry. It was in the course of this engagement that the unfortunate blunder occurred, in consequence of which 607 men [the 'Light Brigade' immortalized by Tennyson] galloped forth against an army, and only 198 came back, the rest having been killed, wounded, or made prisoners. A long, unsatisfactory controversy was carried on some time after, having for its object to decide who was to blame for throwing away, in this foolish manner, the lives of so many gallant men. It seems that the orders were not very clearly expressed, and that the general — Lord Lucan — by whom they were received, misapprehended them more completely than a man in his position ought to have done. In the end, the Russians were forced to retire, without having effected their object; but as they retained some portion of the ground that had been occupied by the allies at the commencement of the battle, they too claimed the victory, and Te-Deums were sung all over Russia in honour of this fragmentary success. However, the Russian commander did not abandon the hope of being able to obtain possession of Balaclava. On the very day following the affair which has just been related, the Russians within the town made a sortie with a force of about 6,000 men; but near the village of Inkermann they encountered so strong a resistance from a far inferior force, that they were obliged to retreat. The Russian

army at Balaclava had been prepared to coöperate with them; but the promptitude and vigour with which the allies repelled the sortie prevented the Russians from entrenching themselves at Inkermann, and thus frustrated the plan of a combined attack on the allied position which had probably been formed. The village of Inkermann, which was the scene of this skirmish, shortly after witnessed a more deadly and decisive contest. It was on the morning of Sunday, November 5th, that the approach of the Russian army was heard, while it was still concealed from view by the mists which overhung the British position. That army had been greatly increased by the arrival of large reinforcements, and every effort had been made to exalt the courage of the soldiers: they had been stimulated by religious services and exhortations, as well as by an abundant supply of ardent spirits; and they came on in the full confidence that they would be able to sweep the comparatively small British force from the position it occupied. That position was the centre of a grand attack made by the whole Russian army. The obscurity prevented the generals of the allies from discovering what was going on, or from clearly discerning, among a series of attacks on different parts of their position, which were real, and which were mere feints. There was a good deal of confusion in both armies; but the obscurity, on the whole, favoured the Russians, who had received their instructions before they set out, and were moving together in large masses. It was, in fact, a battle fought pell-mell, man against man, and regiment against regiment, with very little guidance or direction from the commanding officers, and consequently one in which the superior skill of the British gave them little advantage. The principal point of attack throughout was the plateau of Inkermann, occupied by the Guards and a few British regiments, who maintained a long and unequal struggle against the main body of the Russian army. It was, in fact, a hand-to-hand contest between superior civilization on the one hand, and superior numbers on the other, in which it is probable that the small British force would have been eventually swept off the field. Bosquet, the ablest of the French generals, with a soldier's instinct at once divined, amid all the obscurity, turmoil, and confusion, that the British position was the real point of attack; and therefore, leaving a portion of his force to defend his own position, he marched off to Inkermann, and never halted till his troops charged the Russians with such fury that they drove them down the hill, and decided the fate of the battle in favour of the allies. . . . Meanwhile Mr. Sidney Herbert, the minister at war, had succeeded in inducing Miss Florence Nightingale, well known in London for her skilful and self-denying benevolence, to go out and take charge of the military hospitals in which the wounded soldiers were received. Everything connected with the hospitals there was in a state of the most chaotic confusion. The medical and other stores which had been sent out were rotting in the holds of vessels, or in places where they were not wanted. Provisions had been despatched in abundance, and yet nothing could be found to support men who were simply dying from exhaustion. The system of check and counter-check, which had been devised to prevent waste and extravagance in the time of peace, proved to be the very cause of the most prodigious waste, extravagance, and inefficiency in the great war in which England was now embarked. The sort of dictatorial authority which had been conferred on Miss Nightingale, supported by her own admirable organising and administrative ability, enabled her to substitute order for confusion, and procure for the multitudes of wounded men who came under her care the comforts as well as the medical attendance they needed. She arrived at Scutari with her nurses on the very day of the battle of Inkermann. Winter was setting-in in the Crimea with unusual rigour and severity."—W. N. Molesworth, *Hist. of Eng.*, 1830–1874, *v.* 3, *ch.* 1.

A. D. 1854-1855.—Siege and capture of Kars.—"Everywhere unsuccessful in Europe, the Russians were more fortunate in Asia. Towards the close of 1854, the Turkish army at Kars was in a wretched and demoralised condition. Its unsatisfactory state, and the reverses it had experienced, resulting, it was well known, from the misconduct of the Turkish officials, induced the British government to appoint colonel Williams as a commissioner to examine into the causes of previous failures, and endeavour to prevent a repetition of them. . . . Colonel Williams, attended only by major Teesdale and Dr. Sandwith, arrived at Kars at the latter end of September, 1854, where he was received with the honour due to his position. Kars, in past times considered the key of Asia Minor, is 'a true Asiatic town in all its picturesque squalor,' and has a fortress partly in ruins, but once considered most formidable. On inspecting the Turkish army there, colonel Williams found the men in rags; their pay fifteen and even eighteen months in arrear; the horses half-starved; discipline so relaxed that it could be scarcely said to exist; and the officers addicted to the lowest vices and most disorderly habits. . . . Though treated with an unpardonable superciliousness and neglect by lord Stratford de Redcliffe, the British ambassador at Constantinople, colonel Williams succeeded in promoting a proper discipline, and in securing the men from being plundered by their officers. In the January of 1855, the Turkish government granted colonel Williams the rank of terik, or general in the Ottoman army, together with the title of Williams Pasha. The inactivity of the Russian army at Gumri excited much surprise; but notwithstanding the condition of the Turks, they permitted spring to pass away, and summer to arrive, before active hostilities were resumed. . . . During this period, the Turks at Kars had been employed, under the direction of colonel Lake, in throwing up fortifications around the town, which gradually assumed the appearance of a formidably intrenched camp. Early in June the Russians left Gumri, and encamped within five leagues of Kars. They were estimated at 40,000 men; while the Turkish troops amounted to about 15,000 men, who had been familiarised with defeat, and scourged by fever and the scurvy. In addition to this, their provisions were insufficient to enable them to sustain a siege of any considerable duration, and their stock of ammunition was very low The Russians made a partial attack on the town on the 16th of June, but they met with a repulse. . . . The road to Erzeroum was in their posses-

sion, and the supplies intended for the Turks fell into their hands. In effect, they had blockaded Kars by drawing a cordon of troops around it. A period of dreary inaction followed this movement of the Russians, broken only by trivial skirmishes at the outposts. Want was already felt within the town, and the prospect of surrender or starvation was imminent. . . . Omar Pasha, and a large body of Turkish troops from the Crimea, had landed at Batoum, and it was expected that they would soon arrive to raise the siege of Kars. This circumstance, occurring shortly after the arrival of the news of the fall of Sebastopol, induced many of the officers of the besieged army to believe that the Russians were about to retire. This surmise was strengthened by the fact, that, for several days, large convoys of heavily laden waggons were observed leaving the Russian camp. General Williams, however, was not deceived by this artifice, and correctly regarded it as the prelude to an extensive attack upon Kars. An hour before dawn on the 29th of September, the tramp of troops and the rumble of artillery wheels was heard in the distance, and the Turkish garrison made hurried preparations to receive the foe. Soon the dim moonlight revealed a dark moving mass in the valley. It was an advancing column of the enemy, who had hoped to take the Turks by surprise. In this they were deceived; for no sooner were they within range, than a crushing shower of grape informed them that the Moslems were on the alert. The battle commenced almost immediately. The assailants rushed up the hill with a shout, and advanced in close column on the breastworks and redoubts. From these works a murderous fire of musketry and rifles was poured forth, aided by showers of grape from the great guns. This told with terrible effect upon the dense masses of the foe, who fell in heaps. . . . Riddled with shot, the Russians were completely broken, and sent headlong down the hill, leaving hundreds of dead behind them. . . . Had not the Turkish cavalry been destroyed by starvation — a circumstance which rendered pursuit impossible — the Russian army might have been almost annihilated. The Turks had obtained an unequivocal victory, after a battle of nearly seven hours' duration. Their loss did not exceed 463 killed, of whom 101 were townspeople, and 631 wounded. That of the Russians was enormous; 6,300 of them were left dead upon the field, and it is said that they carried 7,000 wounded off the ground. Though the Russians had suffered a severe reverse, they were not driven from the position they held prior to the battle . . . and were enabled to resume the blockade of the city with as much strictness as before. The sufferings of the unhappy garrison and inhabitants of Kars form one of the most terrible pictures incidental to this war. Cholera and famine raged within the town; and those who were enfeebled by the last frequently fell victims to the first. The hospitals were crowded with the sick and wounded, but the nourishment they required could not be obtained. The flesh of starved horses had become a luxury, and the rations of the soldiers consisted only of a small supply of coarse bread, and a kind of broth made merely of flour and water. . . . Children dropt and died in the streets; and every morning skeleton-like corpses were found in various parts of the camp. The soldiers deserted in large numbers, and discipline was almost at an end. . . . As all hope of relief from Selim Pasha or Omar Pasha had expired, general Williams resolved to put an end to these miseries by surrendering the town to the foe. . . . Articles of surrender were signed on the 25th of November. . . . The fall of Kars was a disgrace and a scandal to all who might have contributed to prevent it."—T. Gaspey, *Hist. of Eng., Geo. III.–Victoria, ch.* 56 (*v.* 3).

A. D. 1854-1856.—Unfruitful peace negotiations at Vienna.—Renewed bombardment of Sebastopol.—Battle of the Tchernaya.—Repulse of the English from the Redan.—Taking of the Malakhoff by the French.—The congress at Paris.—Peace.—In November, 1854, the Czar, Nicholas I., authorized Gortschakoff, his Minister at Vienna, to signify to the Western Powers his willingness to conclude peace on the basis of "the four points" which the latter had laid down in the previous spring. These "four points" were as follows: "(1) The protectorate which Russia had hitherto exercised over the Principalities was to be replaced by a collective guarantee; (2) the navigation of the mouths of the Danube was to be freed from all impediments; (3) the treaty of 1841 was to be revised in the interests of the European equilibrium; and (4) Russia was to renounce all official protectorate over the Sultan's subjects, of whatever religion they might be. . . . The Czar's new move was not entirely successful. It did not prevent Austria from concluding a close arrangement with the Western Powers, and it induced her, in concert with France and England, to define more strictly the precise meaning attached to the four points. With some disappointment, Russia was doomed to find that every successive explanation of these points involved some fresh sacrifice on her own part. The freedom of the lower Danube, she was now told, could not be secured unless she surrendered the territory between that river and the Pruth which she had acquired at the treaty of Adrianople; the revision of the treaty of 1841, she was assured, must put an end to her preponderance in the Black Sea. These new exactions, however, did not deter the Czar from his desire to treat. By no other means was it possible to prevent Austria from taking part against him; and a conference, even if it ultimately proved abortive, would in the interim confine her to neutrality. Under these circumstances, Nicholas consented to negotiate. . . . The conference which it was decided to hold in December did not assemble till the following March. The negotiation which had been agreed to by Aberdeen, was carried out under Palmerston; and, with the double object of temporarily ridding himself of an inconvenient colleague, and of assuring the presence of a statesman of adequate rank at the conference, Palmerston entrusted its conduct to Russell. While Russell was on his way to Vienna, an event occurred of momentous importance. Sore troubled at the events of the war, alarmed at the growing strength of his enemies, the Emperor of Russia had neither heart nor strength to struggle against a slight illness. His sudden death [March 2, 1855] naturally made a profound impression on the mind of Europe. . . . Alexander, his successor,

a monarch whose reign commenced with disaster and ended with outrage, at once announced his adherence to the policy of his father. His accession, therefore, did not interrupt the proceedings of the Conference; and, in the first instance, the diplomatists who assembled at Vienna succeeded in arriving at a welcome agreement. On the first two of the four points all the Powers admitted to the Conference were substantially in accord. On the third point no such agreement was possible. The Western Powers were determined that an effectual limitation should be placed on the naval strength of Russia in the Black Sea; and they defined this limit by a stipulation that she should not add to the six ships of war which they had ascertained she had still afloat. Russia, on the contrary, regarded any such condition as injurious to her dignity and her rights, and refused to assent to it. Russia, however, did not venture on absolutely rejecting the proposal of the allies. Instead of doing so, she offered either to consent to the opening of the Dardanelles and the Bosphorus to the ships of war of all nations, or to allow the Sultan a discretion in determining whether he would open them to the vessels either of the Western Powers or of Russia. The Western Powers, however, were firm in their determination to prevent the fleets of Russia from passing into the Mediterranean, and refused the alternative. With its rejection the Conference practically terminated. After its members separated, however, Buol, the Austrian Minister, endeavoured to evolve from the Russian offer a possible compromise. . . . The rejection of the Austrian alternative necessitated the continuance of the war. But the struggle was resumed under conditions very different from those on which it had previously been conducted. Austria, indeed, considered that the rejection of her proposal released her from the necessity of actively joining the Western Powers, and, instead of taking part in the war, reduced her armaments. But the Western Powers obtained other aid. The little State of Sardinia sent a contingent to the Crimea; later on in the year Sweden joined the alliance. Fresh contingents of troops rapidly augmented the strength of the French and English armies, and finer weather as well as better management banished disease from the camp. Under these circumstances the bombardment was renewed in April. In May a successful attack on Kertch and Yenikale, at the extreme east of the Crimea, proved the means of intercepting communication between Sebastopol and the Caucasian provinces, and of destroying vast stores intended for the sustenance of the garrison. In June the French, to whose command Pelissier, a Marshal of more robust fibre than Canrobert, had succeeded, made a successful attack on the Mamelon, while the English concurrently seized another vantage-ground. Men at home, cheered by the news of these successes, fancied that they were witnessing the beginning of the end. Yet the end was not to come immediately. A great assault, delivered on the 18th of June, by the French on the Malakhoff, by the English on the Redan, failed; and its failure, among other consequences, broke the heart of the old soldier [Lord Raglan] who for nine months had commanded the English army. . . . His capacity as a general does not suffer from any comparison with that of his successor, General Simpson. That officer had been sent out to the Crimea in the preceding winter; he had served under Raglan as chief of the staff; and he was now selected for the command. He had, at least, the credit which attaches to any military man who holds a responsible post in the crisis of an operation. For the crisis of the campaign had now come. On both sides supreme efforts were made to terminate the struggle. On the 16th of August the Russian army in force crossed the Tchernaya, attacked the French lines, but experienced a sharp repulse. On the 8th of September the assault of June was repeated; and though the British were again driven back from the Redan, the French succeeded in carrying the Malakhoff. The Russians, recognising the significance of the defeat, set Sebastopol and their remaining ships on fire, and retreated to the northern bank of the harbour. After operations, which had lasted for nearly a year, the allies were masters of the south side of the city. It is, perhaps, unnecessary to prolong any further the narrative of operations which had little influence on history. The story of the defence of Kars and of the bombardment of Sweaborg have an interest of their own. But they had no effect on the events which followed or on the peace which ensued. Soon after, the Vienna Conference was dissolved, indeed, it became evident that the war was approaching its close. The cost and the sacrifices which it involved were making the French people weary of the struggle, and the accidental circumstances, which gave them in August and September the chief share in the glory, disposed them to make peace. The reasons which made the French, however, eager for peace, did not apply to the English. They, on the contrary, were mortified at their failures. Their expectations had been raised by the valour of their army at Alma, at Balaklava, and at Inkerman. But, since the day of Inkerman, their own share in the contest had added no new page of splendour to the English story. The English troops had taken no part in the battle of the Tchernaya; their assaulting columns had been driven back on the 18th of June; they had been repulsed in the final attack on the Redan; and the heroic conduct of their own countrymen at Kars had not prevented the fall of that fortress. Men at home, anxious to account for the failure of their expectations, were beginning to say that England is like the runner, never really ripe for the struggle till he has gained his second wind. They were reluctant that she should retire from the contest at the moment when, having repaired her defective administration and reinforced her shattered army, she was in a position to command a victory. Whatever wishes, however, individual Englishmen might entertain, responsible statesmen, as the autumn wore on, could not conceal from themselves the necessity of finding some honourable means for terminating the war. In October the British Cabinet learned with dismay that the French Emperor had decided on withdrawing 100,000 men from the Crimea. About the same time the members of the Government learned with equal alarm that, if war were to be continued at all, the French public were demanding that France should secure some advantage in Poland, in Italy, and on the left bank of the Rhine. In November the French ministry took a much more extreme course, and concerted with Austria terms of peace without the

knowledge of England. . . . It was impossible any longer to depend on the co-operation of France, and . . . it was folly to continue the struggle without her assistance. The protocol which Austria had drawn up, and to which France had assented, was, with some modifications, adopted by Britain and presented, as an ultimatum, to Russia by Austria. In the middle of January, 1856, the ultimatum was accepted by Russia; a Congress at which Clarendon, as Foreign Minister, personally represented his country, was assembled at Paris. The plenipotentiaries, meeting on the 25th of February, at once agreed on a suspension of hostilities. Universally disposed towards peace, they found no difficulty in accommodating differences which had proved irreconcilable in the previous year, and on the 30th of March, 1856, peace was signed. The peace which was thus concluded admitted the right of the Porte to participate in the advantages of the public law of Europe; it pledged all the contracting parties, in the case of any fresh misunderstanding with the Turk, to resort to mediation before using force. It required the Sultan to issue and to communicate to the Powers a firman ameliorating the condition of his Christian subjects; it declared that the communication of the firman gave the Powers no right, either collectively or separately, to interfere between the Sultan and his subjects; it neutralised the Black Sea, opening its waters to the mercantile marine of every nation, but, with the exception of a few vessels of light draught necessary for the service of the coast, closing them to every vessel of war; it forbade the establishment or maintenance of arsenals on the shores of the Euxine; it established the free navigation of the Danube; it set back the frontier of Russia from the Danube; it guaranteed the privileges and immunities of the Principalities of Wallachia and Moldavia; it similarly guaranteed the privileges of Servia, though it gave the Sultan the right of garrison in that province; and it undertook that Russia and Turkey should restore the conquests which they had made in Asia [Kars, etc.] one from another during the war. Such were the terms on which the war was terminated. Before the plenipotentiaries separated they were invited by Walewski, the Foreign Minister and first representative of France, to discuss the condition of Greece, of the Roman States, and of the two Sicilies; to condemn the licence to which a free press was lending itself in Belgium; and to concert measures for the mitigation of some of the worst evils of maritime war"—(see DECLARATION OF PARIS). —S. A. D. 1859-1876. — Conquests in Central Asia.— Subjugation of Bokhara, Khiva and Khokand. — "The original cause of Russia's appearance in Central Asia or Turkestan may be considered either the turbulence of the Kirghiz tribes, or the ambitious and clearly defined policy of Peter the Great. . . . Although the Czarina Anne received in 1734 the formal surrender of all the Kirghiz hordes, it was not until the present century had far advanced that the Russian Government could so much as flatter itself that it had effectually coerced them. . . . When the Kirghiz were subjugated Russia found no difficulty in reaching the lower course of the Jaxartes, on which [in 1849] . . . she established her advanced post at Kazala, or Fort No. 1. With her ultimate task thus simplified, nothing but the Crimean War prevented Russia's immediate advance up the Jaxartes into Turkestan. . . . The conquest of the Khanate of Turkestan began with the siege and capture of the forts Chulak Kurgan and Yani Kurgan in 1859; its successful progress was shown by the fall of the fortified towns of Turkestan and Auliata in 1864; and it was brought to a conclusion with the storming of Tashkent in 1865. The conquest of this Khanate, which had been united early in the century with that of Khokand, was thus speedily achieved, and this rapid and remarkable triumph is identified with the name of General Tchernaieff."— D. C. Boulger, *Central Asian Questions, ch.* 1.— "Khudayar Khan, the ruler of Khokand, a noted coward even in Central Asia, had soon lost his spirits, and implored Muzaffar-ed-din-Khan for assistance. Bokhara, reputed at that time the very stronghold of moral and material strength in Central Asia, was soon at hand with an army outnumbering the Russian adventurers ten or fifteen times; an army in name only, but consisting chiefly of a rabble, ill-armed, and devoid of any military qualities. By dint of preponderating numbers, the Bokhariots succeeded so far as to inflict a loss upon the daring Russian general at Irdjar, who, constrained to retreat upon Tashkend, was at once deposed by his superiors in St. Petersburg, and, instead of praises being bestowed upon him for the capture of Tashkend, he had to feel the weight of Russian ingratitude. His successor, General Romanovsky, played the part of a consolidator and a preparer, and as soon as this duty was fulfilled he likewise was superseded by General Kauffmann, a German from the Baltic Russian provinces, uniting the qualities of his predecessors in one person, and doing accordingly the work entrusted to him with pluck and luck in a comparatively short time. In 1868 the Yaxartes valley, together with Samarkand, the former capital of Timur, fell into the hands of Russia, and General Kauffmann would have proceeded to Bokhara, and even farther, if Muzaffar-ed-din-Khan . . . had not voluntarily submitted and begged for peace. At the treaty of Serpul, the Emir was granted the free possession of the country which was left to him, beginning beyond Kermineh, as far as Tchardjui in the south. . . . Of course the Emir had to pledge himself to be a true and faithful ally of Russia. He had to pay the heavy war indemnity . . . ; he had to place his sons under the tutorship of the Czar in order to be brought up at St. Petersburg . . . ; and ultimately he had to cede three points on his southern frontier — namely, Djam, Kerki, and Tchardjui. . . . Scarcely five years had elapsed when Russia . . . cast her eyes beyond the Oxus upon the Khan of Khiva. . . . A plea for a 'casus belli' was soon unearthed. . . . The Russian preparations of war had been ready for a long time, provisions were previously secured on different points, and General Kauffmann, notoriously fond of theatrical pageantries, marched through the most perilous route across bottomless sands from the banks of the Yaxartes to the Oxus [1873]. . . . Without fighting a

single battle, the whole country on the Lower Oxus was conquered. Russia again showed herself magnanimous by replacing the young Khan upon the paternal throne, after having taken away from him the whole country on the right bank of the Oxus, and imposed upon his neck the burden of a war indemnity which will weigh him down as long as he lives, and cripple even his successors, if any such are to come after him. Three more years passed, when Russia . . . again began to extend the limits of her possessions in the Yaxartes Valley towards the East. In July, 1876, one of the famous Russian embassies of amity was casually (?) present at the Court of Khudayar Khan at Khokand, when suddenly a rebellion broke out, endangering not only the lives of the Russian embassy but also of the allied ruler. No wonder, therefore, that Russia had to take care of the friend in distress. An army was despatched to Khokand, the rebellion was quelled, and, as a natural consequence, the whole Khanate incorporated into the dominions of the Czar. The Khokandians, especially one portion of them called the Kiptchaks, did not surrender so easily as their brethren in Bokhara and Khiva. The struggle between the conquerer and the native people was a bloody and protracted one; and the butchery at Namangan, an engagement in which the afterwards famous General Skobeleff won his spurs, surpasses all the accounts hitherto given of Russian cruelty. Similar scenes occurred in Endidjan and other places, until the power of the Kiptchaks, noted for their bravery all over Central Asia, was broken, and 'peace,' a pendant to the famous tableau of Vereshtchagin, 'Peace at Shipka,' prevailed throughout the valleys of Ferghana, enabling the Russian eagle to spread his wings undisturbedly over the whole of Central Asia, beginning from the Caspian Sea in the west to the Issyk Kul in the east, and from Siberia to the Turkoman sands in the south."— A. A. D. 1869-1881.—Advance in Central Asia from the Caspian.—Capture of Geok Tepe.—Subjugation of the Turkomans.—Occupation of Merv.—"Down to 1869 the Russian advance into Central Asia was conducted from Orenburg and the various military posts of Western Siberia. Year by year the frontier was pushed to the southward, and the map of the Asiatic possessions of Russia required frequent revision. The long chain of the Altai Mountains passed into the control of the Czar; the Aral Sea became a Russian lake; and vast territories with a sparse population were brought under Russian rule. . . . The Turcoman country extends westward as far as the Caspian Sea. To put a stop to the organized thieving of the Turcomans, and more especially to increase the extent of territory under their control, and open the land route to India, the Russians occupied the eastern shore of the Caspian in 1869. A military expedition was landed at Krasnovodsk, where it built a fort, and took permanent possession of the country in the name of the Czar. Points on the eastern coast of the Caspian had been occupied during the time of Peter the Great, and again during the reign of Nicholas I., but the occupation of the region was only temporary. The force which established itself at Krasnovodsk consisted of a few companies of infantry, two sotnias of Cossacks, and half a dozen pieces of artillery. Three men who afterwards obtained considerable prominence in the affairs of Central Asia, and one of whom gained a world-wide reputation as a soldier, were attached to this expedition. The last was Skobeleff, the hero of Plevna and the Russo-Turkish campaign of 1877-78. The others were Stolietoff and Grodekoff. . . . The Yomut Turcomans in the Caspian region made no resistance; they are far less warlike than the Tekke Turcomans farther to the east, who afterwards became the defenders of Geok Tepe. . . . From 1869 to 1873 there were numerous skirmishes and reconnoitrings, during which the steppes were pretty well explored as far as Kizil-Arvat. General Stolietoff was in command until 1872, when he was succeeded by Colonel Markusoff, who pushed his explorations to the wells of Igdy, then bending to the southwest, he passed Kizil-Arvat on his return to Krasnovodsk. There appeared to be no obstacle to a Russian advance into the heart of the country. But when General Lomakin was ordered there during the years between 1873 and '79, he found that beyond Kizil-Arvat were the Tekke Turcomans, who seemed determined to make a decided opposition to the Muscovite designs. . . . He advanced with 4,000 men and reached Geok Tepe without resistance, but no sooner was he in front of it than the Turcomans fell upon him. He was severely defeated and made a hasty retreat to Krasnovodsk with the remnant of his army. General Tergukasoff was next appointed to the command, but when he saw the difficulties confronting him he resigned. He was succeeded by General Petrussovitch under the chief command of Skobeleff. Thus from Stolietoff to Skobeleff there were no fewer than seven generals who had tried to conquer the Tekke Turcomans. Skobeleff, seeing the vast difficulties of the situation, matured a skilful and scientific plan of operations, for which he obtained the imperial sanction. . . . Skobeleff's first work [1880] was to secure a safe transport, establish a regular line of steamers across the Caspian, to build suitable docks, secure 20,000 camels, and build a railway from Michaelovsk to Kizil-Arvat. Michaelovsk is a small bay near Krasnovodsk and better suited as a harbor than the latter place. Skobeleff's first reconnoitring convinced him that Geok Tepe could only be taken by a regular siege. . . . Geok Tepe, sometimes called Goek Tepe ('The Green Hills'), is situated on the Akhal oasis, in the Turcoman steppes, 387 versts (250 miles), east of the Caspian Sea. The chain of hills called the Kopet-Dag, lies south and southwest of Geok Tepe, and on the other side it touches the sandy desert of Kara Kum, with the hill of Geok on the east. The Turcomans, or rather the Tekke Turcomans, who held it are the most numerous of the nomad tribes in that region.

They are reported to count about 100,000 kibitkas, or tents; reckoning 5 persons to a kibitka, this would give them a strength of half a million. Their great strength in numbers and their fighting abilities enabled them to choose their position and settle on the most fertile oases along the northern border of Persia for centuries. These oases have been renowned for their productiveness, and in consequence of the abundance of food, the Tekkes were a powerful race of men, and were feared throughout all that part of Asia. . . . The fortress of Geok Tepe at the time of the Russian advance consisted of walls of mud 12 or 15 feet high towards the north and west, and 6 or 8 feet thick. In front of these walls was a ditch, 6 feet deep, supplied by a running stream, and behind the walls was a raised platform for the defenders. The space between the first and second interior wall was from 50 to 60 feet wide, and occupied by the kibitkas of the Tekke Turcomans and their families. The second wall was exactly like the outer one." The Russian siege was opened at the beginning of the year 1881. "The first parallel, within 800 yards of the walls, was successfully cut by January 4th. From that date it was a regular siege, interrupted occasionally by sallies of the Tekkes within the fort or attacks by those outside. In one of these fights General Petrussovitch was killed. The besieging army was about 10,000 strong, while the besieged were from 30,000, to 40,000. . . . Throughout the siege the Turcomans made frequent sallies and there was almost continuous fighting. Sometimes the Turcomans drove the Russians from the outposts, and if they had been as well armed as their besiegers it is highly probable that Skobeleff would have fared no better than did Lomakin in his disastrous campaign. . . . The storming columns were ordered to be ready for work on January 24th. . . . At 7 o'clock in the morning of the 24th, Gaidaroff advanced to attack the first fortification on the south front, supported by 36 guns. The wall had already been half crumbled down by an explosion of powder and completely broken by the firing of a dynamite mine. At 11.20 the assault took place, and during the action the mine on the east front was exploded. It was laid with 125 cwt. of gunpowder, and in its explosion completely buried hundreds of Tekkes. . . . About 1.30 P. M. Gaidaroff carried the southwestern part of the walls, and a battle raged in the interior. Half an hour later the Russians were in possession of Denghil-Tepe, the hill redoubt commanding the fortress of Geok Tepe. The Tekkes then seemed to be panic-stricken, and took to flight leaving their families and all their goods behind. . . . The ditches to Geok Tepe were filled with corpses, and there were 4,000 dead in the interior of the fortress. The loss of the enemy was enormous. In the pursuit the Russians are said to have cut down no less than 8,000 fugitives. The total loss of the Tekkes during the siege, capture, and pursuit was estimated at 40,000. . . . Skobeleff pushed on in pursuit as far as Askabad, the capital of the Akhal Tekkes, 27 miles east of Geok Tepe, and from Askabad he sent Kuropatkin with a reconnoitring column half-way across the desert to Merv. Skobeleff wanted to capture Merv; but . . . he did not feel strong enough to make the attempt. Kuropatkin was recalled to Askabad, which remained the frontier post of the Russians for several months, until circumstances favored the advance upon Sarakhs and the Tejend, and the subsequent swoop upon Merv, with its bloodless capture [February, 1884]. The siege and capture of Geok Tepe was the most important victory ever achieved by the Russians in Central Asia. It opened the way for the Russian advance to the frontier of India, and carried the boundaries of the empire southward to those of Persia. In the interest of humanity, it was of the greatest importance, as it broke up the system of man-stealing and its attendant cruelties, which the Turcomans had practised for centuries. The people of Northern Persia no longer live in constant terror of Turcoman raids; the slave markets of Central Asia are closed, and doubtless forever."—T. W. Knox, *Decisive Battles since Waterloo, ch.* 22.—"There is a vast tract of country in Central Asia that offers great possibilities for settlement. Eastern Afghan, and Western Turkestan, with an area of 1,500,000 square miles, have a population which certainly does not exceed 15,000,000, or ten to the square mile. Were they peopled as the Baltic provinces of Russia are—no very extreme supposition — they would support 90,000,000. It is conceivable that something like this may be realized at no very distant date, when railroads are carried across China, and when water—the great want of Turkestan—is provided for by a system of canalisation and artesian wells. Meanwhile it is important to observe that whatever benefit is derived from an increase of population in these regions will mostly fall to China. That empire possesses the better two-thirds of Turkestan, and can pour in the surplus of a population of 400,000,000. Russia can only contribute the surplus of a population of about 100,000,000; and though the Russian is a fearless and good colonist, there are so many spaces in Russia in Europe to be filled up, so many growing towns that need workmen, so many counter-attractions in the gold bearing districts of Siberia, that the work of peopling the outlying dependencies of the empire is likely to be very gradual. Indeed it is reported that Russia is encouraging Chinese colonists to settle in the parts about Merv."—C. H. Pearson, *National Life and Character, pp.* 43–44.

A. D. 1879-1881.—Nihilist attempts against the life of the Czar Alexander II.—His assassination.—In November, 1879, "the Czar paid his annual visit to the memorial church at Sevastopol, when a requiem was celebrated, and he left the Crimea on November 30. The following evening, as his train was entering Moscow, followed by another carrying his baggage, an explosion took place under the baggage train from a mine of dynamite below the rails, which destroyed one carriage, and threw seven more off

the line. He was informed of the cause of the noise he had just heard, as he stepped on to the platform at Moscow, and it proved to be another Nihilist outrage [see NIHILISM], designed chiefly by an ex-Jew, who escaped to France, and by Sophia Perovsky, who was afterwards concerned in the Emperor's death. A similar mine, of which the wire was accidentally cut by a passing cart before the train arrived, had been laid further south at Alexandrovsk; and another nearer to Odessa was discovered in time by the officials, who reversed the usual position of the Imperial trains, thereby probably saving the Czar's life. He telegraphed the same night to the Empress at Cannes that he had arrived safely at Moscow, but did not mention his escape, which she learned from the newspapers, and from her attendants. In her weak, nervous state, it is not surprising that the effect was most injurious. . . . Another plot was discovered to blow up the landing stage at Odessa when the Emperor embarked for Yalta on his way from Warsaw in September; but the arrest of the conspirators frustrated a scheme by which hundreds as well as the sovereign might have perished. . . . The Revolutionary Committee put forth a circular acknowledging their part in the explosion, and calling on the people to aid them against the Czar. . . . A formal sentence of death was forwarded to him at Livadia by the Revolutionary Committee in the autumn of 1879; and December 1 was evidently selected for the Moscow attempt, being the anniversary of the death of Alexander I.; therefore a fatal day for monarchs in the eyes of the Nihilists. The Empress continued very ill, and her desire to return to Russia increased. At last it was decided to gratify her, as her case was pronounced hopeless. . . . The Emperor joined her in the train three stations before she arrived at St. Petersburg, and drove alone with her in the closed carriage, in which she was removed from the station to the Winter Palace. Only a fortnight later [February 17, 1880], a diabolical attempt was made to destroy the whole Imperial family. The hours when they assembled in the dining-room were well known. . . . The Empress was confined to her room, only kept alive by an artificial atmosphere being preserved in her apartment, which was next to the dining-room. Her only surviving brother, Prince Alexander of Hesse-Darmstadt, had arrived the same evening on a visit, and his letter to his wife on the occasion describes the result of the plot: . . . 'We were proceeding through a large corridor to His Majesty's rooms, when suddenly a fearful thundering was heard. The flooring was raised as if by an earthquake, the gas lamps were extinguished, and we were left in total darkness. At the same time a horrible dust and the smell of gunpowder or dynamite filled the corridor. Some one shouted to us that the chandelier had fallen down in the saloon where the table was laid for the dinner of the Imperial family. I hastened thither with the Czarovitz and the Grand-Duke Vladimir, while Count Adlerberg, in doubt as to what might happen next, held back the Emperor. We found all the windows broken, and the walls in ruins. A mine had exploded under the room. The dinner was delayed for half an hour by my arrival, and it was owing to this that the Imperial family had not yet assembled in the dining-hall.' One of the Princes remarked that it was a gas explosion; but the Emperor, who fully retained his composure, said, 'O no, I know what it is;' and it was subsequently stated that for several weeks past he had found a sealed black-bordered letter on his table every morning, always containing the same threat, that he should not survive the 2nd of March, the twenty-fifth anniversary of his accession. His first care was to see that his daughter was safe, and he then asked her to go to the Empress, and prevent her from being alarmed, while he personally inspected the scene of the catastrophe. General Todleben was of opinion that 144 lbs. of dynamite must have been used; and one of the cooks — a foreigner — and another official disappeared; but none of those concerned in the plot was arrested at that time. Subsequent information showed that the explosion was intended for the 2nd of March, but hastened on account of the arrest of some one acquainted with the plot. It was caused by machinery placed in the flue, and set for 6 P. M. It killed and wounded two servants and thirty-three brave soldiers of the Finnish Guard, who were assembled in the hall under the dining-room and above the flue where the dynamite was laid. . . . The Russian and foreign newspapers teemed with advice to the Emperor to grant a constitution, or abdicate in order to save his life; and it is reported that in a Council of his Ministers and relations he offered to hand over the sceptre at once to his eldest son, if they agreed that it would be best for their own safety, and for Russia; but that he was earnestly requested to continue in power. However this might be, he took an extraordinary and decisive step. He appointed an Armenian, General Melikof, a man of 56 years of age, distinguished in the war with Turkey, and subsequently as Governor of Charkof, to be the temporary dictator of the Empire, with almost absolute powers, and over the six Governors-General who in 1879 were established throughout Russia. The Commission was for six months. . . . The explosion in the Winter Palace caused the greatest panic in St. Petersburg, and people would no longer take tickets for the opera, till they ascertained that the Emperor was not likely to be there. . . . The sad condition of the Empress, who lingered, hardly conscious, between life and death, the incessant Nihilist circulars which day after day were found among his clothes, or on his writing table, with the real attempts made to poison him in letters and other ways, and of assassins to penetrate into the Palace under the guise of sweeps, petitioners, fire-lighters, and guards, the danger to which his nearest relations were exposed, and the precautions which he looked upon as a humiliation that were taken to ensure his safety, added to the cares of Empire, must have rendered his [the Emperor's] existence hardly tolerable. It is not surprising that at last he desired to be left to take his chance. . . . He was again seen driving in the streets in an open droschky, with only his coachman and one Cossack. . . . In May the Court usually repaired to Gateschina for the summer manœuvres of the troops. . . . The Empress, having somewhat rallied, desired to go as usual to Gateschina. . . . But early in the morning of June 3, she passed quietly away in her sleep. . . . It has been since ascertained that the Nihilists had planned to blow up the bridge over which the

funeral procession must pass, so as to destroy all the mourners, including the foreign princes, the Imperial hearse, and the numerous guards and attendants; but a tremendous storm of rain and wind on the previous night and morning, which raised the Neva to a level with its banks, and threatened to postpone the ceremony, prevented the last measures being taken to secure the success of the plot. . . . On March 2, the Emperor, as usual, attended the Requiem Mass for his father, and the service to celebrate his own accession to the throne. During the last week of his life, he lived in comparative retirement, as it was Lent, and he was preparing for the Holy Communion, which he received with his sons on the morning of Saturday, March 12. At 12 that day, Melikof came to tell him of the capture of one of the Nihilists concerned in the explosion in the Winter Palace. This man refused to answer any questions, except that his capture would not prevent the Emperor's certain assassination, and that his Majesty would never see another Easter. Both Melikof and the Czarovitz begged the Emperor in vain not to attend the parade the next day. . . . After the Parade [Sunday, March 13, 1881] the Emperor drove with his brother Michael to the Michael Palace, the abode of their cousin, the widowed Grand-Duchess Catherine; and, leaving his brother there, he set off about two o'clock by the shortest way to the Winter Palace, along the side of the Catherine Canal. There, in the part where the road runs between the Summer Garden and the Canal, a bombshell was hurled under the Imperial carriage, and exploded in a shower of snow, throwing down two of the horses of the escort, tearing off the back of the carriage, and breaking the glass, upsetting two lamp-posts, and wounding one of the Cossacks, and a baker's boy who was passing with a basket on his head. As soon as he saw the two victims lying on the pavement, the Emperor called to the coachman to stop, but the last only drove on faster, having received private orders from the Emperor's family to waive all ceremony, and to prevent his master from going into dangerous situations, or among crowds. However, the Emperor pulled the cord round the coachman's arm till he stopped; and then, in spite of the man's request to let himself be driven straight home, got out to speak to the sufferers, and to give orders for their prompt removal to the hospital, as the thermometer was below zero. . . . The Emperor gave his directions, and seeing the man who had thrown the bomb in the grasp of two soldiers, though still struggling to point a revolver at his sovereign, he asked his name, on which the aid-de-camp replied: 'He calls himself Griaznof, and says he is a workman.' The Emperor made one or two more remarks, and then turned to go back to his carriage. It was observed he was deadly pale, and walked very slowly; and as splashes of blood were found in the carriage, it was afterwards supposed that he had already received slight wounds. Several men had been placed at different points of the road with explosive bombs, and hearing the first explosion, two of these hurried up to see the effect. One of them flung a bomb at the Emperor's feet when he had gone a few paces towards his carriage, and it exploded, blowing off one leg, and shattering the other to the top of the thigh, besides mortally wounding the assassin himself, who fell with a shriek to the ground, and injuring twenty foot passengers. The other accomplice, according to his own evidence, put down his bomb, and instinctively ran forward to help the Emperor, who did not utter a sound, though his lips moved as if in prayer. He was supporting himself with his back against a buttress by grasping the rails on the canal. His helmet was blown off, his clothes torn to rags, and his orders scattered about on the snow, while the windows of houses 150 yards distant were broken by the explosion, which raised a column of smoke and snow, and was heard even at the Anitchkof Palace. . . . Besides his shattered limbs, the Emperor had a frightful gash in the abdomen, his left eye-lid was burnt, and his sight gone, his right hand was crushed, and the rings broken. . . . The Emperor expired from loss of blood at five-and-twenty minutes to four. . . . More than twenty persons were killed and injured by the two bombs."— C. Joyneville, *Life of Alexander II., ch.* 13.

A. D. 1881.—Accession of Alexander III.

A. D. 1881-1894.—Character and reign of Alexander III.—Persecution of Jews and unorthodox Christians.—Hostility to western civilization.—"According to an apparently authentic report in the Cracow paper 'Czas,' confirmed by later publications, the Emperor Alexander II. had signed the very morning of the day on which he was murdered a Ukase addressed to the Senate, by which a committee was to be appointed for realising Count Loris Melikow's project of a general representative assembly composed of delegates from the provincial assemblies. On March 20th Alexander III. convoked a grand council of the principal dignitaries, asking their opinion on Loris Melikow's proposal. A lively discussion took place, of which the 'Czas' gives a detailed account. . . . The Emperor, thanking the members, said that the majority had declared for the convening of an assembly elected by the nation for discussing the affairs of the State, adding, 'I share this opinion of the majority, and wish that the reform Ukase shall be published as under the patronage of my father, to whom the initiative of this reform is due.' The Ukase, however, was not published, Podobenoszew and Ignatiew having succeeded in discrediting it in the eyes of the Czar, asserting that it would only create excitement and increase the existing fermentation. On May 13th a manifesto appeared, in which the Czar declared his will 'to keep firmly the reins in obedience to the voice of God, and, in the belief in the force and truth of autocratic power, to fortify that power and to guard it against all encroachments.' A few days later Count Ignatiew, the head of the Slavophil party, was appointed Minister of the Interior, and by-and-by the other more liberal Ministers of Alexander II. disappeared. By far the most important personage under the present government is Podobenoszew, High Procurator of the Holy Synod, an office equivalent to a Minister of Public Worship for the State Church. Laborious and of unblemished integrity, this man is a fanatic by conviction. Under Alexander II., who was too much of a European to like him, he had but a secondary position, but under his pupil, the present Emperor, he has become all-powerful,

the more so because his orthodoxy wears the national garb, and he insists that the break-down of the Nicolas I. system was only caused through governing with Ministers of German origin. He is seconded by Count Tolstoi, the Minister of Internal Affairs (who replaced the more liberal Saburow), to whom belong the questions concerning the foreign, i. e., non-orthodox, confessions. These two, supported by the Minister of Justice, Manasseïn, have enacted persecutions against Catholics, Uniates, Protestants, and Jews [see JEWS: 19TH CENTURY], which seem incredible in our age, but which are well attested. Thousands of persons who have committed no wrong other than that of being faithful to their inherited creed have been driven from their homes, and exiled to Siberia, or to distant regions without any means of livelihood. As regards Catholics, these measures are principally directed against the clergy; but the Uniates, i. e., the Catholics who have the Slav liturgy, are unsparingly deported if they refuse to have their children baptised by an orthodox Pope, and this is done with men, women, and children, peasants and merchants. Twenty thousand Uniates alone have been removed from the western provinces to Szaratow. Those who remain at home have Cossacks quartered upon them, and all sorts of compulsory means are used to stamp out this sect. . . . It is pretty certain that Alexander III. is ignorant of the atrocities committed in his name, for he is not a man to sanction deliberate injustice or to tolerate persons of manifest impurity in important offices. Though the Czar insists upon having personally honest Ministers, mere honesty is not sufficient for governing a great empire. Truth does not penetrate to the ear of the autocrat; the Russian Press does not reflect public opinion with its currents, but is simply the speaking-tube of the reigning coterie, which has suppressed all papers opposed to it, while the foreign Press is only allowed to enter mutilated by the censorship. Some people have, indeed, the privilege to read foreign papers in their original shape, but the Autocrat of All the Russias does not belong to them. . . . The Emperor is peaceful and will not hear of war: he has, in fact, submitted to many humiliations arising from Russia's conduct towards Bulgaria. . . . With all this, however, he is surrounded by Panslavists and allows them to carry on an underground warfare against the Balkan States. . . . He is strongly opposed to all Western ideas of civilisation, very irritable, and unflinching in his personal dislikes, as he has shown in the case of Prince Alexander of Battenberg; and, with his narrow views, he is unable to calculate the bearing of his words and actions, which often amount to direct provocation against his neighbours. If, nevertheless, tolerable relations with England, Austria, and Germany have been maintained, this is for the most part the merit of M. de Giers, the Foreign Secretary, an unpretending, cautious, and personally reliable man of business, whose influence with the Czar lies in the cleverness with which he appears not to exercise any."—Prof. Geffcken, *Russia under Alexander III.* (*New Review, Sept.*, 1891).

ALSO IN: H. von Samson-Himmelstierna, *Russia under Alexander III.*

A. D. 1894.—Death of Alexander III.—Accession of Nicholas II.—The Czar Alexander III. died on the 1st of November, 1894, at Livadia, and the accession of his eldest son, who ascends the throne as Nicholas II., was officially proclaimed at St. Petersburg on the following day. The new autocrat was born in 1868. He is to wed the Princess Alix of Hesse Darmstadt.

RUSSIA, Great, Little, White, and Black.—"Little Russia consists of the governments of Podolia, Volhynia, Kief, Tchernigof, Poltava, and Kharkof. . . . To protect Poland from Tartar raids, the Polish king entrusted to the keeping of the Cossacks the whole south-east frontier of Poland, the former Grand Duchy of Kief, which acquired the name of Ukraine, 'border land,' and also of Little Russia, in contradistinction to the Grand Duchy of Moscow or Great Russia [see COSSACKS]. . . . The provinces of Moghilef, Minsk, and Vitebsk are popularly known by the name of White Russia. . . . The peaceful, industrious, good tempered White Russians are descendants of the old Slav race of the Krevitchi. . . . The name of 'the land of the Krevitchi,' by which White Russia was called in the 11th century, died out on the rise of the Principalities of Polotsk, Misteslavsk, and Minsk, which belonged first to Kief, next to Lithuania, and later still to Poland."—H. M. Chester, *Russia, Past and Present, pp.* 225, 228, 270–271.—"The epithet of 'White,' applied also to the Muscovite Russians in the sense of 'free,' at the time when they were rescued from the Tatar yoke, has been the special designation of the Russians of the Upper Dnieper only since the end of the 14th century. At first applied by the Poles to all the Lithuanian possessions torn from the Muscovites, it was afterwards used in a more restricted sense. Catherine II. gave the name of White Russia to the present provinces of Vitebsk and Moghilov, and Nicholas abolished the expression altogether, since when it has lost all its political significance, while preserving its ethnical value. . . . The term 'White' is generally supposed to refer to the colour of their dress in contradistinction to the 'Black Russians,' between the Pripet and Niemen, who form the ethnical transition from the Little to the White Russians. . . . The terms Little Russia (Malo-Russia, Lesser Russia), Ukrania, Ruthenia, have never had any definite limits, constantly shifting with the vicissitudes of history, and even with the administrative divisions. . . . The name itself of Little Russia appears for the first time in the Byzantine chronicles of the 13th century in association with Galicia and Volhynia, after which it was extended to the Middle Dnieper, or Kiyovia. In the same way Ukrania—that is 'Frontier'—was first applied to Podolia to distinguish it from Galicia, and afterwards to the southern provinces of the Lithuanian state, between the Bug and Dnieper."—É. Reclus, *The Earth and its Inhabitants: Europe, v.* 5. *pp.* 282–290.

SABINE WARS, The.—The Roman historians — Dionysius, Plutarch, Livy, and others — gave credit to traditions of a long and dangerous war, or series of wars, with the Sabines, following the expulsion of the Tarquins from Rome and the founding of the Republic. But modern skeptical criticism has left little ground for any part of the story of these wars. It seems to have been derived from the chronicles of an ancient family, the Valerian family, and, as a recent writer has said, it is suspicious that "a Valerius never holds a magistracy but there is a Sabine war." Ihne conjectures that some annalist of the Valerian family used the term Sabine in relating the wars of the Romans with the Latins, and with the Tarquins, struggling to regain their lost throne, and that this gave a start to the whole fictitious narrative of Sabine wars.— W. Ihne, *Hist. of Rome, bk.* 1, *ch.* 12.

SABINE WOMEN, The Rape of the. See ROME: B. C. 753–510.

SABINES, OR SABELLIANS, The.—"The greatest of the Italian nations was the Sabellian. Under this name we include the Sabines, who are said by tradition to have been the progenitors of the whole race, the Samnites, the Picenians, Vestinians, Marsians, Marrucinians, Pelignians, and Frentanians. This race seems to have been naturally given to a pastoral life, and therefore fixed their early settlements in the upland valleys of the Apennines. Pushing gradually along this central range, they penetrated downwards towards the Gulf of Tarentum; and as their population became too dense to find support in their native hills, bands of warrior youths issued forth to settle in the richer plains below. Thus they mingled with the Opican and Pelasgian races of the south, and formed new tribes known by the names of Apulians, Lucanians, and Campanians. These more recent tribes, in turn, threatened the Greek colonies on the coast. . . . It is certain that the nation we call Roman was more than half Sabellian. Traditional history . . . attributes the conquest of Rome to a Sabine tribe. Some of her kings were Sabine; the name borne by her citizens was Sabine; her religion was Sabine; most of her institutions in war and peace were Sabine; and therefore it may be concluded that the language of the Roman people differed from that of Latium Proper by its Sabine elements, though this difference died out again as the Latin communities were gradually absorbed into the territory of Rome."— H. G. Liddell, *Hist. of Rome, introd., sect.* 2.— See, also, ITALY, ANCIENT; and LATIUM.

SACÆ, The.—"The Sacæ were neighbours of the Hyrcanians, the Parthians, and the Bactrians in the steppes of the Oxus. Herodotus tells us that the Sacæ were a nation of the tribe of the Scyths, and that their proper name was Amyrgians; the Persians called all the Scythians Sacæ."— M. Duncker, *Hist. of Antiquity, bk.* 8, *ch.* 2 (*v.* 5).—See, also, SCYTHIANS.

SACERDOTES. — These were the public priests of the ancient Romans, who performed the 'sacra publica' or religious rites for the people, at public expense.—E. Guhl and W. Koner, *Life of the Greeks and Romans, sect.* 103.

SACHEM.— SAGAMORE. —"Each totem of the Lenape [or Delaware Indians of North America] recognized a chieftain, called sachem, 'sakima,' a word found in most Algonkin dialects, with slight variations (Chip., 'ogima,' Cree, 'okimaw,' Pequot, 'sachimma'), and derived from a root 'ŏki,' signifying above in

space, and, by a transfer frequent in all languages, above in power. . . . It appears from Mr. Morgan's inquiries, that at present and of later years, 'the office of sachem is hereditary in the gens, but elective among its members.' Loskiel, however, writing on the excellent authority of Zeisberger, states explicitly that the chief of each totem was selected and inaugurated by those of the remaining two. By common and ancient consent, the chief selected from the Turtle totem was head chief of the whole Lenape nation. The chieftains were the 'peace chiefs.' They could neither go to war themselves, nor send nor receive the war belt — the ominous string of dark wampum, which indicated that the tempest of strife was to be let loose. . . . War was declared by the people at the instigation of the 'war captains,' valorous braves of any birth or family who had distinguished themselves by personal prowess."—D. G. Brinton, *The Lenape and their Legends, ch.* 3.—"At the institution of the League [of the Iroquois] fifty permanent sachemships were created, with appropriate names; and in the sachems who held these titles were vested the supreme powers of the confederacy. . . . The sachems themselves were equal in rank and authority, and instead of holding separate territorial jurisdictions, their powers were joint, and coextensive with the League. As a safeguard against contention and fraud, each sachem was 'raised up' and invested with his title by a council of all the sachems, with suitable forms and ceremonies. . . . The sachemships were distributed unequally between the five nations, but without thereby giving to either a preponderance of political power. Nine of them were assigned to the Mohawk nation, nine to the Oneida, fourteen to the Onondaga, ten to the Cayuga and eight to the Seneca. The sachems united formed the Council of the League, the ruling body, in which resided the executive, legislative and judicial authority."—L. H. Morgan, *The League of the Iroquois, bk.* 1, *ch.* 3.—"The New-England Indians had functionaries; . . . the higher class known as sachems, the subordinate, or those of inferior note or smaller jurisdiction, as sagamores. . . . This is the distinction commonly made (Hutchinson, Mass., I. 410). But Williamson (Maine, I. 494) reverses it; Dudley (Letter to the Countess of Lincoln) says, 'Sagamore, so are the kings with us called, as they are sachems southward' (that is, in Plymouth); and Gookin (Mass. Hist. Coll., I. 154) speaks of the two titles of office as equivalent."—J. G. Palfrey, *Hist. of New Eng., v.* 1, *ch.* 1, *and foot-note.*

SACRED ROADS IN GREECE. — "After the chariot races came into vogue [at the sacred festivals and games] these equally necessitated good carriage roads, which it was not easy to make in a rocky locality like Delphi. Thus arose the sacred roads, along which the gods themselves were said to have first passed, as Apollo once came through pathless tracks to Delphi. . . . Hence the art of road-making and of building bridges, which deprived the wild mountain streams of their dangers, took its first origin from the national sanctuaries, especially from those of Apollo. While the foot-paths led across the mountain ridges, the carriage-roads followed the ravines which the water had formed. The rocky surface was leveled, and ruts hollowed out which, carefully smoothed, served as tracks in which the wheels rolled on without obstruction. This style of roads made it necessary, in order to a more extended intercourse, to establish an equal gauge, since otherwise the festive as well as the racing chariots would have been prevented from visiting the various sanctuaries. And since as a matter of fact, as far as the influence of Delphi extended in the Peloponnesus and in central Greece, the same gauge of 5 ft. 4 in. demonstrably prevailed, not merely the extension, but also the equalization, of the net-work of Greek roads took its origin from Delphi."—E. Curtius, *Hist. of Greece, bk.* 2, *ch.* 4.

SADDUCEES, The. — "There is a tradition that the name of Sadducee was derived from Zadok, a disciple of Antigonus of Socko. But the statement is not earlier than the seventh century after the Christian Era, and the person seems too obscure to have originated so widespread a title. It has been also ingeniously con-

jectured that the name, as belonging to the whole priestly class, is derived from the famous high priest of the time of Solomon. But of this there is no trace in history or tradition. It is more probable that, as the Pharisees derived their name from the virtue of Isolation (pharishah) from the Gentile world on which they most prided themselves, so the Sadducees derived theirs from their own special virtue of Righteousness (zadikah), that is, the fulfillment of the Law, with which, as its guardians and representatives of the law, they were specially concerned. The Sadducees — whatever be the derivation of the word — were less of a sect than a class."—Dean Stanley, *Lect's on the Hist. of the Jewish Church, lect.* 49.—"At the time when we first meet with them [the Sadducees] in history, that is to say, under Jonathan the Asmonean [B. C. 159–144 — see JEWS: B. C. 166–40], they were, though in a modified form, the heirs and successors of the Hellenists [see JEWS: B. C. 332–167]. . . . Hellenism was conquered under the Asmoneans, and beaten out of the field, and a new gush of Jewish patriotism and zeal for the law had taken its place. The Sadducees, who from the first appear as a school suited for the times, including the rich and educated statesmen, adopted the prevailing tone among the people. They took part in the services and sacrifices of the temple, practised circumcision, observed the Sabbath, and so professed to be real Jews and followers of the law, but the law rightly understood, and restored to its simple text and literal sense. They repudiated, they said, the authority of the new teachers of the law (now the Pharisees), and of the body of tradition with which they had encircled the law. In this tradition they of course included all that was burdensome to themselves. . . . The peculiar doctrines of the Sadducees obviously arose from the workings of the Epicurean philosophy, which had found special acceptance in Syria. They admitted indeed the creation, as it seems, but denied all continuous operation of God in the world. . . . The Sadducees proved they were real followers of Epicurus, by denying the life of the soul after death. The soul, they said, passes away with the body. . . . The mass of the people stood aloof from the Sadducees, whom they regarded with mistrust and aversion."—J. J. I. Döllinger, *The Gentile and the Jew in the Courts of the Temple of Christ, v.* 2, *pp.* 302–303.

The Jacobite court.—When James II., driven from England by the Revolution of 1688, took refuge in France, he was received with great hospitality by Louis XIV., who assigned to the exiled king the palace of Saint-Germains for his residence, with a pension or allowance which enabled him to maintain a regal court of imposing splendor. "There was scarcely in all Europe a residence more enviably situated than that which the generous Lewis had assigned to his suppliants. The woods were magnificent, the air clear and salubrious, the prospects extensive and cheerful. No charm of rural life was wanting; and the towers of the greatest city of the Continent were visible in the distance. The royal apartments were richly adorned with tapestry and marquetry, vases of silver, and mirrors in gilded frames. A pension of more than 40,000 pounds sterling was annually paid to James from the French treasury. He had a guard of honour composed of some of the finest soldiers in Europe. . . . But over the mansion and the domain brooded a constant gloom, the effect, partly of bitter regrets and of deferred hopes, but chiefly of the abject superstition which had taken complete possession of his own mind, and which was affected by all those who aspired to his favour. His palace wore the aspect of a monastery. . . . Thirty or forty ecclesiastics were lodged in the building; and their apartments were eyed with envy by noblemen and gentlemen who had followed the fortunes of their Sovereign, and who thought it hard that, when there was so much room under his roof, they should be forced to sleep in the garrets of the neighbouring town. . . . All the saints of the royal household were praying for each other and backbiting each other from morning to night."—Lord Macaulay, *Hist. of Eng., ch.* 20 (*v.* 4).

SAINT LAZARUS, Knights of.—"Some historians of the order of St. Lazarus have traced its origin to a supposed association of Christians in the first century against the persecution of their Jewish and Pagan enemies. This account is fabulous. It appears certain, however, that in very early times Christian charity founded establishments for the sick. . . . Lazarus became their tutelary saint and the buildings were styled Lazarettos. One of those hospitals was in existence at Jerusalem at the time of the first crusade. It was a religious order, as well as a charitable institution, and followed the rule of St. Augustin. For purposes of defence against the Muselman tyrants, the members of the society became soldiers, and insensibly they formed themselves into distinct bodies of those who attended the sick, and those who mingled with the world. The cure of lepers was their first object, and they not only received lepers into their order, for the benefit of charity, but their grand master was always to be a man who was afflicted with the disorder, the removal whereof formed the purpose of their institution. The cavaliers who were not lepers, and were in a condition to bear arms, were the allies of the Christian kings of Palestine. . . . The habits of those knights is not known; it only appears that the crosses on their breasts were always green, in opposition to those of the knights of St. John, which were white, and the red crosses of the Templars. . . . But neither the names nor the exploits of the knights of St. Lazarus often appear in the history of the Crusades."—C. Mills, *Hist. of the Crusades, ch.* 8, *with foot-notes.*

SAINT MICHAEL, Knights of the Order of, in France.—"Louis XI. [of France] determined on instituting an order of chivalry himself. It was to be select in its membership, limited in its number, generous in its professions, and he fondly hoped the Garter and Fleece would soon sink into insignificance compared to the Order of Saint Michael. The first brethren were named from the highest families in France; the remaining great feudatories, who had preserved some relics of their hereditary independence, were fixed upon to wear this mark of the suzerain's friendship. But when they came to read the oaths of admission, they found that the Order of St. Michael was in reality a bond of stronger obligation than the feudal laws had ever enjoined. It was a solemn association for the prevention of disobedience to the sovereign. . . . The brotherhood of noble knights sank, in the degrading treatment of its founder, into a confederation of spies."—J. White, *Hist. of France, ch.* 7.

SAINT PETER'S CHURCH AT ROME.—"The first church which existed on or near the site of the present building was the oratory founded in A. D. 90, by Anacletus, bishop of Rome, who is said to have been ordained by St. Peter himself, and who thus marked the spot where many Christian martyrs had suffered in the circus of Nero, and where St. Peter was buried after his crucifixion. In 306 Constantine the Great yielded to the request of Pope Sylvester, and began the erection of a basilica on this spot, labouring with his own hands at the work. . . . Of the old basilica, the crypt is now the only remnant. . . . Its destruction was first planned by Nicholas V. (1450), but was not carried out till the time of Julius II., who in 1506 began the new St. Peter's from designs of Bramante. . . . The next Pope, Leo X., obtained a design for a church in the form of a Latin cross from Raphael, which was changed, after his death (on account of expense) to a Greek cross, by Baldassare Peruzzi, who only lived to complete the tribune. Paul III. (1534) employed Antonio di Sangallo as an architect, who returned to the design of a Latin cross, but died before he could carry out any of his intentions. Giulio Romano succeeded him and died also. Then the pope, 'being inspired by God,' says Vasari, sent for Michael Angelo, then in his seventy-second year, who continued the work under Julius III., returning to the plan of a Greek cross, enlarging the tribune and transepts, and beginning the dome on a new plan, which he said would 'raise the Pantheon in the air.'. . . The present dome is due to Giacomo della Porta, who brought the great work to a conclusion in 1590, under Sixtus V. . . . The church was dedicated by Urban VIII., November 18th, 1626; the colonnade added by Alexander VII., 1667, the sacristy by Pius VI., in 1780. The building of the present St. Peter's extended altogether over 176 years, and its expenses were so great that Julius II. and Leo X. were obliged to meet them by the sale of indulgences, which led to the Reformation. The expense of the main building alone has been estimated at £10,000,000. The annual expense of repairs is £6,300."—A. J. C. Hare, *Walks in Rome, ch.* 15.

SAINT THOMAS OF ACRE, The Knights of.—"This was a little body of men who had formed themselves into a semi-religious order on the model of the Hospitallers. In the third Crusade, one William, an English priest, chaplain to Ralph de Diceto, Dean of S. Paul's, had devoted himself to the work of burying the dead at Acre, as the Hospitallers had given themselves at first to the work of tending the sick. He had built himself a little chapel there, and bought ground for a cemetery; like a thorough Londoner of the period, he had called it after S. Thomas the Martyr; and, somehow or other, as his design was better known, the family of the martyr seem to have approved of it; the brother-in-law and sister of Becket became founders and benefactors, and a Hospital of S. Thomas the Martyr of Canterbury, of Acre, was built in London itself on the site of the house where the martyr was born. . . . They [the knights] had their proper dress and cross: according to Favin their habit was white, and the cross a full red cross charged with a white scallop; but the existing cartulary of the order describes the habit simply as a mantle with a cross of red and white. . . . The Chronicle of the Teutonic knights, in relating the capture of Acre, places the knights of S. Thomas at the head of the 5,000 soldiers whom the king of England had sent to Palestine, and Herman Corner, who however wrote a century later, mentions them amongst the defenders of Acre. We know from their cartulary that they had lands in Yorkshire, Middlesex, Surrey, and Ireland."—W. Stubbs, *Seventeen Lectures on the Study of Medieval and Modern History, lect.* 8.

SAIONES.—"The Saiones were apparently a class of men peculiar to the Ostrogothic monarchy [of Theodoric, in Italy]. More honoured than the Roman lictor (who was but a menial servant of the magistrate), but hardly perhaps rising to the dignity of a sheriff or a marshal, they were, so to speak, the arms by which Royalty executed its will. If the Goths had to be summoned to battle with the Franks, a Saio carried round the stirring call to arms. If a Prætorian Prefect was abusing his power to take away his neighbour's lands by violence, a Saio was sent to remind him that under Theodoric not even Prætorian Prefects should be allowed to transgress the law. . . . The Saiones seem to have stood in a special relation to the King. They are generally called 'our Saiones,' sometimes 'our brave Saiones,' and the official virtue which is always credited to them (like the 'Sublimity' or the 'Magnificence' of more important personages) is 'Your Devotion.' One duty which was frequently entrusted to the Saio was the 'tuitio' of some wealthy and unwarlike Roman. It often happened that such a person, unable to protect himself against the rude assaults of sturdy Gothic neighbours, appealed to the King for protection. . . . The chief visible sign of the King's protection, and the most effective guarantee of its efficiency, was the stout Gothic soldier who as Saio was quartered in the wealthy Roman's house."—T. SALADIN: The Empire of.—Among the revolutions which attended the breaking up of the empire of the Seljuk Turks was one that brought about the rise to power in Syria and Mesopotamia of a vigorous and capable soldier named Zenghi or Zengui. Zenghi and his son Noureddin acquired a wide dominion, with its capital, as it enlarged, shifting from Mossoul to Aleppo, from Aleppo to Damascus, and they were the first formidable enemies with whom the Christians of the Crusade settlements in Syria had to contend. The dynasty of sultans which they founded was one of those called Atabecks, or Atabegs, signifying "governors of the prince." Having found an opportunity (A. D. 1162–1168) to interfere in the affairs of Egypt, where the Fatimite caliphs were still nominally reigning, Noureddin sent thither one of his most trusted officers, Shiracouh, or Shirkoh, a Koord, and Shiracouh's nephew, Saladin,—then a young man, much addicted to elegant society and the life of pleasure, at Damascus. Shiracouh established his master's authority in Egypt—still leaving the puppet caliph of the Fatimites on his throne—and he was succeeded by Saladin, as the representative of the sultan Noureddin, and grand vizier of the caliph. But in 1171, the latter, being on his death-bed, was quietly deposed and the sovereignty of the Abbaside caliph of Bagdad was proclaimed. "This great 'coup d'état,' which won Egypt over to the Orthodox Mohammedan sect, and ultimately enabled Saladin to grasp the independent sovereignty of the country, was effected, as an Arab historian quaintly observes, 'so quietly, that not a brace of goats butted over it.'" Saladin had now

developed great talents as a ruler, and great ambitions, as well. On the death of Nouraddin, in 1174, he was prepared to seize the sultan's throne, and succeeded, after a short period of civil war, in making himself master of the whole Atabeg dominion. From that he went on to the conquest of Jerusalem, and the expulsion of the Christians from all Palestine, except Tyre and a small strip of coast. By his defense of that conquest against the crusaders of the Third Crusade, and by the decided superiority of character which he evinced, compared with his Christian antagonists, Richard Cœur de Lion and the rest, Saladin acquired surpassing renown in the western world and became a great figure in history. He died at Damascus, in March, 1193, in his fifty-seventh year. The dynasty which he founded was called the Ayoubite (or Aiyubite) dynasty, from the name of Saladin's father, Ayoub (Job), a native Koord of Davin.—W. Besant and E. H. Palmer, *Jerusalem, ch.* 16.—"Saladin gave no directions respecting the order of succession, and by this want of foresight prepared the ruin of his empire. One of his sons, Alaziz, who commanded in Egypt, caused himself to be proclaimed sultan of Cairo; another took possession of the sovereignty of Aleppo, and a third of the principality of Amath. Malek-Adel [called Seïf Eddin, the Sword of Religion, by which latter name, in the corrupted form Saphadin, he was known commonly to the crusaders], the brother of Saladin, assumed the throne of Mesopotamia and the countries in the neighbourhood of the Euphrates. The principal emirs, and all the princes of the race of the Ayoubites, made themselves masters of the cities and provinces of which they held the command. Afdhal [Almelek Alafdhal], eldest son of Saladin, was proclaimed sultan of Damascus. Master of Syria, and of the capital of a vast empire, sovereign of Jerusalem and Palestine, he appeared to have preserved something of the power of his father; but all fell into disorder and confusion." After some years of disorder and of war between the brothers, Malek Adel, or Saphadin, the more capable uncle of the young princes, gathered the reins of power into his hands and reunited most of the provinces of Saladin's empire. On his death, in 1217, the divisions and the disorder reappeared. The Ayoubite dynasty, however, held the throne at Cairo (to the dominion of which Palestine belonged) until 1250, when the last of the line was killed by his Mamelukes. The lesser princes of the divided empire were swept away soon after by the Mongol invasion. —J. F. Michaud, *Hist. of the Crusades, bks.* 9, 12–14.— See, also, Jerusalem: A. D. 1149–1187.

SALADIN, The Tithe of.—"In England and in France, in order to defray expenses [of the Third Crusade], a tax called the Tithe of Saladin, consisting of a tenth part of all their goods, was levied on every person who did not take the Cross. . . . In every parish the Tithe of Saladin was raised in the presence of a priest, a Templar, a Hospitaller, a king's man, a baron's man and clerk, and a bishop's clerk."—W. Besant and E. H. Palmer, *Jerusalem, ch.* 15.

SALIAN FRANKS, The. See Franks: Origin, etc.

SALIC LAW, The.—"A greatly exaggerated importance has been attributed to the Salic Law. You are acquainted with the reason of this error; you know that at the accession of Philippe-le-Long, and during the struggle of Philippe-de-Valois and Edward III. for the crown of France, the Salic law was invoked in order to prevent the succession of women, and that, from that time, it has been celebrated by a crowd of writers as the first source of our public law, as a law always in vigor, as the fundamental law of monarchy. Those who have been the most free from this illusion, as, for example, Montesquieu, have yet experienced, to some degree, its influence, and have spoken of the Salic law with a respect which it is assuredly difficult to feel towards it when we attribute to it only the place that it really holds in our history. . . . I pray you to recall that which I have already told you touching the double origin and the incoherence of the barbarous laws; they were, at once, anterior and posterior to the invasion; at once, German and Germano-Roman: they belonged to two different conditions of society. This character has influenced all the controversies of which the Salic law has been the object; it has given rise to two hypotheses: according to one, this law was compiled in Germany, upon the right bank of the Rhine, long before the conquest, and in the language of the Franks. . . . According to the other hypothesis, the Salic law was, on the contrary, compiled after the conquest, upon the left bank of the Rhine, in Belgium or in Gaul, perhaps in the seventh century, and in Latin. . . . I believe, however, that the traditions which, through so many contradictions and fables, appear in the prefaces and epilogues annexed to the law, . . . indicate that, from the eighth century, it was a general belief, a popular tradition, that the customs of the Salian

Franks were anciently collected. . . . We are not obliged to believe that the Salic law, such as we have it, is of a very remote date, nor that it was compiled as recounted, nor even that it was ever written in the German language; but that it was connected with customs collected and transmitted from generation to generation, when the Franks lived about the mouth of the Rhine, and modified, extended, explained, reduced into law, at various times, from that epoch down to the end of the eighth century — this, I think, is the reasonable result to which this discussion should lead. . . . At the first aspect it is impossible not to be struck with the apparent utter chaos of the law. It treats of all things — of political law, of civil law, of criminal law, of civil procedure, of criminal procedure, of rural jurisdiction, all mixed up together without any distinction or classification. . . . When we examine this law more closely, we perceive that it is essentially a penal regulation. . . . I say nothing of the fragments of political law, civil law, or civil procedure, which are found dispersed through it, nor even of that famous article which orders that 'Salic land shall not fall to woman; and that the inheritance shall devolve exclusively on the males.' No person is now ignorant of its true meaning. . . . When, in the fourteenth century, they invoked the Salic law, in order to regulate the succession to the crown, it had certainly been a long time since it had been spoken of, except in remembrance, and upon some great occasion."—F. Guizot, *Hist. of Civilization, v.* 2 (*France, v.* 1), *lect.* 9.

Also in: W. C. Perry, *The Franks, ch.* 10.—E. F. Henderson, *Select Hist. Doc's of the Middle Ages, bk.* 2, *no.* 1.

Applied to the regal succession in France. —Louis X., surnamed Hutin, king of France, died in 1316, leaving a daughter, Jeanne, and his queen with child. The late king's brother, Philip the Long, became regent; but when the queen bore a son and the child died, this Philip "hastened to Rheims, filled the Cathedral with his own followers, and compelled the archbishop to consecrate him King [Philip V.]. Thence he returned to Paris, assembled the citizens, and, in the presence of a great concourse of barons and notables of the realm, declared that no female could succeed to the crown of France. Thus began the so-called Salic Law of France, through the determined violence of an unscrupulous man. The lawyers round the throne, seeking to give to the act of might the sanction of right, bethought them of that passage in the law of the Salian Franks which declares 'That no part or heritage of Salic land can fall to a woman'; and it is from this that the law obtained the name of 'the Salic Law.'"—G. W. Kitchin, *Hist. of France, v.* 1, *bk.* 3, *ch.* 11, *sect.* 1-2.—"In this contest [after the death of Louis X., as mentioned above], every way memorable, but especially on account of that which sprung out of it, the exclusion of females from the throne of France was first publicly discussed. . . . It may be fairly inferred that the Salic law, as it was called, was not so fixed a principle at that time as has been contended. But however this may be, it received at the accession of Philip the Long a sanction which subsequent events more thoroughly confirmed. Philip himself leaving only three daughters, his brother Charles [IV.] mounted the throne; and upon his death the rule was so unquestionably established, that his only daughter was excluded by the count of Valois, grandson of Philip the Bold. This prince first took the regency, the queen-dowager being pregnant, and, upon her giving birth to a daughter, was crowned king [Philip of Valois]. No competitor or opponent appeared in France; but one more formidable than any whom France could have produced was awaiting the occasion to prosecute his imagined right with all the resources of valour and genius, and to carry desolation over that great kingdom with as little scruple as if he was preferring a suit before a civil tribunal." This was King Edward III. of England, whose mother Isabel was the sister of the last three French kings, and who claimed through her a right to the French crown.—H. Hallam, *The Middle Ages, ch.* 1, *pt.* 1.—See, also, France: A. D. 1328-1339.

SALISBURY, Gemot of.—William the Conqueror, while establishing feudalism in England, "broke into its 'most essential attribute, the exclusive dependence of a vassal upon his lord,' by requiring in accordance with the old English practice, that all landowners, mesne tenants as well as tenants-in-chief, should take the oath of fealty to the King. This was formally decreed at the celebrated Gemot held on Salisbury Plain, on the 1st of August, 1086, at which the Witan and all the landowners of substance in England whose vassals soever they were, attended, to the number, it is reported, of 60,000. The statute, as soon as passed, was carried into immediate effect."—T. P. Taswell-Langmead, *Eng. Const. Hist., p.* 55.

SALON, Origin of the French. See Rambouillet, Hôtel de.

SALONA, Ancient.—"Amidst the decay of the empire in the third century Dalmatia suffered comparatively little; indeed, Salonae probably only reached at that time its greatest prosperity. This, it is true, was occasioned partly by the fact that the regenerator of the Roman state, the emperor Diocletian, was by birth a Dalmatian, and allowed his efforts, aimed at the decapitalising of Rome, to redound chiefly to the benefit of the capital of his native land; he built alongside of it the huge palace from which the modern capital of the province takes the name Spalato, within which it has for the most part found a place, and the temples of which now serve it as cathedral and as baptistery. Diocletian, however, did not make Salonae a great city for the first time, but, because it was such, chose it for his private residence; commerce, navigation, and trade must at that time in these waters have

been concentrated chiefly at Aquileia and at Salonae, and the city must have been one of the most populous and opulent towns of the west."—T. Mommsen, *Hist. of Rome, bk.* 8, *ch.* 6.

SALONICA.—The modern name of ancient Thessalonica. See THESSALONICA.

SALONIKI, The kingdom of.—The kingdom obtained by Boniface, Marquis of Montferrat, in the partition of the Byzantine Empire after its conquest by the Crusaders, A. D. 1204, comprised the province of Macedonia, with Thessalonica for its capital, and was called the kingdom of Saloniki. Its duration was brief. In 1222 the neighboring Greek despot of Epirus took Thessalonica and conquered the whole kingdom. He then assumed the title of emperor of Thessalonica, in rivalry with the Greek emperors of Nicæa and Trebizond. The title of king of Saloniki was cherished by the family of Montferrat for some generations; but those who claimed it never made good their title by possession of the kingdom.—G. Finlay, *Hist. of Greece from the Conquest by the Crusaders, ch.* 5.—See, also, BYZANTINE EMPIRE: A. D. 1204–1205.

SALVATION ARMY, The.—"Some people of to-day seem to have the idea that the Rev. William Booth was Jove, and that the Salvation Army sprang from his brain full-grown and fully armed. Far from it; a boy trained in the Church of England is converted among Wesleyan Methodists, and, believing thoroughly in what he professes, is constrained to feel interested in the salvation of others. He is much moved by some revival services that he hears conducted by the Rev. James Caughey, an American evangelist, and the effect of the straightforward, conversational style of preaching makes an impression upon him that is never forgotten. Through all the years that follow, among all the scenes of his labors as a Methodist minister, he never forgets that simple, open-air preaching, that pushing home of the truth, with its wonderful results, and year after year only increases the conviction that the masses can only be reached by going to them, and never, never saved by waiting until they come to us. Years passed away before William Booth and his wife came to the point where they could step out, shake off traditional methods and means, and begin to carry out evangelistic work on lines forbidden by the churches. . . . 'Nothing succeeds like success,' and when the first results were between three and four thousand souls in four little towns of Cornwall, there was a decided leaning toward them, overpowered, though, at a meeting of the Wesleyan Conference, which promulgated the strange formula that 'evangelistic movements are unfavorable to Church order.' However, the work was carried on steadily, until that memorable Sunday [July 5th, 1865] on Mile End Waste, East London, from which William Booth consecrated himself to the salvation of the ignorant, and from which he dates all statistics referring to his work as an independent movement in the religious world. From this time forward, without interrupting in the least the open-air work, one shelter after another was secured and appropriated for mission work, here a tent or an old stable, there a carpenter's shop, until the movement was strong enough to warrant the lease of 'The Eastern Star,' a notorious beer-house, which was used as book-store, hall, and classroom. From this place, with its name of good hope, hundreds of souls went forth to make the wilderness blossom like the rose, so far as their humble homes were concerned. Sheds, lofts, alleys, tumble-down theatres, well-known places of resort or of refuge were preferred as being familiar to the class of men who were to be reached. Such was the Salvation Army in its early years, merely a 'mission,' with no more idea of development into an 'army,' with military rule and nomenclature, than we at the present time have of what may come to us in the next twenty years."—M. B. Booth, *Beneath Two Flags, ch.* 2.—"In 1873 Mrs. Booth, overcoming her own intense reluctance, began to preach. In 1874 and the two following years the work spread to Portsmouth, Chatham, Wellingborough, Hammersmith, Hackney, Leeds, Leicester, Stockton, Middlesborough, Cardiff, Hartlepool, and other towns, where recent converts of the humblest rank—tinkers, railway guards, navvies—took charge of new stations. In 1876, shaking itself more and more free from the trammels of custom and routine, the Army deliberately utilized the services of women. In 1877 it spread still further. In 1878 it 'attacked' no less than fifty towns, and—more by what we should call 'accident' than by design—assumed the title of the Salvation Army. It also adopted, for good or for evil, the whole vocabulary of military organization, which has caused it to be covered with ridicule, but which may undoubtedly have aided its discipline and helped its progress. In 1879 advance was marked by the imprisonment of three Salvationists—who refused, as always, to pay the alternative fine—for the offence of praying in a country road near a public-house, which was regarded as 'obstructing the thoroughfare.' In this year began also the establishment of training homes for the instruction and equipment of the young officers; the printing of the 'War Cry'; the use of uniforms and badges; and the extension of the work to Philadelphia and the United States. In 1880 the United Kingdom was mapped into divisions. In 1881 the work was extended to Australia and the colonies, and so stupendous had become the religious energy of the soldiers that they began to dream of the religious rescue of Europe as well as of Great Britain and its empire-colonies. Since that year its spread, in spite of all opposition, has been steady and continuous, until, in 1890, it excited the attention of the civilized world by that immense scheme of social amelioration into which we shall not here enter particularly. At the present moment [1891] the Army has no less

than 9,349 regular officers, 13,000 voluntary officers, 30 training homes, with 400 cadets, and 2,864 corps scattered over 32 different countries. In England alone it has 1,377 corps, and has held some 160,000 open-air meetings. This represents a part of its religious work. Besides this it has in social work 30 rescue homes, 5 shelters, 3 food depots, and many other agencies for good."—F. W. Farrar, *The Salvation Army* (*Harper's Mag., May*, 1891).—In one of his addresses, delivered during his visit to the United States, in February, 1895, General Booth said: "We have, with God's help, been able to carry our banner and hoist our flag in 45 different countries and colonies, and we are reaching out day by day. We have been able to create and bring into harmonious action, with self-supporting and self-guiding officers, something like 4,000 separate societies. We have been able to gather together something like 11,000 men and women, separated from their earthly affiliations, who have gone forth as leaders of this host." In the same address, General Booth gave the number of the Army newspapers as 27, with a circulation of 50,000,000,—presumably meaning the total issues of a year. Commissioner Railton, of the Salvation Army, writing in 1893, had given more precisely the number 10,645, as that of the men and women officers,—"the men and women," he said, "who gladly bear contempt, abuse, poverty, and suffering of every kind, that they may spend the part of life which still remains to them in proclaiming their Saviour." He gave the number of "Homes, Refuges, Farm Colonies, Shelters and human Elevators" maintained by the Army as 218, and stated that its journals were being published in 14 languages. Mrs. Catherine Booth, who died in 1890, had exercised a great and inspiring influence in its work, and her loss was profoundly felt.

SALYES, OR SALLUVIANS.—The Salyes or Saluvii or Salluvians, named Salvii Yalli in Livy's Epitome, "were Ligurians or a mixed race of Celts and Ligurians. They perhaps occupied part of the coast east of Massilia: they certainly extended inland behind that town to the Rhone on the west and to the north as far as the river Druentia (Durance). They occupied the wide plain which you may see from the highest point of the great amphitheatre of Arelate (Arles) stretching east from Tarascon and the Rhone as far as the eye can reach." The Salyes were dangerous to Massilia and in 125 B. C. the latter appealed to the Romans, as allies. The latter responded promptly and sent Flaccus, one of the consuls, to deal with the Salyes. He defeated them; but in two or three years they were again in arms, and consul C. Sextius Calvinius was sent against them. "The Salyes were again defeated and their chief city taken, but it is uncertain whether this capital was Arelate (Arles) or the place afterwards named Aquae Sextiae (Aix). . . . The Roman general found in this arid country a pleasant valley well supplied with water from the surrounding hills, and here he established the colony named Aquae Sextiae." The chiefs of the conquered Salyes took refuge with the Allobroges, and that led to the subjugation of the latter (see ALLOBROGES).—G. Long, *Decline of the Roman Republic, v.* 1, *ch.* 17 *and* 21.

SALZBURG, Origin of.—"The foundation of a colony [by Hadrian] at Juvavium, or Salzburg, which received the name of Forum Hadriani, attests the vigilance which directed his view from the Rhine to the Salza, and the taste, I would willingly add, which selected for a town to bear his name the most enchanting site in central Europe."—C. Merivale, *Hist. of the Romans, ch.* 66.

SAMANIDES OR SAMANIANS, The.—"As the vigour of the Khalifate began to pass away, and effeminate luxury crept imperceptibly into the palaces of Baghdad, the distant lieutenants gradually aspired to independence. At length, in 868 A. D., one Ya' kub-bin-Lais, the son of a brasier in Sistan, rose in rebellion, subdued Balkh, Kabul, and Fars, but died on his march to Baghdad. In former days he would have been treated as an audacious rebel against the authority of the Vicar of God; now the degenerate Khalifah appointed his brother 'Amr his lieutenant on the death of Ya' kub [A. D. 877], and allowed him to govern Fars, as the founder of the Saffary, or Brasier, dynasty. Ever fearful of the power of 'Amr, the Khalifah at length instigated a Tatar lord, named Isma'il Samany, to raise an army against the Saffaris, in Khurasan. 'Amr marched against him, and crossed the Oxus, but he was entirely defeated; and laughed heartily at a dog, who ran away with the little pot that was preparing the humble meal of the fallen king. That morning it had taken thirty camels to carry his kitchen retinue. 'Amr was sent to Baghdad, and put to death in 901 A. D. Isma'il, who traced his descent from a Persian noble who had rebelled against Khusru Parviz, now founded the Samany [or Samanide] dynasty, which ruled over Khurasan and the north of Persia, with their capital at Bukhara. The Dailamy [or Dilemite or Bouide] dynasty ruled in Fars and the south of Persia during the same period. To the Samanians Persia owes the restoration of its nationality, which had been oppressed and trodden under foot by the Arabian conquerors." The Samanide dynasty was overthrown in 998 by the founder of the Gaznevide Empire, which succeeded.—C. R. Markham, *General Sketch of the Hist. of Persia, ch.* 6.

6th Century.—Taken from the White Huns by the Turks. See TURKS: 6TH CENTURY.

A. D. 1209-1220.—Capital of the Khuarezmian empire. See KHUAREZM.

A. D. 1221.—Conquest and destruction by Jingis Khan.—When Jingis Khan, the Mongol conqueror and devastator of Central Asia, invaded the Khahrezmian Empire, Samarkand was

its capital and its most important city. "The fugitive Khahrezmian prince had left behind him for the defence 110,000 men — i. e., 60,000 Turks and 50,000 Tadjiks — with twenty elephants." But the Turkish mercenaries deserted in a body and the town was surrendered after a siege of three days. "The flourishing city of Samarkand and the fortress were laid even with the ground; and the inhabitants, stripped of all they possessed, shared the fate of their brethren of Bokhara. Those who had contrived to escape were lured back by false promises; all capable of bearing arms were compulsorily enrolled in the Mongolian army; the artistic gardeners of the place were sent off to the far East, where they were wanted to adorn the future Mongolo-Chinese capital with pleasure-grounds, after the fashion of those of Samarkand, and the celebrated artisans, especially the silk and cotton weavers, were either distributed as clever and useful slaves amongst the wives and relations of Djenghiz, or else carried with him to Khorasan. A few were sent as slaves to his sons Tchagatai and Oktai, who were then marching on Khahrezm. This was the end, in the year 618 (1221), of Samarkand, which Arabian geographers have described as the most brilliant and most flourishing spot on the face of the earth."—A. Vámbéry, *Hist. of Bokhara, ch.* 8.—"Samarkand was not only the capital of Trans-Oxiana, but also one of the greatest entrepots of commerce in the world. Three miles in circumference, it was surrounded with a wall having castles at intervals, and pierced by twelve iron gates."—H. H. Howorth, *Hist. of the Mongols, pt.* 1, *p.* 79.

SAMARIA.—SAMARITANS: Early history.—The Kingdom of Israel.—Overthrow by the Assyrians. See JEWS: KINGDOMS OF ISRAEL AND JUDAH.

Repopulation of the city and district by the Assyrian conqueror.—After the capture of the city of Samaria (B. C. 722) and the deportation of a large part of its inhabitants by the Assyrian conqueror (see as above), "these districts remained for many years in a condition of such desolation that they were overrun with wild beasts. In the meantime King Asarhaddon, whom we suppose to be Asarhaddon II., having reduced afresh several refractory towns about twenty years after the death of Sennacherib, and wishing to inflict on their inhabitants the favourite punishment of his predecessors, transported large bodies of their heathen populations into these deserted regions. . . . A great number of the settlers in Samaria, the former capital, appear to have come from the Babylonian city of Cuthah, from which arose the name of Cutheans, often applied in derision to the Samaritans by the later Jews. Other settlers were sent from Babylon itself," and "from the cities on the west of the Euphrates, Hamath, Ivah, and Sepharvaim."—H. Ewald, *Hist. of Israel, v.* 4, *pp.* 215–216.

After the Exile.—In the second and third generations after the return of the Judæans from exile, there began to be connections formed by marriage with the neighboring peoples. These peoples, "particularly the Samaritans, had given up idolatry, and were longing earnestly and truly to take part in the divine service at Jerusalem. They were, in fact, proselytes to the religion of Judæa; and were they always to be sternly repulsed? The principal Judæan families determined to admit the foreigners into the community, and the high priest of that time, either Jehoiakim or his son Eliashib, was ready to carry these wishes into effect. Marriages were therefore contracted with the Samaritans and other neighbouring people." But when Ezra and his party came from Babylon (B. C 459–458) bringing an access of religious zeal and narrower interpretations of the law, these marriages were condemned, and those who had contracted them were forced to repudiate their foreign wives and the children borne by such. This cruelly fanatical action changed the friendly feeling of the Samaritans to hatred. Their leader, Sanballat, was a man of power, and he began against the restored Judæans a war which drove them from Jerusalem. It was not until Nehemiah came from Susa, with the authority of King Artaxerxes to rebuild the walls, that they recovered the city. "The strict observance of the Law enjoined by Ezra was followed out by Nehemiah; he strengthened the wall of separation between Judæans and Gentiles so securely that it was almost impossible to break through it." Sanballat, whose son-in-law, a priest, had been exiled on account of his Samaritan marriage, now "cunningly conceived the plan of undermining the Judæan community, by the help of its own members. How would it be were he to raise a temple to the God of Israel, in rivalry to the one which held sway in Jerusalem?" He executed his plan and the Samaritan temple was raised on Mount Gerizim. Thus "the Samaritans had their temple, around which they gathered; they had priests from the house of Aaron; they compared Mount Gerizim . . . to Mount Moriah; they drew the inference from the Book of the Law that God had designed Mount Gerizim as a site for a sanctuary, and they proudly called themselves Israelites. Sanballat and his followers being intent upon attracting a great many Judæans to their community, tempted them with the offer of houses and land, and in every way helped to support them. Those who had been guilty of crime and who feared punishment, were received with open arms by the Samaritans. Out of such elements a new semi-Judæan community or sect was formed. Their home was in the somewhat limited district of Samaria, the centre of which was either the city that gave its name to the province or the town of Shechem. The members of the new community became an active, vigorous, intelligent people, as if Sanballat, the founder, had breathed his spirit into them. . . . They actually tried to argue away the right of the Judæans to exist as a community. They declared that they alone were the descendants of Israel, and they denied the sanctity of Jerusalem and its Temple, affirming that everything achieved by the Judæan people was a debasement of the old Israelite character. . . . Upon the Judæan side, the hatred against their Samaritan neighbours was equally great. . . . The enmity between Jerusalem and Samaria that existed in the time of the two kingdoms blazed out anew; it no longer bore a political character, but one of a

religious tendency."—H. Graetz, *History of the Jews, ch.* 19–20 (*v.* 1).—"While the Hebrew writers unanimously represent the Samaritans as the descendants of the Cuthæan colonists introduced by Esarhaddon, a foreign and idolatrous race, their own traditious derive their regular lineage from Ephraim and Manasseh, the sons of Joseph. The remarkable fact, that this people have preserved the book of the Mosaic law in the ruder and more ancient character, while the Jews, after the return from Babylonia, universally adopted the more elegant Chaldean form of letters, strongly confirms the opinion that, although by no means pure and unmingled, the Hebrew blood still predominated in their race. In many other respects, regard for the Sabbath and even for the sabbatic year, and the payment of tithes to their priests, the Samaritans did not fall below their Jewish rivals in attachment to the Mosaic polity. The later events in the history of the kings of Jerusalem show that the expatriation of the ten tribes was by no means complete and permanent: is it then an unreasonable supposition, that the foreign colonists were lost in the remnant of the Israelitish people, and, though perhaps slowly and imperfectly weaned from their native superstitions, fell by degrees into the habits and beliefs of their adopted country? . . . Whether or not it was the perpetuation of the ancient feud between the two rival kingdoms, from this period [of the return from the captivity in Babylonia] the hostility of the Jews and Samaritans assumed its character of fierce and implacable animosity. No two nations ever hated each other with more unmitigated bitterness."—H. H. Milman, *Hist. of the Jews, bk.* 9.

Change of population by Alexander the Great.—After the submission of Palestine to Alexander the Great (B. C. 332), Samaria "rebelled and murdered the Macedonian governor, Andromachus. Alexander expelled the inhabitants, and planted a Macedonian colony in their room — another heathen element in the motley population of Samaria."—P. Smith, *Hist. of the World: Ancient, v.* 3, *ch.* 34.

Rebuilding of the city by Herod.— One of the measures of King Herod, for strengthening himself outside of Jerusalem, was "the rebuilding of Samaria, which he did (B. C. 25) on a scale of great magnificence and strength, and peopled it partly with his soldiers, partly with the descendants of the old Samaritans, who hoped to see their temple likewise restored." He changed the name of Samaria, however, to Sebaste — the August.—H. H. Milman, *Hist. of the Jews, bk.* 11.

Justinian's War.—The Christian zeal of the Emperor Justinian [A. D. 527–565] induced him to undertake the forcible conversion of all unbelievers in his empire. Among others, the Samaritans of Palestine were offered "the alternative of baptism or rebellion. They chose the latter: under the standard of a desperate leader they rose in arms, and retaliated their wrongs on the lives, the property, and the temples of a defenceless people. The Samaritans were finally subdued by the regular forces of the East; 20,000 were slain, 20,000 were sold by the Arabs to the infidels of Persia and India, and the remains of that unhappy nation atoned for the crime of treason by the sin of hypocrisy. It has been computed that 100,000 Roman subjects were extirpated in the Samaritan war, which converted the once fruitful province into a desolate and smoking wilderness."—E. Gibbon, *Decline and Fall of the Roman Empire, ch.* 47.

SAMARKAND. See SAMARCAND.

SAMBUCA, The.—A great military engine, in ancient sieges, was a species of huge covered ladder, supported by two ships lashed together and floated up against the sea wall of the besieged town. The Greeks called it a Sambuca. Mithridates brought one into use when besieging Rhodes, B. C. 88, but with disastrous failure.—G. Long, *Decline of the Roman Republic, v.* 2, *ch.* 20.

SAMIAN WARE.—An elegant species of Roman pottery, red in color, which was in great repute among the ancients.

SAMMARINESI, The.—The citizens of San Marino. See SAN MARINO, THE REPUBLIC OF.

SAMNITE WARS, The. See ROME: B. C. 343–290.

SAMNITES, The.—"The Samnite nation [see ITALY: ANCIENT], which, at the time of the expulsion of the Tarquins from Rome, had doubtless already been for a considerable period in possession of the hill-country which rises between the Apulian and Campanian plains and commands them both, had hitherto found its further advance impeded on the one side by the Daunians, . . . on the other by the Greeks and Etruscans. But the fall of the Etruscan power towards the end of the third, and the decline of the Greek colonies in the course of the fourth century [B. C.], made room for them towards the west and south; and now one Samnite host after another marched down to, and even moved across, the south Italian seas. They first made their appearance in the plain adjoining the bay, with which the name of the Campanians has been associated from the beginning of the fourth century; the Etruscans there were suppressed, and the Greeks were confined within narrower bounds; Capua was wrested from the former [B. C. 424] Cumæ from the latter [B. C. 420]. About the same time, perhaps even earlier, the Lucanians appeared in Magna Graecia. . . . Towards the end of the fourth century mention first occurs of the separate confederacy of the Bruttii, who had detached themselves from the Lucanians — not, like the other Sabellian stocks, as a colony, but through a quarrel — and had become mixed up with many foreign elements. The Greeks of Lower Italy tried to resist the pressure of the barbarians. . . . But even the union of Magna Graecia no longer availed; for the ruler of Syracuse, Dionysius the Elder, made common cause with the Italians against his countrymen. . . . In an incredibly short time the circle of flourishing cities was destroyed or laid desolate. Only a few Greek settlements, such as Neapolis, succeeded with difficulty, and more by means of treaties than by force of arms, in preserving their existence and their nationality. Tarentum alone remained thoroughly independent and powerful. . . . About the period when Veii and the Pomptine plain came into the hands of Rome, the Samnite hordes were already in possession of all Lower Italy, with the exception of a few unconnected Greek colonies, and of the Apulo-Messapian coast."—T. Mommsen, *Hist. of Rome, bk.* 2, *ch.* 5.

SAMO, The Kingdom of. See AVARS: 7TH CENTURY.

SAMOA.—Samoa is the native name of the group of twelve volcanic islands in central Polynesea formerly known as the Navigator Islands. Their place on the chart is between the parallels of 13° and 15° south latitude, and 168° and 173° west longitude. The total area of the islands is about 1,700 square miles. The population consists of about 36,000 natives and a few hundred foreigners, English, American and German. The islands are said to have been first visited by the Dutch navigator, Roggewein, in 1722. A Christian mission was first established upon them in 1830, by the London Missionary Society. After some years the trade of the islands became important, and German traders acquired an influence which they seem to have used to bring about a state of civil war between rival kings. The United States, Great Britain and Germany, at length, in 1879, by joint action, intervened, and, after ten years more of disturbed and unsatisfactory government, the affairs of Samoa were finally settled at a conference of the three Powers held in Berlin in 1889. A treaty was signed by which they jointly guarantee the neutrality of the islands, with equal rights of residence, trade and personal protection to the citizens of the three signatory Powers. They recognize the independence of the Samoan Government, and the free right of the natives to elect their chief or king and choose the form of their government. The treaty created a supreme court, with jurisdiction over all questions arising under it. It stopped the alienation of lands by the natives, excepting town lots in Apia, the capital town; and it organized a municipal government for Apia, with an elected council under the presidency of a magistrate appointed by the three Powers. Other articles impose customs duties on foreign importations, and prohibit the sale of intoxicating liquors to the natives.—*Appleton's Annual Cyclopædia*, 1888 and 1889.

Also in: *The Statesman's Year-Book*, 1894.—R. L. Stevenson, *A Foot-note to History*.—G. H. Bates, *Some Aspects of the Samoan Question* (*The Century, April and May*, 1889). See, also, Polynesia.

SAMOS.—SAMIANS.—The island now called Samo, lying close to the coast of Asia Minor, in the part of the Ægean Sea which was anciently known as the Icarian Sea. It is of considerable size, being about eighty miles in circumference. The narrow strait which separates it from the mainland is only about three-fourths of a mile wide. The ancient Samians were early and important members of the Ionian confederacy [see Asia Minor: The Greek Colonies] and acquired an early prominence among Greek communities in navigation, commerce, colonizing enterprise and advancement in the arts. Shortly before the Persian wars, in the last half of the sixth century B. C. the island became subject to a profoundly able and ambitious usurper, Polycrates, the most famous of all the Greek "tyrants" of the age, and under whom Samos rose to great power and great splendor of development. "Samos was at that time the brilliant centre of all Ionia, as far as the latter was yet untouched by the barbarians. For such a position she was preeminently fitted; for nowhere had the national life of the Ionians attained to so many-sided and energetic a development as on this particular island. . . . An unwearying impulse for inventions was implanted in these islanders, and at the same time a manly and adventurous spirit of discovery, stimulated by the dangers of unknown seas. . . . Under Polycrates, Samos had become a perfectly organized piratical state; and no ship could quietly pursue its voyages without having first purchased a safe-conduct from Samos. . . . But Polycrates intended to be something more than a freebooter. After he had annihilated all attempts at resistance, and made his fleet the sole naval power of the Archipelago, he began to take steps for creating a new and lasting establishment. The defenceless places on the coast had to buy security by the regular payment of tribute; under his protection they united into a body, the interests and affairs of which came more and more to find their centre in Samos, which from a piratical state became the federal capital of an extensive and brilliant empire of coasts and islands."—E. Curtius, *Hist. of Greece, bk.* 2, *ch.* 5 (*v.* 2).—Two of the great works of Polycrates in Samos, the aqueduct, for which a mountain was tunnelled, and the harbor breakwater, were among the wonders of antiquity. The Heræum, or temple of Here, was a third marvel. After the death of Polycrates, treacherously murdered by the Persians, Samos became subject to Persia. At a later time it came under the sovereignty of Athens, and its subsequent history was full of vicissitudes. It retained considerable importance even to Roman times.

SAMOSATA. See Commagene.

SAMOTHRACE.—A mountainous island in the northern part of the Ægean sea, so elevated that its highest point is over 5,000 feet above the sea level. In ancient times it derived its chief importance from the mysteries of the little understood worship of the Cabiri, of which it seems to have been the chief seat.—G. S. Faber, *Mysteries of the Cabiri*.—"The temple and mysteries of Samothrace formed a point of union for many men from all countries: for a great portion of the world at that time, the temple of Samothrace was like the Caaba of Mecca, the tomb of the prophet at Medina, or the Holy Sepulchre at Jerusalem. Samothrace and Dodona were to the Pelasgian nations what perhaps Delphi and Delos were to the Hellenic world."—B. G. Niebuhr, *Lect's on the Hist. of Rome, lect.* 1.

SAN JUAN OR NORTHWESTERN WATER-BOUNDARY QUESTION.—The treaty of 1846 which settled the Oregon boundary question left still in dispute the water-boundary between the territory of the United States and Vancouver's Island. Provision for submitting the determination of this San Juan water-boundary question, as it was called, to the Emperor of Germany was made in the Treaty of Washington (see ALABAMA CLAIMS: A. D. 1871). "The Emperor, it appears, referred the arguments on both sides to three experts, Dr. Grimm, Dr. Kiepert, and Dr. Goldschmidt, personages among the most eminent of his subjects in jurisprudence and in science, upon whose report he decided, on the 21st of October, 1872, in the terms of the reference, that the claim of the United States to have the line drawn through the Canal de Haro is most in accordance with the true interpretation of the treaty concluded on the 15th of June, 1846, between Great Britain and the United States. 'This Award,' says the President's Message of December 2, 1872, 'confirms the United States in their claim to the important archipelago of islands lying between the continent and Vancouver's Island, which for more than 26 years . . . Great Britain had contested, and leaves us, for the first time in the history of the United States as a nation, without a question of disputed boundary between our territory and the possessions of Great Britain on this continent.'"—C. Cushing, *The Treaty of Washington, p.* 222.—The Haro Archipelago, which formed the subject of dispute, is a group of many islands, mostly small, but containing one of considerable importance, namely the island of San Juan. The combined area of the islands is about 170 square miles. The archipelago is bounded on the north by the Canal de Haro and the Gulf of Georgia, on the east by Rosario Strait, on the west by the Canal de Haro, on the south by the Straits of Fuca. The entrance to the strait called the Canal de Haro is commanded by the Island of San Juan, which has, therefore, been called "'the Cronstadt of the Pacific.' Its position is such that a few batteries, skilfully placed, would render it almost impregnable." Hence the importance attached to the possession of this island, and especially on the part of Great Britain, looking to the future of British Columbia. By the decision of the Emperor of Germany the entire Archipelago became part of the recognized territory of the United States.—Viscount Milton, *Hist. of the San Juan Water Boundary Question* [*to* 1869].

SAN MARINO, The Republic of.—"The Republic of San Marino is a survival unique in the political world of Europe. . . . The sovereign independence of San Marino is due to a series of happy accidents which were crystallised into a sentiment. The origin of the State is ascribed to a Dalmatian saint who fled from the early persecutions at Rome and dwelt in a hermitage on Mount Titanus. But it is impossible to believe that there was no earlier population. The mountain is a detached block standing free of the Apennines,—a short twelve miles from the sea-coast, easily defensible and commanding a fertile undulating district. The hill-villages must have existed before the towns of the coast. As old as Illyrian pirates were the highland townships of Verrucchio, San Leo, Urbino, Osimo, Loretto, and above all San Marino. Yet, but for the saint and his noble benefactress Felicitá, San Marino would have shared the fate of other highland communes. This lady was a Countess Matilda on a small scale. She gave to the young congregation the proprietorship of the mountain, and the lower table-land was acquired by subsequent purchase and by the generosity of Pope Æneas Sylvius. But Felicitá could not give sovereignty,—she could give no more than she possessed. The sovereignty had rested with the Roman Republic—the Empire—the Goths—the Greeks—the Germans. The Papacy itself had as much claim to San Marino as to anything which it possessed. It was included at all events in the donation of Pepin. In the Pontificate of John XXII. the Bishop of Feltro, who claimed the ownership of the town, proposed to sell it, partly because he needed money to restore his church, partly because the Sammarinesi were rebellious subjects,—'not recognising superiors here on earth, and perchance not believing upon a superior in heaven.' Yet the Papacy appears in the 13th century to have accepted a judicial decision as to the sovereign independence of the Republic, and Pius II. considerably increased its territory in 1463 at the expense of Sigismund Malatesta. The sovereignty of San Marino is therefore almost as complete a puzzle as that of the mysterious Royaume d' Yvetot. . . . The Malatestas, originally lords of the neighboring upland fortress of Verrucchio would willingly have made the whole ridge the backbone of their State of Rimini. But this very fact secured for the Sammarinesi the constant friendship of the lords of Urbino. . . . Neither power could allow the other to appropriate so invaluable a strategic position. . . . The existing constitution is a living lesson on medieval history. . . . Theoretically, sovereignty in the last resort belongs to the people, and of old this was practically exercised by the Arengo, which thus has some correspondence in meaning and functions to the Florentine Parlamento. The Sammarinesi, however, were wiser than the Florentines. When the increase of population and territory rendered a gathering of the whole people an incompetent engine of legislation, the Arengo was not allowed to remain as a mischievous survival with ill-defined authority at the mercy of the governmental wire-pullers. The prerogatives which were reserved to the Arengo were small but definite. . . . It was after the accession of territory granted by

Pius II. in 1465 that the constitution of the State was fundamentally altered. . . . The people now delegated its sovereignty to the Council, which was raised to 60 members. . . . In 1600 an order of Patricians was established, to which was given one-third of the representation, and the Council now consists of 20 'nobili,' 20 'artisti,' artisans and shopkeepers, and 20 'contadini,' agriculturists. The harmony of the Republic is undisturbed by general elections, for the Council is recruited by co-optation. . . . At the head of the Executive stand the two Captains Regent. To them the statutes assign the sovereign authority and the power of the sword. . . . They draw a small salary, and during their six months of office are free from all State burdens."—E. Armstrong, *A Political Survival* (*Macmillan's Magazine, Jan.*, 1891).—"Between this miniature country and its institutions there is a delicious disproportion. The little area of thin soil has for centuries maintained a complicated government. . . . There is a national post-office; there is an army of nine hundred and fifty men and eight officers; there are diplomatic agents in Paris and Montevideo, and consuls in various European cities. Services rendered to the State or to science may be rewarded by knighthood, and so late as 1876 San Marino expressed its gratitude to an English lady for her gift of a statue of liberty, by making her Duchess of Acquaviva. Titles are by no means the most undemocratic part of the republic. On examination it is seen to be in fact an oligarchy. . . . Yet an oligarchy among yeoman farmers is a very different thing from an oligarchy among merchant princes. San Marino may be compared with colonial Massachusetts. The few voters have always really represented the mass of the people. It has been a singularly united, courageous, honorable, public-spirited, and prudent people. Union was possible because it was and is a poor community, in which there were no powerful families to fight and expel each other, or exiles to come back with an enemy's army. The courage of the people is shown by their hospitality to Garibaldi when he was fleeing after his defeat of 1849. An excellent moral fibre was manifested when, in 1868, the Republic refused to receive the gambling establishments which had been made illegal in other countries. The new town-hall is a monument to the enlightened public spirit of the San Marinese, as well as to their taste. That the State is prudent is shown by its distinction, almost unique in Europe, of having no public debt. Other little states in Europe have had similar good qualities, yet have long since been destroyed. Why has San Marino outlived them all? . . . The perpetuation of the government is due in the first place to a singular freedom from any desire to extend its borders. The outlying villages have been added by gift or by their own free will; and when, in 1797, Gen. Bonaparte invited the San Marinese to make their wishes known, 'if any part of the adjacent territory is absolutely necessary to you,' the hard-headed leaders declined 'an enlargement which might in time compromise their liberty.' On the other hand, the poor town had nothing worth plundering, and annexation was so difficult a task that Benedict XIV. said of Cardinal Alberoni's attempt in 1739: 'San Marino is a tough bread-crust; the man who tries to bite it gets his teeth broken.' Nevertheless, even peaceful and inoffensive communities were not safe during the last twelve centuries, without powerful protectors. The determining reason for the freedom of San Marino since 1300 has been the friendship of potentates, first of the neighboring Dukes of Urbino, then of the Popes, then of Napoleon, then of Italy. . . . When the kingdom of Italy was formed in 1860, no one cared to erase from the map a state which even the Pope had spared, and in which Europe was interested. Hence the San Marinese retained a situation comparable with that of the native states in India. A 'consolato' of the Italian Government resides in the town; the schools are assimilated to the Italian system; appeals may be had from the courts to the Italian upper courts, and precautions are taken to prevent the harboring of refugee criminals. Yet of the old sovereignty four important incidents are retained. San Marino has a post-office, a kind of national plaything; but the rare and beautiful stamps are much prized by collectors, and doubtless the sale helps the coffers of the state. The San Marinese manage, and well manage, their own local affairs, without any annoying interference from an Italian prefect. They owe no military service to Italy, and their own militia is no burden. Above all, they pay no taxes to Italy. If I were an Italian, I should like to be a San Marinese."—A. B. Hart, *The Ancient Commonwealth of San Marino* (*The Nation, Feb.* 1, 1894).

SANDEMANIANS.—Robert Sandeman "was a Scotchman who held peculiar religious views: such as—that an intellectual belief would ensure salvation, without faith; and that this intellectual belief was certain to induce Christian virtues. He held these so strongly and urgently that he made a small sect; and in 1764 he came to Connecticut, and founded churches

at Danbury and at some other places, where his followers were called 'Sandemanians,' and where some traces of them exist still. . . . The followers of Robert Sandeman were nearly all Loyalists [at the time of the American Revolution], and many of them emigrated from Connecticut to New Brunswick."—C. W. Elliott, *The New Eng. Hist.*, *v.* 2, *p.* 370.

SANGALA.—An ancient city in the Punjab, India, which was the easternmost of all the conquests of Alexander the Great. He took the town by storm (B. C. 326), slaying 17,000 of the inhabitants and taking 70,000 captives.—G. Grote, *Hist. of Greece, pt.* 2, *ch.* 94.

SANHEDRIM, The.—"Beside the priesthood [of the Jewish church], ever since the time of Ezra, there had been insensibly growing a body of scholars, who by the time of Herod had risen to a distinct function of the State. Already under John Hyrcanus there was a judicial body known as the House of Judgment (Beth-Din). To this was given the Macedonian title of Synedrion [or Synhedrion], transformed into the barbarous Hebrew word Sanhedrim, or Sanhedrin."—Dean Stanley, *Lectures on the Hist. of the Jewish Church, lect.* 50.—"The Sanhedrin was the great court of judicature; it judged of all capital offences against the law; it had the power of inflicting punishment by scourging and by death. . . . The Great Sanhedrin was a court of appeal from the inferior Sanhedrins of twenty-three judges established in the other towns. The Sanhedrin was probably confined to its judicial duties—it was a plenary court of justice, and no more—during the reigns of the later Asmonean princes, and during those of Herod the Great and his son Archelaus. . . . When Judæa became a Roman province, the Sanhedrin either, as is more likely, assumed for the first time, or recovered its station as a kind of senate or representative body of the nation. . . . At all events, they seem to have been the channel of intercourse between the Roman rulers and the body of the people. It is the Sanhedrin, under the name of the chief priests, scribes, and elders of the people, who take the lead in all the transactions recorded in the Gospels. Jesus Christ was led before the Sanhedrin, and by them denounced before the tribunal of Pilate."—H. H. Milman, *Hist. of the Jews, bk.* 12.

SANITARY COMMISSION, and Christian Commission, The United States.—"Soon after Mr. Lincoln issued his proclamation [April 15, 1861, at the outbreak of the American Civil War] . . . calling for 75,000 soldiers, many good men and women instituted what they termed 'Soldiers' Aid Societies.' At first the government did not look upon these with approval, under an apprehension that they might interfere with the discipline and efficiency of the armies. Certain physicians and clergymen who had interested themselves in these charitable undertakings perceived how much good could be accomplished by a more extensive and thorough organization. Seeking no remuneration, they applied to the government to give them recognition and moral support, and, after some difficulty, this being secured, they organized themselves and were recognized as 'the United States Sanitary Commission.' The Rev. Henry W. Bellows, D. D., was its president. Their intention was to aid by their professional advice the medical department of the government service; but soon, the field opening out before them, their operations were greatly enlarged. From being simply an advisory, they became more and more an executive body. . . . The Sanitary Commission now entered on an extraordinary career of usefulness. It ranged itself in affiliation with the government medical bureau. It gathered supporters from all classes of the people. . . . Soon the commission had an independent transportation of its own. It had hospital transports, wagons, ambulances, railroad ambulances, cars. Ingenious men devised for it inventions of better litters, better stretchers, better ambulances. It secured comfortable transportation for the wounded soldier from the battle-field to the hospital. On the railroad it soon had its hospital cars, with kitchen, dispensary, and a surgeon's car in the midst. As its work increased, so did its energies and the singular efficiency of its organization. It divided its services into several departments of duty. (1.) Its preventive service, or sanitary inspection department, had a corps of medical inspectors, who examined thoroughly troops in the field, and reported their condition and needs to its own officers and to the government. It had also a corps of special hospital inspectors, who visited the general hospitals of the army, nearly 300 in number, their reports being confidential, and sent to the surgeon general of the army. (2.) Its department of general relief. This consisted of twelve branches of the general commission, having dépôts in the large towns, each branch having from 150 to 1,200 auxiliaries engaged in obtaining supplies. These were sent to the main dépôt, and there assorted, repacked, and dispatched. One of these branches, the 'Woman's Central Association,' collected stores to the value of over a million of dollars; another, the Northwestern, at Chicago, furnished more than a quarter of a million. Care was taken to have no waste in the distribution. Soldiers of all the states were equally supplied; and even wounded enemies left on the field, or sick and abandoned in the hospitals, were tenderly cared for. (3.) Its department of special relief. This took under its charge soldiers not yet under, or just out of the care of the government; men on sick leave, or found in the streets, or left by their regiments. For such it furnished 'homes.' About 7,500 men were, on an average, thus daily or nightly accommodated. It also had 'lodges' wherein a sick soldier might stay while awaiting his pay from the paymaster general, or, if unable to reach a hospital, might stop for a time. Still more, it had 'Homes for the Wives, Mothers, and Children of Soldiers,' where those visiting the wounded or sick man to minister to his necessities might find protection, defense, food, shelter. It had its 'Feeding Stations,' where a tired and hungry soldier passing by could have a gratuitous meal. On the great military lines these stations were permanently established. On the chief rivers, the Mississippi, the Cumberland, the Potomac, it had 'sanitary

steamers' for transmitting supplies and transporting the sick and wounded. It established 'agencies' to see that no injustice was done to any soldier; that the soldier, his widow, his orphan, obtained pensions, back pay, bounties, or whatever money was due; that any errors in their papers were properly corrected, and especially that no sharper took advantage of them. It instituted hospital directories by which the friends of a soldier could obtain information without cost as to his place and condition, if within a year he had been an inmate of any hospital. It had such a record of not less than 900,000 names. Whenever permitted to do so, it sent supplies to the United States prisoners of war in confinement at Andersonville, Salisbury, Richmond. . . . (4.) Its department of field relief. The duty of this was to minister to the wounded on the field of battle; to furnish bandages, cordials, nourishment; to give assistance to the surgeons, and to supply any deficiencies it could detect in the field hospitals. It had a chief inspector for the armies of the East; another for the Military Department of the Mississippi, with a competent staff for each. (5.) Its auxiliary relief corps. This supplied deficiencies in personal attendance and work in the hospitals, or among the wounded on the field. Between May, 1864, when it was first organized, and January, 1865, it gave its services to more than 75,000 patients. It waited on the sick and wounded; wrote letters for them, gave them stationery, postage stamps, newspapers, and whiled away the heavy hours of suffering by reading magazines and books to them. To the Sanitary Commission the government gave a most earnest support; the people gave it their hearts. They furnished it with more than three millions of dollars in money, of which one million came from the Pacific States; they sent it nine millions' worth of supplies. From fairs held in its interest very large sums were derived. One in New York yielded a million and a quarter of dollars; one in Philadelphia more than a million. In towns comparatively small, there were often collected at such fairs more than twenty thousand dollars. . . . The Christian Commission emulated the noble conduct of the United States Sanitary Commission. It, too, received the recognition and countenance of the government. Its object was to promote the physical and spiritual welfare of soldiers and sailors. Its central office was in Philadelphia, but it had agencies in all the large towns. 'It aided the surgeon, helped the chaplain, followed the armies in their marches, went into the trenches and along the picket-line. Wherever there was a sick, a wounded, a dying man, an agent of the Christian Commission was near by.' It gave Christian burial whenever possible; it marked the graves of the dead. It had its religious services, its little extemporized chapels, its prayer-meetings. The American Bible Society gave it Bibles and Testaments; the Tract Society its publications. The government furnished its agents and supplies free transportation; it had the use of the telegraph for its purposes. Steamboat and railroad companies furthered its objects with all their ability. It distributed nearly five millions of dollars in money and supplies." —J. W. Draper, *Hist. of the American Civil War, ch.* 87 (*v.* 3).

SANSKRIT.—"The name Sanskrit as applied to the ancient language of the Hindus is an artificial designation for a highly elaborated form of the language originally brought by the Indian branch of the great Aryan race into India. This original tongue soon became modified by contact with the dialects of the aboriginal races who preceded the Aryans, and in this way converted into the peculiar language ('bhasha') of the Aryan immigrants who settled in the neighbourhood of the seven rivers of the Panjab and its outlying districts ('Sapta-Sindhavas' = in Zand 'Hapta Hendu'). The most suitable name for the original language thus moulded into the speech of the Hindus is Hindu-i (= Sindhu-i), its principal later development being called Hindi, just as the Low German dialect of the Saxons when modified in England was called Anglo-Saxon. But very soon that happened in India which has come to pass in all civilized countries. The spoken language, when once its general form and character had been settled, separated into two lines, the one elaborated by the learned, the other popularized and variously provincialized by the unlearned. In India, however, . . . this separation became more marked, more diversified, and progressively intensified. Hence, the very grammar which with other nations was regarded only as a means to an end, came to be treated by Indian Pandits as the end itself, and was subtilized into an intricate science, fenced around by a bristling barrier of technicalities. The language, too, elaborated 'pari passu' with the grammar, rejected the natural name of Hindu-i, or 'the speech of the Hindus,' and adopted an artificial designation, viz. Sanskrita, 'the perfectly constructed speech,'. . . to denote its complete severance from vulgar purposes, and its exclusive dedication to religion and literature; while the name Prakrita — which may mean 'the original' as well as 'the derived' speech — was assigned to the common dialect." —M. Williams, *Indian Wisdom, introd., p. xxviii.*

SARACENS, The name.—"From Mecca to the Euphrates, the Arabian tribes were confounded by the Greeks and Latins under the general appellation of Saracens. . . . The name which, used by Ptolemy and Pliny in a more confined, by Ammianus and Procopius in a larger, sense, has been derived, ridiculously, from Sarah, the wife of Abraham, obscurely from the village of Saraka, . . . more plausibly from the Arabic words which signify a thievish character, or Oriental situation. . . . Yet the last and most popular of these etymologies is refuted by Ptolemy (Arabia, p. 2. 18. in Hudson, tom. iv.), who expressly remarks the western and southern position of the Saracens, then an obscure tribe on the borders of Egypt. The appellation cannot, therefore, allude to any national character; and, since it was imposed by strangers, it must be found, not in the Arabic, but in a foreign language."—E. Gibbon, *Decline and Fall of the Roman Empire, ch.* 50, *and note.*—"Dr. Clarke (Travels, v. ii., p. 391) after expressing contemptuous pity for Gibbon's ignorance, derives the word from Zara, Zaara, Sara, the Desert, whence Saraceni, the children of the Desert. De Marlès adopts the derivation from Sarrik, a robber, Hist. des Arabes, vol. 1., p. 36; St. Martin from Scharkioun, or Sharkün, Eastern, vol. xi., p. 55."—H. Milman, *note to Gibbon, as above.*—The Kadmonites "are undoubtedly what their name expresses, Orientals, Saracens, otherwise 'B'ne Kedem,' or Sons of the East; a name restricted in practice to the east contiguous to Palestine, and comprising only the Arabian nations dwelling between Palestine and the Euphrates. . . . The name Saraceni was in use among the Romans long before Islam, apparently from the time of Trajan's and Hadrian's wars."—H. Ewald, *Hist. of Israel, introd., sect.* 4, *with foot-note* (*v.* 1).—In the Middle Ages the term Saracen became common in its application to the Arabs, and, in fact, to the Mahometan races pretty generally. SARDINIA (The Island): Name and early history.—"The name of the island 'Sardo' is derived with probability from the Phœnician, and describes its resemblance to the human footstep. . . . Diodorus reckons this island among the places to which the Phœnicians sent colonies, after they had enriched themselves by the silver of Spain. . . . What the primitive population of the island was, which the Phœnicians found there when they touched at its southern ports on their way to Spain, whether it had come from the coast of Italy, or Africa, we can only conjecture. In historical times it appears to have been derived from three principal sources,—immigrations from Africa, represented by the traditions of Sardus and Aristæus; from Greece, represented by Iolaus, and from the south and south-east of Spain, represented by Norax. . . . The name Norax has evidently a reference to those singular remains of ancient architecture, the Nuraghi of Sardinia,—stone towers in the form of a truncated cone, with a spiral staircase in the thickness of the wall, which to the number of 3,000 are scattered over the island, chiefly in the southern and western parts. Nothing entirely analogous to these has been found in any other part of the world; but they resemble most the Athalayas [or Talajots] of Minorca, whose population was partly Iberian, partly Libyan. . . . The Carthaginians, at the time when their naval power was at its height, in the sixth and fifth centuries B. C., subdued all the level country, the former inhabitants taking refuge among the mountains, where their manners receded towards barbarism."—J. Kenrick, *Phœnicia, ch.* 4, *sect.* 3.

SARDIS.—When Cyrus the Great founded the Persian empire by the overthrow of that of the Medes, B. C. 558, his first enterprise of conquest, outside of the Median dominion, was directed against the kingdom of Lydia, then, under its famous king Crœsus, dominant in Asia Minor and rapidly increasing in wealth and power. After an indecisive battle, Crœsus retired to his capital city, Sardis, which was then the most splendid city of Asia Minor, and was followed by Cyrus, who captured and plundered the town, at the end of a siege of only fourteen days. The fall of Sardis was the fall of the Lydian kingdom, which was absorbed into the great empire of Persia.—G. Rawlinson, *Five Great Monarchies: Persia, ch.* 7.—Fifty-eight years later (about 500 B. C.) at the beginning of the Ionian Revolt, when the Greek cities of Asia Minor attempted to throw off the Persian yoke, Sardis was again plundered and burned by an invading force of Ionians and Athenians.—C. Thirlwall, *Hist. of Greece, ch.* 14.—See, also, PERSIA: B. C. 521–493.

SARGASSO SEA, The. See AMERICA: A. D. 1492.

SARISSA, The. See PHALANX.

SARK, Battle of (1448).—This was a severe defeat inflicted by the Scots upon an English force, invading Scottish territory, under Lord Percy. The English lost 3,000 men and Percy was taken prisoner.—Sir W. Scott, *Hist. of Scotland, ch.* 19.

SARMATIA. — SARMATIANS. — "The Scythians of the time of Herodotus were separated only by the river Tanais [modern Don] from the Sarmatians, who occupied the territory for several days' journey north-east of the Palus Mæôtis; on the south, they were divided by the Danube from the section of Thracians called Getæ. Both these nations were nomadic, analogous to the Scythians in habits, military efficiency, and fierceness. Indeed, Herodotus and Hippokratês distinctly intimate that the Sarmatians were nothing but a branch of Scythians, speaking a Scythian dialect, and distinguished from their neighbours on the other side of the Tanais chiefly by this peculiarity,—that the women among them were warriors hardly less daring and expert than the men."—G. Grote, *Hist. of Greece, pt.* 2, *ch.* 17.—The Sarmatians ultimately gave their name to the whole region of northeastern Europe, and some writers have considered them to be, not Scythic or Mongolic in race, but progenitors of the modern Slavonic family. "By Sarmatia [Tacitus] seems to have understood what is now Moldavia and Wallachia,

and perhaps part of the south of Russia."—Church and Brodribb, *Geog. Notes to The Germany of Tacitus.*—See Slavonic Peoples.

SARMATIAN AND MARCOMANNIAN WARS OF MARCUS AURELIUS.—It was during the reign of Marcus Aurelius Antoninus that the inroads of the barbarians along the Danubian frontier of the Roman Empire began to be seriously frequent and bold. "It is represented as a simultaneous, and even a combined attack, of all the races on the northern frontier, who may be ranged under the three national divisions of Germans, Scythians, and Sarmatians; though we may question the fact of an actual league among tribes so many, so various, and so distant." The Marcomanni and the Quadi on the upper Danube, and the Sarmatian tribes on the lower, were the prominent intruders, and the campaigns which Aurelius conducted against them, A. D. 167–180, are generally called either the Marcomannian or the Sarmatian Wars. During these thirteen years, the noblest of all monarchs surrendered repeatedly the philosophic calm which he loved so well, and gave himself to the hateful business of frontier war, vainly striving to arrest in its beginning the impending flood of barbaric invasion. Repeatedly, he won the semblance of a peace with the unrelenting foe, and as repeatedly it was broken. He died in his soldier's harness, at Vindobona (Vienna), and happily did not live to witness the peace which Rome, in the end, stooped to buy from the foes she had no more strength to overcome.—C. Merivale, *Hist. of the Romans, ch.* 68.

SASSANIAN DYNASTY.—Artaxerxes I., who resurrected the Persian empire, or called a new Persian empire into existence, A. D. 226, by the overthrow of the Parthian monarchy and the subjection of its dominions, founded a dynasty which took the name of the Sassanian, or the family of the Sassanidæ, from one Sasan, who, according to some accounts was the father, according to others a remoter progenitor of Artaxerxes. This second Persian monarchy is, itself, often called the Sassanian, to distinguish it from the earlier Achæmenian Persian empire.—G. Rawlinson, *Seventh Great Oriental Monarchy.*—See, also, Persia: B. C. 150–A. D. 226.

SATRAP.—SATRAPIES.—Darius Hystaspis "has been well called 'the true founder of the Persian state.' He found the Empire a crude and heterogeneous mass of ill-assorted elements, hanging loosely together by the single tie of subjection to a common head; he left it a compact and regularly organized body, united on a single well-ordered system, permanently established everywhere. . . . It was the first, and probably the best, instance of that form of government which, taking its name from the Persian word for provincial ruler, is known generally as the system of 'satrapial' administration. Its main principles were, in the first place, the reduction of the whole Empire to a quasi-uniformity by the substitution of one mode of governing for several; secondly, the substitution of fixed and definite burthens on the subject in lieu of variable and uncertain calls; and thirdly, the establishment of a variety of checks and counterpoises among the officials to whom it was necessary that the crown should delegate its powers. . . . The authority instituted by Darius was that of his satraps. He divided the whole Empire into a number of separate governments—a number which must have varied at different times, but which seems never to have fallen short of twenty. Over each government he placed a satrap, or supreme civil governor, charged with the collection and transmission of the revenue, the administration of justice, the maintenance of order, and the general supervision of the territory. These satraps were nominated by the king at his pleasure from any class of his subjects, and held office for no definite term, but simply until recalled, being liable to deprivation or death at any moment, without other formality than the presentation of the royal 'firman.' While, however, they remained in office they were despotic—they represented the Great King, and were clothed with a portion of his majesty. . . . They wielded the power of life and death. They assessed the tribute on the several towns and villages within their jurisdiction at their pleasure, and appointed deputies—called sometimes, like themselves, satraps—over cities or districts within their province, whose office was regarded as one of great dignity. . . . Nothing restrained their tyranny but such sense of right as they might happen to possess, and the fear of removal or execution if the voice of complaint reached the monarch."—G. Rawlinson, *Five Great Monarchies: Persia, ch.* 7.

SATTAGYDÆ, The. See Gedrosians.

SATURNALIA, The Roman.—"The Saturnalia, first celebrated in Rome at the dedication [of the temple of Saturn, on the southern slope of the Capitoline Hill] . . . extended originally over three, but finally over seven days, during which all social distinctions were ignored; slaves were admitted to equality with their masters; and the chains which the emancipated from slavery used to hang, as thanksgiving, on or below the statue of the god, were taken down to intimate that perfect freedom had been enjoyed by all alike under the thrice-happy Saturnian reign. Varro mentions the practice of sending wax tapers as presents during this festival; and when we remember the other usage of suspending wax masks, during the Saturnalia, in a chapel beside the temple of the beneficent Deity, the analogies between these equalizing fêtes and the modern Carnival become more apparent."—C. I. Hemans, *Historic and Monumental Rome, ch.* 6.

11th Century.—The founders of the House of Savoy. See BURGUNDY: A. D. 1032.

11-15th Centuries.—Rise and growth of the dominions of the Savoyard princes, in Italy and the Burgundian territory.—Creation of the duchy.—Assumption of the title of Princes of Piedmont.—"The cradle of the Savoyard power lay in the Burgundian lands immediately bordering upon Italy and stretching on both sides of the Alps. It was to their geographical position, as holding several great mountain passes, that the Savoyard princes owed their first importance, succeeding therein in some measure to the Burgundian kings themselves. The early stages of the growth of the house are very obscure; and its power does not seem to have formed itself till after the union of Burgundy with the Empire. But it seems plain that, at the end of the 11th century, the Counts of Maurienne, which was their earliest title, held rights of sovereignty in the Burgundian districts of Maurienne, Savoy strictly so called, Tarantaise, and Aosta. . . . The early Savoyard possessions reached to the Lake of Geneva, and spread on both sides of the inland mouth of the Rhone. The power of the Savoyard princes in this region was largely due to their ecclesiastical position as advocates of the abbey of Saint Maurice. Thus their possessions had a most irregular outline, nearly surrounding the lands of Genevois and Faucigny. A state of this shape, like Prussia in a later age and on a greater scale, was, as it were, predestined to make further advances. But for some centuries those advances were made much more largely in Burgundy than in Italy. The original Italian possessions of the House bordered on their Burgundian counties of Maurienne and Aosta, taking in Susa and Turin. This small marchland gave its princes the sounding title of Marquesses in Italy. . . . In the 12th and 13th centuries, the princes of Savoy were still hemmed in, in their own corner of Italy, by princes of equal or greater power, at Montferrat, at Saluzzo, at Iverea, and at Biandrate. And it must be remembered that their position as princes at once Burgundian and Italian was not peculiar to them. . . . The Italian dominions of the family remained for a long while quite secondary to its Burgundian possessions. . . . The main object of Savoyard policy in this region was necessarily the acquisition of the lands of Faucigny and the Genevois. But the final incorporation of those lands did not take place till they were still more completely hemmed in by the Savoyard dominions through the extension of the Savoyard power to the north of the Lake. This began early in the 13th century [1207] by a royal grant of Moudon to Count Thomas of Savoy. Romont was next won, and became the centre of the Savoyard power north of the Lake. Soon after, through the conquests of Peter of Savoy [1263–1268], who was known as the Little Charlemagne and who plays a part in English as well as in Burgundian history, these possessions grew into a large dominion, stretching along a great part of the shores of the Lake of Neufchâtel and reaching as far north as Murten or Morat. . . . This new dominion north of the Lake was, after Peter's reign, held for a short time by a separate branch of the Savoyard princes as Barons of Vaud; but in the middle of the 14th century, their barony came into the direct possession of the elder branch of the house. The lands of Faucigny and the Genevois were thus altogether surrounded by the Savoyard territory. Faucigny had passed to the Dauphins of the Viennois, who were the constant rivals of the Savoyard counts, down to the time of the practical transfer of their dauphiny to France. Soon after that annexation, Savoy obtained Faucigny, with Gex and some other districts beyond the Rhone, in exchange for some small Savoyard possessions within the dauphiny. The long struggle for the

Genevois, the county of Geneva, was ended by its purchase in the beginning of the 15th century [1401]. This left the city of Geneva altogether surrounded by Savoyard territory, a position which before long altogether changed the relations between the Savoyard counts and the city. Hitherto, in the endless struggles between the Genevese counts, bishops, and citizens, the Savoyard counts . . . had often been looked on by the citizens as friends and protectors. Now that they had become immediate neighbours of the city, they began before long to be its most dangerous enemies. The acquisition of the Genevois took place in the reign of the famous Amadeus the Eighth, the first Duke of Savoy, who received that rank by grant of King Siegmund [1417], and who was afterwards the Antipope Felix [see PAPACY: A. D. 1431–1448]. In his reign the dominions of Savoy, as a power ruling on both sides of the Alps, reached their greatest extent. But the Savoyard power was still pre-eminently Burgundian, and Chambery was its capital. The continuous Burgundian dominion of the house now reached from the Alps to the Saône, surrounding the lake of Geneva and spreading on both sides of the lake of Neufchâtel. Besides this continuous Burgundian dominion, the House of Savoy had already become possessed [1388] of Nizza, by which their dominions reached to the sea. . . . After the 15th century, the Burgundian history of that house consists of the steps spread over more than 300 years by which this great dominion was lost. The real importance of the house of Savoy in Italy dates from much the same time as the great extension of its power in Burgundy. . . . During the 14th century, among many struggles with the Marquesses of Montferrat and Saluzzo, the Angevin counts of Provence, and the lords of Milan, the Savoyard power in Italy generally increased. . . . Before the end of the reign of Amadeus [the Eighth — 1391–1451], the dominions of Savoy stretched as far as the Sesia, taking in Biella, Santhia and Vercelli. Counting Nizza and Aosta as Italian, which they now practically were, the Italian dominions of the House reached from the Alps of Wallis to the sea. But they were nearly cut in two by the dominions of the Marquesses of Montferrat, from whom however the Dukes of Savoy now claimed homage. . . . Amadeus, the first Duke of Savoy, took the title of Count of Piedmont, and afterwards that of Prince. His possessions were now fairly established as a middle state, Italian and Burgundian, in nearly equal proportions."—E. A. Freeman, *Historical Geog. of Europe, ch.* 8, *sect.* 7.

A. D. 1559-1580.—End of the French occupation.—Recovery of his dominions by Emanuel Philibert.—His reconstruction of the state.—Treaties with the Swiss.—War with the Waldenses.—Tolerant Treaty of Cavour.—Settlement of government at Turin.—"The history of Piedmont begins where the history of Italy terminates. At the Peace of Château-Cambresis [see FRANCE: A. D. 1547–1559], in 1559, Piedmont was born again. Under Amadeus VIII. Savoy bade fair to become a State of the very first order. In the course of a century it had sunk to a third-rate power. . . . Piedmont, utterly prostrated by five-and-twenty years of foreign occupation, laid waste by the trampling of all the armies of Europe, required now the work of a constructive genius, and Emanuel Philibert was providentially fitted for the task. No man could better afford to be pacific than the conqueror of St. Quintin [see FRANCE: as above]. . . . After the battle of St. Quintin, Emanuel Philibert had France at his discretion. Had his counsels been instantly followed, the Spanish army would have dictated its own terms before or within the walls of Paris. . . . The reconciliation of France with the hero who had alarmed and humbled her seemed, nevertheless, to be sincere." Under the terms of the treaty, the Duke of Savoy's dominions, occupied by the French, were to be restored to him, except that Turin, Chieri, Chivasso, Pinerolo, and Villanova d' Asti, with part of their territories, "were to be occupied for three years, or until the settlement of the differences between the two Courts, chiefly with regard to the dowry of Louisa of Savoy, mother of Francis I., the original cause of dispute. . . . So long as France insisted on keeping the five above-mentioned places, Spain was also empowered to retain Asti and Vercelli." Philip II., however, gave up Vercelli and "contented himself with the occupation of Asti and Santia." The differences with France proved hard of settlement, and it was not until 1574 that "Emanuel Philibert found himself in possession of all his Subalpine dominions. No words can describe the meanness and arrogance by which the French aggravated this prolonged usurpation of their neighbour's territories. . . . Had Emanuel Philibert put himself at the head of one of [the factions which fought in France at this time] . . . he might have paid back . . . the indignities he had had to endure; but his mission was the restoration of his own State, not the subjugation of his neighbour's. . . . The same moderation and longanimity which enabled Emanuel Philibert to avoid a collision with France, because he deemed it unreasonable, equally distinguished him in his relations with his neighbours of Italy. There was now, alas! no Italy; the country had fallen a prey to the Spanish branch of the House of Austria, and the very existence of Mantua, Parma, Tuscany, etc., was at the mercy of Philip II. . . . This 'most able and most honest of all the princes of his line' was fully aware of the importance of his position as the 'bulwark of Italy,' and felt that on his existence hung the fate of such states in the Peninsula as still aspired to independence. 'I know full well,' he said in a moment of cordial expansion, 'that these foreigners are all bent on the utter destruction of Italy, and that I may be the first immolated; but my fall can be indifferent to no Italian state, and least of all to Venice.' Full of these thoughts, he was unwearied in his endeavours to secure the friendship of that republic. . . . The same instinctive dread of the crushing ascendancy of Spain and France, which made Emanuel Philibert cling to the Venetian alliance, equally urged

him to settle, no matter at what cost, the differences with the other old allies of his house — the Swiss. The Pays de Vaud, Gex, Chablais, and Lower Valais were still in the power of the confederates [see SWITZERLAND: A. D. 1531–1648]; and it was not without a murmur that the Duke of Savoy could part with so fair a portion of his forefathers' inheritance; but it was not long ere he learnt to resign all hope of its recovery. A new generation had sprung up in those provinces, amongst whom all loyalty to Savoy had died off. The Bernese had introduced the Reformation into the conquered lands. . . . Political freedom went hand in hand with religious innovation. . . . Geneva was the very head-quarters of reform; it was proud of the appellation of the 'Rome of Calvinism.' . . . Emanuel Philibert, ill-supported by Spain and thwarted by France, laid aside all ideas of an appeal to force, and trusted his cause to negotiation. There was happily division in the enemy's camp; religious difference had set the old forest cantons into opposition with Berne and her Protestant associates. The Duke of Savoy made a treaty at Lucerne (November 11, 1560) with Schwytz, Uri, Unterwald, Zug, Lucerne, Soleure, and even Zurich; and these promised their good offices with their Protestant brethren in behalf of Savoy. Lengthy and somewhat stormy conferences ensued, the result of which was the treaty of Lausanne (October 30, 1564); by the terms of which Berne retained Vaud, and Friburg Romont, and Savoy only recovered Gex and Chablais. At a later period (March 4th, 1569) Valais also came to terms at Thonon; it gave up its own share of Chablais, but remained in possession of Lower Valais. By the recovery of Gex and Chablais Savoy now encompassed Geneva on all sides, and caused that town incessant uneasiness; but the Duke . . . was . . . earnestly bent on peace, and he reassured the Genevese by new treaties, signed at Berne (May 5th, 1570), by which he engaged to give no molestation to Geneva. These same treaties bound Savoy to allow freedom of conscience and worship to those of her subjects who had embraced Protestantism during the Swiss occupation; and we hear, in fact, of no persecutions in the provinces round the Leman in Emanuel Philibert's lifetime; but it is important to inquire how that Prince dealt in these matters with his subjects in general. . . . We hear from several authorities that 'the Piedmontese were more than half Protestants.' The Waldensian ministers reckoned their sectaries at the foot of the Alps at 800,000. . . . The Waldenses considered the prevalence of the new tenets as their own triumph. From 1526 to 1530 they entered into communication with the Reformers, and modified their own creed and worship in accordance with the new ideas, identifying themselves especially with the disciples of Calvin. . . . Their valleys became a refuge for all persecuted sectaries, amongst whom there were turbulent spirits, who stirred up those simple and loyal mountaineers to mutiny and revolt. Although they thus called down upon themselves the enmity of all the foes to Protestantism, these valleys continued nevertheless to be looked upon as a privileged district, and their brethren of other provinces found there a safe haven from the storms which drove them from their homes." In 1559, the Duke issued his edict of Nice, "intended not so much to suppress heresy as to repress it." The Waldenses "assumed a mutinous attitude," and "applied for succour to the Huguenot chiefs of the French provinces." Then the Duke sent 4,000 foot and 200 horse into the valleys, under the Count de la Trinita, and a fierce and sanguinary war ensued. "Its horrors were aggravated by foreign combatants, as the ranks of La Trinita were swelled by both French and Spanish marauders; and the Huguenots of France, and even some Protestant volunteers from Germany, fought with the Waldenses. . . . But it was not for the interest of the Duke of Savoy that his subjects should thus tear each other to pieces. After repeated checks La Trinita met with, . . . a covenant was signed at Cavour on the 5th of June, 1561. The Waldenses were allowed full amnesty and the free exercise of their worship within their own territory. . . . Within those same boundaries they consented to the erection of Catholic churches, and bound themselves to a reciprocal toleration of Roman rites. . . . The Treaty of Cavour satisfied neither party. It exposed the Duke to the loud reprimands of Rome, France and Spain, no less than to the bitter invectives of all his clergy . . . ; and, on the other hand the Waldenses . . . again and again placed themselves in opposition to the authorities deputed to rule over them. . . . In his leniency towards the sectaries of the valleys, Emanuel Philibert was actuated by other motives besides the promptings of a naturally generous soul. . . . His great schemes for the regeneration of the country could only find their development in a few years of profound peace. . . . Whatever may be thought of the discontent to which his heavy taxes gave rise among the people, or his stern manners among the nobles, it is a beautiful consoling fact that the establishment of despotism in Piedmont did not cost a single drop of blood, that the prince subdued and disciplined his people by no other means than the firmness of his iron will. . . . The great work for which Piedmont will be eternally indebted to the memory of this great prince was the nationalization of the State. He established the seat of government at Turin, recalled to that city the senate which had been first convoked at Carignano, and the university which had been provisionally opened at Mondovi. Turin, whose bishop had been raised to metropolitan honours in 1515, had enjoyed comparative security under the French, who never lost possession of it from 1536 to 1562. It dates its real greatness and importance from Emanuel Philibert's reign, when the population . . . rose to 17,000 souls. . . . It was not without great bitterness that the transalpine provinces of Savoy submitted to the change, and saw the dignity and ascendancy of a sovereign state depart from them." Emanuel Philibert died in 1580, and was succeeded by his son, Charles Emanuel.—A. Gallenga, *Hist. of Piedmont*, *v.* 3, *ch.* 1.

A. D. 1580-1713.—Vicissitudes of a century and a quarter.—Profitable infidelities in war.—The Duke wins Sicily and the title of King.—Emanuel Philibert, by his "well-timed policy of peace, . . . was enabled to leave his duchy immensely strengthened to his son Charles Emanuel (1580–1630). The new duke was much more active in his policy. His marriage with a daughter of Philip II. bound him to the side of Spain and he supported the cause of the League

in France. With the help of the Catholic party he seized the vacant marquisate of Saluzzo, and thus involved himself in a long quarrel with Henry IV. In 1601 the peace of Lyons confirmed the duke in the possession of Saluzzo, in exchange for which he ceded Bresse on the Rhone frontier to Henry. All attempts made to recover Geneva for Savoy proved unsuccessful. Before his death the restless Charles Emanuel brought forward another claim to the marquisate of Montferrat. This had been held since 1533 by the dukes of Mantua, whose male line became extinct in 1627. The duke did not live to see the settlement of the Mantuan succession, but his son, Victor Amadeus I., obtained great part of Montferrat by the treaty of Cherasco (1631). Richelieu had now acquired Pinerolo and Casale for France and this effected a complete change in the policy of Savoy. Victor Amadeus was married to Christine, a daughter of Henry IV., and he and his successor remained till nearly the end of the century as faithful to France as his predecessors had been to Spain. Charles Emanuel II., who succeeded as a minor on the early death of his father, was at first under the guardianship of his mother, and when he came of age remained in the closest alliance with Louis XIV. His great object was to secure the Italian position which Savoy had assumed, by the acquisition of Genoa. But the maritime republic made a successful resistance both to open attack and to treacherous plots. Victor Amadeus II., who became duke in 1675, was married to a daughter of Philip of Orleans. But Louis XIV. had begun to treat Savoy less as an ally than as a dependency, and the duke, weary of French domination, broke off the old connexion, and in 1690 joined the League of Augsburg against Louis. His defection was well-timed and successful, for the treaty of Ryswick (1697) gave him the great fortresses of Pinerolo and Casale, which had so long dominated his duchy. In the war of the Spanish succession he first supported Louis and afterwards turned against him. His faithlessness was rewarded in the peace of Utrecht [1713] with the island of Sicily and the title of king. Within a few years, however, he was compelled to exchange Sicily for Sardinia."—R. SAXONS, The.—"In the reign of Caracalla [A. D. 212–217] Rome first heard of the Goths and Alemanni; a little more than half a century later the Franks appear; and about the same time the Saxons, who had been named and placed geographically by Ptolemy [A. D. 130–160], make their first mark in history. They are found employed in naval and piratical expeditions on the coasts of Gaul in A. D. 287. Whatever degree of antiquity we may be inclined to ascribe to the names of these nations, and there is no need to put a precise limit to it, it can scarcely be supposed that they sprang from insignificance and obscurity to strength and power

in a moment. It is far more probable that under the names of Frank and Saxon in the fourth century had been sunk the many better known earlier names of tribes who occupied the same seats. . . . The Cherusci, the Marsi, the Dulgibini and the Chauci may have been comprehended under the name of Saxons. . . . Whilst the nations on the Lower Rhine were all becoming Franks, those between the Rhine and the Oder were becoming Saxons; the name implied as yet no common organisation, at the most only an occasional combination for attack or defence." —W. Stubbs, *Const. Hist. of Eng., ch.* 3 (*v.* 1).— "The hypothesis respecting the Saxons is as follows: The name Saxon was to the Kelts of Britain what German was to those of Gaul. Or, if not, what Suevi was — a name somewhat more specific. It probably applied to the Germans of the sea-coast, and the water-systems of the Lower Rhine, Weser, Lower Elbe, and Eyder; to Low Germans on the Rhine, to Frisians and Saxons on the Elbe, and to North Frisians on the Eyder. All the Angles were Saxons, but all the Saxons were not Angles. The reasoning in favour of this view is as follows: — That Saxon was a Britannic term is undenied. The Welsh and Gaels call us Saxons at the present moment. The Romans would take their name for certain Germans as they found it with the Britons. The Britons and Romans using the same name would be as two to one in favour of the Keltic name taking ground. It would be Roman and Keltic against a German name single-handed. The only question is whether the name Saxon was exclusively Britannic (Keltic), i. e., not German also. . . . I think, upon the whole, that Saxon was a word like 'Greek,' i. e., a term which, in the language of the Hellenes, was so very special, partial, and unimportant, as to have been practically a foreign term, or, at least, anything but a native name; whilst in that of the Romans it was one of general and widely extended import. Hence, mutatis mutandis, it is the insignificant Saxones of the neck of the Cimbric Chersonese, and the three Saxon islands, first mentioned by Ptolemy, who are the analogues of the equally unimportant Græci of Epirus; and these it was whose name eventually comprised populations as different as the Angles, and the Saxons of Saxony, even as the name Græcus in the mouth of a Roman comprised Dorians, Æolians, Macedonians, Athenians, Rhodians, &c. In this way the name was German; but its extended import was Keltic and Roman."—R. G. Latham, *The Germany of Tacitus: Epilegomena, sect.* 48.— See, also, GERMANY: THE NATIONAL NAMES; and ANGLES AND JUTES.

The sea-rovers of the 5th century.—"At the end of a long letter, written by Sidonius [Apolinaris, Bishop, at Clermont, in Auvergne, A. D. 471–488] to his friend Nammatius [an officer of the Channel fleet of the Romans, then chiefly occupied in watching and warding off the Saxon pirates], after dull compliments and duller banter, we suddenly find flashed upon us this life-like picture, by a contemporary hand, of the brothers and cousins of the men, if not of the very men themselves who had fought at Aylesford under Hengest and Horsa, or who were slowly winning the kingdom of the South Saxons: 'Behold, when I was on the point of concluding this epistle in which I have already chattered on too long, a messenger has suddenly arrived from Saintonge with whom I have spent some hours in conversing about you and your doings, and who constantly affirms that you have just sounded your trumpet on board the fleet, and that with the duties of a sailor and a soldier combined you are roaming along the winding shores of the Ocean, looking out for the curved pinnaces of the Saxons. When you see the rowers of that nation you may at once make up your mind that every one of them is an arch-pirate, with such wonderful unanimity do all at once command, obey, teach, and learn their one chosen business of brigandage. For this reason I ought to warn you to be more than ever on your guard in this warfare. Your enemy is the most truculent of all enemies. Unexpectedly he attacks, when expected he escapes, he despises those who seek to block his path, he overthrows those who are off their guard, he always succeeds in cutting off the enemy whom he follows, while he never fails when he desires to effect his own escape. Moreover, to these men a shipwreck is capital practice rather than an object of terror. The dangers of the deep are to them, not casual acquaintances, but intimate friends. For since a tempest throws the invaded off their guard, and prevents the invaders from being descried from afar, they hail with joy the crash of waves on the rocks, which gives them their best chance of escaping from other enemies than the elements. Then again, before they raise the deep-biting anchor from the hostile soil, and set sail from the Continent for their own country, their custom is to collect the crowd of their prisoners together, by a mockery of equity to make them cast lots which of them shall undergo the iniquitous sentence of death, and then at the moment of departure to slay every tenth man so selected by crucifixion, a practice which is the more lamentable because it arises from a superstitious notion that they will thus ensure for themselves a safe return. Purifying themselves as they consider by such sacrifices, polluting themselves as we deem by such deeds of sacrilege, they think the foul murders they thus commit are acts of worship to their gods, and they glory in extorting cries of agony instead of ransoms from these doomed victims.'"—T. Hodgkin, *Italy and Her Invaders, bk.* 3, *ch.* 3.

A. D. 451.—At the Battle of Chalons.— In the allied army of Romans and barbarians which count Aetius brought together to encounter the Hun, Attila, on the great and terrible battlefield of Chalons, July, 451, there is mention of the "Saxones." "How came our fathers thither; they, whose homes were in the long sandy levels of Holstein? As has been already pointed out, the national migration of the Angles and Saxons to our own island had already commenced, perhaps in part determined by the impulse northward of Attila's own subjects. Possibly, like the Northmen, their successors, the Saxons may have invaded both sides of the English Channel at once, and may on this occasion have been standing in arms to defend against their old foe some newly-won possessions in Normandy or Picardy."—T. Hodgkin, *Italy and Her Invaders, bk.* 2, *ch.* 3.

A. D. 528-729. — Struggles against the Frank dominion, before Charlemagne. See GERMANY: A. D. 481–768.

A. D. 772-804.—Conquest by Charlemagne. —"In the time of Charlemagne, the possessions of this great league [the Saxons] were very extensive, stretching, at one point, from the banks of the Rhine nearly to the Oder, and on the other hand, from the North Sea to the confines of Hesse and Thuringia. Warlike in their habits, vigorous in body, active and impatient in mind, their geographical situation, operating together with their state of barbarism, rendered them pirates, extending the predatory excursions, common to all the northern tribes, to the sea as well as to the land. . . . They held, from an early period, greater part of the islands scattered round the mouths of the German rivers; and, soon beginning to extend their dominion, they captured, at different times, all those on the coast of France and in the British sea. Not contented, however, with this peculiar and more appropriate mode of warfare, the Saxons who remained on land, while their fellow-countrymen were sweeping the ocean, constantly turned their arms against the adjacent continental countries, especially after the conquest of Britain had, in a manner, separated their people, and satisfied to the utmost their maritime cupidity in that direction. Surpassing all nations, except the early Huns, in fierceness, idolaters of the most bloody rites, insatiable of plunder, and persevering in the purpose of rapine to a degree which no other nation ever knew, they were the pest and scourge of the north. Happily for Europe, their government consisted of a multitude of chiefs, and their society of a multitude of independent tribes, linked together by some bond that we do not at present know, but which was not strong enough to produce unity and continuity of design. Thus they had proceeded from age to age, accomplishing great things by desultory and individual efforts; but up to the time of Charlemagne, no vast and comprehensive mind, like that of Attila, had arisen amongst them, to combine all the tribes under the sway of one monarch, and to direct all their energies to one great object. It was for neighbouring kings, however, to remember that such a chief might every day appear. . . . Such was the state of the Saxons at the reunion of the French [or Frank] monarchy under Charlemagne; and it would seem that the first step he proposed to himself, as an opening to all his great designs, was completely to subdue a people which every day ravaged his frontier provinces, and continually threatened the very existence of the nations around."—G. P. R. James, *Hist. of Charlemagne, bk.* 3.—For generations before Charlemagne—from the period, in fact, of the sons of Clovis, early in the sixth century—the Frank kings had claimed supremacy over the Saxons and counted them among the tributaries of their Austrasian or German monarchy. Repeatedly, too, the Saxons had been forced to submit themselves and acknowledge the yoke, in terms, while they repudiated it in fact. When Charlemagne took in hand the conquest of this stubborn and barbarous people, he seems to have found the task as arduous as though nothing had been done in it before him. His first expedition into their country was undertaken in 772, when he advanced with fire and sword from the Rhine at Mayence to the Diemel in the Hessian country. It was on this occasion that he destroyed, near the head-waters of the Lippe, the famous national idol and fane of the Saxons called the Irminsul or Herminsaule—supposed to be connected with the memory of Hermann, the Cheruscan patriot chief who destroyed the Roman legions of Varus. The campaign resulted in the submission of the Saxons, with a surrender of hostages to guarantee it. But in 774 they were again in arms, and the next summer Charlemagne swept their country to beyond the Weser with the besom of destruction. Once more they yielded and gave hostages, who were taken to Frank monasteries and made Christians of. But the peace did not last a twelvemonth, and there was another great campaign in 776, which so terrified the turbulent heathen that they accepted baptism in large numbers, and a wholesale conversion took place at Paderborn in May, 777. But a chief had risen at last among the Saxons who could unite them, and who would not kneel to Charlemagne nor bow his head to the waters of baptism. This was Wittekind, a Westphalian, brother-in-law of the king of the Danes and friend of the Frisian king, Ratbod. While Charlemagne was in Spain, in 778, Wittekind roused his countrymen to a rising which cleared their land of crosses, churches, priests and Frank castles at one sweep. From that time until 785 there were campaigns every year, with terrible carnage and destruction in the Saxon country and industrious baptising of the submissive. At Badenfield, at Bockholz, near Zutphen, and at Detmold, there were fierce battles in which the Saxons suffered most; but at Sonnethal, on the Weser (the Dachtelfield), in 782, the Franks were fearfully beaten and slaughtered. Charlemagne took a barbarous vengeance for this reverse by beheading no less than 4,500 Saxon prisoners at Verden, on the Aller. Three years later, the country of the Saxons having been made, for the most part, a famine-smitten desert, they gave up the struggle. Even Wittekind accepted Christianity, became a monk—a missionary—a canonized saint—and disappeared otherwise from history. According to legend, the blood of more than 200,000 Saxons had "changed the very color of the soil, and the brown clay of the Saxon period gave way to the red earth of Westphalia." For seven years the Saxons were submissive and fought in Charlemagne's armies against other foes. Then there was a last despairing attempt to break the conqueror's yoke, and another long war of twelve years' duration. It ended in the practical annihilation of the Saxons as a distinct people in Germany. Many thousands of them were transplanted to other regions in Gaul and elsewhere; others escaped to Denmark and were absorbed into the great rising naval and military power of the Northmen. The survivors on their own soil were stripped of their possessions. "The Saxon war was conducted with almost unparalleled ferocity."—J. I. Mombert, *Hist. of Charles the Great, bk.* 2, *ch.* 3-4.

Also in: P. Godwin, *Hist. of France: Ancient Gaul, ch.* 16-17.

SAXONS OF BAYEUX.—"The district of Bayeux, occupied by a Saxon colony in the latest days of the old Roman Empire, occupied again by a Scandinavian colony as the result of its conquest by Rolf [or Rollo, the Northman], has retained to this day a character which distinguishes it from every other Romance-speaking portion of the Continent. The Saxons of Bayeux preserved

their name and their distinct existence under the Frankish dominion; we can hardly doubt that the Scandinavian settlers found some parts at least of the district still Teutonic, and that nearness of blood and speech exercised over them the same influence which the same causes exercised over the Scandinavian settlers in England. Danes and Saxons coalesced into one Teutonic people, and they retained their Teutonic language and character long after Rouen had become, in speech at least, no less French than Paris. With their old Teutonic speech, the second body of settlers seem to have largely retained their old Teutonic religion, and we shall presently find Bayeux the centre of a heathen and Danish party in the Duchy, in opposition to Rouen, the centre of the new speech and the new creed. The blood of the inhabitants of the Bessin must be composed of nearly the same elements, mingled in nearly the same proportions, as the blood of the inhabitants of the Danish districts of England."—E. A. Freeman, *Hist. of the Norman Conquest of England, ch.* 4.

SAXONY: The old Duchy.—"The great duchy of Saxony [as it existed under the Carolingian empire and after the separation of Germany from France] consisted of three main divisions, Westfalia, Engern or Angria, and Eastfalia. Thuringia to the south-east, and the Frisian lands to the north-west, may be looked on as in some sort appendages to the Saxon duchy. The duchy was also capable of any amount of extension towards the east, and the lands gradually won from the Wends on this side were all looked on as additions made to the Saxon territory. But the great Saxon duchy was broken up at the fall of Henry the Lion [A. D. 1191]. The archiepiscopal Electors of Köln received the title of Dukes of Westfalia and Engern. But in the greater part of those districts the grant remained merely nominal, though the ducal title, with a small actual Westfalian duchy, remained to the electorate till the end. From these lands the Saxon name may be looked on as having altogether passed away. The name of Saxony, as a geographical expression, clave to the Eastfalian remnant of the old duchy, and to Thuringia and the Slavonic conquests to the east. In the later division of Germany these lands formed the two circles of Upper and Lower Saxony; and it was within their limits that the various states arose which have kept on the Saxon name to our own time. From the descendants of Henry the Lion himself, and from the allodial lands which they kept, the Saxon name passed away, except so far as they became part of the Lower-Saxon circle. They held their place as princes of the Empire, no longer as Dukes of Saxony, but as Dukes of Brunswick, a house which gave Rome one Emperor and England a dynasty of kings. After some of the usual divisions, two Brunswick principalities finally took their place on the map, those of Lüneburg and Wolfenbüttel, the latter having the town of Brunswick for its capital. The Lüneburg duchy grew. Late in the seventeenth century it was raised to the electoral rank, and early in the next century it was finally enlarged by the acquisition of the bishoprics of Bremen and Verden. Thus was formed the Electorate, and afterwards Kingdom, of Hannover, while the simple ducal title remained with the Brunswick princes of the other line."—E. A. Freeman, *Hist. Geog. of Europe, ch.* 8, *sect.* 1.—See, also, GERMANY: A. D. 843–962.

A. D. 911-1024.—The Imperial House. See GERMANY: A. D. 911–936; 936–973; and 973–1122.

A. D. 1073-1075.—Revolt against Henry IV.—The Saxons were still unreconciled to the transfer of the imperial dignity from their own ducal family to the House of Franconia, when the third of the Franconian emperors, Henry IV., came to the throne while still a boy. His long minority encouraged them to a habit of independent feeling, while his rash and injudicious measures when he grew to manhood provoked their raging enmity. They were still a turbulent, wild people, and he undertook to force the yoke of the empire on their necks, by means of garrisoned fortresses and castles, distributed through their land. The garrisons were insolent, the people were not meek, and in 1073 a furious revolt broke out. "'All Saxony,' says a chronicler, 'revolted, as one man, from the king,' and marched, 80,000 strong, to the Hartzburg, a stately citadel near Goslar, which the king had built for a residence upon a commanding height. After useless negotiations, Henry made a narrow escape by flight. When he then summoned his princes around him, no one came; and here and there it began to be said that he must be entirely abandoned and another monarch chosen. In this extremity, the cities alone remained faithful to the emperor, who for some time lay sick almost to death in his loyal city of Worms." Henry's energy, and the great abilities which he possessed, enabled him to recover his command of resources and to bring a strong army into the field against the Saxons, in the early summer of 1075. They offered submission and he might have restored peace to his country in an honorable way; but his headstrong passions demanded revenge. "After a march of extraordinary rapidity, he fell suddenly upon the Saxons and their allies, the Thuringians, on the meadows of the Unstrutt, at Langensalza, near Hohenburg. His army drawn up in an order resembling that which Otto the Great had formed on the Lech [against the Hungarians], obtained, after a fierce hand-to-hand fight of nine hours, a bloody victory. When the Saxons finally yielded and fled, the battle became a massacre. . . . It is asserted that of the foot-soldiers, who composed the mass of the Saxon army of 60,000, hardly any escaped; though of the noblemen, who had swift horses, few were slain. But it was a battle of Germans with Germans, and on the very evening of the struggle, the lamentations over so many slain by kindred hands could not be suppressed in the emperor's own camp. Yet for the time the spirit of Saxon independence was crushed. Henry was really master of all Germany, and seemed to have established the imperial throne again." But little more than a year afterwards, Henry, under the ban of the great Pope Gregory VII., with whom he had quarrelled, was again deserted by his subjects. Again he recovered his footing and maintained a civil war until his own son deposed him, in 1105. The next year he died.—C. T. Lewis, *Hist. of Germany, bk.* 2, *ch.* 7, *sect.* 13–20.

ALSO IN: W. Menzel, *Hist. of Germany, ch.* 142.—See, also, GERMANY: A. D. 973–1122.

A. D. 1125-1152.—The origin of the electorate. See GERMANY: A. D. 1125–1272.

A. D. 1178-1183.—The dissolution of the old duchy.—In an account given elsewhere of the origin of the Guelf and Ghibelline parties and their names (see GUELFS AND GHIBELLINES), the circumstances under which Henry the Proud, in 1138, was stripped of the duchy of Saxony, and the duchy of Bavaria, have been briefly related. This Duke Henry the Proud died soon after that event, leaving a son who acquired the name of Henry the Lion. The Emperor Conrad, whose hostility to the father had been the cause of his ruin, now restored to the son, Henry the Lion, his duchy of Saxony, but required him to renounce the Bavarian duchy. But Conrad, dying in 1152, was succeeded on the imperial throne by his nephew, Frederick Barbarossa, who entertained a friendly feeling for the young Duke of Saxony, and who restored to him, in 1156, the whole of his father's forfeited possessions, Bavaria included. By his own warlike energies, Henry the Lion extended his dominions still further, making a conquest of the Obotrites, one of the tribes of heathen Slaves or Wends who occupied the Mecklenburg region on the Baltic. He was, now, the most powerful of the princes of the Germanic empire, and one of the most powerful in Europe. But he used his power haughtily and arbitrarily and raised up many enemies against himself. At length there arose a quarrel between the Emperor and Duke Henry, which the latter embittered by abruptly quitting the emperor's army, in Italy, with all his troops, at a time when (A. D. 1175) the latter was almost ruined by the desertion. From that moment Henry the Lion was marked, as his father had been, for ruin. Accusations were brought against him in the diet; he was repeatedly summoned to appear and meet them, and he obstinately refused to obey the summons. At length, A. D. 1178, he was formally declared to be a rebel to the state, and the "imperial ban" was solemnly pronounced against him. "This sentence placed Henry without the pale of the laws, and his person and his states were at the mercy of every one who had the power of injuring them. The archbishop of Cologne, his ancient enemy, had the ban promulgated throughout Saxony, and at his command Godfrey, Duke of Brabant; Philip, Count of Flanders; Otho, Count of Guelders; Thierry, Lord of Cleves; William of Juliers, with the Lords of Bonn Senef, Berg, and many others, levied forces, and joining the archbishop, entered Westphalia, which they overran and laid waste, before he was aware of their intentions." This was the beginning of a long struggle, in which Henry made a gallant resistance; but the odds were too heavily against him. His friends and supporters gradually fell away, his dominions were lost, one by one, and in 1183 he took refuge in England, at the court of Henry II., whose daughter Matilda he had married. After an exile of three years he was permitted to return to Germany and his alodial estates in Saxony were restored to him. The imperial fiefs were divided. The archbishop of Cologne received the greater part of Westphalia, and Angria. Bernard, Count of Anhalt, got the remainder of the old Saxon duchy, with its ducal title. When Henry the Lion died, in 1195, the alodial possessions that he had recovered were divided between his three sons.—Sir A. Halliday, *Annals of the House of Hanover, bk.* 4 (*v.* 1).—Fifty years afterwards these were converted into imperial fiefs and became the two duchies of the house of Brunswick, —Lüneburg and Wolfenbüttel, afterwards Hanover and Brunswick—the princes of which represented the old house of Saxony and inherited the name of Guelf.

A. D. 1180-1553.—The later Duchy and Electorate.—The House of Wettin.—Its Ernestine and Albertine lines, and their many branches.—"When Henry the Lion was deprived of the Duchy of Saxony in 1180, it [reduced to a small district around Lauenberg] was given to Bernhard, the youngest son of Albert the Bear, Elector of Brandenburg, and it continued with his descendants in the male line till 1422, when it was sold by the Emperor Sigismond to Frederick, surnamed the Warlike, Margrave of Misnia, descended in the female line from the Landgraves of Thuringen."—Sir A. Halliday, *Annals of the House of Hanover, v.* 1, *p.* 426.—This line has been known as the House of Wettin, taking that name from Dedo, count of Wettin, who was the first margrave of Misnia, or Meissen; being invested with the dignity in 1048. "The Wettin line of Saxon princes, the same that yet endures [1855], known by sight to every English creature (for the high individual, Prince Albert, is of it), had been lucky enough to combine in itself, by inheritance, by good management, chiefly by inheritance and mere force of survival, all the Three separate portions and divided dignities of that country: the Thüringen Landgraviate, the Meissen Markgraviate, and the ancient Duchy and Electorate of Saxony; and to become very great among the Princes of the German Empire. . . . Through the earlier portion of the 15th century, this Saxon House might fairly reckon itself the greatest in Germany, till Austria, till Brandenburg gradually rose to overshadow it. Law of primogeniture could never be accepted in that country; nothing but divisions, redivisions, coalescings, splittings, and never-ending readjustments and collisions were prevalent in consequence; to which cause, first of all, the loss of the race by Saxony may be ascribed." In 1464, Frederick II. was succeeded by his two sons, Ernest and Albert. These princes governed their country conjointly for upwards of 20 years, but then made a partition from which began the separation of the Ernestine and Albertine lines that continued ever afterwards in the House of Saxony. "Ernest, the elder of those two . . . boys, became Kurfürst (Elector); and got for inheritance, besides the 'inalienable properties' which lie round Wittenberg, . . . the better or Thuringian side of the Saxon country—that is, the Weimar, Gotha, Altenburg, &c. Principalities: —while the other youth, Albert, had to take the 'Osterland (Easternland), with part of Meissen,' what we may in general imagine to be (for no German Dryasdust will do you the kindness to say precisely) the eastern region of what is Saxony in our day. These Albertines, with an inferior territory, had, as their main towns, Leipzig and Dresden, a Residenz-Schloss (or sublime enough Ducal Palace) in each city, Leipzig as yet the grander and more common one. There, at Leipzig chiefly, I say, lived the august younger or Albertine Line. . . . As for Ernst,

the elder, he and his lived chiefly at Wittenberg, as I perceive; there or in the neighbourhood was their high Schloss; distinguished among palaces. But they had Weimar, they had Altenburg, Gotha, Coburg,—above all, they had the Wartburg, one of the most distinguished Strong Houses any Duke could live in, if he were of frugal and heroic turn. . . . Ernst's son was Frederick the Wise, successor in the Kur (Electorship) and paternal lands; which, as Frederick did not marry and there was only one other brother, were not further divided on this occasion. Frederick the Wise, born in 1463, was that ever-memorable Kurfürst who saved Luther from the Diet of Worms in 1521 [see PAPACY: A. D. 1521–1522]. . . . He died in 1525, and was succeeded by his brother, John the Steadfast. . . . He also was a wise and eminently Protestant man. He struggled very faithfully for the good Cause, during his term of sovereignty; died in 1532 (14 years before Luther), having held the Electorate only seven years. . . . His son was Johann Friedrich, the Magnanimous by epithet (der Grossmüthige), under whom the Line underwent sad destinies; lost the Electorship, lost much; and split itself after him into innumerable branches, who are all of a small type ever since." In the Albertine Line, Albert's eldest son, "successor in the eastern properties and residences, was Duke George of Saxony,—called 'of Saxony,' as all those Dukes, big and little, were and still are,—Herzog Georg von Sachsen: of whom, to make him memorable, it is enough to say that he was Luther's Duke George! Yes, this is he with whom Luther had such wrangling and jangling. . . . He was strong for the old religion, while his cousins went so valiantly ahead for the new. . . . George's brother, Henry, succeeded; lived only for two years; in which time all went to Protestantism in the eastern parts of Saxony, as in the western. This Henry's eldest son, and first successor, was Moritz, the 'Maurice' known in English Protestant books; who, in the Schmalkaldic League and War, played such a questionable game with his Protestant cousin, of the elder or Ernestine Line,—quite ousting said cousin, by superior jockeyship, and reducing his Line and him to the second rank ever since [see GERMANY: A. D. 1546–1552]. This cousin was Johann Friedrich the Magnanimous . . . whom we left above waiting for that catastrophe. . . . Duke Moritz got the Electorship transferred to himself; Electorship, with Wittenberg and the 'inalienable lands and dignities.' . . . Moritz kept his Electorship, and, by cunning jockeying, his Protestantism too; got his Albertine or junior Line pushed into the place of the Ernestine or first; in which dishonourably acquired position it continues to this day [1855]; performing ever since the chief part in Saxony, as Electors, and now as Kings of Saxony. . . . The Ernestine, or honourable Protestant line is ever since in a secondary, diminished, and as it were, disintegrated state, a Line broken small; nothing now but a series of small Dukes, Weimar, Gotha, Coburg, and the like, in the Thuringian region, who, on mere genealogical grounds, put Sachsen to their name: Sachsen-Coburg, Sachsen-Weimar, &c. [Anglicised, Saxe-Coburg, etc.]."—T. Carlyle, *The Prinzenraub* (*Essays, v.* 6).

SCALDIS, The.—The ancient name of the river Scheldt.

SCALDS, OR SKALDS, The.—"Before the introduction or general diffusion of writing, it is evident that a class of men whose sole occupation was to commit to memory and preserve the laws, usages, precedents, and details of all those civil affairs and rights, and to whose fidelity in relating former transactions implicit confidence could be given, must of necessity have existed in society — must have been in every locality. . . . This class [among the Scandinavian peoples of the North of Europe] were the Scalds — the men who were the living books, to be referred to in every case of law or property in which the past had to be applied to the present. Before the introduction of Christianity, and with Christianity the use of written documents, and the diffusion, by the church establishment, of writing in every locality, the scald must have been among the pagan landowners what the parish priest and his written record were in the older Christianised countries of Europe. . . . The scalds in these Christianised countries were merely a class of wandering troubadours, poets, story-tellers, minnesingers. . . . The scalds of the north disappeared at once when Christian priests were established through the country. They were superseded in their utility by men of education, who knew the art of writing; and the country had no feudal barons to maintain such a class for amusement only. We hear little of the scalds after the first half of the 12th century."—S. Laing, *The Heimskringla: Preliminary Dissertation, ch.* 1.—"At the dawn of historical times we find the skalds practising their art everywhere in the North. . . . The oldest Norwegian skalds, like 'Starkad' and 'Brage the Old,' are enveloped in mythic darkness, but already, in the time of Harald Fairhair (872–930), the song-smiths of the Scandinavian North appear as thoroughly historical personages. In Iceland the art of poetry was held in high honor, and it was cultivated not only by the professional skalds, but also by others when the occasion presented itself. . . . When the Icelander had arrived at the age of maturity, he longed to travel in foreign lands. As a skald he would then visit foreign kings and other noblemen, where he would receive a most hearty welcome. . . . These Icelandic skalds became a very significant factor in the literary development of the North during the greater part of the middle ages."—F. W. Horn, *Hist. of the Literature of the Scandinavian North, pt.* 1, *ch.* 1.

SCANDINAVIAN STATES.

Early history.—"Those who lean implicitly on the chief props supplied by the Old Norse literature for the early history and genealogy of the North lean on very unsafe supports. The fact is, we must treat these genealogies and these continuous histories as compilations made up from isolated and detached traditions — epics in which some individual or some battle was described, and in which the links and the connections between the pieces have been supplied according to the ingenuity of the compilers; in which the arrangement and chronology are to a large extent arbitrary; and in which it has been a great temptation to transfer the deeds of one hero to another of the same name. Under these circumstances what is a modern historian to do? In the first place he must take the contemporary chronicles — Frank, English, and Irish — as his supreme guides, and not allow their statements to be perverted by the false or delusive testimony of the sagas, and where the two are at issue, sacrifice the latter without scruple, while in those cases where we have no contemporary and independent evidence then to construct as best we can our story from the glimmers of light that have reached us."—H. H. Howorth, *Early Hist. of Sweden* (*Royal Hist. Soc., Transactions, v.* 9).

Their relationships in language and blood.—"Scandinavia is not a very convenient word. Norway and Sweden it suits; because, in Norway and Sweden, the geographical boundaries coincide with the phenomena of language and blood. But Denmark is not only divided from them by water, but is in actual contact with Germany. More than this, it is connected with

the Empire: Holstein being German and Imperial, Sleswick partly German though not Imperial. . . . Generically, a Scandinavian is a German. Of the great German stock there are two divisions — the Scandinavian or Norse, and the Teutonic or German Proper. Of the Germans Proper, the nearest congeners to the Scandinavians are the Frisians; and, after them, the Saxons. . . . At present the languages of Sweden and Denmark, though mutually intelligible, are treated as distinct: the real differences being exaggerated by differences of orthography, and by the use on the part of the Swedes of the ordinary Italian alphabet, whilst the Danes prefer the old German black-letter. The literary Norwegian is Danish rather than Swedish. Meanwhile, the old language, the mother-tongue, is the common property of all, and so is the old literature with its Edda and Sagas; though . . . the Norwegians are the chief heroes of it. The language in which it is embodied is preserved with but little alteration in Iceland; so that it may fairly be called Icelandic, though the Norwegians denominate it Old Norse [see NORMANS —NORTHMEN: A. D. 960–1100]. . . . The histories of the three countries are alike in their general character though different in detail. Denmark, when we have got away from the heroic age into the dawn of the true historical period, is definitely separated from Germany in the parts about the Eyder — perhaps by the river itself. It is Pagan and Anti-Imperial; the Danes being, in the eyes of the Carlovingians, little better than the hated Saxons. Nor is it ever an integral part of the Empire; though Danish and German alliances are common. They end in Holstein being Danish, and in its encroaching on Sleswick and largely influencing the kingdom in general. As being most in contact with the civilization of the South, Denmark encroaches on Sweden, and, for a long time, holds Skaane and other Swedish districts. Indeed, it is always a check upon the ambition of its northern neighbour. Before, then, that Sweden becomes one and indivisible, the Danes have to be ejected from its southern provinces. Norway, too, when dynastic alliances begin and when kingdoms become consolidated, is united with Denmark. . . . In the way of language the Scandinavians are Germans — the term being taken in its wider and more general sense. Whether the blood coincide with the language is another question; nor is it an easy one. The one point upon which most ethnologists agree, is the doctrine that, in Norway and Sweden (at least), or in the parts north of the Baltic, the Germans are by no means aboriginal; the real aborigines having been congeners of either the Laps or the Fins; who, at a time anterior to the German immigrations, covered the whole land from the North Cape to the Naze in Norway, and from Tornea to Ystadt in Sweden. Towards these aborigines the newer occupants comported themselves much as the Angles of England comported themselves towards the Britons. At the same time, in both Britain and Scandinavia the extent to which the two populations intermarried or kept separate is doubtful. It may be added that, in both countries, there are extreme opinions on each side of the question."—R. G. Latham, *The Nationalities of Europe, v. 2, ch. 37.*— See, also, GOTHS, ORIGIN OF THE.

8-9th Centuries. — Explorations, ravages and conquests of the Vikings. See NORMANS. — NORTHMEN.

8-11th Centuries.— Formation of the Three Kingdoms.—"At the end of the 8th century, . . . within the two Scandinavian peninsulas, the three Scandinavian nations were fast forming. A number of kindred tribes were settling down into the kingdoms of Denmark, Norway and Sweden, which, sometimes separate, sometimes united, have existed ever since. Of these three, Denmark, the only one which had a frontier towards the Empire, was naturally the first to play a part in general European history. In the course of the 10th century, under the half-mythical Gorm, and his successors Harold and Sven, the Danish kingdom itself, as distinguished from other lands held in aftertimes by its kings, reached nearly its full historical extent in the two peninsulas and the islands between them. Halland and Skane or Scania, it must always be remembered, are from the beginning at least as Danish as Zealand and Jutland. The Eider remained the frontier towards the Empire, save during part of the 10th and 11th centuries, when the Danish frontier withdrew to the Dannewerk, and the land between the two boundaries formed the Danish March of the Empire. Under Cnut the old frontier was restored. The name of Northmen, which the Franks used in a laxer way for the Scandinavian nations generally, was confined to the people of Norway. These were formed into a single kingdom under Harold Harfraga late in the 9th century. The Norwegian realm of that day stretched far beyond the bounds of the later Norway, having an indefinite extension over tributary Finnish tribes as far as the White Sea. The central part of the eastern side of the northern peninsula, between Denmark to the south and the Finnish nations to the north, was held by two Scandinavian settlements which grew into the Swedish kingdom. These were those of the Swedes strictly so called, and of the Geatas or Gauts. This last name has naturally been confounded with that of the Goths, and has given the title of 'King of the Goths' to the princes of Sweden. Gothland, east and west, lay on each side of Lake Wettern. Swithiod or Svealand, Sweden proper, lay on both sides of the great arm of the sea whose entrance is guarded by the modern capital. The union of Svealand and Gothland made up the kingdom of Sweden. Its early boundaries towards both Denmark and Norway were fluctuating. Wermeland, immediately to the north of Lake Wenern, and Jamteland farther to the north, were long a debatable land. At the beginning of the 12th century Wermeland passed finally to Sweden, and Jamteland for several ages to Norway. Bleking again, at the south-east corner of the Peninsula, was a debatable land between Sweden and Denmark which passed to Denmark. For a land thus bounded the natural course of extension by land lay to the north, along the west coast of the Gulf of Bothnia. In the course of the 11th century at the latest, Sweden began to spread itself in that direction over Helsingland. Sweden had thus a better opportunity than Denmark and Norway for extension of her own borders by land. Meanwhile Denmark and Norway, looking to the west, had their great time of Oceanic conquest and colonization in the 9th and 10th centuries."

—E. A. Freeman, *Historical Geog. of Europe, ch.* 11, *sect.* 1.—"Till about the year of Grace 860 there were no kings in Norway, nothing but numerous jarls, — essentially kinglets, — each presiding over a kind of republican or parliamentary little territory; generally striving each to be on some terms of human neighbourhood with those about him, but, in spite of 'Fylke Things' (Folk Things)— little parish parliaments — and small combinations of these, which had gradually formed themselves, often reduced to the unhappy state of quarrel with them. Harald Haarfagr was the first to put an end to this state of things, and become memorable and profitable to his country by uniting it under one head and making a kingdom of it; which it has continued to be ever since. His father, Halfdan the Black, had already begun this rough but salutary process, . . . but it was Harald the Fairhaired, his son, who conspicuously carried it on and completed it. Harald's birth-year, death-year, and chronology in general, are known only by inference and computation; but, by the latest reckoning, he died about the year 933 of our era, a man of 83. The business of conquest lasted Harald about twelve years (A. D. 860–872?), in which he subdued also the Vikings of the out-islands, Orkneys, Shetlands, Hebrides, and Man. Sixty more years were given him to consolidate and regulate what he had conquered, which he did with great judgment, industry, and success. His reign altogether is counted to have been of over 70 years. . . . These were the times of Norse colonization; proud Norsemen flying into other lands, to freer scenes,— to Iceland, to the Faröe Islands, which were hitherto quite vacant (tenanted only by some mournful hermit, Irish Christian fakir, or so); still more copiously to the Orkney and Shetland Isles, the Hebrides and other countries where Norse squatters and settlers already were. Settlement of Iceland, we say, settlement of the Faröe Islands, and, by far the notablest of all, settlement of Normandy by Rolf the Ganger (A. D. 876?)."— T. Carlyle, *The Early Kings of Norway, ch.* 1.

9th Century.—Introduction of Christianity. See CHRISTIANITY: 9–11TH CENTURIES.

A. D. 1018-1397.—The empire of Canute and its dissolution.— Disturbed state of the Three Kingdoms.—The Folkungas in Sweden. —Rise of Denmark.— The reign of Queen Margaret and the Union of Calmar.—"A Northern Empire . . . for a time seemed possible when Canute the Great arose. King by inheritance of England [see ENGLAND: A. D. 979–1016, and 1016–1042] and of Denmark, he was able by successful war to add almost the whole of Norway to his dominions. The definite incorporation of Sleswig under treaty with the Emperor Conrad, and the submission of the Wendish tribes, appeared to open for him a way on to the continent. . . . Had men with like capacity succeeded to his throne, the world might have beheld an Empire of the North as well as of the East and West. But the kingdoms of the great Danish monarch fell asunder on his death and his successors sink again into insignificance. Another century passes before a bright page illumines their obscure annals. The names of Waldemar the Great [1157–1182], of Canute VI. [1182–1202] and Waldemar the Victorious [1202–1241] his sons, are then found attracting the attention of Europe. Again their kingdom seemed about to raise itself to be a continental power. They sallied forth from their peninsula, they again conquered the Wends; the southern shores of the Baltic, even as far as Courland and Esthonia, were made to tremble at the Danish arms. . . . But the greatness was again but temporary. Waldemar the Victorious, surprised and made a prisoner in Germany, beheld his empire returning to its fragments. Regaining his liberty he tried to regain his power, but a disastrous battle at Bornhoved in 1227 gave a deathblow to his ambition. An alliance of the petty princes who feared his greatness prevailed against him, and Denmark relapsed again into decline. Many causes now contributed to the downfall of the kingdom. By the fatal policy of Waldemar it was divided among his sons. . . . While anarchy increased within the country, new enemies arose around it. The Norwegians in a war that lasted for long years harassed it. The necessities of Christopher obliged him to pledge Scania, Halland, and Bleking to Sweden. A formidable foe too was now appearing in the Hanseatic League [see HANSA TOWNS], whose rise had followed upon the fall of Waldemar's power. The rich cities of Lubeck and Hamburg had seized the opportunity to assert their freedom. . . . Harassed by foreign enemies and by strife with his own nobles, Christopher [the Second, who came to the throne in 1319] at last was driven from his kingdom. A count of Holstein, known as the Black Geert, became for fourteen years the virtual sovereign, and imposed upon the country his nephew, Waldemar III., the heir of the rebellious house of Sleswig, as a titular King. Dismembered and in anarchy, the country had sunk low, and it was not until the assassination of Black Geert, in 1340, that any hope appeared of its recovery." In Sweden the national history had its real beginning, perhaps, in the days of St. Eric, who reigned from 1155 to 1160. "In this reign the spread of Christianity became the spread of power. Eric . . . earned his title from his definite establishment of the new faith. . . . The remaining sovereigns of his line can hardly be said to have contributed much towards the advancement of their country, and it was reserved for a new dynasty to carry on the work of the earlier kings. A powerful family had risen near the throne, and, retaining the old tribal rank of Jarls, had filled almost the position of mayors of the palace. The death of Eric Ericson without children removed the last obstacle to their ambition. The infant son of Birger Jarl was elected to the vacant throne, and the transfer of the royal title to the family [known as the Folkungas] that had long held royal power seemed as natural to the Swedes as it had done earlier to the Franks. As regent for his child, Birger upheld and added to the greatness of his country; he became the conspicuous figure of the 13th century in the North; he is the founder of Stockholm, the conqueror of the Finns, the protector of the exiled princes of Russia, the mediator in differences between Norway and Denmark. His sceptred descendants however did not equal their unsceptred sire. The conquest of Finland was indeed completed by Torkel Knutson at the close of the 13th century, and shed some lustre upon the reign of King Birger, but the quarrels of succeeding princes among themselves disgraced and distracted the country." In Norway, "the conquests of Harold

Harfager had secured the crown to a long line of his descendants; but the strife of these descendants among themselves, and the contests which were provoked by the attempts of successive sovereigns, with imprudent zeal, to enforce the doctrines of Christianity upon unwilling subjects, distracted and weakened the kingdom. A prey to anarchy, it fell also a prey to its neighbours. In the 10th century it belonged for a time to Denmark; Sweden joined later in dismembering it; and Canute the Great was able to call himself its King. These were times indeed in which conquests and annexations were often more rapid than lasting, and a King of Norway soon reigned in his turn over Denmark. Yet there is no doubt that the Norwegians suffered more than they inflicted, and were from the first the weakest of the three nations. . . . Wars, foreign and domestic, that have now no interest, exhausted the country; the plague of 1348 deprived it of at least one half its population. Its decline had been marked, upon the extinction of its royal dynasty in 1319, by the election of Swedish princes to fill its throne; and after the reign of two stranger Kings it sank for ever from the list of independent kingdoms. Drifting through anarchy and discord the three kingdoms had sunk low. Denmark was first to raise herself from the abasement, and the reign of a fourth Waldemar not only restored her strength but gave her a pre-eminence which she retained until the days of Gustavus Adolphus. The new sovereign, a younger son of Christopher II., was raised to the throne in 1340, and no competitor, now that Black Geert was dead, appeared to dispute it with him." Waldemar gave up, on the one hand, his claims to Scania, Halland, and Bleking (which he afterwards reclaimed and repossessed), as well as the distant possessions in Esthonia, while he bought back Jutland and the Isles, on the other. "The isle of Gothland, and Wisby its rich capital, the centre of the Hanseatic trade within the Baltic, were plundered and annexed [1361], giving the title thenceforward of King of the Goths to the Danish monarchs. This success indeed was paid for by the bitter enmity of the Hansa, and by a war in which the pride of Denmark was humbled to the dust beneath the power of the combined cities. Copenhagen was pillaged [1362]; and peace was only made by a treaty [1363] which confirmed all former privileges to the conquerors, which gave them for fifteen years possession of the better part of Scania and its revenues, and which humbly promised that the election of all sovereigns of Denmark should thenceforth be submitted for their approval. Yet Waldemar has left behind him the reputation of a prudent and successful prince, and his policy prepared the way for the greatness of his successors. At his death in 1375 two daughters, on behalf of their children, became claimants for his throne. The youngest, Margaret, had married Hako, King of Norway, the son of a deposed King of Sweden [the last of the Folkungas, or Folkungers]; and the attractive prospect of a union between the two kingdoms, supported by her own prudent and conciliatory measures, secured the election of her son Olaf. As regent for her child, who soon by the death of his father became King of Norway as well as of Denmark, she showed the wisdom of a ruler, and won the affections of her subjects; and when the death of Olaf himself occurred in 1387 she was rewarded in both kingdoms by the formal possession of the sceptres which she had already shown herself well able to hold. Mistress in Denmark and in Norway, she prepared to add Sweden to her dominions. Since the banishment of the Folkungas, Albert Duke of Mecklenburg had reigned as King." But Sweden preferred Margaret, and she easily expelled Albert from the throne, defeating him and making him a prisoner, in 1389. A few years later, "her nephew, Eric, long since accepted in Denmark and in Norway as her successor, and titularly King, was now [1397] at a solemn meeting of the states at Calmar crowned Sovereign of the Three Kingdoms. At a later meeting the Union, since known as that of Calmar, was formally voted, and the great work of her life was achieved."—C. F. Johnstone, *Historical Abstracts, ch.* 1.

14-15th Centuries.—Power and influence of the Hanseatic League. See Hansa Towns.

A. D. 1397-1527.—Under the Union of Calmar until its dissolution.—The brutality of Christian II. and his overthrow.—Gustavus Vasa and his elevation to the throne of Sweden.—The introduction of the Reformation.— The most noteworthy articles of the Union of Calmar, by which Norway, Sweden and Denmark were united together, in 1397, under the Danish queen Margaret, were the following: "That the right of electing a sovereign should be exercised in common by the three kingdoms; that a son of the reigning king, if there were any, should be preferred; that each kingdom should be governed by its own laws; and that all should combine for the common defence. But this confederacy, which seemed calculated to promote the power and tranquility of Scandinavia, proved the source of much discontent and jealousy and of several bloody wars. Margaret was succeeded on her death in 1412 by Eric of Pomerania, the son of her niece. . . . Eric's reign was turbulent. In 1438 the Danes, and in the following year the Swedes, renounced their allegiance; and Eric fled to the island of Gothland, where he exercised piracy till his death. The Danes elected in Eric's stead Christopher of Bavaria, son of his sister Catharine; . . . but after Christopher's death in 1448 the union was dissolved. The Danes now elected for their king Count Christian of Oldenburg; while the Swedes chose Charles Knutson. But in the following year Charles was compelled to resign Norway to Denmark, and in 1457 he lost Sweden itself through an insurrection led by the Archbishop of Upsala. Christian I. of Denmark was chosen in his place and crowned at Upsala, June 19th; and in the following year all the councillors of the three kingdoms, assembled at Skara, recognised Christian's son John as his successor. Christian I. became a powerful monarch by inheriting Schleswic and Holstein from his uncle. He had, however, to contend for a long period with Charles Knutson for the throne of Sweden, and after Charles's death in 1470, with Sten Sture, of a noble family in Dalecarlia, to whom Charles, with the approbation of the Swedes, had left the administration of the kingdom. In October 1471 a battle was fought on the Brunkeberg, a height now enclosed in the city of Stockholm, in which the Danish King was defeated, though he

continued to hold the southern provinces of Sweden. Christian died in 1481 and was succeeded by his son John. The Swedes in 1483 acknowledged the supremacy of Denmark by renewing the Union of Calmar; yet . . . John could never firmly establish himself in that country. . . . King John of Denmark died in 1513. . . . It was during the reign of Christian II. [his son and successor] that Denmark first began to have any extensive connections with the rest of Europe. In the year of his accession, he allied himself with the Wendish, or north-eastern towns of the Hanseatic League, whose metropolis was Lübeck; and he subsequently formed alliances with Russia, France, England, and Scotland, with the view of obtaining their aid in his contemplated reduction of Sweden. . . . In 1517 Trolle [Archbishop of Upsala] had levied open war against the administrator, Sten Sture, in which Christian supported him with his fleet; but Sten Sture succeeded in capturing Trolle. . . . In the next year (1518) Christian again appeared near Stockholm with a fleet and army, in which were 2,000 French sent by Francis I. Christian was defeated by Sten Sture in a battle near Bränkirka. . . . The Archbishop of Upsala having proceeded to Rome to complain of Sten Sture, the Pope erected in Denmark an ecclesiastical tribunal, which deposed the administrator and his party, and laid all Sweden under an interdict. This proceeding, however, served to pave the way for the acceptance in Sweden of the Lutheran reformation; though it afforded Christian II. a pretence for getting up a sort of crusade against that country. . . . Early in 1520 . . . Sture was defeated and wounded in a battle fought on the ice of Lake Asunden, near Bogesund in West Gothland. . . . Sten Sture, in spite of his wound, hastened to the defence of Stockholm, but expired on the way in his sledge on Malar Lake, February 3rd 1520. The Swedes were defeated in a second battle near Upsala, after which a treaty was concluded to the effect that Christian should reign in Sweden, agreeably to the Union of Calmar, but on condition of granting an entire amnesty. Christian now proceeded to Stockholm, and in October was admitted into that city by Sture's widow, who held the command. Christian at first behaved in the most friendly manner . . . ; yet he had no sooner received the crown than he took the most inhuman vengeance on his confiding subjects. . . . The city was abandoned to be plundered by the soldiers like a place taken by storm. Orders were despatched to Finland to proceed in a similar manner; while the King's progress through the southern provinces was everywhere marked by the erection of gallowses. These cruelties . . . occasioned insurrections in all his dominions. That in Sweden was led by Gustavus Ericson, . . . a young man remarkable alike by his origin, connections, talent and courage; whose family, for what reason is unknown, afterwards assumed the name of Vasa, which was borne neither by himself nor by his forefathers." Gustavus, who had been a hostage in Christian's hands, had escaped from his captivity, in 1519, taking refuge at Lübeck. In May, 1520, he secretly entered Sweden, remaining in concealment. A few months later his father perished, among the victims of the Danish tyrant, and Gustavus fled to Dalecarlia, "a district noted for its love of freedom and hatred of the Danes. Here he worked in peasant's clothes, for daily wages, in hourly danger from his pursuers, from whom he had many narrow escapes. . . . The news of Christian's inhumanity procured Gustavus Vasa many followers; he was elected as their leader by a great assembly of the people at Mora, and found himself at the head of 5,000 men," out of whom he made good soldiers, although they were wretchedly armed. "In June, 1521, he invested Stockholm; but the siege, for want of proper artillery and engineering skill, was protracted two years. During this period his command was legally confirmed in a Herrendag, or assembly of the nobles, at Wadstena, August 24th 1521; the crown was proffered to him, which he declined, but accepted the office of Regent. The Danes were now by degrees almost entirely expelled from Sweden; and Christian II., so far from being able to relieve Stockholm, found himself in danger of losing the Danish crown," which he did, in fact, in 1523, through a revolution that placed on the throne his uncle, Duke Frederick of Holstein. "The Union of Calmar was now entirely dissolved. The Norwegians claimed to exercise the right of election like the Danes; and when Frederick called upon the Swedish States to recognise his title in conformity with the Union, they replied that it was their intention to elect Gustavus Ericson for their king; which was accordingly done at the Diet of Strengnäs, June 7th 1523. Three weeks after Stockholm surrendered to Gustavus." The dethroned Christian II. escaped to the Netherlands, where he found means to equip an expedition with which he invaded Norway, in 1531. It left him a prisoner in the hands of the Danes, who locked him up in the castle of Sonderburg until his death, which did not occur until 1559. "Meanwhile, in Sweden, Gustavus was consolidating his power, partly by moderation and mildness, partly by examples of necessary severity. He put himself at the head of the Reformation, as Frederick I. also did in Denmark. . . . Luther's doctrines had been first introduced into Sweden in 1519, by two brothers, Olaus and Lawrence Petri, who had studied under the great apostle of reform at Wittenberg. The Petris soon attracted the attention of Gustavus, who gave them his protection, and entered himself into correspondence with Luther. . . . As in other parts of Europe, the nobles were induced to join the movement from the prospect of sharing the spoils of the church; and in a great Diet at Westeräs in 1527, the Reformation was introduced."—T. H. Dyer, *Hist. of Modern Europe, bk.* 4, *ch.* 4 (*v.* 2).

(Sweden): A. D. 1523-1604.—The reigns of Gustavus Vasa and his sons.—Wars with Russia and Denmark.—The Baltic question.—Prince Sigismund elected king of Poland and his consequent loss of the Swedish crown.—Resulting hostilities.—"Gustavus Vasa, the founder of his dynasty, was not a very religious man. He had determined to make Sweden a Lutheran country for two main reasons: first, because he wanted the lands of the Church, both in order to enrich the crown and also to attach the nobles to his cause; secondly, because, as he

SCANDINAVIAN STATES, 1523–1604.

said, the 'priests were all unionists in Sweden'—that is, they all wished to maintain the union of the three Scandinavian kingdoms which he had broken, and they were, therefore, irreconcilably hostile to his dynasty. Three other great services were rendered to Sweden by Gustavus I.: (1) at the Diet of Westerås, in 1544, the hereditary character of the monarchy was definitely declared. This was a great victory over the nobles, who in nearly all the Northern and Eastern Kingdoms of Europe—and in Sweden itself at a later time—succeeded in erecting an oligarchy, which oppressed the peasants and crippled the activity of the State. (2) Again, by his consistent favouring of the middle classes, and his conclusion of commercial treaties with Russia, France, and the Netherlands, he became the founder of Swedish commerce, and dealt a serious blow at the Baltic supremacy of the Hanseatic League. (3) And lastly, he appears as the founder of that policy of territorial aggression (toward the South and East), which, however we may judge of its morality in this age of peace, was certainly looked upon then as the prime duty of all Kings, and which in the case of Sweden was the direct path toward the great part which she was destined to play in the 17th century. His first enemy was Russia, a recently consolidated State, already bordering on the half-Polish province of Livonia and the Swedish province of Finland; already extending her flanks to the Caucasus and the Don on the south and to the White Sea on the north. . . . The wars of Ivan the Terrible (1534–84) for Finland and Livonia were unsuccessful, and the chief interest which they possess for us is that in 1561, the year after the death of Gustavus I., his son Eric acquired for Sweden the province of Esthonia, which appears to have previously fluctuated between dependence on Denmark and on Russia. This was the first of the so-called 'Baltic provinces' of Sweden; herewith began the exclusion of Russia from the 'Dominium Maris Baltici.' But this possession brought Eric face to face with Poland, a country which was disputing with Russia the possession of Livonia. Poland, under the last of the great Jaghellon line, was already displaying the fatal tendency to anarchy which at last devoured her. . . . Poland turned for help to the King of Denmark, in whom Eric, with keen insight, recognised the most dangerous foe for Sweden. In 1563 Eric concluded peace with Russia, and the nations of the North began to assume their natural relation to each other. The Baltic question rapidly became an European one. English sympathies were with Sweden and Russia; Spain and the Emperor as naturally took the other side, and suggested to the King of Denmark, Frederick II. (1559–1588), that he should ask for the hand of Mary Stuart; to counteract which King Eric indulged in an elaborate flirtation with Elizabeth. The powers of North Germany took sides in the war (1565), but the war itself produced but little result. The able Eric displayed symptoms of insanity and was extremely unpopular with the Swedish nobles, and Denmark was as yet too powerful an enemy for Sweden to overthrow. In 1567 Eric was deposed by a revolution, the fruit of which was reaped by his brother John. When the great Gustavus I. was dying, and could no longer speak, he made a sign that he wished to write, and wrote half a sentence of warning to his people: 'Rather die a hundred times than abandon the Gospel. . . .' Then his hand failed, and he dropped back dead. He was not, I have said, a particularly religious man, but he marked out the true path for Sweden. Now in 1567 a certain reaction set in: many of the nobles, who had felt the yoke of Gustavus heavy and of Eric heavier, seemed ready to drift back to Catholicism, and John's reign (1567–1590) was one of reaction in many ways. John never openly went over to Catholicism, but he cast off all the Lutheranism that he dared to cast off. He made peace with Denmark and war with Russia; thereby he allowed the former country to develop her trade and foreign relations enormously and rapidly, and made the task of his successors doubly hard. Above all, he originated, by his marriage with Catherine Jaghellon, the disastrous connexion with Poland. That unhappy country, 'the fatal byword for all years to come' of genuine anarchy, had just closed its period of prosperity. The last of the Jaghellon Kings died in 1572, and the elected King, Stephen Bathori, died in 1586. Ivan the Terrible sought the crown of Poland. . . . John of Sweden, on the other hand, saw an opening for the House of Vasa. His son Sigismund was, by dint of bribes and intrigue, elected King of Poland. But he had to become a Catholic. . . . The union of Sweden with Poland, which would necessarily follow, if Sigismund succeeded his father on the Swedish throne, would be almost certainly a Catholic union. . . . Sweden was still a free country, in the sense of being governed in a parliamentary way with the consent of the four estates, Nobles, Clergy, Citizens, and Peasants. Whatever the Riddarhus might think upon the subject, the three non-noble estates were red-hot Protestants and would have no Catholic king. Even the nobles were only induced to consent to Sigismund becoming King of Poland without forfeiting his right to succeed in Sweden, by the grant of extravagant privileges, practically so great, had they been observed, as to emasculate the Vasa monarchy. Luckily the people had a deliverer at hand. Charles, Duke of Sudermania, the youngest of the sons of Gustavus I., lived wholly in the best traditions of his father's policy. He might be relied upon to head an insurrection, if necessary. Even before John's death in 1590 murmurs began to be heard that he had been an usurper—was his son necessarily the heir? These murmurs increased, when in 1593, after waiting three years, Sigismund came home to claim his kingdom, with a present of 20,000 crowns from the Pope in his pocket, 'to defray the cost of the restoration of Catholicism in Sweden.' Duke Charles had already prepared his plans when the King arrived; there seems little doubt that he was playing a game, and for the crown. We are not concerned with his motives, it is sufficient to know that they corresponded with the interests of his country. In 1593, just before Sigismund had landed, Charles had been chosen Regent and President of the Council of State. . . . When Sigismund went back to Poland at the end of the year 1594, he could not prevent Charles being chosen to administer the kingdom in his absence, and Diet after Diet subsequently confirmed the power of the Regent. The peasants of Dalecarlia, the great province of the centre, which had first

come forward to the support of Gustavus I. in 1520, sent up a petition to the effect that there ought to be only one king in Sweden, and that Sigismund had forfeited the crown. Charles himself had been unwilling to lead a revolution, until it became apparent that Sigismund was massing troops and raising money in Poland for an attack upon his native land. In 1597 the civil war may be said to have begun; in the following year Sigismund landed (with only 5,000 Polish troops) and was utterly defeated near Linköping (on September 25, 1598). On the next day a treaty was concluded by which Sigismund was acknowledged as King, but promised to send away his foreign troops and maintain Protestantism. It was obviously a mere effort to gain time, and in the following year on failing to keep the condition, which he never had the remotest intention of keeping, he was formally deposed (July, 1599). The contest, however, was by no means over, and it led to that perpetual hostility between Sweden and Poland which played such an important part in the history of Northern Europe in the 17th century. . . . In 1604 Charles was solemnly crowned King; that was the second birthday of the Vasa monarchy; the crown was entailed upon his eldest son, Gustavus Adolphus, and his descendants, being Protestants, and the descendants of Sigismund were forever excluded. 'Every prince who should deviate from the Confession of Augsburg should ipso facto lose the crown. Anyone who should attempt to effect any change of religion should be declared an enemy and a traitor. Sweden should never be united with another kingdom under one crown; the King must live in Sweden.'"—C. R. L. Fletcher, *Gustavus Adolphus, introd.*

(Denmark and Norway): A. D. 1559.—Accession of Frederick II.

(Denmark and Norway): A. D. 1588.—Accession of Christian IV.

(Sweden): A. D. 1611—Accession of Gustavus Adolphus.

(Sweden): A. D. 1611-1629.—The Danish, Russian and Polish wars of Gustavus Adolphus.— On the death of Charles in 1611 his son, Gustavus Adolphus, did not immediately assume the title of king. "Sweden remained without a sovereign for two months; for, according to the will of the deceased king, the queen and his nephew (Duke John), with six councillors of state, were to rule till the wishes of the people could be made known in the customary manner. After an interregnum of two months, the Diet opened at Nyköping. . . . Duke John was the son of Sigismund, King of Poland, had been brought up in Sweden, and might be considered as having some just claim to the throne. The queen-mother and Duke John laid down the tutelage and the regency. . . . Nine days later the young king, in the presence of the representatives of the estates of Sweden, received the reins of government. . . . He was then in the first month of his 18th year. He took charge of the kingdom when it was in a critical condition. Since the death of Gustavus Vasa, his grandfather, a period of more than 50 years, Sweden had not enjoyed a single year of peace. In that long space of time, there had been constant dissensions and violence. . . . Sweden was much constrained and embarrassed by her boundaries, and by the jealousies and hostile feelings of her neighbours on the north and the south. Denmark and Norway were united in a kind of dual government under the same king; and both alike were opposed to the growth of Swedish power, and were in continual dispute with her in respect to territory, as well as to the naval and commercial uses of the adjacent seas. Those provinces in the south which are now the most productive and valuable of Sweden, then belonged to Denmark, or were in dispute between the two countries. On the east, Russia and Poland embarrassed and threatened her." During the first year of his reign Gustavus devoted his energies to the war with Denmark. He fought at a disadvantage. His resources were unequal to those of the Danes. His capital, Stockholm, was once attacked by a Danish fleet and in serious peril. But he secured an advantageous peace in the spring of 1613. "Sweden renounced some of its conquests and pretensions, and the Danes gave up to Sweden the city of Calmar on the Baltic, and at the end of six years were to surrender to Sweden its city of Elfsborg on the North Sea; the latter agreeing to pay to the Danes 1,000,000 thalers for the surrender. . . . At the death of Charles IX., and the ascension of Gustavus to the throne, Sweden was in a state of war with Russia, and was so to continue for several years; though hostilities were not all the time prosecuted with vigor, and were some of the time practically suspended. . . . The Swedes held possession of a large area of what is now Russian territory, as well as important towns and fortresses. The extensive country of Finland, which makes to-day so important a province of Russia, had been united with Sweden nearly five centuries, as it continued to be nearly two hundred years longer. But towns and territory, also a long distance within the lines of the Russian population, were then in the power of the Swedish forces. The troubles and dissensions relative to the succession, and extreme dislike to the Poles, had caused a numerous party to seek a Swedish prince for its sovereign, and to this end had sent an embassy to Stockholm near the date of the death of Charles IX. Finding that the young Gustavus had acceded to the crown of his father, this Russian party desired to secure for the Russian throne Charles Philip, a younger brother of Gustavus. The Swedish king did not show eagerness to bring this plan to success; but, the war being terminated with Denmark, he was resolved to draw what advantage he could from the weakened condition of Russia, to the advancement and security of the interests of Sweden. In July, 1613, the Russians chose for czar Michael Romanoff, then sixteen years of age. . . . Gustavus proceeded to push military operations with as much vigor as possible. . . . For four years more the war between these two countries continued; . . . the advantages being generally on the side of the Swedes, though they were not always successful in important sieges." Finally, through the mediation of English agents, terms of peace were agreed upon. "The treaty was signed February, 1617. Russia yielded to Sweden a large breadth of territory, shutting herself out from the Baltic; the land where St.

Petersburg now stands becoming Swedish territory. . . . The next important work in hand was to deal with Poland. . . . At the death of Charles IX. an armistice had been signed, which was to continue until July, 1612. This was thrice extended, the last time to January, 1616. The latter date had not been reached when the Polish partisans began to intrigue actively in Sweden, and those Swedes who still adhered to the religion and the dynastic rights of Sigismund could not be otherwise than secretly or openly stirred. Sigismund was not only supported by the power of Poland, and by his strong show of legal title to the Swedish crown, but there were strong influences on his side in European high political and religious quarters. He was united to the house of Hapsburg by the bonds of relationship as well as of theology. Philip III. of Spain, and he who afterwards became Ferdinand II. of Austria, were his brothers-in-law. . . . Sigismund came then to the resolution to make war for the possession of Sweden. He was promised enrolment of troops in Germany, the Spaniards had engaged to arm a fleet in his support, and the estates of Poland were to furnish their quota. . . . Efforts were made to stir up revolt against Gustavus in his own kingdom," and he promptly declared war. "During the year 1617 hostilities were prosecuted on both sides with much vigor, and loss of life. Towns and strong positions were taken, and invasions and sudden attacks were made on both sides; the advantages being generally with the Swedes, though not decisive. During the winter of 1618 the Poles invaded Livonia and Esthonia, carrying pillage and fire in their march, and then retiring." Gustavus would not allow his generals to retaliate. "'We wish not,' he said, 'to war against the peasant, whom we had rather protect than ruin.'" In 1618 there was an armistice, with peace negotiations which failed, and the war began anew. In August, 1621, Gustavus laid siege to Riga with a strong fleet and army, and met with an obstinate resistance; but the place was surrendered to him at the end of nearly six weeks. Again the belligerents agreed to an armistice, and "the year 1624 is declared by the Swedish historians to have been the only one in which Gustavus Adolphus was able to devote all his labors and cares to the interior administration of his country. In the following year the war was renewed. The third campaign of the Swedish king against Poland was terminated by the completion of the conquest of Livonia; and the possession of Courland assured to him Riga, the object of his special care." The decisive battle of the campaign was fought at Wallhof, January 7, 1626. The king of Sweden then "resolved to transport the theatre of war from the banks of the Duna to those of the Vistula, to attack Poland at the heart, and approach Germany. Here commences that part of the war of Poland which is called also the war of Prussia. . . . He [Gustavus] realized the need of a port in Eastern Prussia; and the elector of Brandenburg, his brother-in-law, was invested with that duchy under the suzerainty of Poland. Gustavus did not allow these considerations to arrest his course. . . . June 26 the king arrived before Pillau, and possessed himself of that city without much resistance, the garrison being small. . . . Braunsberg capitulated June 30. July 1, Flanenberg surrendered, and Elbing on the 6th,

which was followed by Marienberg on the 8th; the last a well-fortified city. Many towns of less importance were likewise soon captured. Gustavus rapidly pushed aside all resistance, and soon reached the frontiers of Pomerania." In the engagements of the campaign of 1627 the king was twice wounded — once by a musket-ball in the groin, and the second time by a ball that entered near the neck and lodged at the upper corner of the right shoulder-blade. In June, 1629, "there was a heated engagement at Stum, in which Gustavus ran great danger, his force being inferior to the enemy." In September of that year "an armistice was concluded for six years between the belligerent kingdoms. Five cities which had been conquered by Swedish arms were given up to Poland, and three others delivered to the elector of Brandenburg, to be held during the armistice. Gustavus was to continue to occupy Pillau and three other towns of some importance. Liberty of conscience was to be accorded to Protestants and Catholics, and commerce was declared free between the two nations."—J. L. Stevens, *Hist. of Gustavus Adolphus, ch.* 3 *and* 7.

D. 1644-1697.—Reign and abdication of Queen Christina.—Wars of Charles X. and Charles XI. with Poland and Denmark and in Germany.—Establishment of absolutism.—"Christina, the only child and successor of Gustavus Adolphus, had been brought up by her aunt, Katerina, the Princess Palatine, until the death of the latter in 1639, and in the year 1644, when she reached the age of eighteen, the regency was absolved, and she began to rule in her own name. She had inherited much of her father's talent, and was perhaps the most learned and accomplished woman of her time. She had

SCANDINAVIAN STATES, 1644–1697.

received the education of a man. . . . She had great taste for the fine arts and for the pursuits of science; but while she encouraged scientific men at her court, she also spent money too recklessly in rewarding artistic merit of all kinds. . . . As a dangerous drawback to her many splendid qualities, she had all the waywardness, caprice, restlessness of mind, fickleness and love of display for which her beautiful mother, Maria Eleanora of Brandenburg, had been noted. She lavished crown lands and the money of the state upon favourites. . . . In the meanwhile the national Estates had been split up into parties, the aristocrats being led by Axel Oxenstjerna, and the democrats, with whom the queen sided, by Johan Skytte. The clergy struggled to maintain their independence under the oppressive patronage of the nobles, and the peasants agitated to recover some of the power which the great Gustavus Vasa had granted them, but which his successors had by degrees taken from them. The kingdom was in a ferment, and a civil war seemed to be unavoidable. The council urged upon the queen to marry, and her cousin, Karl Gustaf of the Palatinate, entreated her to fulfil the promise which she had given him in earlier years of choosing him for her husband. At length . . . she proposed him for her successor. . . . After much opposition, Karl Gustaf was declared successor to the throne in the event of the queen having no children of her own. . . . The few years of Christina's reign after her solemn coronation were disquieted by continued dissensions in the diet, attempts at revolts, and by a general distress, which was greatly increased by her profuse wastefulness and her reckless squandering of the property of the crown. As early as the year 1648 she had conceived the idea of abdicating, but, being hindered by her old friends and councillors, she deferred carrying out her wishes till 1654." In that year the abdication was formally accomplished, and she left the country at once, travelling through Europe. In 1655 she renounced Protestantism and entered the Roman Catholic Church. "At the death [1660] of her cousin and successor, Karl X. Gustaf, as he was called by the Swedes, and who is known to us as Charles X., she returned to Sweden and claimed the crown for herself; but neither then, nor in 1667, when she renewed her pretensions, would the council encourage her hopes, and, after a final attempt to gain the vacant throne of Poland in 1668, she gave up all schemes of ever reigning again, and retired to Rome, where she died in 1689 at the age of sixty-three. . . . The short reign of Charles X., from 1655 to 1660, was a time of great disorder and unquiet in Sweden. . . . He resolved to engage the people in active war. . . . The ill-timed demand of the Polish king, Johan Kasimir, to be proclaimed the true heir to Christina's throne, drew the first attack upon Poland. Charles X. was born to be a soldier and a conqueror, and the success and rapidity with which he overran all Poland, and crushed the Polish army in a three days' engagement at Warsaw in 1656, showed that he was a worthy pupil and successor of his uncle, the great Gustavus Adolphus. But it was easier for him to make conquests than to keep them, and when the Russians, in their jealousy of the increasing power of Sweden, took part in the war, and began to attack Livonia and Esthonia, while an imperial army advanced into Poland to assist the Poles, who, infuriated at the excesses of the Swedish soldiers, had risen en masse against them, Charles saw the expediency of retreating; and, leaving only a few detachments of troops to watch his enemies, he turned upon Denmark. This war, which was closed by the peace signed at Roeskilde in 1658, enriched Sweden at the expense of Denmark, and gave to the former the old provinces of Skaania, Halland and Bleking, by which the Swedish monarchy obtained natural and well-defined boundaries. The success of this first Danish war, in which Denmark for a time lay crushed under the power of the Swedish king, emboldened him to renew his attacks, and between 1658 and 1660 Charles X. made war five times on the Danish monarch; more than once laid siege to Copenhagen; and, under his able captain, Wrangel, nearly destroyed the Danish fleet. At the close of 1659, when it seemed as if Denmark must be wholly subjugated by Sweden, the English and Dutch, alarmed at the ambition of the Swedish king, sent an allied fleet into the Cattegat to operate with the Danes." Charles, checked in his operations, was preparing to carry the war into Norway, when he died suddenly, in the winter of 1660, and peace was made by the treaty of Oliva. "By the early death of Charles X., Sweden was again brought under the rule of a regency, for his son and successor, Charles XI., was only four years old when he became king. . . . Every department of the government was left to suffer from mismanagement, the army and navy were neglected, the defences of the frontiers fell into decay, and the public servants were unable to procure their pay. To relieve the great want of money, the regency accepted subsidies, or payments of money from foreign states to maintain peace towards them, and hired out troops to serve in other countries. In this state of things the young king grew up without receiving any very careful education. . . . Charles was declared of age in his 18th year. . . . He was not left long in the enjoyment of mere exercises of amusement, for in 1674 Louis XIV. of France, in conformity with the treaty which the regents had concluded with him, called upon the young Swedish king to help him in the war which he was carrying on against the German princes [see NETHERLANDS: A. D. 1674–1678]. Charles sent an army into Germany, which advanced without opposition into the heart of Brandenburg, but before these forces could form a junction with the French troops then encamped in the Rhinelands, the Elector came upon them unawares at Fehrbellin [June 18, 1675] and defeated them. The losses of the Swedes on this occasion were not great, but the result of their defeat was to give encouragement to the old rivals of Sweden; and early in 1675 both Holland and Denmark declared war against the Swedish king, who, finding that he had been left by the regency almost without army, navy, or money, resolved for the future to take the management of public affairs entirely into his own hands." When he "began the war by a sea engagement with the enemy off Oeland, he found that his ships of war had suffered as much as the land-defences from the long-continued neglect of his regents. The Danes, under their great admiral, Niels Juel, and supported by a Dutch squadron, beat the Swedish fleet, many of whose ships were burnt or sunk. This defeat was atoned for by a victory on land,

gained by Charles himself in 1676, over the Danes on the snow-covered hills around the town of Lund. Success was not won without heavy cost, for after a most sanguinary fight, continued from daybreak till night, King Charles, although master of the field, found that more than half his men had been killed. The Danes, who had suffered fully as much, were forced to retreat, leaving Lund in the hands of the Swedes; and although they several times repeated the attempt, they failed in recovering the province of Skaania, which was the great object of their ambition. In Germany the fortune of war did not favor the Swedes, although they fought gallantly under their general, Otto Königsmark; [Stettin was surrendered after a long siege in 1677, and Stralsund in 1678] and Charles XI. was glad to enter into negotiations for taking part in the general peace which France was urging upon all the leading powers of Europe, and which was signed at the palace of St. Germains, in 1679, by the representatives of the respective princes. Sweden recovered the whole of Pomerania, which had been occupied during the war by Austria and Brandenburg, and all Swedish and Danish conquests were mutually renounced. . . . At the close of this war Charles XI. began in good earnest to put his kingdom in order." By sternly reclaiming crown-lands which had been wantonly alienated by former rulers, and by compelling other restitutions, Charles broke the power of the nobles, and so humbled the National Estates that they "proclaimed him, in a diet held in 1693, to be an absolute sovereign king, 'who had the power and right to rule his kingdom as he pleased.'" He attained an absolutism, in fact, which was practically unlimited. He died in 1697, leaving three children, the eldest of whom, who succeeded him, was the extraordinary Charles XII.—E. C. (Sweden): A. D. 1697-1700.—The conspiracy of three sovereigns against Charles XII. and how he met it.—First campaigns of the young king, in Denmark and Russia.—"Charles XII, at his accession to the throne, found himself the absolute and undisturbed master, not only of Sweden and Finland, but also of Livonia, Carelia, Ingria, Wismar, Viborg, the Islands of Rügen and Oesel, and the finest part of Pomerania, together with the duchy of Bremen and Verden,—all of them the conquests of his ancestors. . . . The beginning of the king's reign gave no very favorable idea of his character. It was imagined that he had been more ambitious of obtaining the supreme power than worthy of possessing it. True it is, he had no dangerous passion; but his conduct discovered nothing but the sallies of youth and the freaks of obstinacy. He seemed to be equally proud and lazy. The ambassadors who resided at his court took him even for a person of mean capacity, and represented him as such to their respective masters. The Swedes entertained the same opinion of him: nobody knew his real character: he did not even know it himself, until the storm that suddenly arose in the North gave him an opportunity of displaying his great talents, which had hitherto lain concealed. Three powerful princes, taking the advantage of his youth, conspired his ruin almost at the same time. The first was his own cousin, Frederick IV, king of Denmark: the second, Augustus, elector of Saxony and King of Poland; Peter the Great, czar of Muscovy, was the third, and most dangerous. . . . The founder of the Russian empire was ambitious of being a conqueror. . . . Besides, he wanted a port on the east side of the Baltic, to facilitate the execution of all his schemes. He wanted the province of Ingria, which lies to the northeast of Livonia. The Swedes were in possession of it, and from them he resolved to take it by force. His predecessors had had claims upon Ingria, Esthonia, and Livonia; and the present seemed a favorable opportunity for reviving these claims, which had lain buried for a hundred years, and had been cancelled by the sanction of treaties. He therefore made a league with the King of Poland, to wrest from young Charles XII all the territories that are bounded by the Gulf of Finland, the Baltic Sea, Poland, and Muscovy. The news of these preparations struck the Swedes with consternation, and alarmed the council." But the effect on the young King was instantly and strangely sobering. He assumed the responsibilities of the situation at once, and took into his own hands the preparations for war. From that moment "he entered on a new course of life, from which he never afterwards deviated in one single instance. Full of the idea of Alexander and Cæsar, he proposed to imitate those two conquerors in every thing but their vices. No longer did he indulge himself in magnificence, sports, and recreations: he reduced his table to the most rigid frugality. He had formerly been fond of gayety and dress; but from that time he was never clad otherwise than as a common soldier. He was supposed to have entertained a passion for a lady of his court: whether there was any foundation for this supposition does not appear; certain it is, he ever

after renounced all commerce with women, not only for fear of being governed by them, but likewise to set an example of continence to his soldiers. . . . He likewise determined to abstain from wine during the rest of his life. . . . He began by assuring the Duke of Holstein, his brother-in-law, of a speedy assistance. Eight thousand men were immediately sent into Pomerania, a province bordering upon Holstein, in order to enable the duke to make head against the Danes. The duke indeed had need of them. His dominions were already laid waste, the castle of Gottorp taken, and the city of Tönningen pressed by an obstinate siege, to which the King of Denmark had come in person. . . . This spark began to throw the empire into a flame. On the one side, the Saxon troops of the King of Poland, those of Brandenburg Wolfenbüttel, and Hesse Cassel, advanced to join the Danes. On the other, the King of Sweden's 8,000 men, the troops of Hanover and Zell, and three Dutch regiments, came to the assistance of the duke. While the little country of Holstein was thus the theatre of war, two squadrons, the one from England and the other from Holland, appeared in the Baltic. . . . They joined the young King of Sweden, who seemed to be in danger of being crushed. . . . Charles set out for his first campaign on the 8th day of May, new style, in the year 1700, and left Stockholm, whither he never returned. . . . His fleet consisted of three-and-forty vessels. . . . He joined the squadrons of the allies," and made a descent upon Copenhagen. The city surrendered to escape bombardment, and in less than six weeks Charles had extorted from the Danish King a treaty of peace, negotiated at Travendahl, which indemnified the Duke of Holstein for all the expenses of the war and delivered him from oppression. For himself, Charles asked nothing. "Exactly at the same time, the King of Poland invested Riga, the capital of Livonia; and the czar was advancing on the east at the head of nearly 100,000 men." Riga was defended with great skill and determination, and Augustus was easily persuaded to abandon the siege on the remonstrance of the Dutch, who had much merchandise in the town. "The only thing that Charles had now to do towards the finishing of his first campaign, was to march against his rival in glory, Peter Alexiovitch." Peter had appeared before Narva on the 1st of October, at the head of 80,000 men, mostly undisciplined barbarians, "some armed with arrows, and others with clubs. Few of them had guns; none of them had ever seen a regular siege; and there was not one good cannoneer in the whole army. . . . Narva was almost without fortifications: Baron Horn, who commanded there, had not 1,000 regular troops; and yet this immense army could not reduce it in six weeks. It was now the 15th of November, when the czar learned that the King of Sweden had crossed the sea with 200 transports, and was advancing to the relief of Narva. The Swedes were not above 20,000 strong." But the czar was not confident. He had another army marching to his support, and he left the camp at Narva to hasten its movements. Charles' motions were too quick for him. He reached Narva on the 30th of November, after a forced march, with a vanguard of only 8,000 men, and at once, without waiting for the remainder of his army to come up, he stormed the Russian intrenchments. "The Swedes advanced with fixed bayonets, having a furious shower of snow on their backs, which drove full in the face of the enemy." The victory was complete. "The Swedes had not lost above 600 men. Eight thousand Muscovites had been killed in their intrenchments; many were drowned; many had crossed the river," and 30,000 who held a part of the camp at nightfall, surrendered next morning. When czar Peter, who was pressing the march of his 40,000 men, received news of the disaster at Narva, he turned homeward, and set himself seriously to the work of drilling and disciplining his troops. "The Swedes," he said phlegmatically, "will teach us to beat them."—Voltaire, *Hist. of Charles XII., King of Sweden, bk.* 1–2.

(Denmark and Norway): A. D. 1699.—Accession of Frederick IV.

(Sweden): A. D. 1701-1707.—Invasion and subjugation of Poland and Saxony by Charles XII.—Deposition of Augustus from the Polish throne.—Charles at the summit of his career.—"Whilst Peter, abandoning all the provinces he had invaded, retreated to his own dominions, and employed himself in training his undisciplined serfs, Charles prepared to take the field against his only remaining adversary, the King of Poland. Leaving Narva, where he passed the winter, he entered Livonia, and appeared in the neighbourhood of Riga, the very place which the Poles and Saxons had in vain besieged. Dreading the storm that now approached, Augustus had entered into a closer alliance with the czar; and at an interview which took place at Birsen, a small town in Lithuania, it was agreed that each should furnish the other with a body of 50,000 mercenaries, to be paid by Russia. . . . The Saxon army, having failed in their attempt on Riga, endeavoured to prevent the Swedes from crossing the Dwina; but the passage was effected under cover of a thick cloud of smoke from the burning of wet straw, and by means of large boats with high wooden parapets along the sides, to protect the soldiers from the fire of the enemy, who were driven from their intrenchments with the loss of 2,000 killed and 1,500 prisoners. Charles immediately advanced to Mittau, the capital of Courland, the garrison of which, with all the other towns and forts in the duchy, surrendered at discretion. He next passed into Lithuania, conquering wherever he came, and driving 20,000 Russians before him with the utmost precipitation. On reaching Birsen, it gave him no little satisfaction, as he himself confessed, to enter in triumph the very town where, only a few months before, Augustus and the czar had plotted his destruction. It was here that he formed the daring project of dethroning the King of Poland by means of his own subjects, whose notions of liberty could not tolerate the measures of a despotic government. . . . The fate of Augustus, already desperate, was here consummated by the treachery of the primate Radziewiski, who caused it to be immediately notified to all the palatines, that no alternative remained but to submit to the will of the conqueror. The deserted monarch resolved to defend his crown by force of arms; the two kings met near Clissau (July 13, 1702), where after a bloody battle fortune again declared for the Swedes. Charles halted not a moment on the field of victory, but marched rapidly to Cracow

in pursuit of his antagonist. That city was taken without firing a shot, and taxed with a contribution of 100,000 rix-dollars. The fugitive prince obtained an unexpected respite of six weeks, his indefatigable rival having had his thigh-bone fractured by an accidental fall from his horse. The interval was spent in hostile preparations, but the recovery of Charles overturned all the schemes of his enemies, and the decisive battle of Pultusk (May 1, 1703) completed the humiliation of the unfortunate Augustus. At the instigation of the faithless cardinal, the diet at Warsaw declared (February 14, 1704) that the Elector of Saxony was incapable of wearing the crown, which was soon after bestowed on Stanislaus Leczinski, the young palatine of Posnania. Count Piper strongly urged his royal master to assume the sovereignty himself. . . . But the splendours of a diadem had few charms in the eyes of a conqueror who confessed that he felt much more pleasure in bestowing thrones upon others than in winning them for himself. Having thus succeeded in his favourite project, Charles resumed his march to complete the entire conquest of the kingdom. Every where had fortune crowned the bold expeditions of this adventurous prince. Whilst his generals and armies were pursuing their career from province to province, he had himself opened a passage for his victorious troops into Saxony and the imperial dominions. His ships, now masters of the Baltic, were employed in transporting to Sweden the prisoners taken in the wars. Denmark, bound up by the treaty of Travendhal, was prevented from offering any active interference; the Russians were kept in check towards the east by a detachment of 30,000 Swedes; so that the whole region was kept in awe by the sword of the conqueror, from the German Ocean almost to the mouth of the Borysthenes, and even to the gates of Moscow. The Czar Peter in the mean time, having carried Narva by assault, and captured several towns and fortresses in Livonia, held a conference with Augustus at Grodno, where the two sovereigns concerted their plans for attacking the Scandinavian invaders in their new conquests, with a combined army of 60,000 men, under Prince Menzikoff and General Schullemberg. Had the fate of the contest depended on numerical superiority alone, Charles must have been crushed before the overwhelming power of his enemies; but his courage and good fortune prevailed over every disadvantage. The scattered hordes of Muscovy were overthrown with so great celerity, that one detachment after another was routed before they learned the defeat of their companions. Schullemberg, with all his experience and reputation, was not more successful, having been completely beaten by Renschild, the Parmenio of the northern Alexander, in a sanguinary action (Feb. 12, 1706), at the small town of Travenstadt, near Punitz, a place already fatal to the cause of Augustus. . . . The reduction of Saxony, which Charles next invaded, obliged Augustus to implore peace on any terms. The conditions exacted by the victor were, that he should renounce for ever the crown of Poland; acknowledge Stanislaus as lawful king; and dissolve his treaty of alliance with Russia. The inflexible temper of Charles was not likely to mitigate the severity of these demands, but their rigour was increased in consequence of the defeat of General Meyerfeld, near Kalisch, by Prince Menzikoff — the first advantage which the Muscovites had gained over the Swedes in a pitched battle. . . . The numerous victories of Charles, and the arbitrary manner in which he had deposed the King of Poland, filled all Europe with astonishment. Some states entertained apprehensions of his power, while others prepared to solicit his friendship. France, harassed by expensive wars in Spain, Italy, and the Netherlands, courted his alliance with an ardour proportioned to the distressing state of her affairs. Offended at the declaration issued against him by the diet of Ratisbon, and resenting an indignity offered to Baron de Stralheim, his envoy at Vienna, he magnified these trivial affronts into an occasion of quarrelling with the emperor, who was obliged to succumb, and among other mortifying concessions, to grant his Lutheran subjects in Silesia the free exercise of their religious liberties as secured by the treaties of Westphalia. . . . The ambitious prince was now in the zenith of his glory; he had experienced no reverse, nor met with any interruption to his victories. The romantic extravagance of his views increased with his success. One year, he thought, will suffice for the conquest of Russia. The court of Rome was next to feel his vengeance, as the pope had dared to oppose the concession of religious liberty to the Silesian Protestants. No enterprise at that time appeared impossible to him."—A. Crichton, *Scandinavia, Ancient and Modern, v. 2, ch. 3.*

(Sweden): A. D. 1707-1718.—Charles XII. in Russia.—His ruinous defeat at Pultowa.—His refuge among the Turks.—His fruitless intrigues.—His return to Sweden.—His death.—"From Saxony, Charles marched back into Poland [September, 1707], where Peter was making some ineffectual efforts to revive the party of Augustus. Peter retired before his rival, who had, however, the satisfaction of defeating an army of 20,000 Russians [at Golowstschin, in the spring of 1708], strongly intrenched. Intoxicated by success, he rejected the czar's offers of peace, declaring that he would treat at Moscow; and without forming any systematic plan of operations, he crossed the frontiers, resolved on the destruction of that ancient city. Peter prevented the advance of the Swedes, on the direct line, by destroying the roads and desolating the country; Charles, after having endured great privations, turned off towards the Ukraine, whither he had been invited by Mazeppa, the chief of the Cossacks, who, disgusted by the conduct of the czar, had resolved to throw off his allegiance. In spite of all the obstacles that nature and the enemy could throw in his way, Charles reached the place of rendezvous; but he had the mortification to find Mazeppa appear in his camp as a fugitive rather than an ally, for the czar had discovered his treason, and disconcerted his schemes by the punishment of his associates. A still greater misfortune to the Swedes was the loss of the convoy and the ruin of the reinforcement they had expected from Livonia. General Lewenhaupt, to whose care it was entrusted, had been forced into three general engagements by the Russians; and though he had eminently distinguished himself by his courage and conduct, he was forced to set fire to his

SCANDINAVIAN STATES, 1707-1718.

wagons to prevent their falling into the hands of the enemy. Undaunted by these misfortunes, Charles continued the campaign even in the depth of a winter so severe that 2,000 men were at once frozen to death almost in his presence. At length he laid siege to Pultowa, a fortified city on the frontiers of the Ukraine, which contained one of the czar's principal magazines. The garrison was numerous and the resistance obstinate; Charles himself was dangerously wounded in the heel whilst viewing the works; and while he was still confined to his tent he learned that Peter was advancing with a numerous army to raise the siege. Leaving 7,000 men to guard the works, Charles ordered his soldiers to march and meet the enemy, while he accompanied them in a litter (July 8, 1709). The desperate charge of the Swedes broke the Russian cavalry, but the infantry stood firm, and gave the horse an opportunity of rallying in the rear. In the meantime the czar's artillery made dreadful havoc in the Swedish line; and Charles, who had been forced to abandon his cannon in his forced marches, in vain contended against this formidable disadvantage. After a dreadful combat of more than two hours' duration, the Swedish army was irretrievably ruined; 8,000 of their best troops were left dead on the field, 6,000 were taken prisoners, and about 12,000 of the fugitives were soon after forced to surrender on the banks of the Dnieper, from want of boats to cross the river. Charles, accompanied by about 300 of his guards, escaped to Bender, a Turkish town in Bessarabia, abandoning all his treasures to his rival, including the rich spoils of Poland and Saxony. Few victories have ever had such important consequences as that which the czar won at Pultowa; in one fatal day Charles lost the fruits of nine years' victories; the veteran army that had been the terror of Europe was completely ruined; those who escaped from the fatal field were taken prisoners, but they found a fate scarcely better than death; for they were transported by the czar to colonize the wilds of Siberia; the elector of Saxony re-entered Poland and drove Stanislaus from the throne; the kings of Denmark and Prussia revived old claims on the Swedish provinces, while the victorious Peter invaded not only Livonia and Ingria, but a great part of Finland. Indeed, but for the interference of the German emperor and the maritime powers, the Swedish monarchy would have been rent in pieces. Charles, in his exile, formed a new plan for the destruction of his hated rival; he instigated the Turks to attempt the conquest of Russia, and flattered himself that he might yet enter Moscow at the head of a Mohammedan army. The bribes which Peter lavishly bestowed on the counsellors of the sultan, for a time frus trated these intrigues; but Charles, through his friend Poniatowski, informed the sultan of his vizier's corruption, and procured the deposition of that minister. . . . The czar made the most vigorous preparations for the new war by which he was menaced (A. D. 1711). The Turkish vizier, on the other hand, assembled all the forces of the Ottoman Empire in the plains of Adrianople. Demetrius Cantemir, the hospodar of Moldavia, believing that a favourable opportunity presented itself for delivering his country from the Mohammedan yoke, invited the czar to his aid; and the Russians, rapidly advancing, reached the northern banks of the Pruth, near Yassi, the Moldavian capital. Here the Russians found that the promises of Prince Cantemir were illusory," and they were soon so enveloped by the forces of the Turks that there seemed to be no escape for them. But the czarina, Catherine —the Livonian peasant woman whom Peter had made his wife — gathered up her jewels and all the money she could find in camp, and sent them as a gift to the vizier, whereby he was induced to open negotiations. "A treaty [known as the Treaty of the Pruth] was concluded on terms which, though severe [requiring the Russians to give up Azof], were more favourable than Peter, under the circumstances, could reasonably have hoped; the Russians retired in safety, and Charles reached the Turkish camp, only to learn the downfall of all his expectations. A new series of intrigues in the court of Constantinople led to the appointment of a new vizier; but this minister was little inclined to gratify the king of Sweden; on the contrary, warned by the fate of his predecessors, he resolved to remove him from the Ottoman empire (A. D. 1713). Charles continued to linger; even after he had received a letter of dismissal from the sultan's own hand, he resolved to remain, and when a resolution was taken to send him away by force, he determined, with his few attendants, to dare the whole strength of the Turkish empire. After a fierce resistance, he was captured and conveyed a prisoner to Adrianople. . . . Another revolution in the divan revived the hopes of Charles, and induced him to remain in Turkey, when his return to the North would probably have restored him to his former eminence. The Swedes, under General Steenbock, gained one of the most brilliant victories that had been obtained during the war, over the united forces of the Danes and Saxons, at Gadebusch [November 20, 1712], in the duchy of Mecklenburg; but the conqueror sullied his fame by burning the defenceless town of Altona [January 19, 1713] an outrage which excited the indignation of all Europe." He soon after met with reverses and was compelled to surrender his whole army. "The czar in the meantime pushed forward his conquests on the side of Finland; and the glory of his reign appeared to be consummated by a naval victory obtained over the Swedes near the island of Oeland. . . . Charles heard of his rival's progress unmoved; but when he learned that the Swedish senate intended to make his sister regent and to make peace with Russia and Denmark, he announced his intention of returning home." He traversed Europe incognito, making the journey of 1,100 miles, mostly on horseback, in seventeen days, "and towards the close of the year [1714] reached Stralsund, the capital of Swedish Pomerania. Charles, at the opening of the next campaign, found himself surrounded with enemies (A. D. 1715). Stralsund itself was besieged by the united armies of the Prussians, Danes, and Saxons, while the Russian fleet, which now rode triumphant in the Baltic, threatened a descent upon Sweden. After an obstinate defence, in which the Swedish monarch displayed all his accustomed bravery, Stralsund was forced to capitulate, Charles having previously escaped in a small vessel to his native shores. All Europe believed the Swedish monarch undone; it was supposed he could no longer defend his own dominions, when, to the inexpressible astonishment of every one, it

was announced that he had invaded Norway. His attention, however, was less engaged by the war than by the gigantic intrigues of his new favourite, Goertz, who, taking advantage of a coolness between the Russians and the other enemies of Sweden, proposed that Peter and Charles should unite in strict amity, and dictate the law to Europe. . . . While the negotiations were yet in progress, Charles invaded Norway a second time, and invested the castle of Fredericks-hall in the very depth of winter. But while engaged in viewing the works he was struck by a cannon-ball, and was dead before any of his attendants came to his assistance [December 11, 1718]. The Swedish senate showed little grief for the loss of the warlike king. . . . The crown was conferred upon the late king's sister, but she soon resigned it to her husband, the prince of Hesse."—W. C. Taylor, *Student's Manual of Modern History, ch.* 7, *sect.* 6.

(Sweden): A. D. 1719.—Accession of Ulrica Eleonora.

(Sweden): A. D. 1719-1721.—Constitutional changes.—Treaties of Peace ending the Great Northern War.—Swedish cessions of Territory.—"An assembly of the States was summoned in February [1719], and completely altered the constitution. Sweden was declared an elective kingdom, and the government was vested in a council of 24 members, divided into eight colleges, who were invested with a power so absolute that their elected queen was reduced to a mere shadow. In short, the ancient oligarchy was restored, and Sweden became the prey of a few noble families. . . . In November a treaty was signed at Stockholm between Sweden and Great Britain, by which the Duchies of Bremen and Verden were ceded to George I. [as Elector of Hanover] in consideration of a payment of one million rix-dollars. By another treaty in January 1720, George engaged to support Sweden against Denmark and Russia, and to pay a yearly subsidy of $300,000 during the war. About the same time an armistice was concluded with Poland till a definitive treaty should be arranged on the basis of the Peace of Oliva. Augustus was to be recognised as King of Poland; but Stanislaus was to retain the royal title during his life, and to receive from Augustus a million rix-dollars. Both parties were to unite to check the preponderance of the Czar, whose troops excited great discontent and suspicion by their continued presence in Poland. On February 1st a peace was concluded with Prussia under the mediation of France and Great Britain. The principal articles of this treaty were that Sweden ceded to Prussia, Stettin, the Islands of Wollin and Usedom, and all the tract between the Oder and Peene, together with the towns of Damm and Golnau beyond the Oder. The King of Prussia, on his side, engaged not to assist the Czar, and to pay two million rix-dollars to the Queen of Sweden. The terms of a peace between Sweden and Denmark were more difficult of arrangement. . . . By the Treaty of Stockholm, June 12th 1720, the King of Denmark restored to Sweden, Wismar, Stralsund, Rügen, and all that he held in Pomerania; Sweden paying 600,000 rix-dollars and renouncing the freedom of the Sound. Thus the only territorial acquisition that Denmark made by the war was the greater part of the Duchy of Schleswig, the possession of which was guaranteed to her by England and France. Sweden and Russia were now the only Powers that remained at war. . . . At length, through the mediation of France, conferences were opened in May 1721, and the Peace of Nystad was signed, September 10th. . . . The only portion of his conquests that [Peter] relinquished was Finnland, with the exception of a part of Carelia; but as, by his treaty with Augustus II., at the beginning of the war, he had promised to restore Livonia to Poland if he conquered it, he paid the Crown of Sweden $2,000,000 in order to evade this engagement by alleging that he had purchased that province."—T. H. Dyer, *Hist. of Modern Europe, bk.* 5, *ch.* 7 (*v.* 3).

(Sweden): A. D. 1720.—Accession of Frederick of Hesse-Cassel, husband of Ulrica Eleonora.

(Sweden): A. D. 1720-1792.—Wars with Russia and Prussia.—Humiliating powerlessness of the king.—The parties of the Hats and the Caps.—A constitutional Revolution.—Assassination of Gustavus III.—Ulrica Eleonora, the sister of Charles XII., resigned the crown in 1720, in favor of her husband, Prince of Hesse, who became king under the title of Frederick I. His reign witnessed the conquest of Finland and the cession (1743) of a part of that province to Russia (see Russia: A. D. 1740–1762). On his death in 1751, Adolphus Frederick, bishop of Lubeck, and administrator of Holstein, was raised to the throne. "Though his personal qualities commanded respect, his reign was a disastrous one. He had the folly to join the coalition of Russia, Poland, Austria, and France against the king of Prussia. Twenty thousand Swedes were marched into Pomerania, on the pretext of enforcing the conditions of the treaty of Westphalia, but with the view of recovering the districts which had been ceded to Prussia after the death of Charles XII. They reduced Usedom and Wollin, with the fortresses on the coast; but this success was owing to the absence of the Prussians. When, in 1758, Schwald, the general of Frederic the Great, was at liberty to march with 30,000 men into Pomerania, he recovered the places which had been lost, and forced the invaders to retire under the cannon of Stralsund. The accession of the tsar Peter was still more favourable to Frederic. An enthusiastic admirer of that prince, he soon concluded a treaty with him. Sweden was forced to follow the example; and things remained, at the peace of Hubertsburg, in the same condition as before the war. Scarcely was Sweden at harmony with her formidable enemy, when she became agitated by internal commotions. We have alluded to the limitations set to the royal authority after the death of Charles XII., and to the discontent it engendered in the breasts of the Swedish monarchs. While they strove to emancipate themselves from the shackles imposed upon them, the diet was no less anxious to render them more enslaved. That diet, consisting of four orders, the nobles, the clergy, the burghers, and the peasants, was often the scene of tumultuous proceedings: it was rarely tranquil; yet it enjoyed the supreme legislative authority. It was also cor-

rupt; for impoverished nobles and needy tradesmen had a voice, no less than the wealthiest members. All new laws, all ordinances, were signed by the king; yet he had no power of refusal; he was the mere registrar-general. . . . The king had sometimes refused to sign ordinances which he judged dangerous to the common weal: in 1756 an act was passed, that in future a stamp might be used in lieu of the sign-manual, whenever he should again refuse. More intolerable than all this was the manner in which the diet insisted on regulating the most trifling details of the royal household. This interference was resented by some of the members, belonging to what was called the 'Hat' party, who may be termed the tories of Sweden. Opposed to these were the 'Caps,' who were for shackling the crown with new restrictions, and of whom the leaders were undoubtedly in the pay of Russia. . . . As Russia was the secret soul of the Caps, so France endeavoured to support the Hats, whenever the courts of St. Petersburgh and St. Germains were hostile to each other. Stockholm therefore was an arena in which the two powers struggled for the ascendancy." Gustavus III., who succeeded his father Adolphus Frederic in 1771, was able with the help of French money and influence, and by winning to his support the burgher cavalry of the capital, to overawe the party of the Caps, and to impose a new constitution upon the country. The new constitution "conferred considerable powers on the sovereign; enabled him to make peace, or declare war, without the consent of the diet; but he could make no new law, or alter any already made, without its concurrence; and he was bound to ask, though not always to follow, the advice of his senate in matters of graver import. The form of the constitution was not much altered; and the four orders of deputies still remained. On the whole, it was a liberal constitution. If this revolution was agreeable to the Swedes themselves, it was odious to Catherine II., who saw Russian influence annihilated by it." The bad feeling between the two governments which followed led to war, in 1787, when Russia was engaged at the same time in hostilities with the Turks. The war was unpopular in Sweden, and Gustavus was frustrated in his ambitious designs on Finland. Peace was made in 1790, each party restoring its conquests, "so that things remained exactly as they were before the war." On the 16th March, 1792, Gustavus III. was assassinated, being shot at a masquerade ball, by one Ankerstrom, whose motives have remained always a mystery. Suspicion attached to others, the king's brother included, but nothing to justify it is proved. The murdered king was succeeded by his son Gustavus IV., who had but just passed the age of three years.—S. A. Dunham, *Hist. of Denmark, Sweden and Norway, bk.* 3, *ch.* 4 (*v.* 3).

A. D. 1807-1810.—Northern fruits of the conspiracy of the two Emperors at Tilsit.—Bombardment of Copenhagen and seizure of the Danish Fleet by the English.—War of Russia and Denmark with Sweden, and conquest of Finland.—Deposition of the Swedish king.—On the 7th of July, 1807, Napoleon and Alexander I. of Russia, meeting on a raft, moored in the river Nieman, arranged the terms of the famous Treaty of Tilsit—see GERMANY: A. D. 1807 (JUNE—JULY). "There were Secret Articles in this Treaty of Tilsit in which England had a vital interest. These secret articles are not to be found in any collection of State Papers; but Napoleon's diplomatists have given a sufficient account of them to enable us to speak of them with assurance. Napoleon would not part with Constantinople; but he not only gave up Turkey as a whole to be dealt with as Alexander pleased, but agreed to unite his efforts with Alexander to wrest from the Porte all its provinces but Roumelia, if within three months she had not made terms satisfactory to Alexander. In requital for this, if England did not before the 1st of November make terms satisfactory to Napoleon, on the requisition of Russia, the two Emperors were to require of Sweden, Denmark, and Portugal, to close their ports against the English, and were to unite their forces in war against Great Britain. . . . In the month of May, the Duke of Portland had had an audience of the Prince of Wales at Carlton House, at which he had heard a piece of news from the Prince which it deeply concerned him, as Prime Minister, to know. The Prince Regent of Portugal had sent secret information that Napoleon wanted to invade our shores with the Portuguese and Danish fleets. The Portuguese had been refused. It was for us to see to the Danish. Mr. Canning lost no time in seeing to it: and while the Emperors were consulting at Tilsit, he was actively engaged in disabling Denmark from injuring us. When he had confidential information of the secret articles of the Tilsit Treaty, his proceedings were hastened, and they were made as peremptory as the occasion required. He endured great blame for a long time on account of this peremptoriness; and he could not justify himself because the government were pledged to secrecy. . . . Mr. Jackson, who had been for some years our envoy at the Court of Berlin, was sent to Kiel, to require of the Crown Prince (then at Kiel), who was known to be under intimidation by Napoleon, that the Danish navy should be delivered over to England, to be taken care of in British ports, and restored at the end of the war. The Crown Prince refused, with the indignation which was to be expected. . . . Mr. Jackson had been escorted, when he went forth on his mission, by 20 ships of the line, 40

SCANDINAVIAN STATES, 1807–1810.

frigates and other assistant vessels, and a fleet of transports, conveying 27,000 land troops. Admiral Gambier commanded the naval, and Lord Cathcart the military expedition. These forces had been got ready within a month, with great ability, and under perfect secrecy; and before the final orders were given, ministers had such information of the secret articles of the Treaty of Tilsit as left them no hesitation whatever about seizing the Danish fleet, if it was not lent quietly. . . . When, therefore, Mr. Jackson was indignantly dismissed by the Crown Prince, no time was to be lost in seizing the fleet. . . . On the 15th [of August] the forces were landed at Wedbeck, for their march upon Copenhagen, and the fleet worked up before the city. Once more, an attempt was made to avoid extremities. . . . The Crown Prince replied by a proclamation, amounting to a declaration of war. . . . And now the affair was decided. There could be no doubt as to what the end must be. . . . By the 1st of September, however, Stralsund was occupied by the French; and part of the British force was detached to watch them; and this proved that it would have been fatal to lose time. By the 8th of September, all was over; the Danish navy and arsenal were surrendered. One fourth of the buildings of the city were by that time destroyed; and in one street 500 persons were killed by the bombardment. . . . Efforts were made to conciliate the Danes after all was over; but, as was very natural, in vain. . . . Almost as soon as the news of the achievement reached England, the victors brought the Danish fleet into Portsmouth harbour. One of the most painful features of the case is the confiscation which ensued, because the surrender was not made quietly. At the moment of the attack, there were Danish merchantmen in our waters, with cargoes worth £2,000,000. These we took possession of; and, of course, of the navy which we had carried off."—H. Martineau, *Hist. of Eng.*, 1800–1815, *bk.* 2, *ch.* 1.—In fulfilment of the agreements of the Treaty of Tilsit, early in August, 1807, "a show was made by Russia of offering her mediation to Great Britain for the conclusion of a general peace; but as Mr. Canning required, as a pledge of the sincerity of the Czar, a frank communication of the secret articles at Tilsit, the proposal fell to the ground." Its failure was made certain by the action of England in taking possession by force of the Danish fleet. On the 5th of November, upon the peremptory demand of Napoleon, war was accordingly declared against Great Britain by the Czar. "Denmark had concluded (Oct. 16) an alliance, offensive and defensive, with France, and Sweden was now summoned by Russia to join the Continental League. But the King, faithful to his engagements [with England], resolutely refused submission; on which war was declared against him early in 1808, and an overwhelming force poured into Finland, the seizure of which by Russia had been agreed on at Tilsit."—*Epitome of Alison's Hist. of Europe, sects.* 455–456 (*ch.* 51, *v.* 11, *of complete work*).—"In November, 1808, Finland was virtually given up to Alexander; and Sweden was thus deprived of her great granary, and destined to ruin. England had of late aided her vigourously, driving the Russian navy into port, and blockading them there; and sending Sir John Moore, with 10,000 men, in May, when France, Russia, and Denmark, were all advancing to crush the gallant Swedes. Sir John Moore found the King in what he thought a very wild state of mind, proposing conquests, when he had not forces enough for defensive operations. All agreement in their views was found to be impossible: the King resented the Englishman's caution; Sir John Moore thought the King so nearly mad that he made off in disguise from Stockholm, and brought back his troops, which had never been landed. . . . After the relinquishment of Finland, the Swedish people found they could endure no more. Besides Finland, they had lost Pomerania: they were reduced to want; they were thinned by pestilence as well as by war; but the King's ruling idea was to continue the conflict to the last. . . . As the only way to preserve their existence, his subjects gently deposed him, and put the administration of affairs into the hands of his aged uncle, the Duke of Sudermania. The poor King was arrested on the 13th of March, 1809, as he was setting out for his country seat, . . . and placed in imprisonment for a short time. His uncle, at first called Regent, was soon made King. . . . Peace was made with Russia in September, 1809, and with France in the following January. Pomerania was restored to Sweden, but not Finland; and she had to make great sacrifices. . . . She was compelled to bear her part in the Continental System of Napoleon, and to shut her ports against all communications with England."—H. Martineau, *Hist. of Eng.*, 1800–1815, *bk.* 2, *ch.* 1.—"The invasion by the Tzar Alexander I. in 1808 led to the complete separation of Finland and the other Swedish lands east of the gulf of Bothnia from the Swedish crown. Finland was conquered and annexed by the conqueror; but it was annexed after a fashion in which one may suppose that no other conquered land ever was annexed. In fact one may doubt whether 'annexed' is the right word. Since 1809 the crowns of Russia and Finland are necessarily worn by the same person; the Russian and the Finnish nation have necessarily the same sovereign. But Finland is not incorporated with Russia; in everything but the common sovereign Russia and Finland are countries foreign to one another. And when we speak of the crown and the nation of Finland, we speak of a crown and a nation which were called into being by the will of the conqueror himself. . . . The conqueror had possession of part of the Swedish dominions, and he called on the people of that part to meet him in a separate Parliament, but one chosen in exactly the same way as the existing law prescribed for the common Parliament of the whole. . . . In his new character of Grand Duke of Finland, the Tzar Alexander came to Borga, and there on March 27th, 1809, fully confirmed the existing constitution, laws, and religion of his new State. The position of that State is best described in his own words. Speaking neither Swedish nor Finnish, and speaking to hearers who understood no Russian, the new Grand Duke used the French tongue. Finland was 'Placé désormais au rang des nations'; it was a 'Nation, tranquille au dehors, libre dans l'intérieur.' [Finland was 'Placed henceforth in the rank of the nations; it was a Nation tranquil without, free within.'] And it was a nation of his own founding. The people of Finland had ceased to be a part of the Swedish nation; they

had not become a part of the Russian nation; they had become a nation by themselves. All this, be it remembered, happened before the formal cession of the lost lands by Sweden to Russia. This was not made till the Peace of Frederikshamn on September 17th of the same year. The treaty contained no stipulation for the political rights of Finland; their full confirmation by the new sovereign was held to be enough. Two years later, in 1811, the boundary of the new State was enlarged. Alexander, Emperor of all the Russias and Grand Duke of Finland, cut off from his empire, and added to his grand duchy, the Finnish districts which had been ceded by Sweden to Russia sixty years before. The boundary of his constitutional grand duchy was brought very near indeed to the capital of his despotic empire."— E. A. Freeman, *Finland* (*Macmillan's Mag., March*, 1892).

(Sweden): A. D. 1809.—Granting of the Constitution. See CONSTITUTION OF SWEDEN.

(Sweden): A. D. 1810.—Election of Bernadotte to be Crown Prince and successor to the throne.— The new king, lately called to the throne, being aged, "the eyes of the people were fixed on the successor, or Crown Prince, who took upon himself the chief labour of the government, and appears to have given satisfaction to the nation. But his government was of short duration. On the 28th of May 1810, while reviewing some troops, he suddenly fell from his horse and expired on the spot, leaving Sweden again without any head excepting the old King. This event agitated the whole nation, and various candidates were proposed for the succession of the kingdom. Among these was the King of Denmark, who, after the sacrifices he had made for Buonaparte, had some right to expect his support. The son of the late unfortunate monarch, rightful heir of the crown, and named like him Gustavus, was also proposed as a candidate. The Duke of Oldenburg, brother-in-law of the Emperor of Russia, had partizans. To each of these candidates there lay practical objections. To have followed the line of lawful succession, and called Gustavus to the throne, (which could not be forfeited by his father's infirmity, so far as he was concerned,) would have been to place a child at the head of the state, and must have inferred, amid this most arduous crisis, all the doubts and difficulties of choosing a regent. Such choice might, too, be the means, at a future time, of reviving his father's claim to the crown. The countries of Denmark and Sweden had been too long rivals, for the Swedes to subject themselves to the yoke of the King of Denmark; and to choose the Duke of Oldenburg would have been, in effect, to submit themselves to Russia, of whose last behaviour towards her Sweden had considerable reason to complain. In this embarrassment they were thought to start a happy idea, who proposed to conciliate Napoleon by bestowing the ancient crown of the Goths upon one of his own Field Marshals, and a high noble of his empire, namely, John Julian Baptiste Bernadotte, Prince of Ponte Corvo. This distinguished officer was married to a sister of Joseph Buonaparte's wife, (daughter of a wealthy and respectable individual, named Clary,) through whom he had the advantage of an alliance with the Imperial family of Napoleon, and he had acquired a high reputation in the north of Europe, both when governor of Hanover, and administrator of Swedish Pomerania. On the latter occasion, Bernadotte was said to have shown himself in a particular manner the friend and protector of the Swedish nation; and it was even insinuated that he would not be averse to exchange the errors of Popery for the reformed tenets of Luther. The Swedish nation fell very generally into the line of policy which prompted this choice. . . . It was a choice, sure, as they thought, to be agreeable to him upon whose nod the world seemed to depend. Yet, there is the best reason to doubt, whether, in preferring Bernadotte to their vacant throne, the Swedes did a thing which was gratifying to Napoleon. The name of the Crown Prince of Sweden elect, had been known in the wars of the Revolution, before that of Buonaparte had been heard of. Bernadotte had been the older, therefore, though certainly not the better soldier. On the 18th Brumaire, he was so far from joining Buonaparte in his enterprise against the Council of Five Hundred, notwithstanding all advances made to him, that he was on the spot at St. Cloud armed and prepared, had circumstances permitted, to place himself at the head of any part of the military, who might be brought to declare for the Directory. And although, like every one else, Bernadotte submitted to the Consular system, and held the government of Holland under Buonaparte, yet then, as well as under the empire, he was always understood to belong to a class of officers, whom Napoleon employed indeed, and rewarded, but without loving them, or perhaps relying on them more than he was compelled to do, although their character was in most instances a warrant for their fidelity. These officers formed a comparatively small class, yet comprehending some of the most distinguished names in the French army. . . . Reconciled by necessity to a state of servitude which they could not avoid, this party considered themselves as the soldiers of France, not of Napoleon, and followed the banner of their country rather than the fortunes of the Emperor. Without being personally Napoleon's enemies, they were not the friends of his despotic power."— Sir W. Scott, *Life of Napoleon, v.* 2, *ch.* 12.—The election of Bernadotte is said to have been brought about by the audacity of a young Swedish officer, Baron Mörner, who went to Paris as a courier, bearing a message on the subject from the Swedish government which had a very different aim. He interviewed Bernadotte and persuaded that marshal to become a candidate for the vacant throne. Bernadotte laid the matter before Napoleon. "Napoleon, who had officially been informed of the thoughts of the Swedish government, looked on the whole matter as a ghost of the brain, but declared that he would not meddle with it. At Mörner's last visit (June 27, 1810) Bernadotte gave him leave to communicate that the emperor had nothing against Bernadotte's election and that he himself was ready to accept if the choice fell on him. It is easy to imagine the astonishment of Engström, the minister of state, when

he heard Mörner's description of his bold attempt in Paris. 'What do you bring from Paris?' Engström asked, when Mörner came into the foreign Minister's cabinet in Stockholm. 'That I have induced the prince of Ponte Corvo to accept the Swedish crown.' 'How could you speak to him about it without being commissioned?' 'Our only safety lies in the prince of Ponte Corvo.' 'Are you sure that he will receive it so that we are not doubly committed?' 'Certainly. I have a letter here.' 'From him to you?' 'No, from me to him.' 'Boy,' exclaimed Mörner's relation, his excellency Von Essen, at the end of the conference, 'you ought to sit where neither sun nor moon will shine on you.' But Mörner's project won more and more favor in the country though he himself was arrested in Örebro, whereby the government desired to prevent his presence as a member of the house of knights at the special diet called at Örebro for election. Through messengers and a pamphlet he worked for his plan."—*Sveriges Historia*, 1805–1875 (*trans. from the Swedish by L. G. Sellstedt*), *pp.* 29–31.

A. D. 1813-1814.—The Peace of Kiel.—Cession of Norway to Sweden and of Swedish Pomerania to Denmark.—"The Danes, having been driven out of Holstein by Bernadotte [see Germany: A. D. 1813 (October—December)], concluded an armistice December 18th, and, finally, the Peace of Kiel, January 14th 1814, by which Frederick VI. ceded Norway to Sweden; reserving, however, Greenland, the Ferroe Isles, and Iceland, which were regarded as dependencies of Norway. Norway, which was anciently governed by its own kings, had remained united with Denmark ever since the death of Olaf V. in 1387. Charles XIII., on his side, ceded to Denmark Swedish Pomerania and the Isle of Rugen. This treaty founded the present system of the North. Sweden withdrew entirely from her connection with Germany, and became a purely Scandinavian Power. The Norwegians, who detested the Swedes, made an attempt to assert their independence under the conduct of Prince Christian Frederick, cousin-german and heir of Frederick VI. of Denmark. Christian Frederick was proclaimed King of Norway; but the movement was opposed by Great Britain and the Allied Powers from considerations of policy rather than justice; and the Norwegians found themselves compelled to decree the union of Norway and Sweden in a storting, or Diet, assembled at Christiania, November 4th 1814. Frederick VI. also signed a peace with Great Britain at Kiel, January 14th 1814. All the Danish colonies, except Heligoland, which had been taken by the English, were restored."—T. H. Dyer, *Hist. of Modern Europe, bk.* 7, *ch.* 16 (*v.* 4).

(Sweden): A. D. 1814.—The Allies in France and in possession of Paris.—Fall of Napoleon. See France: A. D. 1814 (January—March), and (March—April).

(Norway): A. D. 1814-1815.—The Norwegian constitution under the union with Sweden.—"When, by the treaty of Kiel in 1814, Norway was taken from Denmark, and handed over to Sweden, the Norwegians roused themselves to once more assert their nationality. The Swedes appeared in force, by land and sea, upon the frontiers of Norway. It was not, however, until the latter country had been guaranteed complete national independence that she consented to a union of the countries under the one crown. The agreement was made, and the constitution of Norway granted on the 17th of May 1814, at which date the contemporary history of Norway begins. . . . The Fundamental Law of the constitution (Grundlöv), which almost every peasant farmer now-a-days has framed and hung up in the chief room of his house, bears the date the 4th of November 1814. The Act of Union with Sweden is dated the 6th of August 1815. The union of the two states is a union of the crown alone. . . . Sweden and Norway form, like Great Britain, a hereditary limited monarchy. One of the clauses in the Act of Union provides that the king of the joint countries must reside for a certain part of the year in Norway. But, as a matter of fact, this period is a short one. In his absence, the king is represented by the Council of State (Statsraad), which must be composed entirely of Norwegians, and consist of two Ministers of State (Cabinet Ministers), and nine other Councillors of State. As with us, the king personally can do no wrong; the responsibility for his acts rests with his ministers. Of the State Council, or Privy Council (above spoken of), three members, one a Cabinet Minister, and two ordinary members of the Privy Council, are always in attendance upon the king, whether he is residing in Norway or Sweden. The rest of the Council forms the Norwegian Government resident in the country. All functionaries are appointed by the king, with the advice of this Council of State. The officials, who form what we should call the Government (as distinguished from what we should call the Civil Service), together with the préfets (Amtmen) and the higher grades of the army are, nominally, removable by the king; but, if removed, they continue to draw two-thirds of their salary until their case has come before Parliament (the Stor-thing, Great Thing), which decides upon their pensions. . . . In 1876 the number of electors to the Storthing were under 140,000, not more than 7.7 per cent. of the whole population. So that the franchise was by no means a very wide one. . . . In foreign affairs only does Norway not act as an independent nation. There is a single foreign minister for the two countries and he is usually a Swede. For the purposes of internal administration, Norway is divided into twenty districts, called Amter—which we may best translate 'Prefectures.' Of these, the two chief towns of the country, Christiania (with its population of 150,000) and Bergen (population about 50,000) form each a separate Amt."—C. F. Keary, *Norway and the Norwegians, ch.* 13.—See Constitution of Norway.

(Denmark): A. D. 1848.—Accession of Frederick VII.

(Denmark): A. D. 1848-1862.—The Schleswig-Holstein question.—First war with Prussia.—"The two Duchies of Schleswig and Holstein lie to the south of modern Denmark. Holstein, the more southern of the two, is exclusively German in its population. Schleswig, the more northern, contains a mixed population of Danes and Germans. In the course of the 14th century Schleswig was conquered by Denmark, but ceded to Count Gerard of Holstein—the Constitution of Waldemar providing that the two Duchies should be under one Lord, but that they should never be united to Denmark. This is the first fact to realise in the complex history of the Schleswig-Holstein question. The line of Gerard of Holstein expired in 1375. It was succeeded by a branch of the house of Oldenburg. In 1448 a member of this house, the nephew of the reigning Duke, was elected to the throne of Denmark. The reigning Duke procured in that year a confirmation of the compact that Schleswig should never be united with Denmark. Dying without issue in 1459, the Duke was succeeded, by the election of the Estates, by his nephew Christian I. of Denmark. In electing Christian, however, the Estates compelled him in 1460 to renew the compact confirmed in 1448. And, though Duchies and Crown were thenceforward united, the only link between them was the sovereign. Even this link could possibly be severed. For the succession in the Duchy was secured to the male heir in direct contradiction of the law of Denmark. . . . It would complicate this narrative if stress were laid on the various changes in the relations between Kingdom and Duchies which were consequent on the unsettled state of Europe during the three succeeding centuries. It is sufficient to say that, by a treaty made in 1773, the arrangements concluded more than 300 years before were confirmed. Schleswig-Holstein reverted once more to the King of Denmark under exactly the same conditions as in the time of Christian I., who had expressly recognised that he governed them as Duke, that is, by virtue of their own law of succession. Such an arrangement was not likely to be respected amidst the convulsions which affected Europe in the commencement of the present century. In 1806 Christian VII. took advantage of the disruption of the German Empire formally to incorporate the Duchies into his Kingdom. No one was in a position to dispute the act of the monarch. In 1815, however, the King of Denmark, by virtue of his rights in Holstein and Lauenburg, joined the Confederation of the Rhine; and the nobility of Holstein, brought in this way into fresh connection with Germany, appealed to the German Diet. But the Diet, in the first quarter of the 19th century, was subject to influences opposed to the rights of nationalities. It declined to interfere, and the union of Duchies and Kingdom was maintained. Christian VII. was succeeded in 1808 by his son Frederick VI., who was followed in 1839 by his cousin Christian VIII. The latter

monarch had only one son, afterwards Frederick VII., who, though twice married, had no children. On his death, if no alteration had been made, the crown of Denmark would have passed to the female line—the present reigning dynasty—while the Duchies, by the old undisputed law, would have reverted to a younger branch, which descended through males to the house of Augustenburg. With this prospect before them it became very desirable for the Danes to amalgamate the Duchies; and in the year 1844 the Danish Estates almost unanimously adopted a motion that the King should proclaim Denmark, Schleswig, Holstein, and Lauenburg one indivisible State. In 1846 the King put forth a declaration that there was no doubt that the Danish law of succession prevailed in Schleswig. He admitted that there was more doubt respecting Holstein. But he promised to use his endeavours to obtain the recognition of the integrity of Denmark as a collective State. Powerless alone against the Danes and their sovereign, Holstein appealed to the Diet; and the Diet took up the quarrel, and reserved the right of enforcing its legitimate authority in case of need. Christian VIII. died in January 1848. His son, Frederick VII., the last of his line, grasped the tiller of the State at a critical moment. Crowns, before a month was over, were tumbling off the heads of half the sovereigns of Europe; and Denmark, shaken by these events, felt the full force of the revolutionary movement. Face to face with revolution at home and Germany across the frontier, the new King tried to cut instead of untying the Gordian knot. He separated Holstein from Schleswig, incorporating the latter in Denmark but allowing the former under its own constitution to form part of the German Confederation. Frederick VII. probably hoped that the German Diet would be content with the half-loaf which he offered it. The Diet, however, replied to the challenge by formally incorporating Schleswig in Germany, and by committing to Prussia the office of mediation [see GERMANY: A. D. 1848 (MARCH—SEPTEMBER)]. War broke out, but the arms of Prussia were crippled by the revolution which shook her throne. The sword of Denmark, under these circumstances, proved victorious; and the Duchies were ultimately compelled to submit to the decision which force had pronounced. These events gave rise to the famous protocol which was signed in London, in August 1850, by England, France, Austria, Russia, Sweden, and Denmark. This document settled the question, so far as diplomacy could determine it, in the interests of Denmark. The unity of Denmark, Schleswig, Holstein and Lauenburg was secured by a uniform law of succession, and their internal affairs were placed, as far as practicable, under a common administration. The protocol of 1850 was signed by Lord Palmerston during the Russell Administration. It was succeeded by the treaty of 1852, which was concluded by Lord Malmesbury. This treaty, to which all the great powers were parties, was the logical consequence of the protocol. Under it the succession to Kingdom and Duchies was assigned to Prince Christian of Glücksburg, the present reigning King of Denmark. The integrity of the whole Danish Monarchy was declared permanent; but the rights of the German Confederation with respect to Holstein and Schleswig were reserved. The declar-

ation was made in accordance with the views of Russia, England, and France; the reservation was inserted in the interests of the German powers; and in a manifesto, which was communicated to the German Courts, the King of Denmark laid down elaborate rules for the treatment and government of the Duchies. Thus, while the succession to the Danish throne and the integrity of Denmark had been secured by the protocol of 1850 and the treaty of 1852, the elaborate promises of the Danish King, formally communicated to the German powers, had given the latter a pretext for contending that these pledges were at least as sacred as the treaty. And the next ten years made the pretext much more formidable than it seemed in 1852. . . . The Danes endeavoured to extricate themselves from a constantly growing embarrassment by repeating the policy of 1848, by granting, under what was known as the Constitution of 1855, autonomous institutions to Holstein, by consolidating the purely Danish portions of the Monarchy, and by incorporating Schleswig, which was partly Danish and partly German, in Denmark. But the German inhabitants of Schleswig resented this arrangement. They complained of the suppression of their language and the employment of Danish functionaries, and they argued that, under the engagements which had been contracted between 1851 and 1852, Holstein had a voice in constitutional changes of this character. This argument added heat to a dispute already acute. For it was now plain that, while the German Diet claimed the right to interfere in Holstein, Holstein asserted her claim to be heard on the affairs of the entire Kingdom."—S. Walpole, *Life of Lord John Russell, ch.* 30 (*v.* 2).—In the first period of the war of 1848–9, the only important battle was fought at Duppeln, June 5, 1848. The Prussians were superior in land forces, but the Danes were able to make use of a flotilla of gunboats in defending their strong position. "After a useless slaughter, both parties remained nearly in the same position as they had occupied at the commencement of the conflict." The war was suspended in August by an armistice — that of Malmö — but was renewed in the April following. "On the 20th April [1849] the Prussians invaded Jutland with 48 battalions, 48 guns, and 2,000 horse; and the Danish generals, unable to make head against such a crusade, retired through the town of Kolding, which was fortified and commanded an important bridge that was abandoned to the invaders. The Danes, however, returned, and after a bloody combat dislodged the Prussians, but were finally obliged to evacuate it by the fire of the German mortars, which reduced the town to ashes. On the 3d May the Danes had their revenge, in the defeat of a large body of the Schleswig insurgents by a Danish corps near the fortress of Fredericia, with the loss of 340 men. A more important advantage was gained by them on the 6th July," over the Germans who were besieging Fredericia. "The loss of the Germans in this disastrous affair was 96 officers and 3,250 men killed and wounded, with their whole siege-artillery and stores. . . . This brilliant victory was immediately followed by the retreat of the Germans from nearly the whole of Jutland. A convention was soon after concluded at Berlin, which established an armistice for six months," and which was followed by the negotiations and

treaties described above. But hostilities were not yet at an end; for the insurgents of Schleswig and Holstein remained in arms, and were said to receive almost open encouragement and aid from Prussia. Their army, 32,000 strong, occupied Idstedt and Wedelspang. They were attacked at the former place, on the 25th of July, 1850, by the Danes, and defeated after a bloody conflict. "The loss on both sides amounted to nearly 8,000 men, or about one in eight of the troops engaged; a prodigious slaughter, unexampled in European war since the battle of Waterloo. Of these, nearly 3,000, including 85 officers, were killed or wounded on the side of the Danes, and 5,000 on that of the insurgents, whose loss in officers was peculiarly severe."—Sir A. Alison, *Hist. of Europe*, 1815–1852, *ch.* 53.—From 1855 to 1862 the history of Denmark was uneventful. But in the next year King Frederick VII. died, and the Treaty of London, which had settled the succession upon Prince Christian of Glücksburg, failed to prevent the reopening of the Schleswig-Holstein question.

(Denmark — Iceland): A. D. 1849-1874.—The Danish constitution.—Relations of Iceland to Denmark.—"Denmark became a constitutional monarchy in 1849. The principal provisions of the Constitution are these: Every king of Denmark, before he can assume the government of the monarchy, must deliver a written oath that he will observe the constitution. He alone is invested with the executive power, but the legislative he exercises conjointly with the Assembly (Rigsdag). He can declare war and make peace, enter and renounce alliances. But he cannot, without the consent of the Assembly, sign away any of the possessions of the kingdom or encumber it with any State obligations. . . . The king's person is sacred and inviolable; he is exempt from all responsibility. The ministers form the Council of State, of which the king is the president, and where, by right, the heir-apparent has a seat. The king has an absolute veto. The Rigsdag (Assembly) meets every year, and cannot be prorogued till the session has lasted for two months at least. It consists of two Chambers — the Upper Chamber, 'Landsting,' and the Lower Chamber, 'Folketing.' The Upper Chamber consists of 66 members, twelve of which are Crown-elects for life, seven chosen by Copenhagen, and one by the so-called Lagting of Farö. The 46 remaining members are voted in by ten electoral districts, each of which comprises from one to three Amts, or rural governorships, with the towns situated within each of them included. The elections are arranged on the proportional or minority system. In Copenhagen and in the other towns one moiety of electors is chosen out of those who possess the franchise for the Lower House, the other moiety is selected from among those who pay the highest municipal rates. In every rural commune one elector is chosen by all the enfranchised members of the community. . . . The Lower House is elected for three years, and consists of 102 members; consequently there are 102 electorates or electoral districts. . . . The Lower House is elected by manhood suffrage. Every man thirty years old has a vote, provided there

be no stain on his character, and that he possesses the birthright of a citizen within his district, and has been domiciled for a year within it before exercising his right of voting, and does not stand in such a subordinate relation of service to private persons as not to have a home of his own. . . . The two Chambers of the Rigsdag stand, as legislative bodies, on an equal footing, both having the right to propose and to alter laws. . . . At present [1891] this very Liberal Constitution is not working smoothly. As was to be expected, two parties have gradually come into existence — a Conservative and a Liberal, or, as they are termed after French fashion, the Right and the Left. The country is governed at present arbitrarily against an opposition in overwhelming majority in the Lower House. The dispute between the Left and the Ministry does not really turn so much upon conflicting views with regard to great public interests, as upon the question whether Denmark has, or has not, to have parliamentary government. . . . The Right represents chiefly the educated and the wealthy classes; the Left the mass of the people, and is looked down upon by the Right. . . . I said in the beginning that I would tell you how the constitutional principle has been applied to Iceland. I have only time briefly to touch upon that matter. In 1800 the old Althing (All Men's Assembly, General Diet), which had existed from 930, came to an end. Forty-five years later it was re-established by King Christian VIII. in the character of a consultative assembly. . . . The Althing at once began to direct its attention to the question — What Iceland's proper position should be in the Danish monarchy when eventually its anticipated constitution should be carried out. The country had always been governed by its special laws; it had a code of laws of its own, and it had never been ruled, in administrative sense, as a province of Denmark. Every successive king had, on his accession to the throne, issued a proclamation guaranteeing to Iceland due observance of the country's laws and traditional privileges. Hence it was found entirely impracticable to include Iceland under the provisions of the charter for Denmark; and a royal rescript of September 23, 1848, announced that with regard to Iceland no measures for settling the constitutional relation of that part of the monarchy would be adopted until a constitutive assembly in the country itself 'had been heard' on the subject. Unfortunately, the revolt of the duchies intervened between this declaration and the date of the constitutive assembly which was fixed for 1851. The Government took fright, being unfortunately quite in the dark about the real state of public opinion in the distant dependency. . . . The Icelanders only wanted to abide by their laws, and to have the management of their own home affairs, but the so-called National-Liberal Government wanted to incorporate the country as a province in the kingdom of Denmark proper. This idea the Icelanders really never could understand as seriously meant. . . . The constitutive assembly was brusquely dissolved by the Royal Commissary when he saw that it meant to insist on autonomy for the Icelanders in their own home affairs. And from 1851 to 1874 every successive Althing (but one) persisted in calling on the Government to fulfil the royal promise of 1848. It was no doubt due to the very loyal, quiet, and able manner in which the Icelanders pursued their case, under the leadership of the trusted patriot, Jon Sigurdsson, that in 1874 the Government at last agreed to give Iceland the constitution it demanded. But instead of frankly meeting the Icelandic demands in full, they were only partially complied with, and from the first the charter met with but scanty popularity."— E. Magnusson, *Denmark and Iceland* (*National Life and Thought, ch.* 12).

SCHOLARII.—The household troops or imperial life-guards of the Eastern Roman Empire. —T. Hodgkin, *Italy and Her Invaders, bk.* 5, *ch.* 20.

SCHOLASTICISM.—SCHOOLMEN. See EDUCATION, MEDIÆVAL: SCHOLASTICISM.

SCHOOL OF THE PALACE, Charlemagne's.—"Charlemagne took great care to attract distinguished foreigners into his states, and . . . among those who helped to second intellectual development in Frankish Gaul, many came from abroad. . . . He not only strove to attract distinguished men into his states, but he protected and encouraged them wherever he discovered them. More than one Anglo-Saxon abbey shared his liberality; and learned men who, after following him into Gaul, wished to return to their country, in no way became strangers to him. . . . Alcuin fixed himself there permanently. He was born in England, at York, about 735. The intellectual state of Ireland and England was then superior to that of the continent; letters and schools prospered there more than anywhere else. . . . The schools of England, and particularly that of York, were superior to those of the continent. That of York possessed a rich library, where many of the works of pagan antiquity were found; among others, those of Aristotle, which it is a mistake to say were first introduced to the knowledge of modern Europe by the Arabians, and the Arabians only; for from the fifth to the tenth century, there is no epoch in which we do not find them mentioned in some library, in which they were not known and studied by some men of letters. . . . In 780, on the death of archbishop Ælbert, and the accession of his successor, Eanbald, Alcuin received from him the mission to proceed to Rome for the purpose of obtaining from the pope and bringing to him the 'pallium.' In returning from Rome, he came to Parma, where he found Charlemagne. . . . The emperor at once pressed him to take up his abode in France. After some hesitation, Alcuin accepted the invitation, subject to the permission of his bishop, and of his own sovereign. The permission was obtained, and in 782 we find him established in the court of Charlemagne, who at once gave him three abbeys, those of Ferrieres in Gatanois, of St. Loup at Troyes, and of St. Josse in the county of Ponthieu. From this time forth, Alcuin was the confidant, the councillor, the intellectual prime minister, so to speak, of Charlemagne. . . . From 782 to 796, the period of his residence in the court of Charlemagne, Alcuin presided over a private school, called 'The School of the Palace,' which accompanied Charlemagne wherever he went, and at which were regularly present all those who were with the emperor. . . . It is difficult to say what could have been the course of instruction pursued in this school; I am disposed to believe that to such auditors Alcuin addressed himself generally upon all sorts of topics as they occurred; that in the 'Ecole du Palais,' in fact, it was conversation rather than teaching, especially so called, that went on; that movement given to mind, curiosity constantly excited and satisfied, was its chief merit." —F. Guizot, *Hist. of Civilization, lect.* 22 (*v.* 3).—See, also, EDUCATION, MEDIÆVAL.

SCINDE, OR SINDH.—"Sindh is the Sanskrit word Sindh or Sindhu, a river or ocean. It was applied to the river Indus, the first great body of water encountered by the Aryan invaders. . . . Sindh, which is part of the Bombay Presidency, is bounded on the north and west by the territories of the khan of Khelat, in Beluchistan; the Punjab and the Bahawalpur State lie on the north-east. . . . Three-fourths of the people are Muhammadans and the remainder Hindus." Sindh was included in the Indian conquests of Mahmud of Ghazni, Akbar, and Nadir Shah (see INDIA: A. D. 977–1290; 1399–1605; and 1662–1748). "In 1748 the country became an appanage of Kabul, as part of the dowry bestowed by the reigning emperor upon Timur, son of Ahmed Shah Durani, who founded the kingdom of Afghanistan. . . . The connection of the British government with Sindh had its origin in A. D. 1758, when Ghulam Shah Kalhora . . . granted a 'purwanah,' or permit, to an officer in the East India Company's service for the establishment of a factory in the province. . . . In their relations with the British government the Amirs throughout displayed much jealousy of foreign interference. Several treaties were made with them from time to time. In 1836, owing to the designs of Ranjit Singh on

Sindh, which, however, were not carried out because of the interposition of the British government, more intimate connection with the Amirs was sought. Colonel Pottinger visited them to negotiate for this purpose. It was not, however, till 1838 that a short treaty was concluded, in which it was stipulated that a British minister should reside at Haidarabad. At this time the friendly alliance of the Amirs was deemed necessary in the contemplated war with Afghanistan which the British government was about to undertake, to place a friendly ruler on the Afghan throne. The events that followed led to the occupation of Karachi by the British, and placed the Amirs in subsidiary dependence on the British government. New treaties became necessary, and Sir Charles Napier was sent to Haidarabad to negotiate. The Beluchis were infuriated at this proceeding, and openly insulted the officer, Sir James Outram, at the Residency at Haidarabad. Sir Charles Napier thereupon attacked the Amir's forces at Meanee, on 17th February, 1843, with 2,800 men, and twelve pieces of artillery, and succeeded in gaining a complete victory over 22,000 Beluchis, with the result that the whole of Sindh was annexed to British India."—D. Ross, *The Land of the Five Rivers and Sindh, pp.* 1–6.

SCIRONIAN WAY, The.—"The Scironian Way led from Megara to Corinth, along the eastern shore of the isthmus. At a short distance from Megara it passed along the Scironian rocks, a long range of precipices overhanging the sea, forming the extremity of a spur which descends from Mount Geranium. This portion of the road is now known as the 'Kaki Scala,' and is passed with some difficulty. The way seems to have been no more than a footpath until the time of Adrian, who made a good carriage road throughout the whole distance. There is but one other route by which the isthmus can be traversed. It runs inland, and passes over a higher portion of Mount Geranium, presenting to the traveller equal or greater difficulties."—G. Rawlinson, *Hist. of Herodotus, bk.* 8, *sect.* 71, *foot-note.*

SCORDISCANS, The. — The Scordiscans, called by some Roman writers a Thracian people, but supposed to have been Celtic, were settled in the south of Pannonia in the second century, B. C. In B. C. 114 they destroyed a Roman army under consul C. Portius Cato. Two years later consul M. Livius Drusus drove them across the Danube.—E. H. Bunbury, *Hist. of Ancient Geog., ch.* 18, *sect.* 1 (*v.* 2).

SCOT AND LOT.—"Paying scot and lot; that is, bearing their rateable proportion in the payments levied from the town for local or national purposes."—W. Stubbs, *Const. Hist. of Eng., ch.* 20, *sect.* 745 (*v.* 3).

SCOTCH HIGHLAND AND LOWLAND.—"If a line is drawn from a point on the eastern bank of Loch Lomond, somewhat south of Ben Lomond, following in the main the line of the Grampians, and crossing the Forth at Aberfoil, the Teith at Callander, the Almond at Crieff, the Tay at Dunkeld, the Ericht at Blairgowrie, and proceeding through the hills of Brae Angus till it reaches the great range of the Mounth, then crossing the Dee at Ballater, the Spey at lower Craigellachie, till it reaches the Moray Firth at Nairn — this forms what was called the Highland Line and separated the Celtic from the Teutonic-speaking people. Within this line, with the exception of the county of Caithness which belongs to the Teutonic division, the Gaelic language forms the vernacular of the inhabitants."—W. F. Skene, *Celtic Scotland, v.* 2, *p.* 453.

SCOTCH-IRISH, The.—In 1607, six counties in the Irish province of Ulster, formerly belonging to the earls of Tyrone and Tyrconnel, were confiscated by the English crown. The two earls, who had submitted and had been pardoned, after a long rebellion during the reign of queen Elizabeth, had now fled from new charges of treason, and their great estates were forfeited (see Ireland: A. D. 1559–1603, and 1607–1611). These estates, thus acquired by King James, the first of the Stuarts, were "parcelled out among a body of Scotch and English, brought over for the purpose. The far greater number of these plantations were from the lower part of Scotland, and became known as 'Scotch-Irish.' Thus a new population was given to the north of Ireland, which has changed its history. The province of Ulster, with fewer natural advantages than either Munster, Leinster, or Connaught, became the most prosperous, industrious and law-abiding of all Ireland. . . . But the Protestant population thus transplanted to the north of Ireland was destined to suffer many . . . persecutions. . . . In 1704, the test-oath was imposed, by which every one in public employment was required to profess English prelacy. It was intended to suppress Popery, but was used by the Episcopal bishops to check Presbyterianism. To this was added burdensome restraints on their commerce, and extortionate rents from their landlords, resulting in what is known as the Antrim evictions. There had been occasional emigrations from the north of Ireland from the plantation of the Scotch, and one of the ministers sent over in 1683, Francis Makemie, had organized on the eastern shore of Maryland and in the adjoining counties of Virginia the first Presbyterian churches in America. But in the early part of the eighteenth century the great movement began which transported so large a portion of the Scotch-Irish into the American colonies, and, through their influence, shaped in a great measure the destinies of America. Says the historian Froude: 'In the two years which followed the Antrim evictions, thirty-thousand Protestants left Ulster for a land where there was no legal robbery, and where those who sowed the seed could reap the harvest.' Alarmed by the depletion of the Protestant population, the Toleration Act was passed, and by it, and further promises of relief, the tide of emigration was checked for

a brief period. In 1728, however, it began anew, and from 1729 to 1750, it was estimated that 'about twelve thousand came annually from Ulster to America.' So many had settled in Pennsylvania before 1729 that James Logan, the Quaker president of that colony, expressed his fear that they would become proprietors of the province. . . . This bold stream of emigrants struck the American continent mainly on the eastern border of Pennsylvania, and was, in great measure, turned southward through Maryland, Virginia, North Carolina, and South Carolina, reaching and crossing the Savannah river. It was met at various points by counter streams of the same race, which had entered the continent through the seaports of the Carolinas and Georgia. Turning westward the combined flood overflowed the mountains and covered the rich valley of the Mississippi beyond. As the Puritans or Round-heads of the south, but freed from fanaticism, they gave tone to its people and direction to its history. . . . The task would be almost endless to simply call the names of this people [the Scotch-Irish] in the South who have distinguished themselves in the annals of their country."—W. W. Henry, *The Scotch Irish of the South* (*Proceedings of the Scotch-Irish Congress*, 1889). — The descendants of the Scotch-Irish are well represented in the list of the signers of the Declaration of Independence. They were with scarcely an exception on the side of the patriots during the American Revolution, forming, for their part of the population, a goodly proportion of the military force employed. They are to be found in striking numbers in the records of our army and navy, in those of our legislatures and of our courts. Their names stand high among our divines, teachers, writers, explorers and inventors. Over one-third of the numbers of our presidents is claimed to be of the Scotch-Irish stock, in greater or less degree of descent. In an analysis of the races which settled in the United States the Scotch-Irish are credited with furnishing one-tenth of the famous men of the country. "Full credit has been awarded the Roundhead and the Cavalier for their leadership in our history; nor have we been altogether blind to the deeds of the Hollander and the Huguenot; but it is doubtful if we have wholly realized the importance of the part played by that stern and virile people, the Irish whose preachers taught the creed of Knox and Calvin. These Irish representatives of the Covenanters were in the west almost what the Puritans were in the northeast, and more than the Cavaliers were in the south. Mingled with the descendants of many other races, they nevertheless formed the kernel of the distinctively and intensely American stock who were the pioneers of our people in their march westward, the vanguard of the army of fighting settlers, who with axe and rifle won their way from the Alleghanies to the Rio Grande and the Pacific. . . . They . . . made their abode at the foot of the mountains, and became the outposts of civilization. . . . In this land of hills, covered by unbroken forest, they took root and flourished, stretching in a broad belt from north to south, a shield of sinewy men thrust in between the people of the seaboard and the red warriors of the wilderness. All through this region they were alike; they had as little kinship with the Cavalier as with the Quaker; the west was won by those who have been rightly called the Roundheads of the south, the same men who, before any others, declared for American independence. The two facts of most importance to remember in dealing with our pioneer history are, first, that the western portions of Virginia and the Carolinas were peopled by an entirely different stock from that which had long existed in the tide-water regions of those colonies; and, secondly, that, except for those in the Carolinas who came from Charleston, the immigrants of this stock were mostly from the north, from their great breeding ground and nursery in western Pennsylvania. That these Irish Presbyterians were a bold and hardy race is proved by their at once pushing past the settled regions, and plunging into the wilderness as the leaders of the white advance. They were the first and last set of immigrants to do this; all others have merely followed in the wake of their predecessors. But, indeed, they were fitted to be Americans from the very start; they were kinsfolk of the Covenanters; they deemed it a religious duty to interpret their own Bible, and held for a divine right the election of their own clergy. For generations, their whole ecclesiastic and scholastic systems had been fundamentally democratic."—T. Roosevelt, *The Winning of the West*, *v.* 1, *ch.* 5.

SCOTCH MILE ACT. See Scotland: A. D. 1660–1666.

SCOTIA, The name. See Scotland, The Name.

SCOTLAND.

The name.— "The name of Scotia, or Scotland, whether in its Latin or its Saxon form, was not applied to any part of the territory forming the modern kingdom of Scotland till towards the end of the tenth century. Prior to that period it was comprised in the general appellation of Britannia, or Britain, by which the whole island was designated in contradistinction from that of Hibernia, or Ireland. That part of the island of Britain which is situated to the north of the Firths of Forth and Clyde seems indeed to have been known to the Romans as early as the first century by the distinctive name of Caledonia, and it also appears to have borne from an early period another appellation, the Celtic form of which was Albu, Alba, or Alban, and its Latin form Albania. The name of Scotia, however, was exclusively appropriated to the island of Ireland. Ireland was emphatically Scotia, the 'patria,' or mother-country of the Scots; and although a colony of that people had established themselves as early as the beginning of the sixth century in the western districts of Scotland, it was not till the tenth century that any part of the present country of Scotland came to be known under that name. . . . From the tenth to the twelfth or thirteenth centuries the name of Scotia, gradually superseding the older name of Alban, or Albania, was confined to a district nearly corresponding with that part of the Lowlands of Scot-

land which is situated on the north of the Firth of Forth. . . . The three propositions — 1st, That Scotia, prior to the tenth century, was Ireland, and Ireland alone; 2d, That when applied to Scotland it was considered a new name superinduced upon the older designation of Alban or Albania; and, 3d, That the Scotia of the three succeeding centuries was limited to the districts between the Forth, the Spey, and Drumalban,—lie at the very threshold of Scottish history."—W. F. Skene, *Celtic Scotland, v.* 1, *introd.*

The Picts and Scots.—"Cæsar tells us that the inhabitants of Britain in his day painted themselves with a dye extracted from woad; by the time, however, of British independence under Carausius and Allectus, in the latter part of the third century, the fashion had so far fallen off in Roman Britain that the word 'Picti,' Picts, or painted men, had got to mean the peoples beyond the Northern wall. . . . Now, all these Picts were natives of Britain, and the word Picti is found applied to them for the first time, in a panegyric by Eumenius, in the year 296; but in the year 360 another painted people appeared on the scene. They came from Ireland, and, to distinguish these two sets of painted foes from one another, Latin historians left the painted natives to be called Picti, as had been done before, and for the painted invaders from Ireland they retained, untranslated, a Celtic word of the same (or nearly the same) meaning, namely 'Scotti.' Neither the Picts nor the Scotti probably owned these names, the former of which is to be traced to Roman authors, while the latter was probably given the invaders from Ireland by the Brythons, whose country they crossed the sea to ravage. The Scots, however, did recognize a national name, which described them as painted or tattooed men. . . . This word was Cruithnig, which is found applied equally to the painted people of both islands. . . . The eponymus of all the Picts was Cruithne, or Cruithnechan, and we have a kindred Brythonic form in Prydyn, the name by which Scotland once used to be known to the Kymry."—J. Rhys, *Celtic Britain, ch.* 7.—A different view of the origin and signification of these names is maintained by Dr. Guest.—E. Guest, *Origines Celticae, v.* 2, *pt.* 1, *ch.* 1.—Prof. Freeman looks upon the question as unsettled. He says: "The proper Scots, as no one denies, were a Gaelic colony from Ireland. The only question is as to the Picts or Caledonians. Were they another Gaelic tribe, the vestige of a Gaelic occupation of the island earlier than the British occupation, or were they simply Britons who had never been brought under the Roman dominion? The geographical aspect of the case favours the former belief, but the weight of philological evidence seems to be on the side of the latter."—E. A. Freeman, *Hist. of the Norman Conq. of Eng., ch.* 2, *sect.* 1, *foot-note.*

6-7th Centuries.—Part included in the English Kingdom of Northumberland. See England: A. D. 547–633.

7th Century.—The Four Kingdoms.—"Out of these Celtic and Teutonic races [Picts, Scots, Britons of Strathclyde, and Angles] there emerged in that northern part of Britain which eventually became the territory of the subsequent monarchy of Scotland, four kingdoms within definite limits and under settled forms of government; and as such we find them in the beginning of the 7th century, when the conflict among these races, which succeeded the departure of the Romans from the island, and the termination of their power in Britain, may be held to have ceased and the limits of these kingdoms to have become settled. North of the Firths of Forth and Clyde were the two kingdoms of the Scots of Dalriada on the west and of the Picts on the east. They were separated from each other by a range of mountains termed by Adamnan the Dorsal ridge of Britain, and generally known by the name of Drumalban. . . . The colony [of Dalriada] was originally founded by Fergus Mor, son of Erc, who came with his two brothers Loarn and Angus from Irish Dalriada in the end of the 5th century [see Dalriada], but the true founder of the Dalriadic kingdom was his great grandson Aedan, son of Gabran. . . . The remaining districts north of the Firths of Forth and Clyde formed the kingdom of the Picts. . . . The districts south of the Firths of Forth and Clyde, and extending to the Solway Firth on the west and to the Tyne on the east, were possessed by the two kingdoms of the Britons [afterwards Strathclyde], on the west and of the Angles of Bernicia on the east. The former extended from the river Derwent in Cumberland in the south to the Firth of Clyde in the north, which separated the Britons from the Scots of Dalriada. . . . The Angles of Bernicia . . . were now in firm possession of the districts extending along the east coast as far as the Firth of Forth, originally occupied by the British tribe of the Ottadeni and afterwards by the Picts, and including the counties of Berwick and Roxburgh and that of East Lothian or Haddington, the rivers Esk and Gala forming here their western boundary. . . . In the centre of Scotland, where it is intersected by the two arms of the sea, the Forth and the Clyde, and where the boundaries of these four kingdoms approach one another, is a territory extending from the Esk to the Tay, which possessed a very mixed population and was the scene of most of the conflicts between these four states." About the middle of the 7th century, Osuiu or Oswiu, king of Northumberland (which then included Bernicia), having overcome the Mercians, "extended his sway not only over the Britons but over the Picts and Scots; and thus commenced the dominion of the Angles over the Britons of Alclyde, the Scots of Dalriada, and the southern Picts, which was destined to last for thirty years. . . . In the meantime the little kingdom of Dalriada was in a state of complete disorganisation. We find no record of any real king over the whole nation of the Scots, but each separate tribe seems to have remained isolated from the rest under its own chief, while the Britons exercised a kind of sway over them, and along with the Britons they were under subjection to the Angles." In 685, on an attempt

being made to throw off the yoke of the Angles of Northumbria, King Ecgfrid or Ecgfrith, son of Oswiu, led an army into the country of the Picts and was there defeated crushingly and slain in a conflict styled variously the battle of Dunnichen, Duin Nechtain, and Nechtan's Mere. The effect of the defeat is thus described by Bede: "'From that time the hopes and strength of the Anglic kingdom began to fluctuate and to retrograde, for the Picts recovered the territory belonging to them which the Angles had held, and the Scots who were in Britain and a certain part of the Britons regained their liberty, which they have now enjoyed for about forty-six years.'"—W. F. Skene, *Celtic Scotland, bk.* 1, *ch.* 5 (*v.* 1).

8-9th Centuries.—The kingdom of Scone and the kingdom of Alban.—"The Pictish kingdom had risen fast to greatness after the victory of Nectansmere in 685. In the century which followed Ecgfrith's defeat, its kings reduced the Scots of Dalriada from nominal dependence to actual subjection, the annexation of Angus and Fife carried their eastern border to the sea, while to the south their alliance with the Northumbrians in the warfare which both waged on the Welsh extended their bounds on the side of Cumbria or Strath-Clyde. But the hour of Pictish greatness was marked by the extinction of the Pictish name. In the midst of the 9th century the direct line of their royal house came to an end, and the under-king of the Scots of Dalriada, Kenneth Mac Alpin, ascended the Pictish throne in right of his maternal descent. For fifty years more Kenneth and his successors remained kings of the Picts. At the moment we have reached, however [the close of the 9th century], the title passed suddenly away, the tribe which had given its chief to the throne gave its name to the realm, and 'Pict-land' disappeared from history to make room first for Alban or Albania, and then for 'the land of the Scots.'"—J. R. Green, *The Conquest of England, ch.* 4.—It appears however that, before the kingdom of Alban was known, there was a period during which the realm established by the successors of Kenneth Mac Alpin, the Scot, occupying the throne of the Picts, was called the kingdom of Scone, from the town which became its capital. "It was at Scone too that the Coronation Stone was 'reverently kept for the consecration of the kings of Alban,' and of this stone it was believed that 'no king was ever wont to reign in Scotland unless he had first, on receiving the royal name, sat upon this stone at Scone.' . . . Of its identity with the stone now preserved in the coronation chair at Westminster there can be no doubt. It is an oblong block of red sandstone, some 26 inches long by 16 inches broad, and 10½ inches deep. . . . Its mythic origin identifies it with the stone which Jacob used as a pillow at Bethel, . . . but history knows of it only at Scone." Some time near the close of the 9th century "the kingdom ceased to be called that of Scone and its territory Cruithentuath, or Pictavia its Latin equivalent, and now became known as the kingdom of Alban or Albania, and we find its kings no longer called kings of the Picts but kings of Alban."—W. F. Skene, *Celtic Scotland, bk.* 1, *ch.* 6-7 (*v.* 1).

9th Century.—The Northmen on the coasts and in the Islands. See NORMANS.—NORTHMEN: 8-9TH CENTURIES.

10-11th Centuries.—The forming of the modern kingdom and its relations to England.—"The fact that the West-Saxon or English Kings, from Eadward the Elder [son of Alfred the Great] onwards, did exercise an external supremacy over the Celtic princes of the island is a fact too clear to be misunderstood by any one who looks the evidence on the matter fairly in the face. I date their supremacy over Scotland from the reign of Eadward the Elder, because there is no certain earlier instance of submission on the part of the Scots to any West-Saxon King. . . . The submission of Wales [A. D. 828] dates from the time of Ecgberht; but it evidently received a more distinct and formal acknowledgement [A. D. 922] in the reign of Eadward. Two years after followed the Commendation of Scotland and Strathclyde. . . . I use the feudal word Commendation, because that word seems to me better than any other to express the real state of the case. The transaction between Eadward and the Celtic princes was simply an application, on an international scale, of the general principle of the Comitatus. . . . A man 'chose his Lord'; he sought some one more powerful than himself, with whom he entered into the relation of Comitatus; as feudal ideas strengthened, he commonly surrendered his allodial land to the Lord so chosen, and received it back again from him on a feudal tenure. This was the process of Commendation, a process of everyday occurrence in the case of private men choosing their Lords, whether those Lords were simple gentlemen or Kings. And the process was equally familiar among sovereign princes themselves. . . . There was nothing unusual or degrading in the relation; if Scotland, Wales, Strathclyde, commended themselves to the West-Saxon King, they only put themselves in the same relation to their powerful neighbour in which every continental prince stood in theory, and most of them in actual fact, to the Emperor, Lord of the World. . . . The original Commendation to the Eadward of the tenth century, confirmed by a series of acts of submission spread over the whole of the intermediate time, is the true justification for the acts of his glorious namesake [Edward I.] in the thirteenth century. The only difference was that, during that time, feudal notions had greatly developed on both sides; the original Commendation of the Scottish King and people to a Lord had changed, in the ideas of both sides, into a feudal tenure of the land of the Scottish Kingdom. But this change was simply the universal change which had come over all such relations everywhere. . . . But it is here needful to point out two other distinct events which have often been confounded with the Commendation of Scotland, a confusion through which the real state of the case has often been misunderstood. . . . It is hard to make people understand that there have not always been Kingdoms of England and Scotland, with the Tweed and the Cheviot Hills as the boundaries between them. It must be borne in mind that in the tenth century no such boundaries existed, and that the names of England and Scotland were only just beginning to be known. At the time of the Commendation the country which is now called Scotland was divided among three quite distinct sovereignties. North of the Forth and Clyde reigned the King of Scots, an independent Celtic prince reigning over a Celtic people, the

Picts and Scots, the exact relation between which two tribes is a matter of perfect indifference to my present purpose. South of the two great firths the Scottish name and the Scottish dominion were unknown. The south-west part of modern Scotland formed part of the Kingdom of the Strathclyde Welsh, which up to 924 was, like the Kingdom of the Scots, an independent Celtic principality. The south-eastern part of modern Scotland, Lothian in the wide sense of the word, was purely English or Danish, as in language it remains to this day. It was part of the Kingdom of Northumberland, and it had its share in all the revolutions of that Kingdom. In the year 924 Lothian was ruled by the Danish Kings of Northumberland, subject only to that precarious superiority on the part of Wessex which had been handed on from Ecgberht and Ælfred. In the year 924, when the three Kingdoms, Scotland, Strathclyde and Northumberland, all commended themselves to Eadward, the relation was something new on the part of Scotland and Strathclyde; but on the part of Lothian, as an integral part of Northumberland, it was only a renewal of the relation which had been formerly entered into with Ecgberht and Ælfred. . . . The transactions which brought Scotland, Strathclyde, and Lothian into their relations to one another and to the English Crown were quite distinct from each other. They were as follows: — First, the Commendation of the King and people of the Scots to Eadward in 924. Secondly, the grant of Cumberland by Eadmund to Malcolm in 945. . . . In 945 the reigning King [of Cumberland, or Strathclyde] revolted against his over-lord Eadmund; he was overthrown and his Kingdom ravaged; it was then granted on tenure of military service to his kinsman Malcolm King of Scots. . . . The southern part of this territory was afterwards . . . annexed to England; the northern part was retained by the Scottish Kings, and was gradually, though very gradually, incorporated with their own Kingdom. The distinction between the two states seems to have been quite forgotten in the 13th century." The third transaction was "the grant of Lothian to the Scottish kings, either under Eadgar or under Cnut. . . . The date of the grant of Lothian is not perfectly clear. But whatever was the date of the grant, there can be no doubt at all as to its nature. Lothian, an integral part of England, could be granted only as any other part of England could be granted, namely to be held as part of England, its ruler being in the position of an English Earl. . . . But in such a grant the seeds of separation were sown. A part of the Kingdom which was governed by a foreign sovereign, on whatever terms of dependence, could not long remain in the position of a province governed by an ordinary Earl. . . . That the possession of Lothian would under all ordinary circumstances remain hereditary, must have been looked for from the beginning. This alone would distinguish Lothian from all other Earldoms. . . . It was then to be expected that Lothian, when once granted to the King of Scots, should gradually be merged in the Kingdom of Scotland. But the peculiar and singular destiny of this country could hardly have been looked for. Neither Eadgar nor Kenneth could dream that this purely English or Danish province would become the historical Scotland. The different tenures of Scotland and Lothian got confounded; the Kings of Scots, from the end of the eleventh century, became English in manners and language; they were not without some pretensions to the Crown of England, and not without some hopes of winning it. They thus learned to attach more and more value to the English part of their dominions, and they laboured to spread its language and manners over their original Celtic territory. They retained their ancient title of Kings of Scots, but they became in truth Kings of English Lothian and of Anglicized Fife. A state was thus formed, politically distinct from England, and which political circumstances gradually made bitterly hostile to England, a state which indeed retained a dark and mysterious Celtic background, but which, as it appears in history, is English in laws, language and manners, more truly English indeed, in many respects, than England itself remained after the Norman Conquest."— E. A. Freeman, *Hist. of the Norman Conquest of Eng., ch.* 3, *sect.* 4.

A. D. 1005-1034.—The kingdom acquires its final name.—"The mixed population of Picts and Scots had now become to a great extent amalgamated, and under the influence of the dominant race of the Scots were identified with them in name. Their power was now to be further consolidated, and their influence extended during the thirty years' reign of a king who proved to be the last of his race, and who was to bequeath the kingdom, under the name of Scotia, to a new line of kings. This was Malcolm, the son of Kenneth, who slew his predecessor, Kenneth, the son of Dubh, at Monzievaird. . . . With Malcolm the descendants of Kenneth mac Alpin, the founder of the Scottish dynasty, became extinct in the male line."—W. F. Skene, *Celtic Scotland, bk.* 1, *ch.* 8.

A. D. 1039-1054.—The reign of Macbeth or Macbeda.— Malcolm was succeeded by his daughter's son, Duncan. "There is little noticeable in his [Duncan's] life but its conclusion. He had made vain efforts to extend his frontiers southward through Northumberland, and was engaged in a war with the holders of the northern independent states at his death in the year 1039. . . . He was slain in 'Bothgowan,' which is held to be Gaelic for 'a smith's hut.' The person who slew him, whether with his own hand or not, was Macbeda, the Maarmor of Ross, or of Ross and Moray; the ruler, in short, of the district stretching from the Moray Frith and Loch Ness northwards. The place where the smith's hut stood is said to have been near Elgin. This has not been very distinctly established; but at all events it was near if not actually within the territory ruled by Macbeda, and Duncan was there with aggressive designs. The maarmor's wife was Gruach, a granddaughter of Kenneth IV. If there was a grandson of Kenneth killed by Malcolm, this was his sister. But whether or not she had this inheritance of revenge, she was, according to the Scots authorities, the representative of the Kenneth whom the grandfather of Duncan had deprived of his throne and his life. . . . The deeds which raised Macbeda and his wife to power were not to appearance much worse than others of their day done for similar ends. However he may have gained his power, he exercised it with good repute, according to the reports nearest to his time. It is among the

most curious of the antagonisms that sometimes separate the popular opinion of people of mark from anything positively known about them, that this man, in a manner sacred to splendid infamy, is the first whose name appears in the ecclesiastical records both as a king of Scotland and a benefactor of the Church; and is also the first who, as king of Scotland, is said by the chroniclers to have offered his services to the Bishop of Rome. The ecclesiastical records of St. Andrews tell how he and his queen made over certain lands to the Culdees of Lochleven, and there is no such fact on record of any earlier king of Scotland. Of his connection with Rome, it is a question whether he went there himself. . . . That he sent money there, however, was so very notorious as not only to be recorded by the insular authorities, but to be noticed on the Continent as a significant event. . . . The reign of this Macbeda or Macbeth forms a noticeable period in our history. He had a wider dominion than any previous ruler, having command over all the country now known as Scotland, except the Isles and a portion of the Western Highlands. . . . With him, too, ended that mixed or alternative regal succession which, whether it was systematic or followed the law of force, is exceedingly troublesome to the inquirer. . . . From Macbeth downwards . . . the rule of hereditary succession holds, at all events to the extent that a son, where there is one, succeeds to his father. Hence this reign is a sort of turning-point in the constitutional history of the Scottish crown."—J. H. Burton, *Hist. of Scotland, v.* 1, *ch.* 10.

A. D. 1066-1093. — Effects of the Norman Conquest of England. — Civilization and growth of the Northern Kingdom. — Reign of Malcolm III.— "The Norman Conquest of England produced a great effect upon their neighbours. In the first place, a very great number of the Saxons who fled from the cruelty of William the Conqueror, retired into Scotland, and this had a considerable effect in civilizing the southern parts of that country; for if the Saxons were inferior to the Normans in arts and in learning, they were, on the other hand, much superior to the Scots, who were a rude and very ignorant people. These exiles were headed and accompanied by what remained of the Saxon royal family, and particularly by a young prince named Edgar Etheling, who was a near kinsman of Edward the Confessor, and the heir of his throne, but dispossessed by the Norman Conqueror. This prince brought with him to Scotland two sisters, named Margaret and Christian. They were received with much kindness by Malcolm III., called Canmore [Ceanmore] (or Great Head), who remembered the assistance which he had received from Edward the Confessor. . . . He himself married the Princess Margaret (1068), and made her the Queen of Scotland. . . . When Malcolm, King of Scotland, was thus connected with the Saxon royal family of England, he began to think of chasing away the Normans, and of restoring Edgar Etheling to the English throne. This was an enterprise for which he had not sufficient strength; but he made deep and bloody inroads into the northern parts of England, and brought away so many captives, that they were to be found for many years afterwards in every Scottish village, nay, in every Scottish hovel. No doubt, the number of Saxons thus introduced into Scotland tended much to improve and civilize the manners of the people. . . . Not only the Saxons, but afterwards a number of the Normans themselves, came to settle in Scotland, . . . and were welcomed by King Malcolm. He was desirous to retain these brave men in his service, and for that purpose he gave them great grants of land, to be held for military services; and most of the Scottish nobility are of Norman descent. And thus the Feudal System was introduced into Scotland as well as England, and went on gradually gaining strength, till it became the general law of the country, as indeed it was that of Europe at large. Malcolm Canmore, thus increasing in power, and obtaining re-enforcements of warlike and civilized subjects, began greatly to enlarge his dominions. At first he had resided almost entirely in the province of Fife, and at the town of Dunfermline, where there are still the ruins of a small tower which served him for a palace. But as he found his power increase, he ventured across the Frith of Forth, and took possession of Edinburgh and the surrounding country, which had hitherto been accounted part of England. The great strength of the castle of Edinburgh, situated upon a lofty rock, led him to choose that town frequently for his residence, so that in time it became the metropolis, or chief city of Scotland. This king Malcolm was a brave and wise prince, though without education. He often made war upon King William the Conqueror of England, and upon his son and successor, William, who, from his complexion, was called William Rufus, that is, Red William. Malcolm was sometimes beaten in these wars, but he was more frequently successful; and not only made a complete conquest of Lothian, but threatened also to possess himself of the great English province of Northumberland, which he frequently invaded." Malcolm Canmore was killed in battle at Alnwick Castle (1093), during one of his invasions of English territory. — Sir W. Scott, *Tales of a Grandfather (Scotland); abridged by E. Ginn, ch.* 4.

Also in: J. H. Burton, *Hist. of Scotland, v.* 1, *ch.* 11.

A. D. 1093-1153.—Successors of Malcolm III.—The reign of David I.—His civilizing work and influence.—"Six sons and two daughters were the offspring of the marriage between Malcolm and Margaret. Edward, the eldest, perished with his father, and Ethelred, created Abbot of Dunkeld and Earl of Fife, appears to have survived his parents for a very short time: Edmund died in an English cloister, a penitent and mysterious recluse; Edgar, Alexander, and David, lived to wear, in succession, the crown of Scotland. Of the two daughters, Editha . . . became the queen of Henry of England. . . . Three parties may be said to have divided Scotland at the period of Malcolm's death." One of these parties, inspired with jealousy of the English influence which had come into the kingdom with queen Margaret, succeeded in raising Donald Bane, a brother of the late king Malcolm, to the throne. Donald was soon displaced by Edmund, who is sometimes said to have been an illegitimate son of Malcolm; and in 1097 Edmund was dethroned by Edgar, the son of Malcolm and Margaret. Edgar, dying in 1107, was succeeded by Alexander I., and he, in 1124, by David I. The reign of David was contemporary

with the dark and troubled time of Stephen in England, and he took an unfortunate part in the struggle between Stephen and the Empress Matilda, suffering a dreadful defeat in the famous Battle of the Standard (see STANDARD, BATTLE OF). But "the whole of the north of England beyond the Tees" was "for several years . . . under the influence, if not under the direct authority, of the Scottish king, and the comparative prosperity of this part of the kingdom, contrasting strongly with the anarchy prevailing in every other quarter, naturally inclined the population of the northern counties to look with favour upon a continuance of the Scottish connection. . . . Pursuing the policy inaugurated by his mother [the English princess Margaret] . . . , he encouraged the resort of foreign merchants to the ports of Scotland, insuring to native traders the same advantages which they had enjoyed during the reign of his father; whilst he familiarized his Gaelic nobles, in their attendance upon the royal court, with habits of luxury and magnificence, remitting three years' rent and tribute — according to the account of his contemporary Malmesbury — to all his people who were willing to improve their dwellings, to dress with greater elegance, and to adopt increased refinement in their general manner of living. Even in the occupations of his leisure moments he seems to have wished to exercise a softening influence over his countrymen, for, like many men of his character, he was fond of gardening, and he delighted in indoctrinating his people in the peaceful arts of horticulture, and in the mysteries of planting and of grafting. For similar reasons he sedulously promoted the improvement of agriculture, or rather, perhaps, directed increased attention to it; for the Scots of that period were still a pastoral, and, in some respects, a migratory people. . . . David hoped to convert the lower orders into a more settled and industrious population; whilst he enjoined the higher classes to 'live like noblemen' upon their own estates, and not to waste the property of their neighbours. . . . In consequence of these measures feudal castles began, ere long, to replace the earlier buildings of wood and wattles rudely fortified by earthworks; and towns rapidly grew up around the royal castles and about the principal localities of commerce. . . . The prosperity of the country during the last fifteen years of his reign [he died in 1153] contrasted strongly with the miseries of England under the disastrous rule of Stephen; Scotland became the granary from which her neighbour's wants were supplied; and to the court of Scotland's king resorted the knights and nobles of foreign origin, whom the commotions of the Continent had hitherto driven to take refuge in England."—E. W. Robertson, *Scotland under her Early Kings, v.* 1, *ch.* 6–8.

A. D. 1153.—Accession of Malcolm IV.

A. D. 1165. — Accession of William IV. (called The Lion).

A. D. 1174-1189.—Captivity of William the Lion, his oath of fealty to the English king, and his release from it.— In 1174, on the occasion of a general conspiracy of rebellion against Henry II., contrived at Paris, headed by his wife and sons, and joined by great numbers of the nobles throughout his dominions, both in England and in France, William the Lion, king of Scotland, was induced to assist the rebellion by the promise of Northumberland for himself. Henry was in France until July, 1174, when he was warned that "only his own presence could retrieve England, where a Scotch army was pouring in from the north, while David of Huntingdon headed an army in the midland counties, and the young prince was preparing to bring over fresh forces from Gravelines. Henry crossed the channel in a storm, and, by advice of a Norman bishop, proceeded at once to do penance at Becket's shrine. On the day of his humiliation, the Scotch king, William the Lion, was surprised at Alnwick and captured. This, in fact, ended the war, for David of Huntingdon was forced to return into Scotland, where the old feud of Gael and Saxon had broken out. The English rebels purchased peace by a prompt submission. In less than a month Henry was able to leave England to itself." The king of Scotland was taken as a prisoner to Falaise, in Normandy, where he was detained for several months. "By advice of a deputation of Scotch prelates and barons he at last consented to swear fealty to Henry as his liege lord, and to do provisional homage for his son. His chief vassals guaranteed this engagement; hostages were given; and English garrisons received into three Scotch towns, Roxburgh, Berwick, and Edinburgh. Next year [1175] the treaty was solemnly ratified at York."— C. H. Pearson, *Hist. of Eng. during the Early and Middle Ages, v.* 1, *ch.* 31.— This engagement of fealty on the part of William the Lion is often referred to as the Treaty of Falaise. Fourteen years afterwards, when Henry's son, Richard, Cœur de Lion, had succeeded to the throne, the Scotch king was absolved from it. "Early in December [1189], while Richard was at Canterbury on his way to the sea [preparing to embark upon his crusade], William the Lion came to visit him, and a bargain was struck to the satisfaction of both parties. Richard received from William a sum of 10,000 marks, and his homage for his English estates, as they had been held by his brother Malcolm; in return, he restored to him the castles of Roxburgh and Berwick, and released him and his heirs for ever from the homage for Scotland itself, enforced by Henry in 1175."— K. Norgate, *England under the Angevin Kings, v.* 2, *ch.* 7.

A. D. 1214.—Accession of Alexander II.

A. D. 1249.—Accession of Alexander III.

A. D. 1263.—The Norwegian invasion and the Battle of Largs.—"The western Highlands and Islands formed the original territory of the Scots. But we have seen how the Norwegians and Danes, seizing Shetland and Orkney, spread themselves over the western Archipelago, even as far south as Man, thereby putting an end, for 300 years, to the intercommunication between the mainlands of Scotland and Ireland. These islands long formed a sort of maritime community, sometimes under the active authority of the kings of Norway, sometimes connected with the Norwegian settlers in Ireland — Ostmen, as they were called; sometimes partially ruled by kings of Man, but more generally subject to chieftains more or less powerful, who, when opportunity offered, made encroachments even on the mainland. . . . Alexander II. seems to have determined to bring this sort of interregnum to

a close, and he was engaged in an expedition for that purpose when he died at the little island of Kerrera, near Oban. His son, as he advanced to manhood, appears to have revived the idea of completely re-annexing the Islands. Complaints were made by the islanders to Haco, king of Norway, of aggressions by the earl of Ross and other mainland magnates, in the interest of the king of Scots; and Haco, who was at once a powerful and a despotic monarch, resolved to vindicate his claims as suzerain of the isles. . . . Haco accordingly fitted out a splendid fleet, consisting of 100 vessels, mostly of large size, fully equipped, and crowded with gallant soldiers and seamen. . . . On the 10th of July, 1263, 'the mightiest armament that ever left the shores of Norway sailed from the haven of Herlover.'. . . The island chieftains, Magnus of the Orkneys, Magnus, king of Man, Dougal MacRoderic, and others, met the triumphant fleet, swelling its numbers as it advanced amongst the islands. Most of the chiefs made their peace with Haco; though there were exceptions. . . . The invading fleet entered the Clyde, numbering by this time as many as 160 ships. A squadron of 60 sail proceeded up Loch-long; the crews drew their boats across the narrow isthmus at Tarbet, launched on Loch-lomond, and spread their ravages, by fire and sword, over the Lennox and Stirlingshire. . . . The alarm spread over the surrounding country, and gradually a Scottish army began to gather on the Ayrshire side of the firth. . . . Whether voluntarily, or from stress of weather, some portion of the Norwegians made a landing near Largs, on the Ayrshire coast, opposite to Bute. These being attacked by the Scots, reinforcements were landed, and a fierce but desultory struggle was kept up, with varying success, from morning till night. Many of the ships were driven ashore. Most of the Norwegians who had landed were slain. The remainder of the fleet was seriously damaged. . . . Retracing its course among the islands, on the 29th of October it reached Kirkwall in Orkney, where king Haco expired on 15th December. Such was the result of an expedition which had set out with such fair promises of success."—W. Burns, *The Scottish War of Independence, ch.* 13 (*v.* 1).—"In the Norse annals our famous Battle of Largs makes small figure, or almost none at all, among Hakon's battles and feats. . . . Of Largs there is no mention whatever in Norse books. But beyond any doubt, such is the other evidence, Hakon did land there; land and fight, not conquering, probably rather beaten; and very certainly 'retiring to his ships,' as in either case he behooved to do! It is further certain he was dreadfully maltreated by the weather on those wild coasts; and altogether credible, as the Scotch records bear, that he was so at Largs very specially. The Norse Records or Sagas say merely he lost many of his ships by the tempests, and many of his men by land fighting in various parts, — tacitly including Largs, no doubt, which was the last of these misfortunes to him. . . . To this day, on a little plain to the south of the village, now town, of Largs, in Ayrshire, there are seen stone cairns and monumental heaps, and, until within a century ago, one huge, solitary, upright stone; still mutely testifying to a battle there — altogether clearly to this battle of King Hakon's; who by the Norse records, too, was in these neighbourhoods at that same date, and evidently in an aggressive, high kind of humour."—T. Carlyle, *Early Kings of Norway, ch.* 15.

A. D. 1266.—Acquisition of the Western Islands.—Three years after the battle of Largs, "in 1266, Magnus IV., the new King [of Norway], by formal treaty ceded to the King of Scots Man and all the Western Isles, specially reserving Orkney and Shetland to the crown of Norway. On the other hand, the King of Scots agreed to pay down a ransom for them of a thousand marks, and an annual rent of a hundred marks."—J. H. Burton, *Hist. of Scotland, ch.* 15 (*v.* 2).

A. D. 1286.—Accession of Queen Margaret (called The Maid of Norway) who died on her way to Scotland in 1290.

A. D. 1290-1305.—Death of the Maid of Norway.—Reign of John Balliol.—English conquest by Edward I.—Exploits of Wallace.—Alexander III. of Scotland, dying in 1286, left only an infant granddaughter to inherit his crown. This was the child of his daughter Margaret, married to the king of Norway and dead after her first confinement. The baby queen, known in Scottish history as the Maid of Norway, was betrothed in her sixth year to Prince Edward of England, son of Edward I., and all looked promising for an early union of the Scottish and English crowns. "But this project was abruptly frustrated by the child's death on her voyage to Scotland, and with the rise of claimant after claimant of the vacant throne Edward was drawn into far other relations to the Scottish realm. Of the thirteen pretenders to the throne of Scotland, only three could be regarded as serious claimants. By the extinction of the line of William the Lion, the right of succession passed to the daughters of his brother David. The claim of John Balliol, Lord of Galloway, rested on his descent from the eldest of these; that of Robert Bruce, Lord of Annandale, on his descent from the second; that of John Hastings, Lord of Abergavenny, on his descent from the third. . . . All the rights of a feudal suzerain were at once assumed by the English King; he entered into the possession of the country as into that of a disputed fief to be held by its overlord till the dispute was settled. . . . Scotland was thus reduced to the subjection which she had experienced under Henry II. . . . The commissioners whom he named to report on the claims to the throne were mainly Scotch; a proposal for the partition of the realm among the claimants was rejected as contrary to Scotch law, and the claim of Balliol as representative of the elder branch was finally preferred to that of his rivals. The castles were at once delivered to the new monarch, and Balliol did homage to Edward with full acknowledgment of the services due to him from the realm of Scotland. For a time there was peace." But, presently, Edward made claims upon the Scotch nobles for service in his foreign wars which were resented and disregarded. He also asserted for his courts a right of hearing appeals from the Scottish tribunals, which was angrily denied. Barons and people were provoked to a hostility that forced Balliol to challenge war. He obtained from the pope absolution from his oath of fealty and he entered

into a secret alliance with the king of France. In the spring of 1296 Edward invaded Scotland, carried Berwick by storm, slaughtered 8,000 of its citizens, defeated the Scots with great slaughter at Dunbar, occupied Edinburgh, Stirling and Perth, and received, in July, the surrender of Balliol, who was sent to imprisonment in the Tower of London. "No further punishment, however, was exacted from the prostrate realm. Edward simply treated it as a fief, and declared its forfeiture to be the legal consequence of Balliol's treason. It lapsed in fact to the overlord, and its earls, barons and gentry swore homage in Parliament at Berwick to Edward as their king. . . . The government of the new dependency was intrusted to Warenne, Earl of Surrey, at the head of an English Council of Regency. . . . The disgraceful submission of their leaders brought the people themselves to the front. . . . The genius of an outlaw knight, William Wallace, saw in their smouldering discontent a hope of freedom for his country, and his daring raids on outlying parties of the English soldiery roused the country at last into revolt. Of Wallace himself, of his life or temper, we know little or nothing; the very traditions of his gigantic stature and enormous strength are dim and unhistorical. But the instinct of the Scotch people has guided it aright in choosing Wallace for its national hero. He . . . called the people itself to arms." At Stirling, in September, 1297, Wallace caught the English army in the midst of its passage of the Forth, cut half of it in pieces and put the remainder to flight. At Falkirk, in the following July, Edward avenged himself upon the forces of Wallace with terrible slaughter, and the Scottish leader narrowly escaped. In the struggle which the Scots still maintained for several years, he seems to have borne no longer a prominent part. But when they submitted, in 1303, Wallace refused Edward's offered amnesty; he was afterwards captured, sent to London for trial, and executed, his head being placed on London Bridge, according to the barbarous custom of the time.—J. R. Green, *Short Hist. of the English People, ch.* 4, *sect.* 3.

Also in: J. H. Burton, *Hist. of Scotland, ch.* 15 *and* 18–22.—C. H. Pearson, *Hist. of Eng. during the Early and Middle Ages, v.* 2, *ch.* 12–13.

A. D. 1305-1307.—The rising under Robert Bruce.—After the submission of Scotland in 1303, King Edward of England "set to work to complete the union of the two kingdoms. In the meantime Scotland was to be governed by a Lieutenant aided by a council of barons and churchmen. It was to be represented in the English parliament by ten deputies, — four churchmen, four barons, and two members of the commons, one for the country north of the Firths, one for the south. These members attended one parliament at Westminster, and an ordinance was issued for the government of Scotland. . . . But the great difficulty in dealing with the Scots was that they never knew when they were conquered, and, just when Edward hoped that his scheme for union was carried out, they rose in arms once more. The leader this time was Robert Bruce, Lord of Annandale, Earl of Carrick in right of his mother, and the grandson and heir of the rival of Balliol. He had joined Wallace, but had again sworn fealty to Edward at the Convention of Irvine, and had since then received many favours from the English king. Bruce signed a bond with William Lamberton, Bishop of St. Andrews, who had also been one of Wallace's supporters. In this bond each party swore to stand by the other in all his undertakings, no matter what, and not to act without the knowledge of the other. . . . This bond became known to Edward; and Bruce, afraid of his anger, fled from London to Dumfries. There in the Church of the Grey Friars he had an interview with John Comyn of Badenoch, called the Red Comyn, who, after Balliol and his sons, was the next heir to the throne. . . . What passed between them cannot be certainly known, as they met alone"— but Comyn was slain. "By this murder and sacrilege Bruce put himself at once out of the pale of the law and of the Church, but by it he became the nearest heir to the crown, after the Balliols. This gave him a great hold on the people, whose faith in the virtue of hereditary succession was strong, and on whom the English yoke weighed heavily. On March 27, 1306, Bruce was crowned [at Scone] with as near an imitation of the old ceremonies as could be compassed on such short notice. The actual crowning was done by Isabella, Countess of Buchan, who, though her husband was a Comyn, and, as such, a sworn foe of Bruce, came secretly to uphold the right of her own family, the Macduffs, to place the crown on the head of the King of Scots. Edward determined this time to put down the Scots with rigour. . . . All who had taken any part in the murder of the Red Comyn were denounced as traitors, and death was to be the fate of all persons taken in arms. Bruce was excommunicated by a special bull from the Pope. The Countess of Buchan was confined in a room, made like a cage, in one of the towers of Berwick Castle. One of King Robert's sisters was condemned to a like punishment. His brother Nigel, his brother-in-law Christopher Seaton, and three other nobles were taken prisoners, and were put to death as traitors. . . . Edward this time made greater preparations than ever. All classes of his subjects from all parts of his dominions were invited to join the army, and he exhorted his son, Edward Prince of Wales, and 300 newly-created knights, to win their spurs worthily in the reduction of contumacious Scotland. It was well for Scotland that he did not live to carry out his vows of vengeance. He died at Burgh-on-the-Sands, July 30th. His death proved a turning-point in the history of Scotland, for, though the English still remained in possession of the strongholds, Edward II. took no effective steps to crush the rebels. He only brought the army raised by his father as far as Cumnock in Ayrshire, and retreated without doing anything."— M. MacArthur, *Hist. of Scotland, ch.* 3.

Also in: Sir W. Scott, *Hist. of Scotland, v.* 1, *ch.* 8–9.—W. Burns, *Scottish War of Independence, v.* 2, *ch.* 21–22.

A. D. 1314.—The Battle of Bannockburn.— "It is extremely difficult to give distinctness and chronological sequence to the events in Scotland from 1306 to 1310: the conditions are indeed antagonistic to distinctness. We have a people restless and feverishly excited to efforts for their liberty when opportunity should come, but not yet embodied in open war against their invaders, and therefore doing nothing distinct enough to hold a place in history. . . . The

other prominent feature in the historical conditions was the new-made king [Robert Bruce], . . . a tall strong man, of comely, attractive, and commanding countenance. . . . He is steady and sanguine of temperament; his good spirits and good-humour never fail, and in the midst of misery and peril he can keep up the spirits of his followers by chivalrous stories and pleasant banter. . . . The English were driven out of the strong places one by one—sometimes by the people of the district. We hear of the fall of Edinburgh, Roxburgh, Linlithgow, Perth, Dundee, Rutherglen, and Dumfries. . . . In the beginning of the year 1309 Scotland was so far consolidated as to be getting into a place in European diplomacy. The King of France advised his son-in-law, Edward II., to agree to a soufrance or truce with the Scots. . . . While the negotiations with France went on, countenance still more important was given to the new order of things at home. The clergy in council set forth their adherence to King Robert, with the reasons for it. . . . This was an extremely important matter, for it meant, of course, that the Church would do its best to protect him from all ecclesiastical risk arising from the death of Comyn. . . . A crisis came at last which roused the Government of England to a great effort. After the fortresses had fallen one by one, Stirling Castle still held out. It was besieged by Edward Bruce [brother of Robert] before the end of the year 1313. Mowbray, the governor, stipulated that he would surrender if not relieved before the Feast of St. John the Baptist in the following year, or the 24th of June. The taking of this fortress was an achievement of which King Edward [I.] was prouder than of anything else he had done in the invasions of Scotland. . . . That the crowning acquisition of their mighty king should thus be allowed to pass away, and stamp emphatically the utter loss of the great conquest he had made for the English crown, was a consummation too humiliating for the chivalry of England to endure without an effort. Stirling Castle must be relieved before St. John's Day, and the relieving of Stirling Castle meant a thorough invasion and resubjection of Scotland." On both sides the utmost efforts were made,—the one to relieve the Castle, the other to strengthen its besiegers. "On the 23d of June [1314] the two armies were visible to each other. If the Scots had, as it was said, between 30,000 and 40,000 men, it was a great force for the country at that time to furnish. Looking at the urgency of the measures taken to draw out the feudal array of England, to the presence of the Welsh and Irish, and to a large body of Gascons and other foreigners, it is easy to be believed that the army carried into Scotland might be, as it was said to be, 100,000 in all. The efficient force, however, was in the mounted men, and these were supposed to be about equal in number to the whole Scottish army." The Scots occupied a position of great strength and advantage (on the banks of the Bannock Burn), which they had skilfully improved by honeycombing all the flat ground with hidden pits, to make it impassable for cavalry. The English attacked them at daybreak on the 24th of June, and suffered a most ignominious and awful defeat. "The end was rout, confused and hopeless. The pitted field added to the disasters; for though they avoided it in their advance, many horsemen were pressed into it in the retreat, and floundered among the pitfalls. Through all the history of her great wars before and since, never did England suffer a humiliation deep enough to approach even comparison with this. Besides the inferiority of the victorious army, Bannockburn is exceptional among battles by the utter helplessness of the defeated. There seems to have been no rallying point anywhere. . . . None of the parts of that mighty host could keep together, and the very chaos among the multitudes around seems to have perplexed the orderly army of the Scots. The foot-soldiers of the English army seem simply to have dispersed at all points, and the little said of them is painfully suggestive of the poor wanderers having to face the two alternatives—starvation in the wilds, or death at the hands of the peasantry. The cavalry fled right out towards England. . . . Stirling Castle was delivered up in terms of the stipulation."—J. H. Burton, *Hist. of Scotland, v. 2, ch. 23.*—"The defeated army . . . left dead upon the field about 30,000 men, including 200 knights and 700 esquires."—W. Burns, *Scottish War of Independence, ch. 23 (v. 2).*

Also in: P. F. Tytler, *Hist. of Scotland, v. 1, ch. 3.*

A. D. 1314-1328. — After Bannockburn.— The consequences of the battle in different views.— "A very general impression exists, especially among Englishmen, that the defeat at Bannockburn put an end to the attempted subjugation of Scotland. This is a mistake. . . . No doubt the defeat was of so decisive a character as to render the final result all but certain. But it required many others, though of a minor kind, to bring about the conviction described by Mr. Froude [that the Scotch would never stoop to the supremacy inflicted upon Wales]; and it was yet fourteen long years till the treaty of Northampton."—W. Burns, *The Scottish War of Independence, ch. 24 (v. 2).*—"No defeat, however crushing, ever proved half so injurious to any country as the victory of Bannockburn did to Scotland. This is the testimony borne by men whose patriotism cannot be called in question. . . . It drove from Scotland the very elements of its growing civilization and its material wealth. The artisans of North Britain were at that time mostly English. These retired or were driven from Scotland, and with them the commercial importance of the Scottish towns was lost. The estates held by Englishmen in Scotland were confiscated, and the wealth which through the hands of these proprietors had found its way from the southern parts of the kingdom and fertilized the more barren soil of the north, at once ceased. The higher and more cultured clergy were English; these retired when the severance of Scotland from England was effected, and with them Scottish scholarship was almost extinguished, and the budding literature of the north disappeared. How calamitous was the period which followed upon Bannockburn may be partially estimated by two significant facts. Of the six princes who had nominal rule in Scotland from the death of Robert III. to James VI., not one died a natural death. Of the ten kings whose names are entered on the roll of Scottish history from the death of Robert Bruce, seven came to the throne whilst minors, and James I. was detained in England for nineteen years. The country during these long minorities, and

the time of the captivity of James, was exposed to the strife commonly attendant on minorities. . . . The war commenced by Bruce lingered for almost three centuries, either in the shape of formal warfare proclaimed by heralds and by the ceremonials usually observed at the beginning of national strife, or in the informal but equally destructive hostilities which neighbours indulge in, and which partake of the bitterness of civil war. . . . For three centuries the lands south of the Tweed, and almost as far as the Tyne at its mouth, were exposed to the ceaseless ravages of moss-troopers. . . . For a while men were killed, and women outraged and murdered, and children slain without pity, and houses plundered and then burnt, and cattle swept off the grazing lands between Tweed and Tyne, until none cared, unless they were outlaws, to occupy any part of the country within a night's ride of the borders of Scotland. The sufferers in their turn soon learned to recognize no law save that of might, and avenged their wrongs by inflicting like wrongs upon others; and thus there grew up along the frontiers of either country a savage population, whose occupation was murder and plunder, and whose sole wealth was what they had obtained by violence. . . . The war, indeed, which has been called a war of independence, and fills so large a part of the annals of England and Scotland during the Middle Ages, was successful so far as its main object was concerned, the preservation of power in the hands of 'barbarous chieftains who neither feared the king nor pitied the people'; the war was a miserable failure if we regard the well-being of the people themselves and the progress of the nation."—W. Denton, *England in the Fifteenth Century, pp.* 68–78.—On the other side: "It [the battle of Bannockburn] put an end for ever to all hopes upon the part of England of accomplishing the conquest of her sister country. . . . Nor have the consequences of this victory been partial or confined. Their duration throughout succeeding centuries of Scottish history and Scottish liberty, down to the hour in which this is written, cannot be questioned; and without launching out into any inappropriate field of historical speculation, we have only to think of the most obvious consequences which must have resulted from Scotland becoming a conquered province of England; and if we wish for proof, to fix our eyes on the present condition of Ireland, in order to feel the reality of all that we owe to the victory at Bannockburn, and to the memory of such men as Bruce, Randolph, and Douglas."—P. F. Tytler, *Hist. of Scotland, v.* 1, *ch.* 3.—"It is impossible, even now, after the lapse of more than 570 years, to read any account of that battle—or still more to visit the field—without emotion. For we must remember all the political and social questions which depended on it. For good or for evil, tremendous issues follow on the gain or on the loss of national independence. . . . Where the seeds of a strong national civilisation, of a strong national character, and of intellectual wealth have been deeply sown in any human soil, the preservation of it from conquest, and from invasion, and from foreign rule, is the essential condition of its yielding its due contribution to the progress of the world. Who, then, can compute or reckon up the debt which Scotland owes to the few and gallant men who, inspired by a splendid courage and a noble faith, stood by The Bruce in the War of Independence, and on June 24, 1314, saw the armies of the invader flying down the Carse of Stirling?"—The Duke of Argyll, *Scotland as it was and as it is, v.* 1, *ch.* 2.

A. D. 1326-1603.—The formation of the Scottish Parliament.—"As many causes contributed to bring government earlier to perfection in England than in Scotland; as the rigour of the feudal institutions abated sooner, and its defects were supplied with greater facility in the one kingdom than in the other; England led the way in all these changes, and burgesses and knights of the shire appeared in the parliaments of that nation, before they were heard of in ours. Burgesses were first admitted into the Scottish parliaments by Robert Bruce [A. D. 1326]; and in the preamble to the laws of Robert III. they are ranked among the constituent members of that assembly. The lesser barons were indebted to James I. [A. D. 1427] for a statute exempting them from personal attendance, and permitting them to elect representatives: the exemption was eagerly laid hold on, but the privilege was so little valued that, except one or two instances, it lay neglected during one hundred and sixty years; and James VI. first obliged them to send representatives regularly to parliament. A Scottish parliament, then, consisted anciently of great barons, of ecclesiastics, and a few representatives of boroughs. Nor were these divided, as in England, into two houses, but composed one assembly, in which the lord chancellor presided. . . . The great barons, or lords of parliament, were extremely few; even so late as the beginning of the reign of James VI. they amounted only to 53. The ecclesiastics equalled them in number, and, being devoted implicitly to the crown, . . . rendered all hopes of victory in any struggle desperate. . . . As far back as our records enable us to trace the constitution of our parliaments, we find a committee distinguished by the name of lords of articles. It was their business to prepare and to digest all matters which were to be laid before the parliament. There was rarely any business introduced into parliament but what had passed through the channel of this committee. . . . This committee owed the extraordinary powers vested in it to the military genius of the ancient nobles, too impatient to submit to the drudgery of civil business. . . . The lords of articles, then, not only directed all the proceedings of parliament, but possessed a negative before debate. That committee was chosen and constituted in such a manner as put this valuable privilege entirely in the king's hands. It is extremely probable that our kings once had the sole right of nominating the lords of articles. They came afterwards to be elected by the parliament, and consisted of an equal number out of each estate."—W. Robertson, *Hist. of Scotland, bk.* 1.

A. D. 1328.—The Peace of Northampton.—In 1327 King Edward III. of England collected a splendid army of 60,000 men for his first campaign against the Scots. After several weeks of tiresome marching and countermarching, in vain attempts to bring the agile Scots to an engagement, or to stop the bold ravages of Douglas and Randolph, who led them, the young king abandoned his undertaking in disgust. He next "convoked a parliament at York, in which there appeared a tendency on the part of Eng-

land to concede the main points on which proposals for peace had hitherto failed, by acknowledging the independence of Scotland and the legitimate sovereignty of Bruce." A truce was presently agreed upon, "which it was now determined should be the introduction to a lasting peace. As a necessary preliminary, the English statesmen resolved formally to execute a resignation of all claims of dominion and superiority which had been assumed over the kingdom of Scotland, and agreed that all muniments or public instruments asserting or tending to support such a claim should be delivered up. This agreement was subscribed by the king on the 4th of March, 1328. Peace was afterwards concluded at Edinburgh the 17th of March, 1328, and ratified at a parliament held at Northampton, the 4th of May, 1328. It was confirmed by a match agreed upon between the princess Joanna, sister to Edward III., and David, son of Robert I., though both were as yet infants. Articles of strict amity were settled betwixt the nations, without prejudice to the effect of the alliance between Scotland and France. . . . It was stipulated that all the charters and documents carried from Scotland by Edward I. should be restored, and the king of England was pledged to give his aid in the court of Rome towards the recall of the excommunication awarded against king Robert. Lastly, Scotland was to pay a sum of £20,000 in consideration of these favourable terms. The borders were to be maintained in strict order on both sides, and the fatal coronation-stone was to be restored to Scotland. There was another separate obligation on the Scottish side, which led to most serious consequences in the subsequent reign. The seventh article of the Peace of Northampton provided that certain English barons . . . should be restored to the lands and heritages in Scotland, whereof they had been deprived during the war, by the king of Scots seizing them into his own hand. The execution of this article was deferred by the Scottish king, who was not, it may be conceived, very willing again to introduce English nobles as landholders into Scotland. The English mob, on their part, resisted the removal of the fatal stone from Westminster, where it had been deposited. . . . The deed called Ragman's Roll, being the list of the barons and men of note who subscribed the submission to Edward I. in 1296, was, however, delivered up to the Scots."—Sir W. Scott, *Hist. of Scotland, ch.* 12 (*v.* 1).

Also in: J. Froissart, *Chronicles* (*tr. by Johnes*), *bk.* 1, *ch.* 18.

A. D. 1329.—Accession of David II.

A. D. 1332-1333.—The Disinherited Barons.—Balliol's invasion.—Siege of Berwick and battle of Halidon Hill.—Until his death, in 1329, King Robert Bruce evaded the enforcement of that provision of the Treaty of Northampton which pledged him to restore the forfeited estates of English nobles within the Scottish border. His death left the crown to a child of seven years, his son David, under the regency of Randolph, Earl of Murray, and the regent still procrastinated the restoration of the estates in question. At length, in 1332, the "disinherited barons," as they were called, determined to prosecute their claim by force of arms, and they made common cause with Edward Balliol, son of the ex-king of Scotland, who had been exiled in France. The English king, Edward III. would not openly give countenance to their undertaking, nor permit them to invade Scotland across the English frontier; but he did nothing to prevent their recruiting in the northern counties an army of 3,300 men, which took ship at Ravenspur, in Yorkshire, and landed on the coast of Fifeshire, under Balliol's command. Marching westward, the invaders "finally took up a strong position in the heart of the country, with the river Earn in their front. Just before this crisis, the wise and capable Regent, Randolph, Earl of Murray, had died, and the great Sir James Douglas, having gone with King Robert's heart to offer it at the shrine of the Holy Sepulchre, had perished on his way, in conflict with the Moors of Spain. The regency had devolved upon the Earl of Mar, a man wanting both in energy and in military capacity; but so strong was the national antipathy to Balliol, as representing the idea of English supremacy, that Mar found no difficulty in bringing an army of 40,000 men into the field against him. He drew up over against the enemy on the northern bank of the Earn, on Dupplin Moor, while the Earl of March, with forces scarcely inferior to the Regent's, threatened the flank of the little army of the invaders. Balliol, however, was not wanting in valour or generalship, and there were, as usual, traitors in the Scotch army, one of whom led the English, by a ford which he knew, safe across the river in the darkness of the night. They threw themselves upon the scattered, oversecure, and ill-sentinelled camp of the enemy with such a sudden and furious onslaught, that the huge Scottish army broke up into a panic-stricken and disorganised crowd and were slaughtered like sheep, the number of the slain four times exceeding that of the whole of Balliol's army, which escaped with the loss of thirty men. The invaders now took possession of Perth, which the Earl of March forthwith surrounded, by land and water, and thought to starve into submission; but Balliol's ships broke through the blockade on the Tay, and the besiegers, despairing of success, marched off and disbanded without striking another blow. Scotland having been thus subdued by a handful of men, the nobles one by one came to make their submission. Young King David and his affianced bride were sent over to France for security, and Edward Balliol was crowned King at Scone on September 24, 1332, two months after his disembarkation in Scotland. As Balliol was thus actual (de facto) King of Scotland, Edward could now form an alliance with him without a breach of the treaty; and there seemed to be many arguments in favour of espousing his cause. The young Bruce and his dynasty represented the troublesome spirit of Scottish independence, and were closely allied with France, whose king, as will be seen, lost no opportunity of stimulating and supporting the party of resistance to England. Balliol, on the other hand, admitted in a secret despatch to Edward that the success of the expedition was owing to that King's friendly non-intervention, and the aid of his subjects; offered to hold Scotland 'as his man,' doing him homage for it as an English fief; and, treating the princess Joan's hastily formed union with David as a mere engagement, proposed to marry her himself instead. The King, as always, even on less important issues than the present, con-

sulted his Parliament. . . . Balliol in the meanwhile, having dismissed the greater part of his English auxiliaries, was lying unsuspicious of danger at Annan, when his camp was attacked in the middle of the night by a strong body of cavalry under Murray, son of the wise Regent, and Douglas, brother of the great Sir James. The entrenchments were stormed in the darkness; noble, vassal and retainer were slaughtered before they were able to organise any resistance, and Balliol himself barely escaped with his life across the English border." In the following year, however, Edward restored his helpless vassal, invading Scotland in person, besieging Berwick, and routing and destroying, at Halidon Hill, a Scotch army which came to its relief.—W. Warburton, *Edward III., ch.* 2.

A. D. 1333-1370.—The long-continued wars with Edward III.—"Throughout the whole country of Scotland, only four castles and a small tower acknowledged the sovereignty of David Bruce, after the battle of Halidon; and it is wonderful to see how, by their efforts, the patriots soon afterwards changed for the better that unfavourable and seemingly desperate state of things. In the several skirmishes and battles which were fought all over the kingdom, the Scots, knowing the country, and having the good-will of the inhabitants, were generally successful, as also in surprising castles and forts, cutting off convoys of provisions which were going to the English, and destroying scattered parties of the enemy; so that, by a long and incessant course of fighting, the patriots gradually regained what they lost in great battles. . . . You may well imagine that, during those long and terrible wars which were waged, when castles were defended and taken, prisoners made, many battles fought, and numbers of men wounded and slain, the state of the country of Scotland was most miserable. There was no finding refuge or protection in the law. . . . All laws of humanity and charity were transgressed without scruple. People were found starved to death in the woods with their families, while the country was so depopulated and void of cultivation that the wild deer came out of the remote forests, and approached near to cities and the dwellings of men. . . . Notwithstanding the valiant defence maintained by the Scots, their country was reduced to a most disastrous state, by the continued wars of Edward III., who was a wise and warlike King as ever lived. Could he have turned against Scotland the whole power of his kingdom, he might probably have effected the complete conquest, which had been so long attempted in vain. But while the wars in Scotland were at the hottest, Edward became also engaged in hostilities with France, having laid claim to the crown of that kingdom. . . . The Scots sent an embassy to obtain money and assistance from the French; and they received supplies of both, which enabled them to recover their castles and towns from the English. Edinburgh Castle was taken from the invaders by a stratagem. . . . Perth, and other important places, were also retaken by the Scots, and Edward Baliol retired out of the country, in despair of making good his pretensions to the crown. The nobles of Scotland, finding the affairs of the kingdom more prosperous, now came to the resolution of bringing back from France, where he had resided for safety, their young King, David II., and his consort, Queen Joanna. They arrived in 1341. David II. was still a youth, neither did he possess at any period of life the wisdom and talents of his father, the great King Robert. The nobles of Scotland had become each a petty prince on his own estates; they made war on each other as they had done upon the English, and the poor King possessed no power of restraining them. Edward III. being absent in France, and in the act of besieging Calais, David was induced, by the pressing and urgent counsels of the French King, to renew the war, and profit by the King's absence from England. The young King of Scotland raised, accordingly, a large army, and, entering England on the west frontier, he marched eastward towards Durham, harassing and wasting the country with great severity; the Scots boasting that, now the King and his nobles were absent, there were none in England to oppose them, save priests and base mechanics. But they were greatly deceived. The lords of the northern counties of England, together with the Archbishop of York, assembled a gallant army. They defeated the vanguard of the Scots and came upon the main body by surprise. . . . The Scottish army fell fast into disorder. The King himself fought bravely in the midst of his nobles and was twice wounded with arrows. At length he was captured. . . . The left wing of the Scottish army continued fighting long after the rest were routed, and at length made a safe retreat. It was commanded by the Steward of Scotland and the Earl of March. Very many of the Scottish nobility were slain; very many made prisoners. The King himself was led in triumph through the streets of London, and committed to the Tower a close prisoner. This battle was fought at Neville's Cross, near Durham, on 17th October, 1346. Thus was another great victory gained by the English over the Scots. It was followed by farther advantages, which gave the victors for a time possession of the country from the Scottish Border as far as the verge of Lothian. But the Scots, as usual, were no sooner compelled to momentary submission, than they began to consider the means of shaking off the yoke. Edward III. was not more fortunate in making war on Scotland in his own name, than when he used the pretext of supporting Baliol. He marched into East-Lothian in spring, 1355, and committed such ravages that the period was long marked by the name of the Burned Candlemas, because so many towns and villages were burned. But the Scots had removed every species of provisions which could be of use to the invaders, and avoided a general battle, while they engaged in a number of skirmishes. In this manner Edward was compelled to retreat out of Scotland, after sustaining much loss. After the failure of this effort, Edward seems to have despaired of the conquest of Scotland, and entered into terms for a truce, and for setting the King at liberty. Thus David II. at length obtained his freedom from the English, after he had been detained in prison eleven years. The latter years of this King's life have nothing very remarkable. He died in 1370."—Sir W. Scott, *Tales of a Grandfather (Scotland); abridged by E. Ginn, ch.* 14-15.

A. D. 1346.—Founding of the Lordship of the Isles. See HEBRIDES: A. D. 1346–1504.

A. D. 1370.—The accession of Robert II. the first of the Stewart or Stuart Dynasty.—On the death of David II. of Scotland (son of Robert Bruce) A. D. 1370, he was succeeded on the throne by his nephew, "Robert the High Steward of Scotland," whose mother was Marjory, daughter of Robert Bruce. The succession had been so fixed by act of the Scottish Parliament during "good King Robert's" life. The new King Robert began the Stewart line, as a royal dynasty. "The name of his family was Allan, or Fitz Allan, but it had become habitual to call them by the name of the feudal office held by them in Scotland, and hence Robert II. was the first of the Steward, or, as it came to be written, the Stewart dynasty. They obtained their feudal influence through the office enjoyed by their ancestors at the Court of Scotland—the office of Steward."—J. H. Burton, *Hist. of Scotland, ch.* 26 (*v.* 3).—The succession of the family on the Scottish throne was as follows: Robert II., Robert III., James I., James II., James III., James IV., James V., Mary, James VI. The grandmother of Mary, the great grandmother of James VI., was Margaret Tudor, of the English royal family—sister of Henry VIII. The death of Queen Elizabeth in 1603 left the English throne with no nearer heir than the Scottish King James. He, therefore, united the two crowns and became James I. of England, as well as James VI. of Scotland. His successors of the dynasty in England were Charles I., before the Rebellion and Commonwealth, then Charles II., James II., Mary (of the joint reign of William and Mary), and Anne. The Hanoverian line, which succeeded, was derived from the Stuart, through a daughter of James I.—Elizabeth of Bohemia.—M. Noble, *Hist. Genealogy of the House of Stuart.*

A. D. 1390.—Accession of Robert III.

A. D. 1400-1436.—Homildon Hill and Shrewsbury.—The captivity of James I.—From 1389 to 1399 there was a truce between England and Scotland, and the Scotch borderers watched impatiently for the termination of it, that they might be let loose on the northern English counties, "like hounds let off the leash. It was asserted on the part of England, indeed, that they did not wait for the conclusion. Ten years of peaceful husbandry had prepared a harvest for them, and they swept it off in the old way—the English borderers retaliating by an invasion of the Lowlands. The political aspect again became menacing for Scotland. The conditions which rendered peace almost a necessity for England had ceased with a revolution. It was no longer Richard II., but Henry IV., who reigned; and he began his reign by a great invasion of Scotland." He marched with a large army (A. D. 1400) as far as Leith and threatened Edinburgh Castle, which was stoutly defended by the Scottish king's son; but the expedition was fruitless of results. Henry, however, gained the adhesion of the Earl of March, one of the most powerful of the Scottish nobles, who had received an unpardonable affront from the Duke of Albany, then regent of Scotland, and who joined the English against his country in consequence. In the autumn of 1402 the Scotch retaliated Henry's invasion by a great plundering expedition under Douglas, which penetrated as far as Durham. The rievers were returning, laden with plunder, when they were intercepted by Hotspur and the traitor March, at Homildon Hill, near Wooler, and fearfully beaten, a large number of Scotch knights and lords being killed or taken prisoner. Douglas and others among the prisoners of this battle were subsequently released by Hotspur, in defiance of the orders of King Henry, and they joined him with a considerable force when he raised his standard of revolt. Sharing the defeat of the rebellious Percys, Douglas was again taken prisoner at Shrewsbury, A. D. 1403. Two years later the English king gained a more important captive, in the person of the young heir to the Scottish throne, subsequently King James I., who was taken at sea while on a voyage to France. The young prince (who became titular king of Scotland in 1406, on his father's death) was detained at the English court nineteen years, treated with friendly courtesy by Henry IV. and Henry V. and educated with care. He married Jane Beaufort, niece of Henry IV., and was set free to return to his kingdom in 1424, prepared by his English training to introduce in Scotland a better system of government and more respectful ideas of law. The reforms which he undertook gave rise to fear and hatred among the lawless lords of the north, and they rid themselves of a king who troubled them with too many restraints, by assassinating him, on the 20th of February, 1436.—J. H. Burton, *Hist. of Scotland, v.* 3, *ch.* 26–27.

A. D. 1411.—Battle of Harlaw.—Defeat of the Lord of the Isles and the Highland clans. See HARLAW.

A. D. 1437-1460.—Reign of James II.—Feuds in the kingdom.—The Douglases.—James II. was crowned (1437) at six years of age. "Sir Alexander Livingstone became guardian of his person; Sir William Crichton, Chancellor of his kingdom; and Archibald, fifth Earl of Douglas, . . . nephew of the late King, became Lieutenant-General. The history of the regency is the history of the perpetual strife of Livingstone and Crichton with each other and with the Earl of Douglas, who had become 'very potent in kine and friendis.' His 'kine and friendis' now spread over vast territories in southern Scotland, including Galloway and Annandale, and in France he was Lord of Longueville and possessor of the magnificent duchy of Touraine. The position the Douglases occupied in being nearly related to the house of Baliol (now extinct) and to the house of Comyn placed them perilously near the throne; but there was a greater peril still, and this lay in the very dearness of the name of Douglas to Scotland. . . . To the Queen-mother had been committed by Parliament the care of her son, but as Crichton, the Chancellor, seemed disposed to take this charge upon himself, she determined to outwit him and to fulfil her duties. Accordingly, saying she was bound on a pilgrimage, she contrived to pack the boy up in her luggage, and carried him

off to Stirling Castle. He was soon, however, brought back to Edinburgh by those in power, and then they executed a wicked plot for the destruction of William, who, in 1439, had, at the age of sixteen, succeeded his father, Archibald, as Earl of Douglas. The Earl and his brother . . . were executed, and for a time it would appear that the mightiness of the Douglases received a shock. . . . The Queen-mother had been early thrust out of the regency by Livingstone and Crichton. Distrusted because she was by birth one 'of our auld enemies of England'; separated from her son; still comparatively young, and needing a strong protector, she gave her hand to Sir James Stewart, the Black Knight of Lorn. . . . After her second marriage she sinks out of notice, but enough is told to make it apparent that neglect and suffering accompanied the last years of the winning Jane Beaufort, who had stolen the heart of the King of Scots at Windsor Castle. . . . The long minority of James, and the first years of his brief reign, were too much occupied in strife with the Douglases to leave time for good government. . . . When there was peace, the King and his Parliament enacted many good laws. . . . Although the Wars of the Roses left the English little time to send armies to Scotland, and although there were no great hostilities with England, yet during this reign a great Scottish army threatened England, and a great English army threatened Scotland. James was on the side of the House of Lancaster, and 'the only key to the complicated understanding of the transactions of Scotland during the Wars of the Two Roses is to recollect that the hostilities of James were directed, not against England, but against the successes of the House of York.' . . . Since the Battle of Durham, the frontier fortress of Roxburgh had been in English hands; and when, in 1460, it was commanded by the great partisan of York, the Earl of Warwick, James laid siege to it in person. Artillery had been in use for some time, and years before we hear of the 'cracks of war.' Still many of the guns were novelties, and, curious to study the strange new machinery of death, 'more curious than became the majesty of ane King,' James ventured too near 'ane misframed gun.' It burst, and one of its oaken wedges striking him, he fell to the ground, and 'died hastlie thairafter,' being in the thirtieth year of his age. . . . King James III., who was eight years old, was crowned at the Monastery of Kelso in 1460."—M. G. J. Kinloch, *Hist. of Scotland, v.* 1, *ch.* 16.

A. D. 1460.—Accession of James III.

A. D. 1482-1488.—Lauder Bridge and Sauchie Burn.—James III., who was an infant at the time of his father's death, developed a character, as he came to manhood, which the rude nobles of his court and kingdom could not understand. "He had a dislike to the active sports of hunting and the games of chivalry, mounted on horseback rarely, and rode ill. . . . He was attached to what are now called the fine arts of architecture and music; and in studying these used the instructions of Rogers, an English musician, Cochrane, a mason or architect, and Torphichen, a dancing-master. Another of his domestic minions was Hommil, a tailor, not the least important in the conclave, if we may judge from the variety and extent of the royal wardrobe, of which a voluminous catalogue is preserved. Spending his time with such persons, who, whatever their merit might be in their own several professions, could not be fitting company for a prince, James necessarily lost the taste for society of a different description, whose rank imposed on him a certain degree of restraint. . . . The nation, therefore, with disgust and displeasure, saw the king disuse the society of the Scottish nobles, and abstain from their counsel, to lavish favours upon and be guided by the advice of a few whom the age termed base mechanics. In this situation, the public eye was fixed upon James's younger brothers, Alexander duke of Albany, and John earl of Mar." The jealousy and suspicion of the king were presently excited by the popularity of his brothers and he caused them to be arrested (1478). Mar, accused of having dealings with witches, was secretly executed in prison and his earldom was sold to the king's favourite, Cochrane, who had amassed wealth by a thrifty use of his influence and opportunities. Albany escaped to France and thence to England, where he put himself forward as a claimant of the Scottish throne, securing the support of Edward IV. by offering to surrender the hard-won independence of the kingdom. An English army, under Richard of Gloucester (afterwards King Richard III.) was sent into Scotland to enforce his claim. The Scotch king assembled his forces and advanced from Edinburgh as far as Lauder (1482), to meet the invasion. At Lauder, the nobles, having becoming deeply exasperated by the arrogant state which the ex-architect assumed as Earl of Mar, held a meeting which resulted in the sudden seizure and hanging of all the king's favourites on Lauder Bridge. "All the favourites of the weak prince perished except a youth called Ramsay of Balmain, who clung close to the king's person," and was spared. Peace with Albany and his English allies was now arranged, on terms which made the duke lieutenant-general of the kingdom; but it lasted no more than a year. Albany became obnoxious and fled to England again. The doings of the king were still hateful to his nobles and people and a continual provocation of smouldering wrath. In 1488, the discontent broke out in actual rebellion, and James was easily defeated in a battle fought at Sauchie Burn, between Bannockburn and Stirling. Flying from the battle-field, he fell from his horse and was taken, badly injured, into the house of a miller near by, where he disclosed his name. "The consequence was, that some of the rebels who followed the chase entered the hut and stabbed him to the heart. The persons of the murderers were never known, nor was the king's body ever found."—Sir W. Scott, *Hist. of Scotland, ch.* 20 (*v.* 1).

A. D. 1488.—Accession of James IV.

A. D. 1502.—The marriage which brought the crown of England to the Stuarts.—"On the 8th of August 1502 the ceremony of marriage between King James [IV. of Scotland] and Margaret, Princess of England [daughter of Henry VII. and sister of Henry VIII.], was celebrated in the Chapel of Holyrood. A union of crowns and governments might be viewed as a possible result of such a marriage; but there had been others between Scotland and England whence none followed. It was long ere such a harvest

of peace seemed likely to arise from this union — it seemed, indeed, to be so buried under events of a contrary tenor that it was almost forgotten; yet, a hundred and one years later, it sent the great-grandson of James IV. to be King of England."—J. H. Burton, *Hist. of Scotland, ch.* 30 (*v.* 3).

A. D. 1502-1504.—The Highlands brought to order.—Suppression of the independent Lordship of the Isles.—"The marriage of James in 1502 with the Princess Margaret, daughter of Henry VII., helped to prolong the period of tranquillity. But, in fact, his energetic administration of justice had, almost from the beginning of his reign, restored confidence, and re-awakened in his subjects an industrial activity, that had slumbered since the death of Alexander III. Everywhere he set his barons the novel task of keeping their territories in order. The Huntlys in the North, the Argylls in the West, were made virtual viceroys of the Highlands; the Douglasses were charged with maintaining the peace of the Borders; and at length the formidable Lordship of the Isles, which had been the source of all the Celtic troubles of Scotland since the days of Somerled, was broken up in 1504, after a series of fierce revolts, and the claim to an independent sovereignty abandoned forever. Henceforth the chieftains of the Hebrides held their lands of the Crown, and were made responsible for the conduct of their clans."—J. M. Ross, *Scottish History and Literature, ch.* 5, *p.* 177.

A. D. 1513.—The Battle of Flodden.—In 1513, while Henry VIII. of England, who had joined the Holy League against France, was engaged in the latter country, besieging Terouenne, he received an embassy from James IV., king of Scotland, his brother-in-law. "French intrigues, and the long-standing alliance between the nations, had induced James to entertain the idea of a breach with England. Causes of complaint were not wanting. There was a legacy due from Henry VII.; Sir Robert Ker, the Scotch Warden of the Marches, had been killed by a Heron of Ford, and the murderer found refuge in England; Andrew Barton, who, licensed with letters of marque against the Portuguese in revenge for the death of his father, had extended his reprisals to general piracy, had been captured and slain by Lord Thomas and Sir Edward Howard, and the Scotch King demanded justice for the death of his captain. To these questions, which had been long unsettled, an answer was now imperiously demanded. Henry replied with scorn, and the Scotch King declared war. The safety of England had been intrusted to the Earl of Surrey, who, when James crossed the border, was lying at Pontefract. Without delay, he pushed forward northward, and, challenging James to meet him on the Friday next following, came up with him when strongly posted on the hill of Flodden, with one flank covered by the river Till, the other by an impassable morass, and his front rendered impregnable by the massing of his artillery. Ashamed, after his challenge, to avoid the combat, Surrey moved suddenly northward, as though bound for Scotland, but soon marching round to the left, he crossed the Till near its junction with the Tweed, and thus turned James's position. The Scots were thus compelled to fight [September 9, 1513]. On the English right, the sons of Surrey with difficulty held their own. In the centre, where Surrey himself was assaulted by the Scotch King and his choicest troops, the battle inclined against the English; but upon the English left the Highlanders were swept away by the archers, and Stanley, who had the command in that wing, fell on the rear of the successful Scotch centre, and determined the fortune of the day. The slaughter of the Scotch was enormous, and among the number of the slain was James himself, with all his chief nobility."—J. F. Bright, *Hist. of Eng., v.* 2, *pp.* 370-372.—"There lay slain on the fatal field of Flodden twelve Scottish earls, thirteen lords, and five eldest sons of peers—fifty chiefs, knights, and men of eminence, and about 10,000 common men. Scotland had sustained defeats in which the loss had been numerically greater, but never one in which the number of the nobles slain bore such a proportion to those of the inferior rank. The cause was partly the unusual obstinacy of the long defence, partly that when the common people began . . . to desert their standards, the nobility and gentry were deterred by shame and a sense of honour from following their example."—Sir W. Scott, *Hist. of Scotland, ch.* 21 (*v.* 1).

Also in: P. F. Tytler, *Hist. of Scotland, v.* 2, *ch.* 6.

A. D. 1513.—Accession of James V.

A. D. 1542.—The disaster at Solway-frith.—James V. of Scotland, who was the nephew of Henry VIII. of England—the son of Henry's sister, Margaret Tudor—gave offense to his proud and powerful uncle (A. D. 1541) by excusing himself from a meeting which had been arranged to take place between the two kings, and for which Henry had taken the trouble to travel to York. It was the eager wish of the English king to persuade his royal nephew to take possession of the property of the monasteries of Scotland, in imitation of his own example. The appointed meeting was for the further urging of these proposals, more especially, and it had been frustrated through the influence of the Catholic clergy with young King James,—very much to the disgust of many among the Scottish nobles, as well as to the wrath of King Henry. Whence came results that were unexpectedly sad. Henry determined to avenge himself for the slight that had been put upon him, and, having made his preparations for war, he issued a manifesto, alleging various injuries which gave color to his declaration of hostilities. "He even revived the old claim to the vassalage of Scotland, and he summoned James to do homage to him as his liege lord and superior. He employed the Duke of Norfolk, whom he called the scourge of the Scots, to command in the war." After some preliminary raiding expeditions, the Duke of Norfolk advanced to the border with 20,000 men, or more. "James had assembled his whole military force at Fala and Sautrey, and was ready to advance as soon as he should be informed of Norfolk's invading his kingdom. The English passed the Tweed at Berwick, and marched along the banks of the river as far as Kelso; but hearing that James had collected near 30,000 men, they repassed the river at that village, and retreated into their own country. The King of Scots, inflamed with a desire of military glory, and of revenge on his invaders, gave the signal for pursuing them, and carrying the war into England. He was surprised to find that his nobility, who were in general disaffected on

account of the preference which he had given to the clergy, opposed this resolution, and refused to attend him in his projected enterprise. Enraged at this mutiny, he reproached them with cowardice, and threatened vengeance; but still resolved, with the forces which adhered to him, to make an impression on the enemy. He sent 10,000 men to the western borders, who entered England at Solway-frith [or Solway Moss]; and he himself followed them at a small distance, ready to join them upon occasion." At the same time, he took the command of his little army away from Lord Maxwell, and conferred it on one of his favorites, Oliver Sinclair. "The army was extremely disgusted with this alteration, and was ready to disband; when a small body of English appeared, not exceeding 500 men, under the command of Dacres and Musgrave. A panic seized the Scots, who immediately took to flight, and were pursued by the enemy. Few were killed in this rout, for it was no action; but a great many were taken prisoners, and some of the principal nobility." The effect of this shameful disaster upon the mind of James was so overwhelming that he took to his bed and died in a few days. While he lay upon his deathbed, his queen gave birth to a daughter, who inherited his crown, and who played in subsequent history the unfortunate role of "Mary, Queen of Scots."—D. Hume, *Hist. of Eng., ch.* 33.

Also in: J. H. Burton, *Hist. of Scotland, ch.* 33.—W. Robertson, *Hist. of Scotland, bk.* 1.

A. D. 1542.—Accession of Queen Mary.

A. D. 1544-1548.—The English Wooing of Queen Mary.—Immediately on the death of James V., Henry VIII. of England began a most resolute undertaking to secure the hand of the infant queen Mary for his own infant son. Scotland, however, was averse to the union, and resisted all the influences which the English king could bring to bear. Enraged by his failure, Henry despatched the Earl of Hertford, in May 1544, with a military and naval force, commissioned to do the utmost destructive work in its power, without attempting permanent conquest, for which it was not adequate. The expedition landed at Newhaven and seized the town of Leith, before Cardinal Beaton or Beatoun, then governing Scotland in the name of the Regent, the Earl of Arran, had learned of its approach. "The Cardinal immediately deserted the capital and fled in the greatest dismay to Stirling. The Earl of Hertford demanded the unconditional surrender of the infant Queen, and being informed that the Scottish capital and nation would suffer every disaster before they would submit to his ignominious terms, he marched immediately with his whole forces upon Edinburgh. . . . The English army entered by the Water-gate without opposition, and assaulted the Nether Bow Port, and beat it open on the second day, with a terrible slaughter of the citizens. They immediately attempted to lay siege to the Castle. . . . Baffled in their attempts on the fortress, they immediately proceeded to wreak their vengeance on the city. They set it on fire in numerous quarters, and continued the work of devastation and plunder till compelled to abandon it by the smoke and flames, as well as the continual firing from the Castle. They renewed the work of destruction on the following day; and for three successive days they returned with unabated fury to the smoking ruins, till they had completely effected their purpose. The Earl of Hertford then proceeded to lay waste the surrounding country with fire and sword. . . . This disastrous event forms an important era in the history of Edinburgh; if we except a portion of the Castle, the churches, and the north-west wing of Holyrood Palace, no building anterior to this date now exists in Edinburgh. . . . The death of Henry VIII. in 1547 tended to accelerate the renewal of his project for enforcing the union of the neighbouring kingdoms, by the marriage of his son with the Scottish Queen. Henry, on his deathbed, urged the prosecution of the war with Scotland; and the councillors of the young King Edward VI. lost no time in completing their arrangements for the purpose. . . . In the beginning of September, the Earl of Hertford, now Duke of Somerset, and Lord Protector of England, during the minority of his nephew Edward VI., again entered Scotland at the head of a numerous army; while a fleet of about 60 sail co-operated with him, by a descent on the Scottish coast. At his advance, he found the Scottish army assembled in great force to oppose him. . . . After skirmishing for several days with various success in the neighbourhood of Prestonpans, where the English army was encamped,—a scene long afterwards made memorable by the brief triumph of Mary's hapless descendant, Charles Stuart,—the two armies at length came to a decisive engagement on Saturday the 10th of September 1547, long after known by the name of 'Black Saturday.' The field of Pinkie, the scene of this fatal contest, lies about six miles distant from Edinburgh. . . . The Scots were at first victorious, and succeeded in driving back the enemy, and carrying off the royal standard of England; but being almost destitute of cavalry . . . they were driven from the field, after a dreadful slaughter, with the loss of many of their nobles and leaders, both slain and taken prisoners." Notwithstanding their severe defeat, the Scots were still stubbornly resolved that their young queen should not be won by such savage wooing; and the English returned home, after burning Leith and desolating the coast country once more. Next year the royal maid of Scotland, then six years old, was betrothed to the dauphin of France and sent to the French court to be reared. So the English scheme of marriage was frustrated in a decisive way. Meantime, the Scots were reinforced by 8,000 French and 1,000 Dutch troops, and expelled the English from most of the places they held in the country. —D. Wilson, *Memorials of Edinburgh, pt.* 1, *ch.* 5 (*v.* 1).

A. D. 1546.—The murder of Cardinal Beatoun.—"Cardinal Beatoun [who had acquired practical control of the government, although the Earl of Arran was nominally Regent] had not used his power with moderation, equal to the prudence by which he attained it. Notwithstanding his great abilities, he had too many of the passions and prejudices of an angry leader of a faction, to govern a divided people with temper. His resentment against one party of the nobility, his insolence towards the rest, his severity to the reformers, and, above all, the barbarous and illegal execution of the famous

George Wishart, a man of honourable birth and of primitive sanctity, wore out the patience of a fierce age; and nothing but a bold hand was wanting to gratify the public wish by his destruction. Private revenge, inflamed and sanctified by a false zeal for religion, quickly supplied this want. Norman Lesly, the eldest son of the earl of Rothes, had been treated by the cardinal with injustice and contempt. It was not the temper of the man, or the spirit of the times, quietly to digest an affront. . . . The cardinal, at that time, resided in the castle of St. Andrew's, which he had fortified at great expense, and, in the opinion of the age, had rendered it impregnable. His retinue was numerous, the town at his devotion, and the neighbouring country full of his dependents. In this situation, sixteen persons undertook to surprise his castle, and to assassinate himself; and their success was equal to the boldness of the attempt. . . . His death was fatal to the catholic religion, and to the French interest in Scotland. The same zeal for both continued among a great party in the nation, but when deprived of the genius and authority of so skilful a leader, operated with less effect." The sixteen conspirators, having full possession of the castle of St. Andrew's, were soon joined by friends and sympathizers — John Knox being one of the party — until 150 men were within the walls. They stood a siege for five months and only surrendered to a force sent over by the king of France, on being promised their lives. They were sent as prisoners to France, and the castle of St. Andrew's was demolished.—W. Robertson, *Hist. of Scotland, bk.* 2 (*v.* 1).

A. D. 1547-1557.—The birth of the Protestant Reformation.—In Scotland, the kings of the house of Stuart "obtained a decisive influence over the appointment to the high dignities in the Church, but this proved advantageous neither to the Church nor, at last, to themselves. . . . The French abuses came into vogue here also: ecclesiastical benefices fell to the dependents of the court, to the younger sons of leading houses, often to their bastards: they were given or sold 'in commendam,' and then served only for pleasure and gain: the Scotch Church fell into an exceedingly scandalous and corrupt state. It was not so much disputed questions of doctrine as in Germany, nor again the attempt to keep out Papal influence as in England, but mainly aversion to the moral corruption of the spirituality which gave the first impulse to the efforts at reformation in Scotland. We find Lollard societies among the Scots much later than in England: their tendencies spread through wide circles, owing to the anti-clerical spirit of the century, and received fresh support from the doctrinal writings that came over from Germany. But the Scotch clergy was resolved to defend itself with all its might. . . . It persecuted all with equal severity as tending to injure the stability of holy Church, and awarded the most extreme penalties. To put suspected heretics to death by fire was the order of the day; happy the man who escaped the unrelenting persecution by flight, which was only possible amid great peril. These two causes, an undeniably corrupt condition, and relentless punishment of those who blamed it as it well deserved, gave the Reform movement in Scotland, which was repressed but not stifled, a peculiar character of exasperation and thirst for vengeance. Nor was it without a political bearing, in Scotland as elsewhere. In particular, Henry VIII. proposed to his nephew, King James V., to remodel the Church after his example: and a part of the nobility, which was already favourably disposed towards England, would have gladly seen this done. But James preferred the French pattern to the English: he was kept firm in his Catholic and French sympathies by his wife, Mary of Guise, and by the energetic Archbishop Beaton. Hence he became involved in the war with England in which he fell, and after this it occasionally seemed, especially at the time of the invasions by the Duke of Somerset, as if the English, and in connexion with them the Protestant, sympathies would gain the ascendancy. But national feelings were still stronger than the religious. Exactly because England defended and recommended the religious change it failed to make way in Scotland. Under the regency of the Queen dowager, with some passing fluctuations, the clerical interests on the whole kept the upper hand. . . . It is remarkable how under these unfavourable circumstances the foundation of the Scotch Church was laid. Most of the Scots who had fled from the country were content to provide for their subsistence in a foreign land and improve their own culture. But there was one among them who did not reconcile himself for one moment to this fate. John Knox was the first who formed a Protestant congregation in the besieged fortress of S. Andrew's; when the French took the place in 1547 he was made prisoner and condemned to serve in the galleys. . . . After he was released, he took a zealous share in the labours of the English Reformers under Edward VI., but was not altogether content with the result; after the King's death he had to fly to the continent. He went to Geneva, where he became a student once more and tried to fill up the gaps in his studies, but above all he imbibed, or confirmed his knowledge of, the views which prevailed in that Church. . . . A transient relaxation of ecclesiastical control in Scotland made it possible for him to return thither . . . towards the end of 1555: without delay he set his hand to form a church-union, according to his ideas of religious independence, which was not to be again destroyed by any state power. . . . Sometimes in one and sometimes in another of the places of refuge which he found, he administered the Communion to little congregations according to the Reformed rite; this was done with greater solemnity at Easter 1556, in the house of Lord Erskine of Dun, one of those Scottish noblemen who had ever promoted literary studies and the religious movement as far as lay in his power. A number of people of consequence from the Mearns (Mearnshire) were present. But they were not content with partaking the Communion; following the mind of their preacher they pledged themselves to avoid every other religious community, and to uphold with all their power the preaching of the Gospel. In this union we may see the origin of the Scotch Church, properly so called. . . . At Erskine's house met together also Lord Lorn, afterwards Earl of Argyle, and the Prior of S. Andrew's, subsequently Earl of Murray; in December 1557 Erskine, Lorn, Mur-

ray, Glencairn (also a friend of Knox), and Morton, united in a solemn engagement, to support God's word and defend his congregation against every evil and tyrannical power even unto death. When, in spite of this, another execution took place which excited universal aversion, they proceeded to an express declaration, that they would not suffer any man to be punished for transgressing a clerical law based on human ordinances. What the influence of England had not been able to effect was now produced by antipathy to France. The opinion prevailed that the King of France wished to add Scotland to his territories, and that the Regent gave him aid thereto. When she gathered the feudal array on the borders in 1557 (for the Scots had refused to contribute towards enlisting mercenaries) to invade England according to an understanding with the French, the barons held a consultation on the Tweed, in consequence of which they refused their co-operation for this purpose. . . . It was this quarrel of the Regent with the great men of the country that gave an opportunity to the lords who were combined for the support of religion to advance with increasing resolution."—L. Von Ranke, *Hist. of Eng. principally in the 17th Cent., bk.* 3, *ch.* 2 (*v.* 1).

A. D. 1557.—The First Covenant and the Lords of the Congregation.— In 1556 John Knox withdrew from Scotland and returned to Geneva — whether through fear of increasing dangers, or for other reasons, is a question in dispute. The following year he was solicited to come back to the Scottish field of labor, by those nobles who favored the Reformation, and he gave up his Genevan congregation for the purpose of obeying their summons. "In the beginning of October he proceeded to Dieppe; but while he waited there for a vessel to convey him to Scotland, he received other letters which dashed all his hopes, by counselling him to remain where he was. The Reformers had suddenly changed their minds. . . . Sitting down in his lodging at Dieppe, Knox wrote a letter to the lords whose faith had failed, after inviting him to come to their help. . . . With it he despatched another addressed to the whole nobility of Scotland, and others to particular friends. . . . The letters of Knox had an immediate and powerful effect in stimulating the decaying zeal of the Reforming nobles. Like a fire stirred up just when ready to die out among its own ashes, it now burned more brightly than ever. Meeting at Edinburgh in the month of December, they drew up a bond which knit them into one body, pledged them to a definite line of conduct and gave consistency and shape to their plans. They had separated from the Roman communion; they now formed themselves into an opposing phalanx. This document is known in our Church history as the first Covenant, and is so important that we give it entire: 'We, perceiving how Satan, in his members, the anti-christs of our time, cruelly do rage, seeking to overthrow and destroy the gospel of Christ and His congregation, ought, according to our bounden duty, to strive in our Master's cause, even unto the death, being certain of the victory in Him. The which our duty being well considered, we do promise before the Majesty of God and His congregation, that we, by His grace, shall, with all diligence, continually apply our whole power, substance, and our very lives, to maintain, set forward, and establish the most blessed Word of God and His congregation; and shall labour, at our possibility, to have faithful ministers, truly and purely to administer Christ's gospel and sacraments to His people. We shall maintain them, nourish them, and defend them, the whole congregation of Christ, and every member thereof, at our whole powers and waging of our lives, against Satan and all wicked power that doth intend tyranny or trouble against the foresaid congregation. Unto the which holy word and congregation we do join us, and so do forsake and renounce the congregation of Satan, with all the superstitious abomination and idolatry thereof; and, moreover, shall declare ourselves manifestly enemies thereto, by this our faithful promise before God, testified to His congregation by our subscription to these presents, at Edinburgh, the 3rd day of December 1557 years. God called to witness — A., Earl of Argyle, Glencairn, Morton, Archibald, Lord of Lorn, John Erskine of Dun,' &c. From the time that the Reformers had resolved to refrain from being present at mass, they had been in the habit of meeting among themselves for the purpose of worship. . . . Elders and deacons were chosen to superintend the affairs of these infant communities. Edinburgh has the honour of having given the example, and the names of her first five elders are still preserved. The existence of these small Protestant 'congregations,' scattered over the country, probably led the lords to employ the word so frequently in their bond, and this again led to their being called the Lords of the Congregation. It was a bold document to which they had thus put their names. It was throwing down the gauntlet to all the powers of the existing Church and State."—J. Cunningham, *Church Hist. of Scotland, v.* 1, *ch.* 10.

A. D. 1558.—Marriage of Mary Stuart to the Dauphin of France.—Contemplated union of Crowns. See France: A. D. 1547–1559.

A. D. 1558-1560.—Rebellion and triumph of the Lords of the Congregation.—The Geneva Confession adopted.—"In 1558 the burning of an old preacher, Walter Mill, at St. Andrew's, aroused the Lords of the Congregation, as the signers of the Covenant now called themselves. They presented their demands to the regent [the queen-dowager, Mary of Guise], and some time was spent in useless discussion. But the hands of the Reformers were strengthened by Elizabeth's accession in England, and on May 2, 1559, the leading spirit of the Scottish Reformation, John Knox, returned to Scotland. . . . Knox's influence was soon felt in the course of affairs. In May, 1559, the regent, stirred to action by the Cardinal of Lorraine, summoned the reformed clergy to Stirling. They came, but surrounded by so many followers, that the regent was afraid, and promised that, if they would disperse, she would proceed no further. They agreed; but scarcely were they gone before Mary caused the preachers to be tried and condemned in their absence. Knox's anger broke out in a fierce ser-

mon against idolatry, preached at Perth. The people of the town rose and destroyed the images in the churches, and tore down all architectural ornaments which contained sculpture. The example of Perth was followed elsewhere, and the churches of Scotland were soon robbed of their old beauty. From this time we must date the decay of the fine ecclesiastical buildings of Scotland, whose ruins still bear witness to their former splendour. . . . The Lords of the Congregation were now in open rebellion against the regent, and war was on the point of breaking out. It was, however, averted for a time by the mediation of a few moderate men, amongst whom was Lord James Stewart, an illegitimate son of the late king, known in later history as the Earl of Murray. Both parties agreed to lay down their arms, and submit their disputes to a meeting of the Estates of the Realm, while the regent promised not to molest the people of Perth, or garrison the town with French soldiers. She kept the letter only of her promise; for she hired native troops with French money, and proceeded to punish the people of Perth. This perfidy gave strength to the Congregation. They again took up arms, seized Edinburgh, summoned a parliament, and deposed the regent (October, 1559). This was a bold step; but without help from England it could not be maintained. As the regent was strong in French troops, the Congregation must ally with England. Elizabeth wished to help them; but her course was by no means clear. To ally with rebels fighting against their lawful sovereign was a bad example for one in Elizabeth's position to set. . . . At last, in January, 1560, a treaty was made at Berwick, between Elizabeth and the Duke of Chatelherault [better known as the Earl of Arran, who had resigned the regency of Scotland in favor of Mary of Guise, and received from the French king the duchy of Chatelherault], the second person in the Scottish realm. Elizabeth undertook to aid the Scottish lords in expelling the French, but would only aid them so long as they acknowledged their queen. And now a strange change had come over Scotland. The Scots were fighting side by side with the English against their old allies the French. Already their religious feelings had overcome their old national animosities; or, rather, religion itself had become a powerful element in their national spirit. . . . But meanwhile affairs in France took a direction favourable to the Reformers. . . . The French troops were needed at home, and could no longer be spared for Scotland. The withdrawal of the French made peace necessary in Scotland, and by the treaty of Edinburgh (July, 1560), it was provided that henceforth no foreigners should be employed in Scotland without the consent of the Estates of the Realm. Elizabeth's policy was rewarded by a condition that Mary and Francis II. should acknowledge her queen of England, lay aside their own pretensions, and no longer wear the British arms. Before the treaty was signed the queen-regent died (June 20), and with her the power of France and the Guises in Scotland was gone for the present. The Congregation was now triumphant, and the work of Reformation was quickly carried on. A meeting of the Estates approved of the Geneva Confession of Faith, abjured the authority of the Pope, and forbade the administration, or presence at the administration, of the mass, on pain of death for the third offence (August 25, 1560). . . . The plans of the Guises were no longer to be carried on in Scotland and England by armed interference, but by the political craft and cunning of their niece, Mary of Scotland [now widowed by the death, December 4, 1560, of her husband, the young French king, Francis II.], who had been trained under their influence."—M. Creighton, *The Age of Elizabeth, bk.* 2, *ch.* 1.

Also in: J. A. Froude, *Hist. of Eng., v.* 7, *ch.* 2–3.—J. Knox, *Hist. of the Reformation in Scotland, bk.* 2 (*Works, v.* 1).—J. H. Burton, *Hist. of Scotland, ch.* 37–38 (*v.* 4).

A. D. 1561-1568.—The reign of Mary.—Differing views of her conduct and character.—In August, 1561, Queen Mary returned from her long residence in France, to undertake the government of a country of which she was the acknowledged sovereign, but of which she knew almost nothing. "She was now a widow, so the Scots were freed from the fear they had felt of seeing their country sink into a province of France. The people, who had an almost superstitious reverence for kingship, which was very inconsistent with their contempt for kingly authority, welcomed her with open arms. . . . They had yet to find out that she had come back to them French in all but birth, gifted with wit, intellect, and beauty, but subtle beyond their power of searching, and quite as zealous for the old form of religion as they were for the new one. The Queen, too, who came thus as a stranger among her own people, had to deal with a state of things unknown in former reigns. Hitherto the Church had taken the side of the Crown against the nobles; now both [the Reformed Church and the Lords of the Congregation] were united against the Crown, whose only hope lay in the quarrels between these ill-matched allies. The chief cause of discord between them was the property of the Church. The Reformed ministers fancied that they had succeeded, not only to the Pope's right of dictation in all matters, public and private, but to the lands of the Church as well. To neither of these claims would the Lords agree. They were as little inclined to submit to the tyranny of presbyters as to the tyranny of the Pope. They withstood the ministers who wished to forbid the Queen and her attendants hearing mass in her private chapel, and they refused to accept as law the First Book of Discipline, a code of rules drawn up by the ministers for the guidance of the new Church. As to the land, much of it had already passed into the hands of laymen, who, with the lands, generally bore the title of the Church dignitary who had formerly held them. The Privy Council took one-third of what remained to pay the stipends of the ministers, while the rest was supposed to remain in the hands of the Churchmen in possession, and, as they died out, it was to fall in to the Crown. Lord James Stewart, Prior of St. Andrews, whom the Queen created Earl of Murray, was the hope of the Protestants, but in the north the Romanists were still numerous and strong. Their head was the Earl of Huntly, chief of the Gordons, who reigned supreme over most of the north." One of the first proceedings of the Queen was to join the Earl of Murray in hostilities which pursued the Earl of Huntly and his son to their death. And yet they were the main pillars of the Church

which she was determined to restore! "The most interesting question now for all parties was, whom the Queen would marry. Many foreign princes were talked of, and Elizabeth suggested her own favourite, the Earl of Leicester, but Mary settled the matter herself by falling in love with her own cousin, Henry Stewart, Lord Darnley." Murray opposed the marriage with bitterness, and took up arms against it, but failed of support and fled to England. The wretched consequences of Mary's union with the handsome but worthless Darnley are among the tragedies of history which all the world is acquainted with. She tired of him, and inflamed his jealousy, with that of all her court, by making a favorite of her Italian secretary, David Rizzio. Rizzio was brutally murdered, in her presence, March 9, 1566, by a band of conspirators, to whom Darnley had pledged his protection. The Queen dissembled her resentment until she had power to make it effective, flying from Edinburgh to Dunbar, meantime. When, within a month, she returned to the capital, it was with a strong force, brought to her support by James Hepburn, Earl of Bothwell. The murderers of Rizzio were outlawed, and Darnley, while recovering from an attack of smallpox, was killed (February 9, 1567) by the blowing up of a house, outside of Edinburgh, in which the Queen had placed him. "It was commonly believed that Bothwell was guilty of the murder, and it was suspected that he had done it to please the Queen and with her consent. This suspicion was strengthened by her conduct. She made no effort to find out the murderer and to bring him to punishment, and on the day of the funeral she gave Bothwell the feudal superiority over the town of Leith." In May, three months after Darnley's death, she married the Earl of Bothwell,—who had freed himself from an earlier tie by hasty divorce. This shameless conduct caused a rising of the barons, who occupied Edinburgh in force. Bothwell attempted to oppose them with an army; but there was no battle. The Queen surrendered herself, at Carberry, June 15, 1567; Bothwell escaped, first to Orkney, and then to Denmark, where he died about ten years later. "Just a month after her third marriage the Queen was brought back to Edinburgh, to be greeted by the railings of the mob, who now openly accused her as a murderess. . . . From Edinburgh she was taken to a lonely castle built on a small island in the centre of Loch Leven. A few days later a casket containing eight letters was produced. These letters, it was said, Bothwell had left behind him in his flight, and they seemed to have been written by Mary to him while Darnley was ill in Glasgow. If she really wrote them, they proved very plainly that she had planned the murder with Bothwell. They are called the 'casket letters,' from the box or casket in which they were found. The confederate barons acted as if they were really hers. The Lord Lindsay and Robert Melville were sent to her at Loch Leven, and she there signed the demission of the government to her son, and desired that Murray should be the first regent." The infant king, James VI., was crowned at Stirling; and Murray, recalled from France, became regent. Within a year Mary escaped from her prison, reasserted her right of sovereignty, and was supported by a considerable party. Defeated in a battle fought at Langside, May 13, 1568, she then fled to England, and received from Elizabeth the hospitality of a prison. She was confined in various castles and manor-houses, ending her life, after many removes, at Fotheringay, where she was executed [see ENGLAND: A. D. 1585–1587] February 8, 1587.—M. Macarthur, *Hist. of Scotland, ch.* 6.—"In spite of all the prurient suggestions of writers who have fastened on the story of Mary's life as on a savoury morsel, there is no reason whatever for thinking that she was a woman of licentious disposition, and there is strong evidence to the contrary. There was never anything to her discredit in France. . . . The charge of adultery with Rizzio is dismissed as unworthy of belief even by Mr. Froude, the severest of her judges. Bothwell indeed she loved, and, like many another woman who does not deserve to be called licentious, she sacrificed her reputation to the man she loved. But the most conclusive proof that she was no slave to appetite is afforded by her nineteen years' residence in England, which began when she was only twenty-five. During almost the whole of that time she was mixing freely in the society of the other sex, with the fullest opportunity for misconduct had she been so inclined. It is not to be supposed that she was fettered by any scruples of religion or morality. Yet no charge of unchastity is made against her. . . . That Darnley was murdered by Bothwell is not disputed. That Mary was cognisant of the plot and lured him to the shambles, has been doubted by few investigators at once competent and unbiassed. She lent herself to this part not without compunction. Bothwell had the advantage over her that the loved has over the lover; and he used it mercilessly for his headlong ambition, hardly taking the trouble to pretend that he cared for the unhappy woman who was sacrificing everything for him. He in fact cared more for his lawful wife, whom he was preparing to divorce, and to whom he had been married only six months. . . . What brought sudden and irretrievable ruin on Mary was not the murder of Darnley, but the infatuation which made her the passive instrument of Bothwell's presumptuous ambition."—E. S. Beesly, *Queen Elizabeth, ch.* 4.—"Constitutionally, Mary was not a person likely to come under the sway of a violent and absorbing passion. Her whole nature was masculine in its moderation, its firmness, its magnanimity. She was tolerant, uncapricious, capable of carrying out a purpose steadily, yet with tact and policy. She was never hysterical, never fanciful. With her, love was not an engrossing occupation; on the contrary, to Mary, as to most men, it was but the child and plaything of unfrequent leisure. Her lovers went mad about her, but she never went mad about her lovers. She sent Chatelar to the scaffold. She saw Sir John Gordon beheaded. She admitted Rizzio to a close intimacy. Rizzio was her intellectual mate, the depository of her state secrets, her politic guide and confidant: but the very notoriety of her intercourse with him showed how innocent and unsexual it was in its nature,—the frank companionship of friendly statesmen. Had she been Rizzio's mistress, nay, even had love in the abstract been a more important matter to her than it was, she would have been more cautious and discreet: however

important the public business which they were transacting might have been, she would hardly have kept the Italian secretary in her boudoir half the night. Her marriage with Darnley was not exclusively a love-match: it was a marriage to which her judgment, as well as her heart, consented. Her love-letters abound in pretty trifles: her business letters are clear, strong, rapid, brilliantly direct. By the fantastic irony of fate this masculine unsentimental career has been translated into an effeminate love-story,—the truth being, as I have had to say again and again, that no woman ever lived to whom love was less of a necessity. This was the strength of Mary's character as a queen—as a woman, its defect. A love-sick girl, when her castle in the air was shattered, might have come to hate Darnley with a feverish feminine hatred; but the sedate and politic intelligence of the Queen could only have been incidentally affected by such considerations. She knew that, even at the worst, Darnley was a useful ally, and the motives which induced her to marry him must have restrained her from putting him forcibly away. Yet when the deed was done, it is not surprising that she should have acquiesced in the action of the nobility. Bothwell, again, was in her estimation a loyal retainer, a trusted adviser of the Crown; but he was nothing more. Yet it need not surprise us that after her forcible detention at Dunbar, she should have resolved to submit with a good grace to the inevitable. Saving Argyle and Huntley, Bothwell was the most powerful of her peers. He was essentially a strong man; fit, it seemed, to rule that turbulent nobility. He had been recommended to her acceptance by the unanimous voice of the aristocracy, Protestant and Catholic. . . . On a woman of ardent sentimentality these considerations would have had little effect: they were exactly the considerations which would appeal to Mary's masculine common-sense. Yet, though she made what seemed to her the best of a bad business, she was very wretched."—J. Skelton, *Essays in History and Biography, pp.* 40–41.—"To establish the genuineness of the Casket Letters is necessarily to establish that Mary was a co-conspirator with Bothwell in the murder of her husband. . . . The expressions in the letters are not consistent with an innocent purpose, or with the theory that she brought Darnley to Edinburgh in order to facilitate the obtaining of a divorce. Apart even from other corroborative evidence, the evidence of the letters, if their genuineness be admitted, is sufficient to establish her guilt. Inasmuch, however, as her entire innocence is not consistent with other evidence, it can scarcely be affirmed that the problem of the genuineness of the letters has an absolutely vital bearing on the character of Mary. Mr. Skelton, who does not admit the genuineness of the letters, and who may be reckoned one of the most distinguished and ingenious defenders of Mary in this country, has taken no pains to conceal his contempt for what he terms the 'theory of the ecclesiastics'—that Mary, during the whole progress of the plot against Darnley's life, was 'innocent as a child, immaculate as a saint.' He is unable to adopt a more friendly attitude towards her than that of an apologizer, and is compelled to attempt the assumption of a middle position—that she was neither wholly innocent nor wholly guilty; that, ignorant of the details and method of the plot, she only vaguely guessed that it was in progress, and failed merely in firmly and promptly forbidding its execution. But in a case of murder a middle position—a position of even partial indifference—is, except in very peculiar circumstances, well-nigh impossible; in the case of a wife's attitude to the murder of her husband, the limit of impossibility is still more nearly approached; but when the wife possesses such exceptional courage, fertility of resource, and strength of will as were possessed by Mary, the impossibility may be regarded as absolute. Besides, as a matter of fact, Mary was not indifferent in the matter. She had long regarded her husband's conduct with antipathy and indignation; she did not conceal her eager desire to be delivered from the yoke of marriage to him; and she had abundant reasons, many of which were justifiable, for this desire. . . . The fatal weakness . . . of all such arguments as are used to establish either Mary's absolute or partial innocence of the murder is, that they do not harmonize with the leading traits of her disposition. She was possessed of altogether exceptional decision and force of will; she was remarkably wary and acute; and she was a match for almost any of her contemporaries in the art of diplomacy. She was not one to be concussed into a course of action to which she had any strong aversion."—T. F. Henderson, *The Casket Letters and Mary Queen of Scots, ch.* 1.—"The beauties of her person, and graces of her air, combined to make her the most amiable of women; and the charms of her address and conversation aided the impression which her lovely figure made on the hearts of all beholders. Ambitious and active in her temper, yet inclined to cheerfulness and society; of a lofty spirit, constant and even vehement in her purpose, yet polite, and gentle, and affable in her demeanour; she seemed to partake only so much of the male virtues as to render her estimable, without relinquishing those soft graces which compose the proper ornament of her sex. In order to form a just idea of her character, we must set aside one part of her conduct, while she abandoned herself to the guidance of a profligate man; and must consider these faults, whether we admit them to be imprudences or crimes, as the result of an inexplicable, though not uncommon, inconstancy in the human mind, of the frailty of our nature, of the violence of passion, and of the influence which situations, and sometimes momentary incidents, have on persons whose principles are not thoroughly confirmed by experience and reflection. Enraged by the ungrateful conduct of her husband, seduced by the treacherous counsels of one in whom she reposed confidence, transported by the violence of her own temper, which never lay sufficiently under the guidance of discretion, she was betrayed into actions which may with some difficulty be accounted for, but which admit of no apology, nor even of alleviation. An enumeration of her qualities might carry the appearance of a panegyric; an account of her conduct must in some parts wear the aspect of severe satire and invective. Her numerous misfortunes, the solitude of her long and tedious captivity, and the persecutions to which she had been exposed on account of her religion, had wrought her up to a degree of bigotry during her later years; and such were the prevalent spirit and principles of the age, that it is the less

wonder if her zeal, her resentment, and her interest uniting, induced her to give consent to a design which conspirators, actuated only by the first of these motives, had formed against the life of Elizabeth."—D. Hume, *Hist. of England, ch.* 42 (*v.* 4).—"More books have been written about Mary Stuart than exist as to all the Queens in the world; yet, so greatly do those biographies vary in their representations of her character, that at first it seems scarcely credible how any person could be so differently described. The triumph of a creed or party has unhappily been more considered than the development of facts, or those principles of moral justice which ought to animate the pen of the Historian; and, after all the literary gladiatorship that has been practised in this arena for some three hundred years, the guilt or innocence of Mary Queen of Scots is still under consideration, for party feeling and sectarian hate have not yet exhausted their malice. . . . If the opinions of Mary Stuart's own sex were allowed to decide the question at issue, a verdict of not guilty would have been pronounced by an overwhelming majority of all readers, irrespective of creed or party. Is, then, the moral standard erected by women for one another, lower than that which is required of them by men? Are they less acute in their perceptions of right and wrong, or more disposed to tolerate frailties? The contrary has generally been proved. With the exception of Queen Elizabeth, Catharine de Medicis, Lady Shrewsbury, and Margaret Erskine (Lady Douglas), of infamous memory, Mary Stuart had no female enemies worthy of notice. It is a remarkable fact that English gold could not purchase witnesses from the female portion of the household of the Queen of Scots. None of the ladies of the Court, whether Protestant or Catholic, imputed crime at any time to their mistress. In the days of her Royal splendour in France Queen Mary was attended by ladies of ancient family and unsullied honour, and, like true women, they clung to her in the darkest hour of her later adversity, through good and evil report they shared the gloom and sorrow of her prison life."—S. H. Burke, *Historical Portraits of the Tudor Dynasty and the Reformation Period, v.* 4, *ch.* 7.—"Mary Stuart was in many respects the creature of her age, of her creed, and of her station; but the noblest and most noteworthy qualities of her nature were independent of rank, opinion, or time. Even the detractors who defend her conduct on the plea that she was a dastard and a dupe are compelled in the same breath to retract this implied reproach, and to admit, with illogical acclamation and incongruous applause, that the world never saw more splendid courage at the service of more brilliant intelligence; that a braver if not 'a rarer spirit never did steer humanity.' A kinder or more faithful friend, a deadlier or more dangerous enemy, it would be impossible to dread or to desire. Passion alone could shake the double fortress of her impregnable heart and ever active brain. The passion of love, after very sufficient experience, she apparently and naturally outlived; the passion of hatred and revenge was as inextinguishable in her inmost nature as the emotion of loyalty and gratitude. Of repentance it would seem that she knew as little as of fear; having been trained from her infancy in a religion where the Decalogue was supplanted by the Creed. Adept as she was in the most exquisite delicacy of dissimulation, the most salient note of her original disposition was daring rather than subtlety. Beside or behind the voluptuous or intellectual attractions of beauty and culture, she had about her the fresher charm of a fearless and frank simplicity, a genuine and enduring pleasure in small and harmless things no less than in such as were neither. . . . For her own freedom of will and of way, of passion and of action, she cared much; for her creed she cared something; for her country she cared less than nothing. She would have flung Scotland with England into the hellfire of Spanish Catholicism rather than forego the faintest chance of personal revenge. . . . In the private and personal qualities which attract and attach a friend to his friend and a follower to his leader, no man or woman was ever more constant and more eminent than Mary Queen of Scots."—A. C. Swinburne, *Mary Queen of Scots* (*Miscellanies, pp.* 357–359).

A. D. 1567.—Accession of James VI.

A. D. 1568-1572.—Distracted state of the kingdom.—The Reformed Church and John Knox.—During the whole minority of the young king, James VI., Scotland was torn by warring factions. Murray, assassinated in 1570, was succeeded in the regency by the Earl of Lennox, who was killed in a fight the next year. The Earl of Mar followed him, and Morton held the office next. "The civil commotions that ensued on Murray's assassination were not wholly adverse to the reformed cause, as they gave it an overwhelming influence with the king's party, which it supported. On the other hand they excused every kind of irregularity. There was a scramble for forfeited estates and the patrimony of the kirk, from which latter source the leaders of both parties rewarded their partisans. . . . The church . . . viewed with alarm the various processes by which the ecclesiastical revenues were being secularised. Nor can it be doubted that means, by which the evil might be stayed, were the subject of conference between committees of the Privy Council and General Assembly. The plan which was actually adopted incorporated in the reformed church the spiritual estate, and reintroduced the bishops by their proper titles, subject to stringent conditions of qualification [see below: A. D. 1572]. . . . Knox, whose life had been attempted in March 1570–1, had been constrained to retire from Edinburgh and was at St. Andrews when the new platform was arranged. On the strength of certain notices that are not at all conclusive, it has been strenuously denied that he was a party to it even by consent. . . . There are facts, however, to the contrary. . . . On the evidence available Knox cannot be claimed as the advocate of a divine right, either of presbytery or episcopacy. . . . With fast-failing strength he returned to Edinburgh towards the end of August." On the 24th of November, 1572, he died.—M. C. Taylor, *John Knox* (*St. Giles' Lect's, 3d series*).—"It seems to me hard measure that this Scottish

man [John Knox], now after three-hundred years, should have to plead like a culprit before the world; intrinsically for having been, in such way as it was then possible to be, the bravest of all Scotchmen! Had he been a poor Half-and-half, he could have crouched into the corner, like so many others; Scotland had not been delivered; and Knox had been without blame. He is the one Scotchman to whom, of all others, his country and the world owe a debt. He has to plead that Scotland would forgive him for having been worth to it any million 'unblamable' Scotchmen that need no forgiveness. He bared his breast to the battle; had to row in French galleys, wander forlorn in exile, in clouds and storms; was censured, shot-at through his windows; had a right sore fighting life: if this world were his place of recompense, he had made but a bad venture of it. I cannot apologise for Knox. To him it is very indifferent, these two-hundred-and-fifty years or more, what men say of him."—T. Carlyle, *Heroes and Hero-worship, lect.* 4.—"Altogether, if we estimate him [Knox], as we are alone entitled to do, in his historical position and circumstances, Knox appears a very great and heroic man—no violent demagogue, or even stern dogmatist—although violence and sternness and dogmatism were all parts of his character. These coarser elements mingled with but did not obscure the fresh, living, and keenly sympathetic humanity beneath. Far inferior to Luther in tenderness and breadth and lovableness, he is greatly superior to Calvin in the same qualities. You feel that he had a strong and loving heart under all his harshness, and that you can get near to it, and could have spent a cheery social evening with him in his house at the head of the Canongate, over that good old wine that he had stored in his cellar, and which he was glad and proud to dispense to his friends. It might not have been a very pleasant thing to differ with him even in such circumstances; but, upon the whole, it would have been a pleasanter and safer audacity than to have disputed some favourite tenet with Calvin. There was in Knox far more of mere human feeling and of shrewd worldly sense, always tolerant of differences; and you could have fallen back upon these, and felt yourself comparatively safe in the utterance of some daring sentiment. And in this point of view it deserves to be noticed that Knox alone of the reformers, along with Luther, is free from all stain of violent persecution. Intolerant he was towards the mass, towards Mary, and towards the old Catholic clergy; yet he was no persecutor. He was never cruel in act, cruel as his language sometimes is, and severe as were some of his judgments. Modern enlightenment and scientific indifference we have no right to look for in him. His superstitions about the weather and witches were common to him with all men of his time. . . . As a mere thinker, save perhaps on political subjects, he takes no rank; and his political views, wise and enlightened as they were, seem rather the growth of his manly instinctive sense than reasoned from any fundamental principles. Earnest, intense, and powerful in every practical direction, he was not in the least characteristically reflective or speculative. Everywhere the hero, he is nowhere the philosopher or sage.—He was, in short, a man for his work and time—knowing what was good for his country there and then, when the old Catholic bonds had rotted to the very heart. A man of God, yet with sinful weaknesses like us all. There is something in him we can no longer love,—a harshness and severity by no means beautiful or attractive; but there is little in him that we cannot in the retrospect heartily respect, and even admiringly cherish."—J. Tulloch, *Leaders of the Reformation: Knox.*

A. D. 1570-1573.—Civil War.—"All the miseries of civil war desolated the kingdom. Fellow-citizens, friends, brothers, took different sides, and ranged themselves under the standards of the contending factions. In every county, and almost in every town and village, 'king's men' and 'queen's men' were names of distinction. Political hatred dissolved all natural ties, and extinguished the reciprocal good-will and confidence which hold mankind together in society. Religious zeal mingled itself with these civil distinctions, and contributed not a little to heighten and to inflame them. The factions which divided the kingdom were, in appearance, only two; but in both these there were persons with views and principles so different from each other that they ought to be distinguished. With some, considerations of religion were predominant, and they either adhered to the queen because they hoped by her means to reestablish popery, or they defended the king's authority as the best support of the protestant faith. Among these the opposition was violent and irreconcilable. . . . As Morton, who commanded the regent's forces [1572, during the regency of Mar], lay at Leith, and Kirkaldy still held out the town and castle of Edinburgh [for the party of the queen], scarce a day passed without a skirmish. . . . Both parties hanged the prisoners which they took, of whatever rank or quality, without mercy and without trial. Great numbers suffered in this shocking manner; the unhappy victims were led by fifties at a time to execution; and it was not till both sides had smarted severely that they discontinued this barbarous practice." In 1573, Morton, being now regent, made peace with one faction of the queen's party, and succeeded, with the help of a siege train and force which Queen Elizabeth sent him from England, in overcoming the other faction which held Edinburgh and its castle. Kirkaldy was compelled to surrender after a siege of thirty-three days, receiving promises of protection from the English commander, in spite of which he was hanged.—W. Robertson, *Hist. of Scotland, bk.* 6 (*v.* 2).

Also in: J. H. Burton, *Hist. of Scotland, ch.* 53–56 (*v.* 5).

A. D. 1572.—Episcopacy restored.—The Concordat of Leith.—The Tulchan Bishops.—"On the 12th of January, 1572, a Convention of the Church assembled at Leith. By whom it was convened is unknown. It was not a regular Assembly, but it assumed to itself 'the strength, force, and effect of a General Assembly,' and it was attended by 'the superintendents, barons, commissioners to plant kirks, commissioners of provinces, towns, kirks, and ministers.' . . . By the 1st of February the joint committees framed a concordat, of which the following articles were the chief:—1. That the names of archbishops and bishops, and the bounds of dioceses, should remain as they were before the Reformation, at the least till the majority of the

king, or till a different arrangement should be made by the parliament; and that to every cathedral church there should be attached a chapter of learned men; but that the bishops should have no more power than was possessed by the superintendents, and should like them be subject to the General Assemblies. 2. That abbots and friars should be continued as parts of the Spiritual Estate of the realm. . . . Such was the famous concordat agreed upon by the Church and State in Scotland in 1572. . . . The Church had in vain . . . struggled to get possession of its patrimony. It had in vain argued that the bishoprics and abbacies should be dissolved, and their revenues applied for the maintenance of the ministry, the education of the youthhead, and the support of the poor. The bishoprics and abbacies were maintained as if they were indissoluble. Some of them were already gifted to laymen, and the ministers of the Protestant Church were poorly paid out of the thirds of benefices. The collection of these even the regent had recently stopped, and beggary was at the door. What was to be done? The only way of obtaining the episcopal revenues was by reintroducing the episcopal office. . . . The ministers regarded archbishops, bishops, deans and chapters as things lawful, but not expedient — 'they sounded of papistry'; but now, under the pressure of a still stronger expediency, they received them into the Church. . . . Knox yielded to the same necessity under which the Church had bowed. . . . It was a mongrel prelacy that was thus introduced into Scotland — a cross betwixt Popery and Presbytery. It was not of the true Roman breed. It was not even of the Anglican. It could not pretend to the apostolical descent."—J. Cunningham, *Church Hist. of Scotland, v.* 1, *ch.* 12.—"The new dignitaries got from the populace the name of the Tulchan bishops. A tulchan, an old Scots word of unknown origin, was applied to a stuffed calf-skin which was brought into the presence of a recently-calved cow. It was an agricultural doctrine of that age, and of later times, that the presence of this changeling induced the bereaved mother easily to part with her milk. To draw what remained of the bishops' revenue, it was expedient that there should be bishops; but the revenues were not for them, but for the lay lords, who milked the ecclesiastical cow."—J. H. Burton, *Hist. of Scotland, ch.* 54 (*v.* 5).

A. D. 1581.—The Second Covenant, called also The First National Covenant.—"The national covenant of Scotland was simply an abjuration of popery, and a solemn engagement, ratified by a solemn oath, to support the protestant religion. Its immediate occasion was a dread, too well founded — a dread from which Scotland was never entirely freed till the revolution — of the re-introduction of popery. It was well known that Lennox was an emissary of the house of Guise, and had been sent over to prevail on the young king to embrace the Roman catholic faith. . . . A conspiracy so dangerous at all times to a country divided in religious sentiment, demanded a counter-combination equally strict and solemn, and led to the formation of the national covenant of Scotland. This was drawn up at the king's request, by his chaplain, John Craig. It consisted of an abjuration, in the most solemn and explicit terms, of the various articles of the popish system, and an engagement to adhere to and defend the reformed doctrine and discipline of the reformed church of Scotland. The covenanters further pledged themselves, under the same oath, 'to defend his majesty's person and authority with our goods, bodies, and lives, in the defence of Christ's evangel, liberties of our country, ministration of justice, and punishment of iniquity, against all enemies within the realm or without.' This bond, at first called 'the king's confession,' was sworn and subscribed by the king and his household, for example to others, on the 28th of January 1581; and afterwards, in consequence of an order in council, and an act of the general assembly, it was cheerfully subscribed by all ranks of persons through the kingdom; the ministers zealously promoting the subscription in their respective parishes."—T. M'Crie, *Sketches of Scottish Church History, v.* 1, *ch.* 4.

Also in: D. Calderwood, *Hist. of the Kirk of Scotland, v.* 3, 1581.—J. Row, *Hist. of the Kirk of Scotland*, 1581.

A. D. 1582.—The Raid of Ruthven.—"The two favourites [Lennox and Arran], by their ascendant over the king, possessed uncontrolled power in the kingdom, and exercised it with the utmost wantonness." The provocation which they gave brought about, at length, a combination of nobles, formed for the purpose of removing the young king from their influence. Invited to Ruthven Castle in August, 1582, by its master, Lord Ruthven, lately created Earl of Gowrie, James found there a large assemblage of the conspirators and was detained against his will. He was afterwards removed to Stirling, and later to the palace of Holyrood, but still under restraint. This continued until the following June, when the king effected his escape and Arran recovered his power. Lennox had died meantime in France. All those concerned in what was known as the Raid of Ruthven were proclaimed guilty of high treason and fled the country. The clergy gave great offense to the king by approving and sustaining the Raid of Ruthven. He never forgave the Church for its attitude on this occasion.—W. Robertson, *Hist. of Scotland, bk.* 6 (*v.* 2).

Also in: C. M. Yonge, *Cameos from Eng. Hist., series* 5, *c.* 20.

A. D. 1584.—The Black Acts.—"James was bent upon destroying a form of Church government which he imagined to be inconsistent with his own kingly prerogatives. The General Assembly rested upon too popular a basis; they were too independent of his absolute will; they assumed a jurisdiction which he could not allow. The ministers were too much given to discuss political subjects in the pulpit — to speak evil of dignities — to resist the powers that were ordained of God. . . . On the 22d of May, 1584, the Parliament assembled. . . . A series of acts were passed almost entirely subversive of the rights hitherto enjoyed by the Church. By one, the ancient jurisdiction of the Three Estates was ratified, — and to speak evil of any one of them was declared to be treason; thus were the bishops hedged about. By another, the king was declared to be supreme in all causes and over all persons, and to decline his judgment was pronounced to be treason; thus was the boldness of such men as Melville to be chastised. By a third, all convocations except those specially licensed

by the king were declared to be unlawful; thus were the courts of the Church to be shorn of their power. By a fourth, the chief jurisdiction of the Church was lodged in the hands of the Episcopal body; for the bishops must now do what the Assemblies and presbyteries had hitherto done. By still another act, it was provided 'that none should presume, privately or publicly, in sermons, declamations, or familiar conferences, to utter any false, untrue, or slanderous speeches, to the reproach of his Majesty or council, or meddle with the affairs of his Highness and Estate, under the pains contained in the acts of parliament made against the makers and reporters of lies.' . . . The parliament registered the resolves of the king; for though Scottish barons were turbulent, Scottish parliaments were docile, and seldom thwarted the reigning power. But the people sympathized with the ministers; the acts became known as the Black Acts; and the struggle between the court and the Church, which lasted with some intermissions for more than a century, was begun."—J. Cunningham, *Church Hist. of Scotland, v.* 1, *ch.* 12.

Also in: D. Calderwood, *Hist. of the Kirk of Scotland, v.* 4, 1584.—*Scottish Divines* (*St. Giles' Lect's, series* 3), *lect.* 2.—J. Melville, *Autobiog. and Diary*, 1584.

A. D. 1587.—The execution of Mary Stuart in England. See England: A. D. 1585-1587.

A. D. 1587.—Appropriation of Church lands and ruin of the Episcopacy.—The parliament of 1587 passed an act which "annexed to the crown such lands of the church as had not been inalienably bestowed upon the nobles or landed gentry; these were still considerable, and were held either by the titular bishops who possessed the benefices, or were granted to laymen by rights merely temporary. The only fund reserved for the clergy who were to serve the cure was the principal mansion house, with a few acres of glebe land. The fund from which their stipends were to be paid was limited to the tithes. . . . The crown . . . was little benefitted by an enactment which, detaching the church lands from all connection with ecclesiastical persons, totally ruined the order of bishops, for the restoration of whom, with some dignity and authority, king James, and his successor afterwards, expressed considerable anxiety."—Sir W. Scott, *Hist. of Scotland, ch.* 37 (*v.* 2).

A. D. 1600.—The Gowrie Plot.—"On the morning of the 5th of August, 1600, as James was setting out hunting from Falkland Palace, he was met by Alexander Ruthven, the younger brother of the Earl of Gowrie [both being sons of the Gowrie of the 'Raid of Ruthven'], who told him with a great air of mystery that he had discovered a man burying a pot of money in a field, and that he thought the affair so suspicious that he had taken him prisoner, and begged the King to come to Gowrie House in Perth to see him. James went, taking with him Mar, Lennox, and about twenty other gentlemen. After dinner Alexander took the King aside, and, when his attendants missed him, they were told that he had gone back to Falkland. They were preparing to follow him there when some of them heard cries from a turret. They recognized the King's voice, and they presently saw his head thrust out of a window, calling for help. They had much ado to make their way to him, but they found him at last in a small room struggling with Alexander, while a man dressed in armour was looking on. Alexander Ruthven and Gowrie were both killed in the scuffle which followed. A tumult rose in the town, for the Earl had been Provost and was very popular with the townsfolk, and the King and his followers had to make their escape by the river. The doom of traitors was passed on the dead men, and their name was proscribed, but as no accomplice could be discovered, it was hard to say what was the extent or object of their plot. The whole affair was very mysterious, the only witnesses being the King himself and Henderson the man in armour. Some of the ministers thought it so suspicious that they refused to return thanks for the King's safety, as they thought the whole affair an invention of his own." Eight years later, however, some letters were discovered which seemed to prove that there had really been a plot to seize the King's person.—M. Macarthur, *Hist. of Scotland, ch.* 6.

Also in: Sir W. Scott, *Hist. of Scotland, ch.* 40 (*v.* 2).—P. F. Tytler, *Hist. of Scotland, v.* 4, *ch.* 11.

A. D. 1603.—Accession of James VI. to the English throne. See England: A. D. 1603.

A. D. 1618.—The Five Articles of Perth.—After his accession to the English throne, James became more deeply enamoured of Episcopacy, and of its ecclesiastical and ceremonial incidents, than before, and more determined to force them on the Scottish church. He worked to that end with arbitrary insolence and violence, and with every kind of dishonest intrigue, until he had accomplished his purpose completely. Not only were his bishops seated, with fair endowments and large powers restored, but he had them ordained in England, to ensure their apostolic legitimacy. When this had been done, he resolved to impose a liturgy upon the Church, with certain ordinances of his own framing. The five articles in which the latter were embodied became for two years the subject of a most bitter and heated struggle between the court and its bishops on one side, with most of the general clergy on the other. At length, in August, 1618, an Assembly made up at Perth proved subservient enough to submit to the royal brow-beating and to adopt the five articles. These Five Articles of Perth, as they are known, enjoined kneeling at the communion, observance of five holidays, and episcopal confirmation; and they authorized the private dispensation both of baptism and of the Lord's Supper. The powers of the court of high commission were actively brought into play to enforce them.—J. Cunningham, *Church Hist. of Scotland, v.* 2, *ch.* 1.

A. D. 1637.—Laud's Liturgy and Jenny Geddes' Stool.—"Now we are summoned to a sadder subject; from the sufferings of a private person [John Williams, bishop of Lincoln, pursued and persecuted by Laud] to the miseries and almost mutual ruin of two kingdoms, England and Scotland. I confess, my hands have always been unwilling to write of that cold country, for fear my fingers should be frostbitten therewith; but necessity to make our story entire puts me upon the employment. Miseries, caused from the sending of the Book of Service or new Liturgy thither, which may sadly be termed a 'Rubric' indeed, dyed with the blood of so many of both nations, slain on that occasion. It seems the design began in the reign of king

James; who desired and endeavoured an uniformity of public prayers through the kingdom of Scotland. . . . In the reign of king Charles, the project being resumed (but whether the same book or no, God knoweth), it was concluded not to send into Scotland the same Liturgy of England 'totidem verbis,' lest this should be misconstrued a badge of dependence of that church on ours. It was resolved also, that the two Liturgies should not differ in substance, lest the Roman party should upbraid us with weighty and material differences. A similitude therefore not identity being resolved of, it was drawn up with some, as they termed them, insensible alterations, but such as were quickly found and felt by the Scotch to their great distaste. . . . The names of sundry saints, omitted in the English, are inserted into the Scotch Calendar (but only in black letters), on their several days. . . . Some of these were kings, all of them natives of that country. . . . But these Scotch saints were so far from making the English Liturgy acceptable, that the English Liturgy rather made the saints odious unto them. . . . No sooner had the dean of Edinburgh begun to read the book in the church of St. Giles, Sunday, July 23rd, in the presence of the Privy Council, both the archbishops, divers bishops, and magistrates of the city, but presently such a tumult was raised that, through clapping of hands, cursing, and crying, one could neither hear nor be heard. The bishop of Edinburgh endeavoured in vain to appease the tumult; when a stool, aimed to be thrown at him [according to popular tradition by an old herb-woman named Jenny Geddes], had killed, if not diverted by one present; so that the same book had occasioned his death and prescribed the form of his burial; and this hubbub was hardly suppressed by the lord provost and bailiffs of Edinburgh. This first tumult was caused by such, whom I find called 'the scum of the city,' considerable for nothing but their number. But, few days after, the cream of the nation (some of the highest and best quality therein) engaged in the same cause, crying out, 'God defend all those who will defend God's cause! and God confound the service-book and all the maintainers of it!'"—T. Fuller, *Church Hist. of Britain, bk.* 11, *sect.* 2 (*v.* 3).—"One of the most distinct and familiar of historical traditions attributes the honour of flinging the first stool, and so beginning the great civil war, to a certain Jenny or Janet Geddes. But a search among contemporary writers for the identification of such an actor on the scene, will have the same inconclusive result that often attends the search after some criminal hero with a mythical celebrity when he is wanted by the police. . . . Wodrow, on the authority of Robert Stewart—a son of the Lord Advocate of the Revolution—utterly dethrones Mrs. Geddes: 'He tells me that it's the constantly-believed tradition that it was Mrs. Mean, wife to John Mean, merchant in Edinburgh, that cast the first stool when the service was read in the New Kirk, Edinburgh, 1637; and that many of the lasses that carried on the fray were prentices in disguise, for they threw stools to a great length.'"—J. H. Burton, *Hist. of Scotland, v.* 6, *pp.* 443–444, *foot-note.*

A. D. 1638.—The Tables, and the signing of the National Covenant.—"Nobles, ministers, gentlemen, and burghers from every district poured into Edinburgh to take part in a national resistance to these innovations [of the Service Book], and an appeal was made from the whole body assembled in the capital, not only against the Service Book, but also against the Book of Canons and the conduct of the bishops. Instead, however, of granting redress of these grievances, the King issued a series of angry and exasperating proclamations, commanding the crowds of strangers in the capital to return immediately to their own homes, and instructing the Council and the Supreme Courts of Law to remove to Linlithgow. But instead of obeying the injunction to leave Edinburgh, the multitudes there continued to receive accessions from all parts of the country. . . . In answer to the complaint of the Council that their meeting in such numbers was disorderly and illegal, the supplicants offered to choose a limited number from each of the classes into which they were socially divided—nobles, lesser barons, burgesses, and clergy—to act as their representatives. This was at once very imprudently agreed to by the Council. A committee of four was accordingly selected by each of these classes, who were instructed to reside in the capital, and were empowered to take all necessary steps to promote their common object. They had also authority to assemble the whole of their constituents should any extraordinary emergency arise. The opponents of the new Canons and Service Book were thus organised with official approval into one large and powerful body, known in history as 'The Tables,' which speedily exercised an important influence in the country. As soon as this arrangement was completed, the crowds of supplicants who thronged the metropolis returned to their own homes, leaving the committee of sixteen to watch the progress of events." But the obstinacy of the King soon brought affairs to a crisis, and early in 1638 the deputies of The Tables "resolved to summon the whole body of supplicants to repair at once to the capital in order to concert measures for their common safety and the furtherance of the good cause. The summons was promptly obeyed, and after full deliberation it was resolved, on the suggestion of Johnstone of Warriston, that in order to strengthen their union against the enemies of the Protestant faith they should renew the National Covenant, which had been originally drawn up and sworn to at a time [A. D. 1581] when the Protestant religion was in imminent peril, through the schemes of France and Spain, and the plots of Queen Mary and the Roman Catholics in England and Scotland. The original document denounced in vehement terms the errors and devices of the Romish Church, and an addition was now made to it, adapting its declarations and pledges to existing circumstances."—J. Taylor, *The Scottish Covenanters, ch.* 1.—"It was in the Greyfriars' Church at Edinburgh that it [the National Covenant] was first received, on February 28, 1638. The aged Earl of Sutherland was the first to sign his name. Then the whole congregation followed. Then it was laid on the flat grave-stone still preserved in the church-yard. Men and women crowded to add their names. Some wept aloud, others wrote their names in their own blood; others added after their names 'till death.' For hours they signed, till every corner of the parchment was filled, and only room left for their initials, and

the shades of night alone checked the continual flow. From Greyfriars' church-yard it spread to the whole of Scotland. Gentlemen and noblemen carried copies of it 'in their portmanteaus and pockets, requiring and collecting subscriptions publicly and privately.' Women sat in church all day and all night, from Friday till Sunday, in order to receive the Communion with it. None dared to refuse their names."—A. P. Stanley, *Lect's on the Hist. of the Church of Scotland, lect.* 2.

The following is the text of the Scottish National Covenant:

"The confession of faith of the Kirk of Scotland, subscribed at first by the King's Majesty and his household in the year of God 1580; thereafter by persons of all ranks in the year 1581, by ordinance of the Lords of the secret council, and acts of the General Assembly; subscribed again by all sorts of persons in the year 1590, by a new ordinance of council, at the desire of the General Assembly; with a general band for the maintenance of the true religion, and the King's person, and now subscribed in the year 1638, by us noblemen, barons, gentlemen, burgesses, ministers, and commons under subscribing; together with our resolution and promises for the causes after specified, to maintain the said true religion, and the King's Majesty, according to the confession aforesaid, and Acts of Parliament; the tenure whereof here followeth: 'We all, and every one of us underwritten, do protest, that after long and due examination of our own consciences in matters of true and false religion, we are now thoroughly resolved of the truth, by the word and spirit of God; and therefore we believe with our hearts, confess with our mouths, subscribe with our hands, and constantly affirm before God and the whole world, that this only is the true Christian faith and religion, pleasing God, and bringing salvation to man, which now is by the mercy of God revealed to the world by the preaching of the blessed evangel, and received, believed, and defended by many and sundry notable kirks and realms, but chiefly by the Kirk of Scotland, the King's Majesty, and three estates of this realm, as God's eternal truth and only ground of our salvation; as more particularly is expressed in the confession of our faith, established and publicly confirmed by sundry Acts of Parliament; and now of a long time hath been openly professed by the King's Majesty, and whole body of this realm, both in burgh and land. To the which confession and form of religion we willingly agree in our consciences in all points, as unto God's undoubted truth and verity, grounded only upon His written Word; and therefore we abhor and detest all contrary religion and doctrine, but chiefly all kind of papistry in general and particular heads, even as they are now damned and confuted by the Word of God and Kirk of Scotland. But in special we detest and refuse the usurped authority of that Roman Antichrist upon the Scriptures of God, upon the Kirk, the civil magistrate, and consciences of men; all his tyrannous laws made upon indifferent things against our Christian liberty; his erroneous doctrine against the sufficiency of the written Word, the perfection of the law, the office of Christ and His blessed evangel; his corrupted doctrine concerning original sin, our natural inability and rebellion to God's law, our justification by faith only, our imperfect sanctification and obedience to the law, the nature, number, and use of the holy sacraments; his five bastard sacraments, with all his rites, ceremonies, and false doctrine, added to the ministration of the true sacraments, without the Word of God; his cruel judgments against infants departing without the sacrament; his absolute necessity of baptism; his blasphemous opinion of transubstantiation or real presence of Christ's body in the elements, and receiving of the same by the wicked, or bodies of men; his dispensations, with solemn oaths, perjuries, and degrees of marriage, forbidden in the Word; his cruelty against the innocent divorced; his devilish mass; his blasphemous priesthood; his profane sacrifice for the sins of the dead and the quick; his canonization of men, calling upon angels or saints departed, worshipping of imagery, relics, and crosses, dedicating of kirks, altars, days, vows to creatures; his purgatory, prayers for the dead, praying or speaking in a strange language; with his processions and blasphemous litany, and multitudes of advocates or mediators; his manifold orders, auricular confession; his desperate and uncertain repentance; his general and doubtsome faith; his satisfaction of men for their sins; his justification by works, "opus operatum," works of supererogation, merits, pardons, perigrinations and stations; his holy water, baptizing of bells, conjuring of spirits, crossing, saning, anointing, conjuring, hallowing of God's good creatures, with the superstitious opinion joined therewith; his worldly monarchy and wicked hierarchy; his three solemn vows, with all his shavelings of sundry sorts; his erroneous and bloody decrees made at Trent, with all the subscribers and approvers of that cruel and bloody band conjured against the Kirk of God. And finally, we detest all his vain allegories, rites, signs, and traditions, brought in the Kirk without or against the Word of God, and doctrine of this true reformed Kirk, to which we join ourselves willingly, in doctrine, religion, faith, discipline, and life of the holy sacraments, as lively members of the same, in Christ our head, promising and swearing, by the great name of the Lord our God, that we shall continue in the obedience of the doctrine and discipline of this Kirk, and shall defend the same according to our vocation and power all the days of our lives, under the pains contained in the law, and danger both of body and soul in the day of God's fearful judgment. And seeing that many are stirred up by Satan and that Roman Antichrist, to promise, swear, subscribe, and for a time use the holy sacraments in the Kirk, deceitfully against their own consciences, minding thereby, first under the external cloak of religion, to corrupt and subvert secretly God's true religion within the Kirk; and afterwards, when time may serve, to become open enemies and persecutors of the same, under vain hope of the Pope's dispensation, devised against the Word of God, to his great confusion, and their double condemnation in the day of the Lord Jesus. We therefore, willing to take away all suspicion of hypocrisy, and of such double dealing with God and his Kirk, protest and call the Searcher of all hearts for witness, that our minds and hearts do

fully agree with this our confession, promise, oath, and subscription: so that we are not moved for any worldly respect, but are persuaded only in our consciences, through the knowledge and love of God's true religion printed in our hearts by the Holy Spirit, as we shall answer to Him in the day when the secrets of all hearts shall be disclosed. And because we perceive that the quietness and stability of our religion and Kirk doth depend upon the safety and good behaviour of the King's Majesty, as upon a comfortable instrument of God's mercy granted to this country for the maintenance of His Kirk, and ministration of justice among us, we protest and promise with our hearts under the same oath, handwrit, and pains, that we shall defend his person and authority with our goods, bodies, and lives, in the defence of Christ His evangel, liberties of our country, ministration of justice, and punishment of iniquity, against all enemies within this realm or without, as we desire our God to be a strong and merciful defender to us in the day of our death, and coming of our Lord Jesus Christ; to Whom, with the Father and the Holy Spirit, be all honour and glory eternally. Like as many Acts of Parliament not only in general do abrogate, annul, and rescind all laws, statutes, acts, constitutions, canons civil or municipal, with all other ordinances and practick penalties whatsoever, made in prejudice of the true religion, and professors thereof, or of the true Kirk discipline, jurisdiction, and freedom thereof; or in favours of idolatry and superstition; or of the papistical kirk (as Act 3. Act 31. Parl. 1. Act 23. Parl. 11. Act 114. Parl. 12, of K. James VI), that papistry and superstition may be utterly suppressed, according to the intention of the Acts of Parliament reported in Act 5. Parl. 20. K. James VI. And to that end they ordained all papists and priests to be punished by manifold civil and ecclesiastical pains, as adversaries to God's true religion preached, and by law established within this realm (Act 24. Parl. 11. K. James VI) as common enemies to all Christian government (Act 18. Parl. 16. K. James VI), as rebellers and gainstanders of our Sovereign Lord's authority (Act 47. Parl. 3. K. James VI, and as idolaters, Act 104. Parl. 7. K. James VI), but also in particular (by and attour the confession of faith) do abolish and condemn the Pope's authority and jurisdiction out of this land, and ordains the maintainers thereof to be punished (Act 2. Parl. 1. Act 51. Parl 3. Act 106. Parl. 7. Act 114. Parl. 12. of K. James VI); do condemn the Pope's erroneous doctrine, or any other erroneous doctrine repugnant to any of the Articles of the true and Christian religion publicly preached, and by law established in this realm; and ordains the spreaders or makers of books or libels, or letters or writs of that nature, to be punished (Act 46. Parl. 3. Act 106. Parl. 7. Act 24. Parl. 11. K. James VI); do condemn all baptism conform to the Pope's kirk, and the idolatry of the Mass; and ordains all sayers, wilful hearers, and concealers of the Mass, the maintainers, and resetters of the priests, Jesuits, trafficking Papists, to be punished without exception or restriction (Act 5. Parl. 1. Act 120. Parl. 12. Act 164. Parl. 13. Act 193. Parl. 14. Act 1. Parl. 19. Act 5. Parl. 20. K. James VI); do condemn all erroneous books and writs containing erroneous doctrine against the religion presently professed, or containing superstitious rights or ceremonies papistical, whereby the people are greatly abused; and ordains the home-bringers of them to be punished (Act 25. Parl. 11. K. James VI); do condemn the monuments and dregs of bygone idolatry, as going to crosses, observing the festival days of saints, and such other superstitious and papistical rites, to the dishonour of God, contempt of true religion, and fostering of great errors among the people, and ordains the users of them to be punished for the second fault as idolaters (Act 104. Parl. 7. K. James VI). Like as many Acts of Parliament are conceived for maintenance of God's true and Christian religion, and the purity thereof in doctrine and sacraments of the true Church of God, the liberty and freedom thereof in her national synodal assemblies, presbyteries, sessions, policy, discipline, and jurisdiction thereof, as that purity of religion and liberty of the Church was used, professed, exercised, preached, and confessed according to the reformation of religion in this realm. (As for instance: Act 99. Parl. 7. Act 23. Parl. 11. Act 114. Parl. 12. Act 160. Parl. 13. K. James VI, ratified by Act 4. K. Charles.) So that Act 6. Parl. 1. and Act 68. Parl. 6. of K. James VI, in the year of God 1579, declare the ministers of the blessed evangel, whom God of His mercy had raised up or hereafter should raise, agreeing with them that then lived in doctrine and administration of the sacraments, and the people that professed Christ, as He was then offered in the evangel, and doth communicate with the holy sacraments (as in the reformed Kirks of this realm they were presently administered) according to the confession of faith to be the true and holy Kirk of Christ Jesus within this realm, and discerns and declares all and sundry, who either gainsays the word of the evangel, received and approved as the heads of the confession of faith, professed in Parliament in the year of God 1560, specified also in the first Parliament of K. James VI, and ratified in this present parliament, more particularly do specify; or that refuses the administration of the holy sacraments as they were then ministrated, to be no members of the said Kirk within this realm and true religion presently professed, so long as they keep themselves so divided from the society of Christ's body. And the subsequent Act 69. Parl. 6. K. James VI, declares that there is no other face of Kirk, nor other face of religion than was presently at that time by the favour of God established within this realm, which therefore is ever styled God's true religion, Christ's true religion, the true and Christian religion, and a perfect religion, which by manifold Acts of Parliament all within this realm are bound to profess to subscribe the Articles thereof, the confession of faith, to recant all doctrine and errors repugnant to any of the said Articles (Act 4 and 9. Parl. 1. Act 45. 46. 47. Parl. 3. Act 71. Parl. 6. Act 106. Parl. 7. Act 24. Parl. 11. Act 123. Parl. 12. Act 194 and 197. Parl. 14 of King James VI). And all magistrates, sheriffs, &c., on the one part, are ordained to search, apprehend, and punish all contravenors (for instance, Act 5. Parl. 1. Act 104. Parl. 7. Act 25. Parl. 11. K. James VI), and that, notwithstanding of the King's Majesty's licences on the contrary, which are discharged and declared to be of no force, in so far as they tend in any ways to the prejudice and hindrance of the execution of the Acts of Parliament against Papists and adversaries of the true religion (Act 106.

Parl. 7. K. James VI). On the other part, in Act 47. Parl. 3. K. James VI, it is declared and ordained, seeing the cause of God's true religion and His Highness's authority are so joined as the hurt of the one is common to both; and that none shall be reputed as loyal and faithful subjects to our Sovereign Lord or his authority, but be punishable as rebellers and gainstanders of the same, who shall not give their confession and make profession of the said true religion; and that they, who after defection shall give the confession of their faith of new, they shall promise to continue therein in time coming to maintain our Sovereign Lord's authority, and at the uttermost of their power to fortify, assist, and maintain the true preachers and professors of Christ's religion, against whatsoever enemies and gainstanders of the same; and namely, against all such of whatsoever nation, estate, or degree they be of, that have joined or bound themselves, or have assisted or assists to set forward and execute the cruel decrees of Trent, contrary to the preachers and true professors of the Word of God, which is repeated word by word in the Articles of Pacification at Perth, the 23d Feb., 1572, approved by Parliament the last of April 1573, ratified in Parliament 1578, and related Act 123. Parl. 12. of K. James VI., with this addition, that they are bound to resist all treasonable uproars and hostilities raised against the true religion, the King's Majesty and the true professors. Like as all lieges are bound to maintain the King's Majesty's royal person and authority, the authority of Parliaments, without which neither any laws or lawful judicatories can be established (Act 130. Act 131. Parl. 8. K. James VI), and the subject's liberties, who ought only to live and be governed by the King's laws, the common laws of this realm allanerly (Act 48. Parl. 3. K. James I, Act 79. Parl. 6. K. James VI, repeated in Act 131. Parl. 8. K. James VI), which if they be innovated or prejudged the commission anent the union of the two kingdoms of Scotland and England, which is the sole Act of 17 Parl. James VI, declares such confusion would ensue as this realm could be no more a free monarchy, because by the fundamental laws, ancient privileges, offices, and liberties of this kingdom, not only the princely authority of His Majesty's royal descent hath been these many ages maintained; also the people's security of their lands, livings, rights, offices, liberties and dignities preserved; and therefore for the preservation of the said true religion, laws and liberties of this kingdom, it is statute by Act 8. Parl. 1. repeated in Act 99. Parl. 7. ratified in Act 23. Parl. 11 and 14. Act of K. James VI and 4 Act of K. Charles, that all Kings and Princes at their coronation and reception of their princely authority, shall make their faithful promise by their solemn oath in the presence of the Eternal God, that during the whole time of their lives they shall serve the same Eternal God to the utmost of their power, according as He hath required in His most Holy Word, contained in the Old and New Testaments, and according to the same Word shall maintain the true religion of Christ Jesus, the preaching of His Holy Word, the due and right ministration of the sacraments now received and preached within this realm (according to the confession of faith immediately preceding); and shall abolish and gainstand all false religion contrary to the same; and shall rule the people committed to their charge according to the will and commandment of God revealed in His aforesaid Word, and according to the lowable laws and constitutions received in this realm, no ways repugnant to the said will of the Eternal God; and shall procure to the utmost of their power, to the Kirk of God, and whole Christian people, true and perfect peace in all time coming; and that they shall be careful to root out of their Empire all heretics and enemies to the true worship of God, who shall be convicted by the true Kirk of God of the aforesaid crimes. Which was also observed by His Majesty at his coronation in Edinburgh, 1633, as may be seen in the Order of the Coronation. In obedience to the commands of God, conform to the practice of the godly in former times, and according to the laudable example of our worthy and religious progenitors, and of many yet living amongst us, which was warranted also by act of council, commanding a general band to be made and subscribed by His Majesty's subjects of all ranks for two causes: one was, for defending the true religion, as it was then reformed, and is expressed in the confession of faith above written, and a former large confession established by sundry acts of lawful general assemblies and of Parliament unto which it hath relation, set down in public catechisms, and which had been for many years with a blessing from heaven preached and professed in this Kirk and kingdom, as God's undoubted truth grounded only upon His written Word. The other cause was for maintaining the King's Majesty, his person and estate: the true worship of God and the King's authority being so straitly joined, as that they had the same friends and common enemies, and did stand and fall together. And finally, being convinced in our minds, and confessing with our mouths, that the present and succeeding generations in this land are bound to keep the aforesaid national oath and subscription inviolable:—We noblemen, barons, gentlemen, burgesses, ministers, and commons under subscribing, considering divers times before, and especially at this time, the danger of the true reformed religion of the King's honour, and of the public of the kingdom, by the manifold innovations and evils generally contained and particularly mentioned in our late supplications, complaints, and protestations, do hereby profess, and before God, His angels and the world, solemnly declare, that with our whole hearts we agree and resolve all the days of our life constantly to adhere unto and to defend the aforesaid true religion, and forbearing the practice of all novations already introduced in the matters of the worship of God, or approbation of the corruptions of the public government of the Kirk, or civil places and power of kirkmen till they be tried and allowed in free assemblies and in Parliaments, to labour by all means lawful to recover the purity and liberty of the Gospel as it was established and professed before the aforesaid novations; and because, after due examination, we plainly perceive and undoubtedly believe that the innovations and evils contained in our supplications, complaints and protestations have no warrant of the Word of God, are contrary to the articles of the aforesaid confessions, to the intention and meaning of the blessed reformers of religion in this land, to the above-written Acts of Parliament, and do sensibly tend to the reëstablishing of the popish religion and

tyranny, and to the subversion and ruin of the true reformed religion, and of our liberties, laws and estates; we also declare that the aforesaid confessions are to be interpreted, and ought to be understood of the aforesaid novations and evils, no less than if every one of them had been expressed in the aforesaid confessions; and that we are obliged to detest and abhor them, amongst other particular heads of papistry abjured therein. And therefore from the knowledge and conscience of our duty to God, to our King and country, without any worldly respect or inducement so far as human infirmity will suffer, wishing a further measure of the grace of God for this effect, we promise and swear by the great name of the Lord our God, to continue in the profession and obedience of the aforesaid religion; that we shall defend the same, and resist all these contrary errors and corruptions according to our vocation, and to the utmost of that power that God hath put into our hands, all the days of our life. And in like manner, with the same heart we declare before God and men, that we have no intention or desire to attempt anything that may turn to the dishonour of God or the diminution of the King's greatness and authority; but on the contrary we promise and swear that we shall to the utmost of our power, with our means and lives, stand to the defence of our dread Sovereign the King's Majesty, his person and authority, in the defence and preservation of the aforesaid true religion, liberties and laws of the kingdom; as also to the mutual defence and assistance every one of us of another, in the same cause of maintaining the true religion and His Majesty's authority, with our best counsels, our bodies, means and whole power, against all sorts of persons whatsoever; so that whatsoever shall be done to the least of us for that cause shall be taken as done to us all in general, and to every one of us in particular; and that we shall neither directly or indirectly suffer ourselves to be divided or withdrawn by whatsoever suggestion, combination, allurement or terror from this blessed and loyal conjunction; nor shall cast in any let or impediment that may stay or hinder any such resolution as by common consent shall be found to conduce for so good ends; but on the contrary shall by all lawful means labour to further and promote the same; and if any such dangerous and divisive motion be made to us by word or writ, we and every one of us shall either suppress it or (if need be) shall incontinently make the same known, that it may be timously obviated. Neither do we fear the foul aspersions of rebellion, combination or what else our adversaries from their craft and malice would put upon us, seeing what we do is so well warranted, and ariseth from an unfeigned desire to maintain the true worship of God, the majesty of our King, and the peace of the kingdom for the common happiness of ourselves and posterity. And because we cannot look for a blessing from God upon our proceedings, except with our profession and subscription, we join such a life and conversation as beseemeth Christians who have renewed their covenant with God: we therefore faithfully promise, for ourselves, our followers, and all other under us, both in public, in our particular families and personal carriage, to endeavour to keep ourselves within the bounds of Christian liberty, and to be good examples to others of all godliness, soberness and righteousness, and of every duty we owe to God and man; and that this our union and conjunction may be observed without violation we call the living God, the searcher of our hearts to witness, who knoweth this to be our sincere desire and unfeigned resolution, as we shall answer to Jesus Christ in the great day, and under the pain of God's everlasting wrath, and of infamy, and of loss of all honour and respect in this world; most humbly beseeching the Lord to strengthen us by His Holy Spirit for this end, and to bless our desires and proceedings with a happy success, that religion and righteousness may flourish in the land, to the glory of God, the honour of our King, and peace and comfort of us all.' In witness whereof we have subscribed with our hands all the premises, &c."

A. D. 1638-1640.—The First Bishops' War.—In November, 1638, a General Assembly was convened at Glasgow, with the consent of the king, and was opened by the Marquis of Hamilton as Royal Commissioner. But when the Assembly took in hand the trial of the bishops, Hamilton withdrew and ordered the members to disperse. They paid no heed to the order, but deposed the bishops and excommunicated eight of them. "The Canons and the Liturgy were then rejected, and all acts of the Assemblies held since 1606 were annulled. In the North, where Huntly was the King's lieutenant, the Covenant had not been received, and the Tables resolved to enforce it with the sword. Scotland was now full of trained soldiers just come back from Germany, where they had learnt to fight in the Thirty Years' war, and as plenty of money had been collected among the Covenanters, an army was easily raised. Their banner bore the motto, 'For Religion, the Covenant, and the Country,' and their leader was James Graham, Earl of Montrose, one of the most zealous among the champions of the cause. . . . While Montrose had been thus busy for the Covenant in the North, the King had been making ready to put down his rebellious Scottish subjects with the sword. Early in May a fleet entered the Forth under the command of Hamilton. But the Tables took possession of the strongholds, and seized the ammunition which had been laid in for the King. They then raised another army of 22,000 foot and 1,200 horse, and placed at its head Alexander Leslie, a veteran trained in the German war. Their army they sent southwards to meet the English host which the King was bringing to reduce Scotland. The two armies faced each other on opposite banks of the Tweed. The Scots were skilfully posted on Dunse Law, a hill commanding the Northern road. To pass them without fighting was impossible, and to fight would have been almost certain defeat. The King seeing this agreed to treat. By a treaty called the Pacification of Berwick, it was settled that the questions at issue between the King and the Covenanters should be put to a free Assembly, that both armies should be disbanded, and that the strongholds should be restored to the King (June 9, 1639). The Assembly which met at Edinburgh repeated and approved all that had been done at Glasgow. When the Estates met for the first time in the New Parliament-house, June 2, 1640, they went still further, for they not only confirmed the Acts of the Assemblies, but ordered every one to sign the Covenant under pain of civil penal-

ties. Now for the first time they acted in open defiance of the King, to whom hitherto they had professed the greatest loyalty and submission. Three times had they been adjourned by the King, who had also refused to see the Commissioners whom they sent up to London. Now they met in spite of him, and, as in former times of troubles and difficulties, they appealed to France for help. When this intrigue with the French was found out, the Lord Loudon, one of their Commissioners, was sent to the Tower, and the English Parliament was summoned to vote supplies for putting down the Scots by force of arms."—M. Macarthur, *Hist. of Scotland, ch.* 7.

A. D. 1644-1645.—The exploits of Montrose.—At the beginning of the conflict between Charles I. and the Covenanters, James Graham, the brilliant and accomplished Earl of Montrose, attached himself to the latter, but soon deserted their cause and gave himself with great earnestness to that of the court. For his reward, he was raised to the dignity of Marquis of Montrose. After the great defeat of Prince Rupert at Marston Moor, Montrose obtained a commission to raise forces among the Highlanders and proved to be a remarkably successful leader of these wild warriors. Along with his Highlanders he incorporated a body of still wilder Celts, received from Ireland. On the 1st of September, 1644, Montrose attacked an army of the Covenanters, 6,000 foot and horse, at Tippermuir, "totally routed them, and took their artillery and baggage, without losing a man. Perth immediately surrendered to Montrose, and he had some further successes; but threatened by a superior force under the Marquis of Argyll, he retreated northwards into Badenoch, and thence sweeping down into Argyllshire, he mercilessly ravaged the country of the Campbells. Exasperated with the devastation of his estates, Argyll marched against Montrose, who, not waiting to be attacked, surprised the army of the Covenanters at Inverlochy, 2d February, 1645, and totally defeated them, no fewer than 1,500 of the clan Campbell perishing in the battle, while Montrose lost only four or five men. Brilliant as were these victories, they had no abiding influence in quenching this terrible civil war. It was a game of winning and losing; and looking to the fact that the Scotch generally took the side of the Covenant, the struggle was almost hopeless. Still Montrose was undaunted. After the Inverlochy affair, he went southwards through Elgin and Banff into Aberdeenshire, carrying everything before him. Major-general Baillie, a second-rate Covenanting commander, and his lieutenant, General Hurry, were at Brechin, with a force to oppose him; but Montrose, by a dexterous movement, eluded them, captured and pillaged the city of Dundee, and escaped safely into the Grampians. On the 4th May, he attacked, and by extraordinary generalship routed Hurry at Auldearn, near Nairn. After enjoying a short respite with his fierce veterans in Badenoch, he again issued from his wilds, and inflicted a still more disastrous defeat on Baillie, at Alford, in Aberdeenshire, July 2. There was now nothing to prevent his march south, and he set out with a force of from 5,000 to 6,000 men." Overtaken by Baillie at Kilsyth, he once more defeated that commander overwhelmingly. "The number of slain was upwards of 6,000, with very few killed on the side of the royalists. The victory so effected, 15th August 1645, was the greatest Montrose ever gained. His triumph was complete, for the victory of Kilsyth put him in possession of the whole of Scotland. The government of the country was broken up; every organ of the recent administration, civil and ecclesiastical, at once vanished. The conqueror was hailed as 'the great Marquis of Montrose.' Glasgow yielded him tribute and homage; counties and burghs compounded for mercy. The city of Edinburgh humbly deprecated his vengeance, and implored his pardon and forgiveness." But, if the conquest of Scotland was complete for the moment, it came too late. The battle of Naseby had been fought two months before the battle of Kilsyth, and the king's cause was lost. It was in vain that Charles sent to his brilliant champion of the north a commission as Lieutenant-governor of Scotland. Montrose's army melted away so rapidly that when, in September, he marched south, leading his forlorn hope to the help of the king in England, he had but 700 foot and 200 mounted gentlemen. The small force was intercepted and surprised at Philiphaugh (September 13, 1645) by Leslie, with 4,000 horse. Montrose, after fighting with vain obstinacy until no more fighting could be done, made his escape, with a few followers. Most of his troops, taken prisoners, were massacred a few days afterwards, cold-bloodedly, in the courtyard of Newark Castle; and the deed is said to have been due, not to military, but to clerical malignity.—W. Chambers, *Stories of Old Families, pp.* 206–217.

A. D. 1646-1647.—Flight of King Charles to the Scots army and his surrender to the English Parliament. See England: A. D. 1646–1647.

A. D. 1648.—Royalist invasion of England and Battle of Preston. See England: A. D. 1648 (April—August).

A. D. 1650 (March—July).—Scottish loyalty revived.—Charles II. accepted as a "Covenant King."—"The Scots had begun the great movement whose object was at once to resist the tyranny of the Stuarts and the tyranny of Rome, and which was destined to result in incalculable consequences for Europe. But now they retraced their steps, and put themselves in opposition to the Commonwealth of England. They wanted a leader. 'With Oliver Cromwell born a Scotchman,' says Carlyle; 'with a Hero King and a unanimous Hero Nation at his back, it might have been far otherwise. With Oliver born Scotch, one sees not but the whole world might have become Puritan.' Without shutting our eyes to the truth there may be in this passage, we find the cause of this northern war elsewhere. In spiritual things the Scots acknowledged Jesus Christ as their king; in temporal, they recognized Charles II. They had no wish

that the latter should usurp the kingdom of the former; but they also had no desire that Cromwell should seize upon the Stuarts' throne. They possessed a double loyalty — one towards the heavenly king, and another to their earthly sovereign. They had cast off the abuses of the latter, but not the monarchy itself. They accordingly invited the prince, who was then in Holland, to come to Scotland, and take possession of his kingdom. . . . Charles at this time was conniving at Montrose, who was spreading desolation throughout Scotland; and the young king hoped by his means to recover a throne without having to take upon himself any embarrassing engagement. But when the marquis was defeated, he determined to surrender to the Scottish parliament. One circumstance had nearly caused his ruin. Among Montrose's papers was found a commission from the king, giving him authority to levy troops and subdue the country by force of arms. The indignant parliament immediately recalled their commissioner from Holland; but the individual to whom the order was addressed treacherously concealed the document from his colleagues, and by showing it to none but the prince, gave him to understand that he could no longer safely temporize. Charles being thus convinced hurried on board, and set sail for Scotland, attended by a train of unprincipled men. The most serious thinkers in the nation saw that they could expect little else from him than duplicity, treachery, and licentiousness. It has been said that the Scotch compelled Charles to adopt their detested Covenant voluntarily. Most certainly the political leaders cannot be entirely exculpated of this charge; but it was not so with the religious part of the government. When he declared his readiness to sign that deed on board the ship, even before he landed, Livingston, who doubted his sincerity, begged him to wait until he had reached Scotland, and given satisfactory proofs of his good faith. But it was all to no effect. . . . If Charles Stuart had thought of ascending his native throne only, Cromwell and the English would have remained quiet; but he aimed at the recovery of the three kingdoms, and the Scotch were disposed to aid him. Oliver immediately saw the magnitude of the danger which threatened the religion, liberty, and morals of England, and did not hesitate."— J. H. Merle d'Aubigne, *The Protector, ch.* 7.

A. D. 1650 (September).— Cromwell's victory at Dunbar.— War with Scotland having been determined upon by the English Council of State, and Fairfax having declined the command, Cromwell was recalled from Ireland to head the army. "He passed the Tweed with an army of 16,000 men on the 16th of July. The Scots had placed themselves under the command of the old Earl of Leven and of David Leslie. As yet their army was a purely Covenanting one. By an act of the Scotch Church, called the Act of Classes, all known Malignants, and the Engagers (as those men were called who had joined Hamilton's insurrection), had been removed from the army. The country between the Tweed and Edinburgh had been wasted; and the inhabitants, terrified by ridiculous stories of the English cruelty, had taken flight; but Cromwell's army, marching by the coast, was supplied by the fleet. He thus reached the immediate neighbourhood of Edinburgh; but Leslie skilfully availed himself of the advantages of the ground and refused to be brought to an engagement. It became necessary for Cromwell to withdraw towards his supplies. He fell back to Dunbar, which lies upon a peninsula, jutting out into the Firth of Forth. The base of this peninsula is at a little distance encircled by high ground, an offshoot of the Lammermuir Hills. These heights were occupied by the Scotch army, as was also the pass through which the road to Berwick lies. Cromwell was therefore apparently shut up between the enemy and the sea, with no choice but to retire to his ships or surrender. Had Leslie continued his cautious policy, such might have been the event. A little glen, through which runs a brook called the Broxburn, separated the two enemies. Between it and the high grounds lay a narrow but comparatively level tract. Either army attacking the other must cross this glen. There were two convenient places for passing it: one, the more inland one, towards the right of the English, who stood with their back to the sea, was already in the hands of the Scotch. Could Leslie secure the other, at the mouth of the glen, he would have it in his power to attack when he pleased. The temptation was too strong for him; he gradually moved his army down from the hills towards its own right flank, thereby bringing it on the narrow ground between the hill and the brook, intending with his right to secure the passage at Broxmouth. Cromwell and Lambert saw the movement, saw that it gave them a corresponding advantage if they suddenly crossed the glen at Broxmouth, and fell upon Leslie's right wing, while his main body was entangled in the narrow ground before mentioned. The attack was immediately decided upon, and [next morning] early on the 3rd of September carried out with perfect success. The Scotch horse of the right wing were driven in confusion back upon their main body, whom they trampled under foot, and the whole army was thus rolled back upon itself in inextricable confusion."— J. F. Bright, *Hist. of Eng., period* 2, *pp.* 694–696.— "The pursuit extended over a distance of eight miles, and the total loss of the Scots amounted to 3,000 killed and 10,000 prisoners, while 30 guns and 15,000 stand of arms were taken; the casualties of the English army did not exceed 20 men. Of the prisoners, 5,000, being wounded, old men or boys, were allowed to return home; the remaining 5,000 were sent into England, whence, after enduring terrible hardships, they were, as had been the prisoners taken at Preston, sold either as slaves to the planters or as soldiers to the Venetians. On the day following that of the battle, Lambert pushed on to Edinburgh with six regiments of horse and one of foot; Cromwell himself, after a rest of a few days, advanced on the capital, which at once surrendered to the victors. The example thus set was followed by Leith, but Edinburgh Castle still held out [until the following December] against the English. The remnant of the Scottish army (but 1,300 horse remained of the 6,000 who took part in the battle) retired on Stirling, while Charles himself took up his residence at Perth."— N. L. Walford, *Parliamentary Generals of the Great Civil War, ch.* 8.

A. D. 1651 (August).—Charles' rash advance into England.—Cromwell's pursuit and crushing victory at Worcester.—"Lesley was gathering the wreck of his army about him at Stirling. Charles, with the Scottish authorities, had retired to Perth. The Presbyterian party became divided; and the royalists obtained a higher influence in the direction of the national policy. Charles, without further question of his real intentions, was crowned at Scone on the 1st of January, 1651. After a three months' blockade, and then a bombardment, Edinburgh Castle was surrendered to Cromwell on the 18th of December. He had little to do to make himself master of Scotland on the south of the Forth. On the 4th of February the army marched towards Stirling, but returned without any result, driven to the good quarters of Edinburgh by terrible storms of sleet and snow. The Lord-General became seriously ill through this exposure. But on the 5th of June he was out again; and at the end of the month was vigorously prosecuting the campaign. The Scottish army was entrenched at Stirling. The king had been invited to take its command in person. Cromwell, on the 2nd of August, had succeeded in possessing himself of Perth. At that juncture the news reached him that the royal camp at Stirling was broken up, on the 31st of July; and that Charles was on his march southward, at the head of 11,000 men, his lieutenant-general being David Lesley. Argyll was opposed to this bold resolution, and had retired to Inverary. Charles took the western road by Carlisle; and when on English ground issued a proclamation offering pardon to those who would return to their allegiance — exempting from his promised amnesty Bradshaw, Cromwell, and Cook. He was also proclaimed king of England, at the head of his army: and similar proclamation was made at Penrith and other market-towns. Strict discipline was preserved, and although the presence of Scots in arms was hateful to the people, they were not outraged by any attempts at plunder. Charles, however, had few important accessions of strength. There was no general rising in his favour. The gates of Shrewsbury were shut against him. At Warrington, his passage of the Mersey was opposed by Lambert and Harrison, who had got before him with their cavalry. On the 22nd of August Charles reached Worcester, the parliamentary garrison having evacuated the city. He there set up his standard, and a summons went forth for all male subjects of due age to gather round their Sovereign Lord, at the general muster of his forces on the 26th of August. An inconsiderable number of gentlemen came, with about 200 followers. Meanwhile Cromwell had marched rapidly from Scotland with 10,000 men, leaving behind him 6,000 men under Monk. The militias of the counties joined him with a zeal which showed their belief that another civil war would not be a national blessing. On the 28th of August the General of the Commonwealth was close to Worcester, with 30,000 men." On the 3d of September (the anniversary of the victory of Dunbar, won just a year before), he attacked the royalist army and made an end of it. "'We beat the enemy from hedge to hedge [he wrote to parliament] till we beat him into Worcester. The enemy then drew all his forces on the other side the town, all but what he had lost; and made a very considerable fight with us, for three hours' space; but in the end we beat him totally, and pursued him to his royal fort, which we took,— and indeed have beaten his whole army.' The prisoners taken at the battle of Worcester, and in the subsequent flight, exceeded 7,000. They included some of the most distinguished leaders of the royalists in England and Scotland. Courts-martial were held upon nine of these; and three, amongst whom was the earl of Derby, were executed." Charles Stuart escaped by flight, with his long cavalier locks cut close and his royal person ignobly disguised, wandering and hiding for six weeks before he reached the coast and got ship for France. The story of his adventures — his concealment in the oak at Boscobel, his ride to Bristol as a serving man, with a lady on the pillion behind him, &c., &c.,— has been told often enough.—C. Knight, *Crown Hist. of Eng., ch.* 27.

A. D. 1651 (August—September).—The conquest completed by Monk.—When Cromwell followed Charles and his Scottish army into England, to destroy them at Worcester, he left Monk in Scotland, with a few thousand men, and that resolute general soon completed the conquest of the kingdom. He met with most resistance at Dundee. "Dundee was a town well fortified, supplied with a good garrison under Lumisden, and full of all the rich furniture, the plate, and money of the kingdom, which had been sent thither as to a place of safety. Monk appeared before it; and having made a breach, gave a general assault. He carried the town; and, following the example and instructions of Cromwell, put all the inhabitants to the sword, in order to strike a general terror into the kingdom. Warned by this example, Aberdeen, St. Andrew's, Inverness, and other towns and forts, yielded, of their own accord, to the enemy. . . , That kingdom, which had hitherto, through all ages, by means of its situation, poverty, and valour, maintained its independence, was reduced to total subjection."—D. Hume, *Hist. of Eng., ch.* 60 (*v.* 5).

ALSO IN: J. Browne, *Hist. of the Highlands, v.* 2, *ch.* 4.

A. D. 1654.—Incorporated with England by Protector Cromwell.—In 1654, "Cromwell completed another work which the Long Parliament and the Barebone Parliament had both undertaken and left unfinished. Under favour of the discussions which had arisen between the great powers of the Commonwealth, the Scottish royalists had once more conceived hopes, and taken up arms. . . . The insurrection, though chiefly confined to the Highlands, descended occasionally to ravage the plains; and towards the beginning of February, 1654, Middleton had been sent from France, by Charles II., to attempt to give, in the king's name, that unity and consistency of action in which it had until then been deficient. No sooner had he been proclaimed Protector, than Cromwell took decisive measures to crush

these dangers in their infancy: he despatched to Ireland his second son, Henry, an intelligent, circumspect, and resolute young man, and to Scotland, Monk, whom that country had already once recognized as her conqueror. Both succeeded in their mission. . . . Monk, with his usual prompt and intrepid boldness, carried the war into the very heart of the Highlands, established his quarters there, pursued the insurgents into their most inaccessible retreats, defeated Middleton and compelled him to re-embark for the Continent, and, after a campaign of four months, returned to Edinburgh at the end of August, 1654, and began once more, without passion or noise, to govern the country which he had twice subjugated. Cromwell had reckoned beforehand on his success, for, on the 12th of April, 1654, at the very period when he ordered Monk to march against the Scottish insurgents, he had, by a sovereign ordinance, incorporated Scotland with England, abolished all monarchical or feudal jurisdiction in the ancient realm of the Stuarts, and determined the place which its representatives, as well as those of Ireland, should occupy in the common Parliament of the new State."—F. P. Guizot, *Hist. of Oliver Cromwell, bk.* 5 (*v.* 2).

Also in: J. Lingard, *Hist. of Eng.*, *v.* 11, *ch.* 1.

A. D. 1660-1666.—The restored King and the restored prelatical Church.—The oppression of the Covenanters.—"In Scotland the restoration of the Stuarts had been hailed with delight; for it was regarded as the restoration of national independence. And true it was that the yoke which Cromwell had imposed was, in appearance, taken away, that the Scottish Estates again met in their old hall at Edinburgh, and that the Senators of the College of Justice again administered the Scottish law according to the old forms. Yet was the independence of the little kingdom necessarily rather nominal than real: for, as long as the King had England on his side, he had nothing to apprehend from disaffection in his other dominions. He was now in such a situation that he could renew the attempt which had proved destructive to his father without any danger of his father's fate. . . . The government resolved to set up a prelatical church in Scotland. The design was disapproved by every Scotchman whose judgment was entitled to respect. . . . The Scottish Parliament was so constituted that it had scarcely ever offered any serious opposition even to Kings much weaker than Charles then was. Episcopacy, therefore, was established by law. As to the form of worship, a large discretion was left to the clergy. In some churches the English Liturgy was used. In others, the ministers selected from that Liturgy such prayers and thanksgivings as were likely to be least offensive to the people. But in general the doxology was sung at the close of public worship, and the Apostles' Creed was recited when baptism was administered. By the great body of the Scottish nation the new Church was detested both as superstitious and as foreign; as tainted with the corruptions of Rome, and as a mark of the predominance of England. There was, however, no general insurrection. The country was not what it had been twenty-two years before. Disastrous war and alien domination had tamed the spirit of the people. . . . The bulk of the Scottish nation, therefore, sullenly submitted, and, with many misgivings of conscience, attended the ministrations of the Episcopal clergy, or of Presbyterian divines who had consented to accept from the government a half toleration known by the name of the Indulgence. But there were, particularly in the western lowlands, many fierce and resolute men who held that the obligation to observe the Covenant was paramount to the obligation to obey the magistrate. These people, in defiance of the law, persisted in meeting to worship God after their own fashion. The Indulgence they regarded, not as a partial reparation of the wrongs inflicted by the State on the Church, but as a new wrong, the more odious because it was disguised under the appearance of a benefit. Persecution, they said, could only kill the body; but the black Indulgence was deadly to the soul. Driven from the towns, they assembled on heaths and mountains. Attacked by the civil power, they without scruple repelled force by force. At every conventicle they mustered in arms. They repeatedly broke out into open rebellion. They were easily defeated and mercilessly punished: but neither defeat nor punishment could subdue their spirit. Hunted down like wild beasts, tortured till their bones were beaten flat, imprisoned by hundreds, hanged by scores, exposed at one time to the license of soldiers from England, abandoned at another time to the mercy of troops of marauders from the Highlands, they still stood at bay, in a mood so savage that the boldest and mightiest oppressor could not but dread the audacity of their despair."—Lord Macaulay, *Hist. of Eng.*, *ch.* 2 (*v.* 1).—The Scottish Parliament by which Episcopacy was established at the king's bidding is known as the Drunken Parliament. "Every man of them, with one exception, is said to have been intoxicated at the time of passing it [October 1, 1662]. Its effect was that 350 ministers were ejected from their livings. The apparatus of ecclesiastical tyranny was completed by a Mile Act, similar to the Five Mile Act of England, forbidding any recusant minister to reside within twenty miles of his own parish, or within three miles of a royal borough."—J. F. Bright, *Hist. of Eng.*, *period* 2, *p.* 729.—"The violence of the drunken parliament was finally shown in the absurdity of what was called the 'Act Rescissory,' by which every law that had been passed in the Scottish parliament during twenty-eight years was wholly annulled. The legal foundations of Presbytery were thus swept away."—C. Knight, *Crown Hist. of Eng.*, *ch.* 29.

Also in: J. Aikman, *Annals of the Persecution in Scotland, v.* 1, *bk.* 2–5.

A. D. 1669-1679.—Lauderdale's despotism.—The Highland host.—"A new Parliament was assembled [October 19, 1669] at Edinburgh, and Lauderdale was sent down commissioner. . . . It were endless to recount every act of violence and arbitrary authority exercised during Lauderdale's administration. All the lawyers were put from the bar, nay banished, by the king's order, twelve miles from the capital, and by that means the whole justice of the kingdom was suspended for a year, till these lawyers were brought to declare it as their opinion that all appeals to Parliament were illegal. A letter was procured from the king, for expelling twelve of the chief magistrates of Edinburgh, and declaring them incapable of all public office, though their only crime had been their want of compliance with

Lauderdale. . . . The private deportment of Lauderdale was as insolent and provoking as his public administration was violent and tyrannical. Justice likewise was universally perverted by faction and interest: and from the great rapacity of that duke, and still more of his duchess, all offices and favours were openly put to sale. No one was allowed to approach the throne who was not dependent on him; and no remedy could be hoped for or obtained against his manifold oppressions. . . . The law enacted against conventicles had called them seminaries of rebellion. This expression, which was nothing but a flourish of rhetoric, Lauderdale and the privy council were willing to understand in a literal sense; and because the western counties abounded in conventicles, though otherwise in profound peace, they pretended that these counties were in a state of actual war and rebellion. They made therefore an agreement with some highland chieftains to call out their clans, to the number of 8,000 men; to these they joined the guards, and the militia of Angus: and they sent the whole to live at free quarters upon the lands of such as had refused the bonds [engaging them as landlords to restrain their tenants from attending conventicles] illegally required of them. The obnoxious counties were the most populous and most industrious in Scotland. The highlanders were the people the most disorderly and the least civilized. It is easy to imagine the havoc and destruction which ensued. . . . After two months' free quarter, the highlanders were sent back to their hills, loaded with the spoils and the execrations of the west. . . . Lest the cry of an oppressed people should reach the throne, the council forbad, under severe penalties, all noblemen or gentlemen of landed property to leave the kingdom. . . . It is reported that Charles, after a full hearing of the debates concerning Scottish affairs, said, 'I perceive that Lauderdale has been guilty of many bad things against the people of Scotland; but I cannot find that he has acted anything contrary to my interest.'"—D. Hume, *Hist. of Eng., ch.* 66 (*v.* 6).

Also in: G. Burnet, *Hist. of My Own Time, bk.* 2-3.—J. H. Burton, *Hist. of Scotland, ch.* 78 (*v.* 7).

A. D. 1679 (May—June).—The Defeat of Claverhouse at Drumclog.—"The public indignation which these measures [under Lauderdale] roused was chiefly directed against the Archbishop of St. Andrews [Dr. James Sharp], who was generally regarded as their author or instigator, and was doubly obnoxious as the Judas of the Presbyterian Church." On the 3d of May, 1679, the Archbishop was dragged from his carriage on Magus Moor, three miles from St. Andrews, and murdered, by a band of twelve Covenanters, headed by Hackston of Rathillet, and Balfour of Burley, his brother-in-law. "The great body of the Presbyterians, though doubtless thinking that 'the loon was weel away,' condemned this cruel and bloody deed as a foul murder; and they could not fail to see that it would greatly increase the severity of the persecution against their party. . . . It was now declared a treasonable act to attend a conventicle, and orders were issued to the commanders of the troops in the western district to disperse all such meetings at the point of the sword. . . . Towards the end of May preparations were made to hold a great conventicle on a moor in the parish of Avondale, near the borders of Lanarkshire. The day selected for the service was the first of June. No secret was made of the arrangement, and it became known to John Graham of Claverhouse, the 'Bloody Claverhouse,' as he was called, who commanded a body of dragoons, stationed at Glasgow, for the purpose of suppressing the Covenanters in that district. . . . Having been apprised of the intended meeting, he hastened towards the spot at the head of his own troop of horse and two companies of dragoons. . . . The Covenanters had assembled on the farm of Drumclog, in the midst of a high and moorland district out of which rises the wild craggy eminence of Loudoun Hill, in whose vicinity Robert Bruce gained his first victory. . . . The preacher, Thomas Douglas, had proceeded only a short way with his sermon when a watchman posted on an adjoining height fired his gun as a signal that the enemy was approaching. The preacher paused in his discourse, and closed with the oft-quoted words—'You have got the theory; now for the practice.' The women and children were sent to the rear. The armed men separated from the rest of the meeting and took up their position. . . . Claverhouse and his dragoons were descending the slope of the opposite eminence, called Calder Hill, and with a loud cheer they rushed towards the morass and fired a volley at the Covenanters. It was returned with great effect, emptying a number of saddles. The dragoons made several unsuccessful attempts to cross the marsh, and flanking parties sent to the right and to the left were repulsed with considerable loss. At this juncture John Nisbet [an old soldier of the Thirty Years War] cried out, 'Jump the ditch and charge the enemy.' The order was instantly obeyed. Balfour, at the head of the horsemen, and Cleland, with a portion of the infantry, crossed the marsh and attacked the dragoons with such fury that they were thrown into confusion and took to flight, leaving from forty to fifty of their number dead on the field. Claverhouse himself had his horse killed under him and narrowly escaped his pursuers. . . . The victory at Drumclog roused the whole country. Great numbers poured in to join the victors, and in a short time their ranks had swelled to upwards of 6,000 men."—J. Taylor, *The Scottish Covenanters, ch.* 4.

Also in: M. Morris, *Claverhouse, ch.* 4.—Sir W. Scott, *Old Mortality.*

A. D. 1679 (June).—Monmouth's success at Bothwell Bridge.—"The King was for suppressing the insurrection immediately by forces from England to join those in Scotland, and the Duke of Monmouth to command them all. . . . The Duke of Monmouth, after a friendly parting with the King, who had been displeased with him, set out from London, June 18, for Scotland, where he arrived in three days, with an expedition considered incredible, and took the command. The Covenanters were 5,000 or 6,000 strong, and had taken up a position six miles from Hamilton, at Bothwell Bridge, which they barricadoed and disputed the Duke's passage. These Covenanters were irresolute. An attempt to negotiate was made, but they were told that no proposal could be received from rebels in arms. One half hour was allowed. The Covenanters went on consuming their time in theological controversy, considering 'the Duke to be in rebellion against the Lord and his people.'

While thus almost unprepared, they were entirely defeated in an action, 22d of June, which, in compliment to the Duke of Monmouth, was too proudly called the battle of Bothwell Bridge. Four hundred Covenanters were killed, and 1,200 made prisoners. Monmouth was evidently favourable to them. . . . The Duke would not let the dragoons pursue and massacre those (as Oldmixon calls them) Protestants. . . . The same historian adds, that the Duke of York talked of Monmouth's expedition to Scotland, as a courting the people there, and their friends in England, by his sparing those that were left alive; and that Charles himself said to Monmouth, 'If I had been there, we would not have had the trouble of prisoners.' The Duke answered, 'I cannot kill men in cold blood; that's work only for butchers.' The prisoners who promised to live peaceably were set at liberty; the others, about 270, were transported to our plantations, but were all cast away at sea! The Duke of Lauderdale's creatures pressed the keeping the army some time in Scotland, with a design to have them eat it up; but the Duke of Monmouth sent home the militia, and put the troops under discipline; so that all the country was sensible he had preserved them from ruin. The Duke asked the King to grant an indemnity for what was past, and liberty to the Covenanters to hold their meetings under the King's license; but these softening measures fell with Monmouth, and rage and slaughter again reigned when the Duke of York obtained the government of Scotland."—G. Roberts, *Life of Monmouth, ch.* 4 (*v.* 1).

Also in: J. H. Burton, *Hist. of Scotland, ch.* 79 (*v.* 7).

A. D. 1681-1689.—The pitiless rule of James II.—The hunting of the Cameronians.—Claverhouse's brutalities.—In 1681 the government of Scotland was committed to the king's brother, the duke of York (afterwards James II.), as viceroy. "Succeeding the duke of Monmouth, who was universally beloved, he was anxious to exhibit as a statesman that capacity which he thought he had given sufficient proof of as a general and as a naval commander. In assuming the direction of the affairs of Scotland, he at first affected moderation; but at a very early period an occasion presented itself for displaying severity; he was then pitiless. A few hundred presbyterians, under the conduct of two ministers, Cameron and Cargill, having taken arms and declared that they would acknowledge neither the king nor the bishops, he sent the troops against them. The insurgents, who called themselves Cargillites and Cameronians, were beaten, and a great number of them killed. The prisoners, taken to Edinburgh, were tortured and put to death. The duke was present at the executions, which he witnessed with an unmoved countenance, and as though they were curious experiments."—A. Carrel, *Hist. of the Counter-Revolution in Eng., ch.* 2.—"Unlike the English Puritans, the great majority of the Scottish Presbyterians were staunch supporters of monarchy. . . . Now, however, owing to the 'oppression which maketh a wise man mad,' an extreme party arose among them, who not only condemned the Indulgence and refused to pay cess, but publicly threw off their allegiance to the King, on the ground of his violation of the coronation oath, his breach of the Covenant which he solemnly swore to maintain, his perfidy, and his 'tyranny in matters civil.' A declaration to this effect was publicly read, and then affixed (June 22d, 1680) to the market cross of Sanquhar in Dumfriesshire, by Richard Cameron and Donald Cargill, two of the most distinguished Covenanting ministers, accompanied by an armed party of about twenty persons. . . . These acts of the 'Society men,' or Cameronians, as they were called after their leader, afforded the government a plausible pretext for far more severe measures than they had yet taken against the Hillmen, whom they hunted for several weeks through the moors and wild glens of Ayr and Galloway."—J. Taylor, *The Scottish Covenanters, ch.* 4.—"He [James II.], whose favourite theme had been the injustice of requiring civil functionaries to take religious tests, established in Scotland, when he resided there as Viceroy, the most rigorous religious test that has ever been known in the empire. He, who had expressed just indignation when the priests of his own faith were hanged and quartered, amused himself with hearing Covenanters shriek and seeing them writhe while their knees were beaten flat in the boots. In this mood he became King, and he immediately demanded and obtained from the obsequious Estates of Scotland, as the surest pledge of their loyalty, the most sanguinary law that has ever in our islands been enacted against Protestant Nonconformists. With this law the whole spirit of his administration was in perfect harmony. The fiery persecution, which had raged when he ruled Scotland as vicegerent, waxed hotter than ever from the day on which he became sovereign. Those shires in which the Covenanters were most numerous were given up to the license of the army. . . . Preeminent among the bands which oppressed and wasted these unhappy districts were the dragoons commanded by John Graham of Claverhouse. The story ran that these wicked men used in their revels to play at the torments of hell, and to call each other by the names of devils and damned souls. The chief of this Tophet, a soldier of distinguished courage and professional skill, but rapacious and profane, of violent temper and obdurate heart, has left a name which, wherever the Scottish race is settled on the face of the globe, is mentioned with a peculiar energy of hatred. To recapitulate all the crimes by which this man, and men like him, goaded the peasantry of the Western Lowlands into madness, would be an endless task."—Lord Macaulay, *Hist. of Eng., ch.* 4 (*v.* 1).

A. D. 1685.—Argyll's invasion.—Monmouth's rebellion. See England: A. D. 1685 (May—July).

A. D. 1687.—Declarations of Indulgence by James II. See England: A. D. 1687–1688.

A. D. 1688-1690.—The Revolution.—Fall of the Stuarts and their Bishops.—Presbyterianism finally restored and established.—"At the first prospect of invasion from Holland [by William of Orange], James had ordered the regiments on duty in Scotland to march southward. The withdrawal of the troops was followed by outbreaks in various parts. In Glasgow the

Covenanters rose, and proclaimed the Prince of Orange king. In Edinburgh riots broke out. The chapel of Holyrood Palace was dismantled, and the Romish bishops and priests fled in fear for their lives. On hearing that William had entered into London, the leading Whigs, under the Duke of Hamilton, repaired thither, and had an interview with him. He invited them to meet in Convention. This they accordingly did, and on January 9, 1689, it was resolved to request William to summon a meeting of the Scottish Estates for the 14th of March, and in the interim to administer the government. To this William consented. The Estates of Scotland met on the appointed day. All the bishops, and a great number of the peers were adherents of James. After a stormy debate, the Duke of Hamilton was elected President. But the minority (Jacobites) was a large one. . . . The Duke of Gordon still held Edinburgh Castle for James, and when the minority found it hopeless to carry their measures, he proposed they should with him withdraw from Edinburgh and hold a rival Convention at Stirling. But these intentions were discovered, many Jacobites were arrested, and many others, amongst them Viscount Dundee, escaped to the Highlands. In the end, the crown was offered to William and Mary on the same terms on which it had been offered by the English Convention. The offer was accompanied by a claim of rights, almost identical with the English declaration, but containing the additional clause, that 'prelacy was a great and insupportable grievance.' On April 11, 1689, William and Mary were solemnly proclaimed at the Cross of Edinburgh. It was high time some form of government should be settled, for, throughout the Lowlands, scenes of mob violence were daily witnessed. The Presbyterians, so long down-trodden, rose in many a parish. The Episcopal clergy were ejected, in some cases with bloodshed. The 'rabbling,' as it is called in Scotch history, continued for some months, until the Presbyterian Church was reinstated by law as the Established Church of Scotland, in June 1690."—E. Hale, *The Fall of the Stuarts, ch.* 13.—"Episcopacy was now thrown down; but Presbytery was yet to be built up. . . . Months passed away, and the year 1690 began. King William was quite prepared to establish Presbytery, but he was most unwilling to abolish patronage. Moreover, he was desirous that the foundations of the new Church should be as widely laid as possible, and that it should comprehend all the ministers of the old Church who chose to conform to its discipline. But he began to see that some concession was necessary, if a Church was to be built up at all. On the 25th of April the Parliament met which was to give us the Establishment which we still enjoy. Its first act was to abolish the Act 1669, which asserted the king's supremacy over all persons and in all causes. Its second act was to restore all the Presbyterian ministers who had been ejected from their livings for not complying with Prelacy. This done, the parliament paused in its full career of ecclesiastical legislation, and abolished the Lords of the Articles, who for so many centuries had managed the whole business of the Scotch Estates, and ordained that the electors of commissioners to the Estates should take the Oath of Allegiance before exercising the franchise. The next act forms the foundation of our present Establishment. It ratifies the 'Westminster Confession of Faith'; it revives the Act 1592; it repeals all the laws in favour of Episcopacy; it legalizes the ejections of the western rabble; it declares that the government of the Church was to be vested in the ministers who were outed for nonconformity, on and after the 1st January 1661, and were now restored, and those who had been or should be admitted by them; it appoints the General Assembly to meet; and empowers it to nominate visitors to purge out all insufficient, negligent, scandalous, and erroneous ministers, by due course of ecclesiastical process. In this act the Presbyterians gained all that they could desire, as Presbytery was established, and the government of the Church was placed entirely in their hands. By this act, the Westminster Confession became the creed of the Church, and is recorded at length in the minutes of the parliament. But the Catechisms and the 'Directory of Worship' are not found by its side. A pamphleteer of the day declares that the Confession was read amid much yawning and weariness, and, by the time it was finished, the Estates grew restive, and would hear no more. It is at least certain that the Catechisms and Directory are not once mentioned, though the Presbyterian ministers were very anxious that they should. From this it would appear that, while the State has fixed the Church's faith, it has not fixed the Church's worship. . . . The Covenants were utterly ignored, though there were many in the Church who would have wished them revived."—J. Cunningham, *Church Hist. of Scotland, v.* 2, *ch.* 7.

A. D. 1689 (July).—War in the Highlands.—The Battle of Killiecrankie.—"The duke of Gordon still held out the castle of Edinburgh for James; and the viscount Dundee [Graham of Claverhouse], the soul of the Jacobite party in Scotland, having collected a small but gallant army of Highlanders, threatened with subjection the whole northern part of the kingdom. Dundee, who had publicly disavowed the authority of the Scottish convention, had been declared an outlaw by that assembly; and general Mackay was sent against him with a body of regular troops. The castle of Blair being occupied by the adherents of James, Mackay resolved to attempt its reduction. The viscount, apprised of the design of his antagonist, summoned up all his enterprising spirit, and by forced marches arrived at Athol before him. He was soon [July 27, 1689] informed that Mackay's vanguard had cleared the pass of Killicranky; a narrow defile, formed by the steep sides of the Grampian hills, and a dark, rapid, and deep river. Though chagrined at this intelligence he was not disconcerted. He despatched Sir Alexander Maclean to attack the enemy's advanced party while he himself should approach with the main body of the Highlanders. But before Maclean had proceeded a mile, Dundee received information that Mackay had marched through the pass with his whole army. He commanded Maclean to halt, and boldly advanced with his faithful band, determined to give battle to the enemy." Mackay's army, consisting of four thousand five hundred foot, and two troops of horse, was formed in eight battalions, and ready for action when Dundee came in view. His own brave but undisciplined followers, of all ranks and conditions,

did not exceed 3,300 men. "These he instantly ranged in hostile array. They stood inactive for several hours in sight of the enemy, on the steep side of a hill, which faced the narrow plain where Mackay had formed his line, neither party choosing to change its ground. But the signal for battle was no sooner given, than the Highlanders rushed down the hill in deep columns; and having discharged their muskets with effect, they had recourse to the broadsword, their proper weapon, with which they furiously attacked the enemy. Mackay's left wing was instantly broken, and driven from the field with great slaughter by the Macleans, who formed the right of Dundee's army. The Macdonalds, who composed his left, were not equally successful: colonel Hasting's regiment of English foot repelled their most vigorous efforts, and obliged them to retreat. But Maclean and Cameron, at the head of part of their respective clans, suddenly assailed this gallant regiment in flank, and put it to the rout. Two thousand of Mackay's army were slain; and his artillery, baggage, ammunition, provisions, and even king William's Dutch standard, fell into the hands of the Highlanders. But their joy, like a smile upon the cheek of death, delusive and insincere, was of short duration. Dundee was mortally wounded by a musket shot as he was pursuing the fugitives; he expired soon after his victory, and with him perished the hopes of James in Scotland. The castle of Edinburgh had already surrendered to the convention; and the Highlanders, discouraged by the loss of a leader whom they loved and almost adored, gradually dispersed themselves, and returned to their savage mountains, to bewail him in their songs. His memory is still dear to them; he is considered as the last of their heroes; and his name, even to this day, is seldom mentioned among them without a sigh or a tear."—W. Russell, *Hist. of Modern Europe, pt.* 2, *letter* 17 (*v.* 2).

A. D. 1689 (August).—Cameronian victory at Dunkeld.—After the victory and death of Dundee at Killiecrankie, the command of his Highlanders had devolved upon Cannon, an Irish officer. "With an army increased to 4,000 men, he continued to coast along the Grampians, followed by Mackay; the one afraid to descend from the mountains, and the other to quit, with his cavalry, the advantage of the open plains. Returning by a secret march to Dunkeld [August 21], he surrounded the regiment of Cameronians, whose destruction appeared so inevitable that they were abandoned by a party of horse to their fate. But the Cameronians, notwithstanding the loss of Cleland, their gallant commander, defended themselves . . . with such desperate enthusiasm that the highlanders, discouraged by the repulse, and incapable of persevering fortitude, dispersed and returned to their homes."—M. Laing, *Hist. of Scotland*, 1603–1707, *bk.* 10 (*v.* 4).

A. D. 1692.—The Massacre of Glenco.—A scheme, originating with Lord Breadalbane, for the pacifying of the Highlanders, was approved by King William and acted upon, in 1691. It offered a free pardon and a sum of money to all the chiefs who would take the oath of allegiance to William and Mary before the first of January, 1692, and it contemplated the extirpation of such clans as refused. "The last man to submit to government was Macdonald of Glenco. Towards the end of December he applied to the governor of Fort William, who refused, as not being a civil magistrate, to administer the oaths; but dispatched him in haste, with an earnest recommendation to the Sheriff of Argyle. From the snows and other interruptions which he met with on the road, the day prescribed for submission had elapsed, before he reached Inverary, the county town. The benefit of the indemnity was strictly forfeited; the sheriff was moved, however, by his tears and entreaties, to receive his oath of allegiance, and to certify the unavoidable cause of his delay. But his oath was industriously suppressed, by the advice particularly of Stair the president; the certificate was erased from the list presented to the privy council; and it appears that an extensive combination was formed for his destruction. The earl of Breadalbane, whose lands he had plundered, and . . . Dalrymple, the secretary, . . . persuaded William that Glenco was the chief obstacle to the pacification of the highlands. Perhaps they concealed the circumstance that he had applied within due time for the oaths to government, and had received them since. But they procured instructions, signed, and for their greater security, countersigned by the king himself, to proceed to military execution against such rebels as had rejected the indemnity, and had refused to submit on assurance of their lives. As these instructions were found insufficient, they obtained an additional order, signed, and also countersigned, by the king, 'that if Glenco and his clan could well be separated from the rest, it would be a proper vindication of public justice to extirpate that sect of thieves.' But the directions given by Dalrymple far exceeded even the king's instructions. . . . Glenco, assured of an indemnity, had remained at home, unmolested for a month, when a detachment arrived from Fort William, under Campbell of Glenlyon, whose niece was married to one of his sons. The soldiers were received on assurance of peace and friendship; and were quartered among the inhabitants of the sequestered vale. Their commander enjoyed for a fortnight the daily hospitality of his nephew's table. They had passed the evening at cards together, and the officers were to dine with his father next day. Their orders arrived that night, to attack their defenceless hosts while asleep at midnight, and not to suffer a man, under the age of seventy, to escape their swords. From some suspicious circumstances the sons were impressed with a sudden apprehension of danger, and discovered their approach; but before they could alarm their father, the massacre spread through the whole vale. Before the break of day, a party, entering as friends, shot Glenco as he rose from his bed. His wife was stript naked by the soldiers, who tore the rings with their teeth from her fingers; and she expired next morning with horror and grief. Nine men were bound and deliberately shot at Glenlyon's quarters; his landlord was shot by his orders, and a young boy, who clung to his knees for protection, was stabbed to death. At another part of the vale the inhabitants were shot while sitting around their fire; women perished with their children in their arms; an old man of eighty was put to the sword; another, who escaped to a house for

concealment, was burnt alive. Thirty-eight persons were thus inhumanly massacred by their inmates and guests. The rest, alarmed by the report of musquetry, escaped to the hills, and were preserved from destruction by a tempest that added to the horrors of the night. . . . The carnage was succeeded by rapine and desolation. The cattle were driven off or destroyed. The houses, to fulfil Dalrymple's instructions, were burnt to the ground; and the women and children, stript naked, were left to explore their way to some remote and friendly habitation, or to perish in the snows. The outcry against the massacre of Glenco was not confined to Scotland; but, by the industry of the Jacobites, it resounded with every aggravation through Europe. Whether the inhuman rigour or the perfidious execution of the orders were considered, each part of the bloody transaction discovered a deliberate, treacherous, and an impolitic cruelty, from which the king himself was not altogether exempt. Instead of the terror which it was meant to inspire, the horror and universal execration which it excited rendered the highlanders irreconcileable to his government, and the government justly odious to his subjects."—M. Laing, *Hist. of Scotland*, 1603–1707, *bk.* 10 (*v.* 4).

A. D. 1695-1699.—The Darien scheme.—King William urges a Union of the kingdoms.—"The peace of Ryswic was succeeded by an event which had well nigh created a civil war between Scotland and England. As the writers of no nation are more marked by grandeur and meanness of composition in the same person, and the actors in public life by grandeur and meanness of character in the same person, than those of England; so the proceedings of the national assembly of England, the noblest that ever was on earth, except that of Rome, are often tinctured with a strange mixture of the great and the little. Of this truth an instance appeared at this time, in the proceedings of parliament with regard to the Scots colony of Darien, settled by Mr. Paterson. . . . Paterson, having examined the places, satisfied himself that on the isthmus of Darien there was a tract of country running across from the Atlantic to the South Sea, which the Spaniards had never possessed, and inhabited by a people continually at war with them; . . . that the two seas were connected by a ridge of hills, which, by their height, created a temperate climate; . . . that roads could be made with ease along the ridge, by which mules, and even carriages, might pass from the one sea to the other in the space of a day, and that consequently this passage seemed to be pointed out by the finger of nature, as a common centre, to connect together the trade and intercourse of the universe. . . . By this obscure Scotsman a project was formed to settle, on this neglected spot, a great and powerful colony, not as other colonies have for the most part been settled, by chance, and unprotected by the country from whence they went, but by system, upon foresight, and to receive the ample protection of those governments to whom he was to offer his project. And certainly no greater idea has been formed since the time of Columbus. . . . Paterson's original intention was to offer his project to England, as the country which had the most interest in it." Receiving no encouragement, however, in London, nor in Holland, nor Germany, to which countries he repaired, he returned finally to Scotland, and there awakened the interest of several influential gentlemen, including Mr. Fletcher of Salton, the Marquis of Tweddale, Lord Stair, and others. "These persons, in June 1695, procured a statute from parliament, and afterwards a charter from the crown in terms of it, for creating a trading company to Africa and the new world, with power to plant colonies and build forts, with consent of the inhabitants, in places not possessed by other European nations. Paterson, now finding the ground firm under him, . . . threw his project boldly upon the public, and opened a subscription for a company. The frenzy of the Scots nation to sign the solemn league and covenant never exceeded the rapidity with which they ran to subscribe to the Darien company. The nobility, the gentry, the merchants, the people, the royal burghs, without the exception of one, most of the other public bodies, subscribed. Young women threw their little fortunes into the stock, widows sold their jointures to get the command of money for the same purpose Almost in an instant £400,000 were subscribed in Scotland, although it be now known that there was not at that time above £800,000 of cash in the kingdom. . . . The English subscribed £300,000, and the Dutch and Hamburghers £200,000 more. . . . In the mean time, the jealousy of trade, which has done more mischief to the trade of England than all other causes put together, created an alarm in England; and the houses of lords and commons, without previous inquiry or reflection, on the 13th December of the year 1695, concurred in a joint address to the King against the establishment of the Darien company, as detrimental to the interest of the East India company. Soon after, the commons impeached some of their own countrymen for being instrumental in erecting the company. . . . The King's answer was 'that he had been ill-advised in Scotland.' He soon after changed his Scottish ministers, and sent orders to his resident at Hamburgh to present a memorial to the senate, in which he disowned the company, and warned them against all connections with it. . . . The Scots, not discouraged, were rather animated by this oppression; for they converted it into a proof of the envy of the English, and of their consciousness of the great advantages which were to flow to Scotland from the colony. The company proceeded to build six ships in Holland, from 36 to 60 guns, and they engaged 1,200 men for the colony; among whom were younger sons of many of the noble and most ancient families of Scotland, and sixty officers who had been disbanded at the peace." The first colony sailed from Leith, July 26, 1698, and arrived safely at Darien in two months. They "fixed their station at Acta, calling it New St. Andrew, . . . and the country itself New Caledonia. . . . The first public act of the colony was to publish a declaration of freedom of trade and religion to all nations. This luminous idea originated with Paterson. But the Dutch East India company having pressed the King, in concurrence with his English subjects, to prevent the settlement of Darien, orders had been sent

from England to the governors of the West Indian and American colonies, to issue proclamations against giving assistance, or even to hold correspondence with the colony; and these were more or less harshly expressed, according to the tempers of the different governors. The Scots, trusting to far different treatment, and to the supplies which they expected from those colonies, had not brought provisions enough with them; they fell into diseases, from bad food, and from want of food. . . . They lingered eight months, awaiting, but in vain, for assistance from Scotland, and almost all of them either died out or quitted the settlement. Paterson, who had been the first that entered the ship at Leith, was the last who went on board at Darien." To complete the destruction of the undertaking, the Spanish government, which had not moved in opposition before, now bestirred itself against the Scottish company, and entered formal complaints at London (May 3, 1699). "The Scots, ignorant of the misfortunes of their colony, but provoked at this memorial [of Spain], sent out another colony soon after of 1,300 men, to support an establishment which was now no more." This last colony, after gallant fighting and great suffering, was expelled from Darien by a Spanish expedition, and "not more than thirty, saved from war, shipwreck, or disease, ever saw their own country again. . . . While the second colony of the Scots were exposing themselves, far from their country, in the cause, mediately or immediately, of all who spoke the English language, the house of lords of England were a second time addressing the King at home against the settlement itself. . . . He answered the address of the lords, on the 12th of February 1699, in the following words: 'His Majesty does apprehend that difficulties may too often arise, with respect to the different interests of trade between his two kingdoms, unless some way be found out to unite them more nearly and completely; and therefore his Majesty takes this opportunity of putting the house of peers in mind of what he recommended to his parliament soon after his accession to the throne, that they would consider of an union between the two kingdoms.'" —Sir J. Dalrymple, *Memorials of Gt. Britain, pt.* 3, *bk.* 6 (*v.* 3).

A. D. 1703-1704.—Hostility to England.—The Act of Security.—The Scottish Plot.—"This Parliament of 1703 was not in a temper of conciliation towards England. Glencoe and Darien were still watchwords of strife. The failure of the negotiations for Union necessarily produced exasperation. Whilst Marlborough was fighting the battles of the Allies, the Scottish Parliament manifested a decided inclination to the interests of France, by removing restrictions on the importation of French wines. The 'Act for the Security of the Kingdom' was a more open declaration not only of the independence of Scotland, but of her disposition to separate wholly from England—to abrogate, on the first opportunity, that union of the crowns which had endured for a century. The Act of Settlement, by which the crown of England was to pass in the Protestant line to the electress Sophia and her descendants, was not to be accepted; but, on the demise of queen Anne without issue, the Estates of Scotland were to name a successor from the Protestant descendants of the Stuart line, and that successor was to be under conditions to secure 'the religious freedom and trade of the nation from English or any foreign influence.' For four months this matter was vehemently debated in the Scottish Parliament. The Act of Security was carried, but the Lord High Commissioner refused his assent. Following this legislative commotion came what was called in England the Scottish plot—a most complicated affair of intrigue and official treachery, with some real treason at the bottom of it. [This Scottish Plot, otherwise called the Queensberry Plot, was a scheme to raise the Highland clans for the Pretender, abortively planned by one Simon Fraser.] The House of Lords in England took cognizance of the matter, which provoked the highest wrath in Scotland, that another nation should interfere with her affairs. . . . When the Scottish Estates reassembled in 1704 they denounced the proceedings of the House of Lords, as an interference with the prerogative of the queen of Scotland; and they again passed the Security Act. The royal assent was not now withheld; whether from fear or from policy on the part of the English ministry is not very clear. The Parliament of England then adopted a somewhat strong measure of retaliation. The queen was addressed, requesting her to put Carlisle, Newcastle, Tynemouth, and Hull in a state of defence, and to send forces to the border. A Statute was passed which in the first place provided for a treaty of Union; and then enacted that until the Scottish Parliament should settle the succession to the crown in the same line as that of the English Act of Settlement, no native of Scotland, except those domiciled in England, or in the navy or army, should acquire the privileges of a natural-born Englishman; and prohibiting all importations of coals, cattle, sheep, or linen from Scotland. It was evident that there must be Union or War."—C. Knight, *Popular Hist. of Eng., v.* 5, *ch.* 21.

Also in: J. H. Burton, *Hist. of the Reign of Queen Anne, ch.* 4 *and* 7 (*v.* 1).

A. D. 1707.—The Union with England.—To avert war between Scotland and England by a complete political Union of the two kingdoms in one became now the greatest object of the solicitude of the wiser statesmen on both sides. They used their influence to so good an effect that, in the spring of 1706, thirty-one Commissioners on the part of each kingdom were appointed to negotiate the terms of Union. The Commissioners held their first meeting on the 16th of April, and were in session until the 22d of July, when the Articles of Union agreed upon by them received the signature of twenty-seven of the English and twenty-six of the Scots. On the 16th of the following January (1707) these Articles were ratified with amendments by the Scottish Parliament. The English Parliament adopted them as amended a month later, and on the 6th of March the Union was perfected by the royal assent, given solemnly by the Queen, in presence of the Lords and Commons of England. "It was agreed that Great Britain should be the designation of the united island; the name of Scotland to be merged in the name of North Britain. It was agreed that the Crosses of St. George and St. Andrew should be conjoined in the flag of the united kingdom. It was agreed

that the arms of the two countries — the three lions passant and guardant Or, and the lion rampant Or, within a double tressure flory and counterflory, Gules — should be quartered with all heraldic honours. It was agreed that the united kingdom should have a new Great Seal. As regards the House of Commons, the English party proposed that Scotland should be represented by 38 members. Even Scottish writers have observed that if taxation be taken as the measure of representation, and if it be remembered that the Scots of that time had asked and been allowed to limit their share of the Land-tax to one-fortieth of the share of England, it would follow that, as an addition to the 513 members of Parliament returned by England, Scotland was entitled to demand no more than 13. But even 38 seemed by no means adequate to the claims on other grounds of that ancient and renowned kingdom. The Scottish Commissioners stood out for an increase, and the English Commissioners finally conceded 45. The Peers of England were at this juncture 185 and the Peers of Scotland 154. It was intended that the latter should send representatives to the former, and the proportion was settled according to the precedent that was just decided. The 45 members from Scotland when added to the 513 from England would make one-twelfth of the whole; and 16 Peers from Scotland when added to the 185 from England would also make about one-twelfth of the whole. Sixteen was therefore the number adopted; and the mode of election both of Commoners and Peers was left to be determined by the Parliament of Scotland, before the day appointed for the Union, that is the first of May 1707. By this treaty Scotland was to retain her heritable jurisdiction, her Court of Session and her entire system of law. The Presbyterian Church as by law established was to continue unaltered, having been indeed excluded from debate by the express terms of the Commission "—Earl Stanhope, *Hist. of Eng.: Reign of Queen Anne, ch.* 8.

Also in: J. H. Burton, *Hist. of the Reign of Queen Anne, ch.* 7 (*v.* 1).—Sir W. Scott, *Tales of a Grandfather: Scotland, series* 2, *ch.* 12.—H. Hallam, *Const. Hist. of Eng., ch.* 17 (*v.* 3).—The text of the Act of Union may be found in the *Parliamentary History, v.* 6, *app.* 2.

A. D. 1707-1708.—Hostility to the Union.—Spread of Jacobitism. — "In Scotland it [the Union] was regarded with an almost universal feeling of discontent and dishonour. The Jacobite party, who had entertained great hopes of eluding the act for settling the kingdom upon the family of Hanover, beheld them entirely blighted; the Whigs, or Presbyterians, found themselves forming part of a nation in which Prelacy was an institution of the state; the Country party, who had nourished a vain but honourable idea of maintaining the independence of Scotland, now saw it, with all its symbols of ancient sovereignty, sunk and merged under the government of England. All the different professions and classes of men saw each something in the obnoxious treaty which affected their own interest. . . . There was, therefore, nothing save discontent and lamentation to be heard throughout Scotland, and men of every class vented their complaints against the Union the more loudly, because their sense of personal grievances might be concealed, and yet indulged under popular declamations concerning the dishonour done to the country. . . . Almost all the dissenting and Cameronian ministers were anti-unionists, and some of the more enthusiastic were so peculiarly vehement, that long after the controversy had fallen asleep, I have heard my grandfather say (for your grandfather, Mr. Hugh Littlejohn, had a grandfather in his time), that he had heard an old clergyman confess he could never bring his sermon, upon whatever subject, to a conclusion, without having what he called a 'blaud,' that is a slap, at the Union. . . . The detestation of the treaty being for the present the ruling passion of the times, all other distinctions of party, and even of religious opinions in Scotland, were laid aside, and a singular coalition took place, in which Episcopalians, Presbyterians, Cavaliers, and many friends of the revolution, drowned all former hostility in the predominant aversion to the Union. . . . For a time almost all the inhabitants of Scotland were disposed to join unanimously in the Restoration, as it was called, of James the Second's son to the throne of his fathers; and had his ally, the King of France, been hearty in his cause, or his Scottish partisans more united among themselves, or any leader amongst them possessed of distinguished talent, the Stewart family might have repossessed themselves of their ancient domain of Scotland, and perhaps of England also." Early in 1708 an attempt was made to take advantage of this feeling in Scotland, on behalf of the Pretender, by a naval and military expedition from France, fitted out by the French king. It was vulgarly frustrated by an attack of measles, which prostrated the Stuart adventurer (the Chevalier de St. George) at Dunkirk, until the English government had warning enough to be too well prepared.—Sir W. Scott, *Tales of a Grandfather: Scotland, series* 3, *ch.* 1-2.

A. D. 1715.—The Jacobite rising.— In 1715 "there were Jacobite risings both in Scotland and in England. Early in September John Erskine, Earl of Mar — who some years before had been a Whig and helped to bring about the Union — raised the standard of rebellion in Braemar, and in a short time found himself in command of a large Highland army. But Mar was very slow in his movements, and lingered for six weeks in Perth. The Duke of Argyle, famous as both a warrior and a statesman, was sent from London to deal with this danger; and, going to Stirling, used the time which Mar was wasting in gathering round him soldiers and loyal Lowlanders. While things stood thus in the far north a few hundred Jacobites took up arms in Northumberland under Mr. Forster and Lord Derwentwater. Joining with some Southern Scots raised by Lord Kenmure, and some Highlanders whom Mar had sent to their aid, they marched to Preston, in Lancashire. The fate of the two risings was settled on the same day. At Preston the English Jacobites and their Scottish allies had to give themselves up to a small body of soldiers under General Carpenter. At Sheriffmuir, about eight miles north of Stirling, the Highlanders, whom Mar had put in motion at last, met Argyle's little army in battle, and, though not utterly beaten, were forced to fall back to Perth. There Mar's army soon dwindled to a mere handful of men. Just when things seemed at the worst the Pretender himself landed in Scotland. But he altogether lacked

the daring and high spirit needful to the cause at the time; and his presence at Perth did not even delay the end, which was now sure. Late in January 1716 Argyle's troops started from Stirling northwards; and the small Highland force broke up from Perth and went to Montrose. Thence James Edward and Mar slipped away unnoticed, and sailed to France; and the Highlanders scampered off to their several homes. Of the rebels that were taken prisoners about forty were tried and put to death; and many were sent beyond the seas. Derwentwater and Kenmure were beheaded; the other leaders of rank either were forgiven or escaped from prison."—J. Rowley, *The Settlement of the Constitution, bk.* 3, *ch.* 1.

A. D. 1736.—The Porteous Riot. See Edinburgh: A. D. 1736.

A. D. 1745-1746.—The Young Pretender's invasion.—The last rising of the Jacobites.—"As early as 1744 Charles Edward [known as 'the Young Pretender'], the grandson of James II., was placed by the French government at the head of a formidable armament. But his plan of a descent on Scotland was defeated by a storm which wrecked his fleet, and by the march of the French troops which had sailed in it to the war in Flanders. In 1745, however, the young adventurer again embarked with but seven friends in a small vessel and landed on a little island of the Hebrides. For three weeks he stood almost alone; but on the 29th of August the clans rallied to his standard in Glenfinnan. . . . His force swelled to an army as he marched through Blair Athol on Perth, entered Edinburgh in triumph, and proclaimed 'James the Eighth' at the Town Cross: and two thousand English troops who marched against him under Sir John Cope were broken and cut to pieces on the 21st of September by a single charge of the clansmen at Preston Pans. Victory at once doubled the forces of the conqueror. The Prince was now at the head of 6,000 men; but all were still Highlanders. . . . After skilfully evading an army gathered at Newcastle, he marched through Lancashire, and pushed on the 4th of December as far as Derby. But here all hope of success came to an end. Hardly a man had risen in his support as he passed through the districts where Jacobitism boasted of its strength. . . . Catholics and Tories abounded in Lancashire, but only a single squire took up arms. . . . The policy of Walpole had in fact secured England for the House of Hanover. The long peace, the prosperity of the country, and the clemency of the Government, had done their work. . . . Even in the Highlands the Macleods rose in arms for King George, while the Gordons refused to stir, though roused by a small French force which landed at Montrose. To advance further south was impossible, and Charles fell rapidly back on Glasgow; but the reinforcements which he found there raised his army to 9,000 men, and on the 23rd January, 1746, he boldly attacked an English army under General Hawley, which had followed his retreat and had encamped near Falkirk. Again the wild charge of his Highlanders won victory for the Prince, but victory was as fatal as defeat. The bulk of his forces dispersed with their booty to the mountains, and Charles fell sullenly back to the north before the Duke of Cumberland. On the 16th of April the armies faced one another on Culloden Moor, a few miles eastward of Inverness. The Highlanders still numbered 6,000 men, but they were starving and dispirited. . . . In a few moments all was over, and the Stuart force was a mass of hunted fugitives. Charles himself after strange adventures escaped [in the disguise of a female servant, attending the famous Flora Macdonald] to France. In England fifty of his followers were hanged; three Scotch lords, Lovat, Balmerino, and Kilmarnock, brought to the block; and forty persons of rank attainted by Act of Parliament. More extensive measures of repression were needful in the Highlands. The feudal tenures were abolished. The hereditary jurisdictions of the chiefs were bought up and transferred to the Crown. The tartan, or garb of the Highlanders, was forbidden by law. These measures, followed by a general Act of Indemnity, proved effective for their purpose."—J. R. Green, *Short Hist. of the Eng. People, ch.* 10, *sect.* 1.

A. D. 1843.—The Disruption of the Church.—Formation of the Free Church.—"Lay patronage was . . . inconsistent with the conception and the fundamental principles of the Presbyterian Church, and she opposed and rejected it, and fought against it. It was abolished shortly after the Revolution of 1688, but again restored by the British Parliament in 1712, contrary to the letter and the spirit of the Treaty of Union, and to all conceptions of a wise policy toward the Scottish nation. . . . An internal struggle arose between the party who held firmly to these sentiments and the new party—called 'the Moderate party.' . . . In the middle of the 18th century the opposite views of the popular and the moderate parties had become distinct. The chief point of polity in dispute was the settlement of ministers in parishes against the wishes of the congregations. Cases of this character were constantly coming before the presbyteries and general assemblies; and in 1733 it was on matters arising from such cases that a secession took place. . . . In 1773 there were upwards of two hundred dissenting congregations, besides Episcopalians and Roman Catholics. . . . As an attempt to redress the evils involved in patronage, the popular party proposed, in the assembly of 1833, that when a majority of a congregation objected to the minister presented by the patron, the presbytery should not proceed with the settlement. . . . It was on this reasonable regulation [passed into an act, called the Veto Act, by the Assembly of 1834] that the struggle which issued in the Disruption was fought, although there were other principles involved in the conflict." In 1839, a

case arising in the parish church of Auchterarder, in Perthshire, led to a decision in the Court of Session against the legality of the Veto Act, and this decision, on appeal, was affirmed by the House of Lords. "For several years the country rang with the clamour and talk of non-intrusion and spiritual independence, and the excitement was intense. Pamphlets, speeches and ballads were circulated through the kingdom in hundreds of thousands. The engrossing subject attracted the attention of every household, and many a family became divided in religious sentiments." Finally, in 1843, finding no prospect of legislation from Parliament to free the Church of Scotland from the odious fetters of patronage, the popular party resolved upon a general secession from it. This occurred in a memorable scene at the opening of the Assembly, in Edinburgh, on the 18th of May, 1843. The Moderator of the body, Dr. Welsh, read a protest against further proceedings in the Assembly, because of certain acts, sanctioned by the Government of the country, which had infringed on the liberties of the constitution of the Church. He then left the chair and walked out of the church. "Instantly Dr. Chalmers, Dr. Gordon, and the whole of those in the left side of the Church, rose and followed him. Upwards of two hundred ministers walked out, and they were joined outside by three hundred clergymen and other adherents. Dr. Welsh wore his Moderator's dress, and when he appeared on the street, and the people saw that principle had risen above interest, shouts of triumph rent the air such as had not been heard in Edinburgh since the days of the Covenant. They walked through Hanover Street to Canonmills, where a large hall was erected for the reception of the disestablished assembly. They elected Dr. Chalmers Moderator, and formed the first General Assembly of 'The Free Church of Scotland.' Four hundred and seventy-four ministers left the Establishment in 1843; they were also joined by two hundred probationers, nearly one hundred theological students of the University of Edinburgh, three fourths of those in Glasgow, and a majority of those in Aberdeen. The Disruption was an accomplished fact."—J. Mackintosh, *Scotland, ch.* 19.—"It is not every nation, it is not every age, which can produce the spectacle of nearly 500 men leaving their homes, abandoning their incomes, for the sake of opinion. It is literally true that disruption was frequently a sentence of poverty, and occasionally of death, to the ministers of the Church. Well, then, might a great Scotchman of that time [Lord Jeffrey] say that he was proud of his country, proud of the heroism and self-denial of which her pastors proved capable. But well also might a Scotchman of the present time say that he was proud of the success which Voluntaryism achieved. It was the good fortune of the Church that in the hour of her trial she had a worthy leader. Years before, while ministering to a poor congregation in Glasgow, Chalmers had insisted on the cardinal doctrine that the poor should be made to help themselves. He applied the same principle to the Scotch Church. He . . . called on his friends around him to 'organise, organise, organise.' It is not, however, the Church alone which deserves commendation. The nation supported the Church. . . . In the four years which succeeded the disruption, the Free Church raised £1,254,000, and built 654 churches. Her ministrations were extended to every district and almost every parish in the land."—S. Walpole, *Hist. of Eng. from* 1815, *ch.* 21 (*v.* 4).—"In 1874 the Patronage Act of 1712 was repealed, but it was too late to be of much use, and Scottish Presbyterianism remains split up into different camps. Some of the older secessions were in 1847 joined together to form the United Presbyterian Church, mostly distinguished from the Free Church by its upholding as a theory the 'Voluntary Principle.'"—T. F. Tout, *Hist. of Eng. from* 1689, *p.* 238.

SCRIBES, The.—"The Scribes or 'Lawyers,' that is, the learned in the Pentateuch. . . . It is evident that in the Scribes, rather than in any of the other functionaries of the Jewish Church, is the nearest original of the clergy of later times."—Dean Stanley, *Lect's on the Hist. of the Jewish Church, lect.* 44.—"The learned men after Ezra were called 'Sopherim' (singular 'Sopher'), Scribes; because to be a skilled writer was the first criterion of a man of learning. To transcribe the authenticated Law as deposited in the temple was one of the Scribe's occupations. His next occupations were to read, expound and teach it. The text was without vowel points, without divisions of words, verses and chapters; hence it was nearly hieroglyphic, so that the correct reading thereof was traditional, and had to be communicated from master to disciple. As the Great Synod legislated by expounding and extending the Law, these additions also had to be taught orally."—I. M. Wise, *Hist. of the Hebrews' Second Commonwealth, period* 1, *ch.* 4.

SCULPTURE: Greek and Roman.—"Recent investigations in the soil of Greece, and especially the excavations of Dr. Schliemann at Mycenae, have revealed to us the existence of an early decorative art, with some features of great beauty of design, especially in geometric patterns and animal forms, showing a power of technical skill far beyond what we should expect from the rude remains of the early seventh-century work. This art was the product of the civilization of the time of the great Achaean princes, who built their palaces at Mycenae, Tiryns, and elsewhere. There was certainly at that time intercourse between the Greeks and Egyptians, and some forms of this early art, as the lotos-flower, were derived from Egypt. This prehistoric art forms an independent province of study. As the power of the Achaean princes declined, so the art fostered by them declined. . . . The first period of Greek sculpture may be reckoned from about B. C. 600, and goes down to the time of the defeat of the Persians at Salamis, or a little later, that is, to the time when it is reasonably supposed that the Aeginetan marbles were executed. . . . A systematic excavation of the surface of the Acropolis of Athens, undertaken in 1880 and the following year by the Greek Archaeological Society, resulted in the discovery of a large number of archaic statues, all of great interest, and some of very remarkable artistic merit. These are now preserved in a small Museum on the Acropolis. History enables us to fix a lower limit of date for these sculptures. We know that the Persians in B. C. 480–479 twice occupied Athens, and burnt, destroyed, and levelled all the buildings, statues, and altars on the Acropolis. On their reoccupation of the city the Athenians determined to rebuild their temples on a more magnificent scale than before, and we now know that they began by rebuilding the wall of enclosure and levelling the rocky surface, which is ridged up towards the centre. The space between the ridge and the wall they filled up with the rubble of the destroyed walls and buildings, and here they deposited a quantity of fallen and broken statues, laying them carefully in and covering them up, as though to save them from further desecration. Thus, by the irony of fate, the very havoc wrought by the Persians resulted in the preservation to us of much which they tried to destroy forever. . . . With the rebuilding of their city, after its destruction by the Persians in B. C. 480, the art of the Athenians entered on a new phase; it took a fresh start of life; the movement was organized and controlled by the great plastic genius of Pheidias and fostered by the care of Pericles, the greatest of the few statesmen of the world who have made the encouragement of art and letters a systematic part of national policy. The Athenians rapidly founded an empire; they were inspired with ideas of imperial magnificence, and they controlled funds equal to the largeness of their schemes. Fifth-century Athenian sculpture is a new birth; it reaches at a bound a splendour and perfection that retain only traces of the archaic mannerisms. . . . The remains of this period are very numerous, and of first rate importance for determining the high point of artistic excellence to which Greece then attained. Yet in truth hardly a vestige remains of the master-works recorded and extolled above all others by contemporary and subsequent writers. The greater part of the sculptures we now possess were regarded by the ancients as accessories, not belonging to the highest class of art; and they are only casually and cursorily mentioned by professed antiquaries like Pausanias. They consist mainly of the external decorations of temples, the pedimental sculptures and the friezes. The temple-images themselves, upon which the sculptors of that age lavished all the resources of their skill, and which excited the admiration of their own and succeeding ages, have perished. The great works which they set up in temples or public places to commemorate great events have likewise perished; only here and there do we possess in Roman copies of renowned originals some standard by which to measure the worth of what has been lost. . . . The first half of the 4th century witnesses the political supremacy, first of Sparta, then of Thebes, based upon military force. The last half witnesses the rise of the Macedonian power in the north, which succeeds eventually in extinguishing the real independence of all Greek states alike. . . . Though there were no longer great public commissions like those which gave the creative genius of Pheidias its splendid opportunity, private wealth and emulation supplied the artist with work enough to call forth great powers. . . . A new school of sculptors arose who set themselves to rival their predecessors with fresh and original creations. The greatest genius of the age is the Athenian Praxiteles. Side by side with him were other sculptors who followed the traditions of Attic art, as Scopas, Timotheus, Leochares. . . . Towards the end of the century we meet with an Argive artist of great original genius, Lysippus, who undertakes commissions for Alexander the Macedonian conqueror. . . . After Praxiteles and his contemporaries, we meet with no fresh original genius of the first rank. . . . After the subjugation of Macedonia and Achaea by the battle of Pydna (B. C. 167) and the capture of Corinth (B. C. 145), Greek art fell under the all-absorbing dominion of Rome. From this point there is a great revival of art, but it is a revival under new conditions: art is cultivated by the Greeks but not for the Greeks; much that is outward remains—great technical skill, beauty of form, delicacy of feeling; but much of the inner inspiration gradually disappears. . . . The term Graeco-Roman is applied to sculptures wrought by Greek artists working under Roman patronage but animated by Greek traditions. . . . When the Roman came under the spell of the more highly cultivated Greek, when, as Horace phrases it, 'captured Greece took captive her conqueror,' a new era began. There was a long period of plunder; soon there arose a demand for the reproduction of famous statues; the taste of Roman patrons led to the rise of new schools of art; gradually the art came to put on such new features that it may be regarded as a new development, when the term 'Roman' art becomes properly applicable. The majority of the numerous antique statues in our European galleries belong to this age of revival. . . . The Romans were too vigorous a people to be mere copyists. They

did not indeed naturalize Greek sculpture to the same extent as they naturalized Greek literature; but the genius of Rome stamped itself upon the creations of Greek chisels; the hands were almost always Greek, while the ideas were Roman." —L. E. Upcott, *An Introduction to Greek Sculpture, ch.* 2–9.

Mediæval and Modern.—"No advantage or information would be gained by describing the earlier [mediæval] sculpture to which dates have been ascribed, varying from the 6th to the 10th century. It has no character but that of extreme rudeness and coarseness. . . . The first artist whose works arrest attention for the real art-feeling they exhibit is Niccolo Pisano. He appeared early in the 13th century, and, as his name implies, he was a native of Pisa. . . . Niccolo may justly be considered the founder of a school; for there can be no doubt that the principal artists who now began to find employment in the service of the church went forth from the workshops of the Pisan master, and that such skill as they possessed was acquired under his guidance. He lived to an advanced age, and left many distinguished scholars and imitators, of whom his son Giovanni of Pisa, Arnolfo of Florence, Margaritone of Arezzo, and Guido of Como, gained well-deserved reputation. . . . In 1330, Andrea, the son of Ugolino of Pisa, was settled in Florence, and executed one of the bronze gates of the Baptistery in that city. . . . A sculptor of considerable power, Andrea Orcagna, was contemporary with Andrea Pisano, and executed, with him, various works in Florence. . . . Among the sculptors who greatly distinguished themselves towards the end of the 14th century Luca della Robbia claims honourable mention. His works represent, almost exclusively, subjects of a serious or religious character. . . . Of the work of this period no production in sculpture has obtained a greater reputation than that portion of the Gates of the Baptistery, at Florence, executed by Lorenzo Ghiberti. The subjects are in large panels enclosed in highly-enriched frames, and represent various scenes from the Old Testament. . . . Several artists were employed on parts of this edifice, and the different gates boast of the skill of different sculptors, . . . but the folding doors of Lorenzo Ghiberti so far surpass all the others that Michael Angelo is said to have declared, in his admiration of them, that they were 'worthy to be the gates of Paradise.' . . . Lorenzo Ghiberti was born in 1378. The precise date of his death is not known, but it must have been at a very advanced age, as his will is dated 1455. The next sculptor who claims especial notice is Donato da Betto Bardi, better known by the abbreviated form of his name, Donatello. He was a Florentine, born in 1383. . . . Donatello lived to a great age, and left many scholars. . . . The general character of modern art had, up to this time, been essentially religious; and in the expression of deep sentiment, in simplicity, in a chaste character of form in sacred and holy subjects, in the arrangement of drapery, and the harmonious flow of lines in the treatment of this important accessory, no school of art of any time or nation can shew works of greater promise than occur in the productions of the mediæval artists. The deficiency in their sculpture was in the technical requirements of the art. . . . The nude was, of course, unthought of, and the human figure was little, if at all, studied by the artists; but in a certain grace of action, and in the characteristic drapery which was introduced, there was evidently the indication of a rapidly increasing knowledge of all that was necessary eventually to establish a deeply interesting as well as excellent school of art. This hopeful condition of sculpture, so full of promise for the future, was destined to be interrupted; and that by the very means which might have been expected to carry it to perfection. At the period which this history has reached, the discovery of the long-lost treasures of classical literature had given an extraordinary impulse to the study of the ancient Greek and Roman writers. . . . That those competent to appreciate the excellence of the ancient writings should exert themselves to extend their influence, cannot be a matter of surprise; nor can any wonder be felt, that when the works of the great sages and poets of antiquity were receiving all this attention and honour, the remains of ancient sculpture should also begin to claim the notice of these enthusiastic admirers of the genius and taste of the Greeks. . . . Whatever advantages may have been derived from the recurrence to fine ancient examples, there can be no doubt that the immediate effect upon sculpture was to arrest its development in one very important particular—namely, its power to address modern sympathies. . . . The religious sentiment that hitherto had marked nearly all productions of art, no longer characterized the works of the sculptors. The object, now, was to imitate as closely as possible the subjects and forms that had occupied the ancient artists. . . . Among the sculptors who lived at this time are found the names of Michael Angelo Buonarotti, Torregiano, Baccio Bandinelli, the Ammanati family, Sansovino, Benvenuto Cellini, and Giovanni de Bologna. . . . The powerful genius of Michael Angelo Buonarotti has secured for him a fame and station in the history of art which no artist of his own age, or of a subsequent time, has been able to reach. . . . In contemplating the works of Michael Angelo, the intelligent spectator is so struck with the invention, energy of character, and vast knowledge of form and anatomy displayed in them, that he scarcely can define, at first, the cause of their not fulfilling the conditions which should command entire approval. But it is undeniable that the sculpture of this great master does not yield that full satisfaction afforded by many ancient productions, by no means of superior merit in technical excellence. . . . It is the absence of effort and obtrusive display of means which gives their charm to all the best productions of the ancients, and even to many works of a later age; and there can be no doubt that it is to the disregard of this essential property or element that the unfavourable effect produced by many otherwise excellent works of Michael Angelo must be attributed. . . . The quality for which the sculptors of the end of the 16th and 17th centuries are chiefly remarkable is a love of display in the executive parts of their art. This led to the decline of sculpture. . . . The honour of giving a new direction to taste, or rather of leading it back to a recognition of true principles, is eminently due to two sculptors, who lived in the present century; namely, Canova and Flaxman. . . . No modern sculptor has entered so deeply into the recesses of ancient art as Flaxman. His style was founded upon the

principles of the noblest Greek practice, combined with the unaffected simplicity of the Pisani and other artists of the 14th century. But he did not servilely copy them."—R. Westmacott, *Handbook of Sculpture, pp.* 256–325.

SCUTAGE.—"The origin of this tax is implied in its title; it was derived from the 'service of the shield' (scutum)—one of the distinguishing marks of feudal tenure—whereby the holder of a certain quantity of land was bound to furnish to his lord the services of a fully-armed horseman for forty days in the year. The portion of land charged with this service constituted a 'knight's fee,' and was usually reckoned at the extent of five hides, or the value of twenty pounds annually."—K. Norgate, *England Under the Angevin Kings, v.* 1, *ch.* 9.

SCUTARI: A. D. 1473-1479.—Stubborn resistance and final surrender to the Turks. See GREECE: A. D. 1454–1479.

SCUTUM.—A long wooden shield, covered with leather, having the form of a cylinder cut in half, which the Romans are said to have adopted from the Samnites.—E. Guhl and W. Koner, *Life of the Greeks and Romans, sect.* 107.

SCYRI, The.—The Scyri were a tribe known to the Greeks as early as the second century B. C. They were then on the shores of the Black Sea. In the fifth century of the Christian era, after the breaking up of the Hunnish empire of Attila, they appeared among the people occupying the region embraced in modern Austria,—on the Hungarian borders. They seem to have spoken the Gothic language.—T. Hodgkin, *Italy and her Invaders, bk.* 3, *ch.* 8 (*v.* 2).

SCYRIS, The dynasty of the. See ECUADOR: THE ABORIGINAL KINGDOM.

SCYTALISM AT ARGOS, The.—The city of Argos was the scene of a terrible outbreak of mob violence (B. C. 370) consequent on the discovery of an oligarchical conspiracy to overturn the democratic constitution. The furious multitude, armed with clubs, slew twelve hundred of the more prominent citizens, including the democratic leaders who tried to restrain them. "This was the rebellion at Argos known under the name of the Scytalism (cudgelling): an event hitherto unparalleled in Greek history,—so unprecedented, that even abroad it was looked upon as an awful sign of the times, and that the Athenians instituted a purification of their city, being of opinion that the whole Hellenic people was polluted by these horrors."—E. Curtius, *Hist. of Greece, bk.* 6, *ch.* 2.

ALSO IN: G. Grote, *Hist. of Greece, pt.* 2, *ch.* 78.

SCYTHIANS, The.—"Their name, unnoticed by Homer, occurs for the first time in the Hesiodic poems. When the Homeric Zeus in the Iliad turns his eye away from Troy towards Thrace, he sees, besides the Thracians and Mysians, other tribes, whose names cannot be made out, but whom the poet knows as milk-eaters and mare-milkers. The same characteristic attributes, coupled with that of 'having waggons for their dwelling-houses,' appear in Hesiod connected with the name of the Scythians. . . . Herodotus, who personally visited the town of Olbia, together with the inland regions adjoining to it, and probably other Grecian settlements in the Euxine (at a time which we may presume to have been about 450–440 B. C.)—and who conversed with both Scythians and Greeks competent to give him information—has left us far more valuable statements respecting the Scythian people, dominion, and manners, as they stood in his day. His conception of the Scythians, as well as that of Hippokrates, is precise and well-defined—very different from that of the later authors, who use the word almost indiscriminately to denote all barbarous Nomads. His territory called Scythia is a square area, twenty days' journey or 4,000 stadia (somewhat less than 500 English miles) in each direction—bounded by the Danube (the course of which river he conceives in a direction from N. W. to S. E.), the Euxine, and the Palus Mæotis with the river Tanais, on three sides respectively—and on the fourth or north side by the nations called Agathyrsi, Neuri, Androphagi and Melanchlæni. . . . The whole area was either occupied by or subject to the Scythians. And this name comprised tribes differing materially in habits and civilization. The great mass of the people who bore it, strictly Nomadic in their habits—neither sowing nor planting, but living only on food derived from animals, especially mare's-milk and cheese—moved from place to place, carrying their families in waggons covered with wicker and leather, themselves always on horseback with their flocks and herds, between the Borysthenes [the Dnieper] and the Palus Mæotis [sea of Azov]. . . . It is the purely Nomadic Scythians whom he [Herodotus] depicts, the earliest specimens of the Mongolian race (so it seems probable) known to history, and prototypes of the Huns and Bulgarians of later centuries."—G. Grote, *Hist. of Greece, pt.* 2, *ch.* 17.—"The Scythians Proper of Herodotus and Hippocrates extended from the Danube and the Carpathians on the one side, to the Tanais or Don upon the other. The Sauromatæ, a race at least half-Scythic, then succeeded, and held the country from the Tanais to the Wolga. Beyond this were the Massagetæ, Scythian in dress and customs, reaching down to the Jaxartes on the east side of the Caspian. In the same neighbourhood were the Asiatic Scyths or Sacæ, who seem to have bordered upon the Bactrians."—G. Rawlinson, *Five Great Monarchies: Assyria, ch.* 9, *footnote.*—For an account of the Scythian expedition of Darius, B. C. 508, see PERSIA: B. C. 521–493.

SCYTHIANS, OR SCYTHÆ, of Athens.—"The Athenian State also possessed slaves of its own. Such slaves were, first of all, the so-called Scythæ or archers, a corps at first of 300, then of 600 or even 1,200 men, who were also called Speusinii, after a certain Speusinus, who first (at what time is uncertain) effected the raising of the corps. They served as gendarmes or armed police, and their guard-house was at first in the market, afterwards in the Areopagus. They were also used in war, and the corps of Hippotoxotæ or mounted archers 200 strong, which is named in the same connection with them, likewise without doubt consisted of slaves."—G. F. Schömann, *Antiq. of Greece: The State, pt.* 3, *ch.* 3.

SECESSIONS OF THE ROMAN PLEBS. — During the prolonged struggle of the plebeians of Rome to extort civil and political rights from the originally governing order, the patricians, they gained their end on several occasions by marching out in a body from the city, refusing military service and threatening to found a new city. The first of these secessions was about 494 B. C. when they wrung from the patricians the extraordinary concession of the Tribunate (see ROME: B. C. 494–492). The second was B. C. 449, when the tyranny of the Decemvirs was overthrown. The third was four years later, on the demand for the Canuleian Law. The last was B. C. 286, and resulted in the securing of the Hortensian Laws. See ROME: B. C. 445–400; and 286.

SECULAR CLERGY. — The secular clergy of the monastic ages "was so called because it lived in the world, in the 'siècle.' It was composed of all the ecclesiastics who were not under vows in a religious community. The ecclesiastical members of communities, or inhabitants of convents, composed the 'regular clergy.'"—E. de Bonnechose, *Hist. of France, epoch* 2, *bk.* 1, *ch.* 6, *foot-note.*—See, also, BENEDICTINE ORDERS.

SECULAR GAMES AT ROME, The. — The Ludi Sæculares, or secular games, at Rome, were supposed to celebrate points of time which marked the successive ages of the city. According to tradition, the first age was determined by the death of the last survivor of those who were born in the year of the founding of Rome. Afterwards, the period became a fixed one; but whether it was 100 or 110 years is a debated question. At all events, during the period of the empire, the secular games were celebrated five times (by Augustus, Claudius, Domitian, Severus and Philip) with irregularity, as suited the caprice of the emperors. The last celebration was in the year A. U. 1000 — A. D. 247.—C. Merivale, *Hist. of the Romans, ch.* 35, *with foot-note.*

SELECTMEN. — In 1665 the General Court or Town Meeting of Plymouth Colony enacted that "'in every Towne of this Jurisdiction there be three or five Celectmen chosen by the Townsmen out of the freemen such as shal be approved by the Court; for the better managing of the afaires of the respective Townships; and that the Celect men in every Towne or the major parte of them are heerby Impowered to heare and determine all debtes and differences arising between pson and pson within theire respective Townships not exceeding forty shillings,' &c. . . . The origin of the title 'Selectmen' it is difficult to determine. It may possibly be referred to the tun-gerefa of the old Anglo-Saxon township, who, with 'the four best men,' was the legal representative of the community, or to the 'probi homines' of more ancient times. The prefix 'select' would seem to indicate the best, the most approved, but, as in the Massachusetts Colony, they were called, as early as 1642, 'selected townsmen,' it is probable that without reference to any historic type they were merely the men appointed, chosen, selected from the townsmen, to have charge of town affairs."—W. T. Davis, *Ancient Landmarks of Plymouth, pp.* 84–85.—See, also, TOWNSHIP AND TOWN-MEETING.

SELEUCIA.—Seleucia, about forty-five miles from Babylon, on the Tigris, was one of the capitals founded by Seleucus Nicator. "Many ages after the fall of [the Macedonian or Seleucid Empire in Asia] . . . Seleucia retained the genuine characters of a Grecian colony — arts, military virtue, and the love of freedom. The independent republic was governed by a senate of three hundred nobles; the people consisted of

600,000 citizens; the walls were strong, and, as long as concord prevailed among the several orders of the State, they viewed with contempt the power of the Parthian; but the madness of faction was sometimes provoked to implore the dangerous aid of the common enemy, who was posted almost at the gates of the colony." The Parthian capital, Ctesiphon, grew up at a distance of only three miles from Seleucia. "Under the reign of Marcus, the Roman generals penetrated as far as Ctesiphon and Seleucia. They were received as friends by the Greek colony; they attacked as enemies the seat of the Parthian kings; yet both cities experienced the same treatment. The sack and conflagration of Seleucia, with the massacre of 300,000 of the inhabitants, tarnished the glory of the Roman triumph."—E. Gibbon, *Decline and Fall of the Roman Empire, ch.* 8.—See, also, CTESIPHON; SELEUCIDÆ; and MEDAIN.

SELEUCIDÆ, The Empire of the.—The struggle for power which broke out after his death among the successors of Alexander the Great (see MACEDONIA: B. C. 323–316 to 297–280) may be regarded as having been brought to a close by the battle of Ipsus. "The period of fermentation was then concluded, and something like a settled condition of things brought about. A quadripartite division of Alexander's dominions was recognised, Macedonia, Egypt, Asia Minor, and Syria (or south-western Asia) becoming thenceforth distinct political entities. . . . Of the four powers thus established, the most important . . . was the kingdom of Syria (as it was called), or that ruled for 247 years by the Seleucidæ. Seleucus Nicator, the founder of this kingdom, was one of Alexander's officers, but served without much distinction through the various campaigns by which the conquest of the East was effected. At the first distribution of provinces (B. C. 323) among Alexander's generals after his death, he received no share; and it was not until B. C. 320, when upon the death of Perdiccas a fresh distribution was made at Triparadisus, that his merits were recognised, and he was given the satrapy of Babylon. . . . Seleucus led the flower of the eastern provinces to the field of Ipsus (B. C. 301), and contributed largely to the victory, thus winning himself a position among the foremost potentates of the day. By the terms of the agreement made after Ipsus, Seleucus was recognised as monarch of all the Greek conquests in Asia, with the sole exceptions of Lower Syria and Asia Minor. The monarchy thus established extended from the Holy Land and the Mediterranean on the west, to the Indus valley and the Bolor mountain-chain upon the east, and from the Caspian and Jaxartes towards the north, to the Persian gulf and Indian Ocean towards the south. It comprised Upper Syria, Mesopotamia, parts of Cappadocia and Phrygia, Armenia, Assyria, Media, Babylonia, Susiana, Persia, Carmania, Sagartia, Hyrcania, Parthia, Bactria, Sogdiana, Aria, Zarangia, Arachosia, Sacastana, Gedrosia, and probably some part of India."—G. Rawlinson, *Sixth Great Oriental Monarchy, ch.* 3.—The original capital of the great Empire of Seleucus was Babylon; but not satisfied with it he founded and built the city of Seleucia, about forty miles from Babylon, on the Tigris. Even there he was not content, and, after the battle of Ipsus, he created, within a few years, the magnificent city of Antioch, in the valley of the Orontes, and made it his royal residence. This removal of the capital from the center of his dominions to the Syrian border is thought to have been among the causes which led to the disintegration of the kingdom. First Bactria, then Parthia, fell away, and the latter, in time, absorbed most of the Seleucid empire.—C. Thirlwall, *Hist. of Greece, ch.* 58–60 (*v.* 7–8).

B. C. 281-224.—Wars with the Ptolemies and civil wars.—Decay of the empire.—"Antiochus Soter, the son of Seleucus, who had succeeded to his father [murdered B. C. 281—see MACEDONIA: B. C. 297–280] at the age of 40, received the surname of Soter [Saviour] from his complete victory [time and place unknown] over the Gauls at the time when they had crossed the Bosporus [see GALATIA]. . . . He reigned little more (?) than twenty years. At the beginning of his reign, Antiochus carried on wars with Antigonus and Ptolemy Ceraunus [see MACEDONIA: B. C. 277–244], which, however, were soon brought to a close. The war with Antigonus had commenced as early as the time of Demetrius; it was a maritime war, in which nothing sufficiently important was done; both parties felt that it was only a useless waste of strength, and soon concluded peace. Antiochus was wise enough altogether to abstain from interfering in the affairs of Europe. In Asia he apparently enlarged the dominion of his father, and his magnificent empire extended from the mountains of Candahar as far as the Hellespont; but many parts of it, which his father had left him in a state of submission, asserted their independence, as e. g., Cappadocia and Pontus under Ariarathes, and so also Armenia and several other countries in the midst of his empire; and he was obliged to be satisfied with maintaining a nominal supremacy in those parts. There can be no doubt that in his reign Bactria also became independent under a Macedonian king. Even Seleucus had no longer ruled over the Indian states, which, having separated from the empire, returned to their own national institutions. With Ptolemy Philadelphus [Egypt] he at first concluded peace, and was on good terms with him; but during the latter years of his reign he was again involved in war with him, although Ptolemy undoubtedly was far more powerful; and this war was protracted until the reign of his son Antiochus. . . . The Egyptians carried on the war on the offensive against Asia Minor, where they already possessed a few places, and principally at sea. The Syrians conquered Damascus, though otherwise the war was unfavourable to them; they did not carry it on with energy, and the Egyptians at that time conquered Ephesus, the coast of Ionia, Caria, Pamphylia, and probably Cilicia also; the Cyclades likewise fell into their hands about that period. . . . On the death of Antiochus Soter (Olymp. 129, 3) [B. C. 252] the government passed into the hands of his surviving son, . . . Antiochus Theos, one of the most detestable Asiatic despots." Peace with Egypt was brought about by the marriage of Antiochus Theos to Berenice, daughter of Ptolemy Philadelphus; but in order to marry her he was obliged to divorce and send away his wife Laudice,

or Laodice. After Ptolemy Philadelphus died, however (B. C. 248), Laodice returned, "recovered her whole influence, and Berenice, with her child, was sent to Antioch"—the royal residence of Antiochus then being at Ephesus. The next year Antiochus, who had been ill for a long time—"in a perpetual state of intoxication"—died, perhaps of poison. Laodice "caused a waxen image of him to be placed in a bed, and thus deceived the courtiers, who were obliged to stand at a respectful distance," while she, "with her sons, took possession of the government, and adopted measures to rid herself of Berenice. But the citizens of Antioch sided with Berenice, and . . . she for a time remained in possession of Antioch. . . . But she was betrayed by the nobles . . . ; her child was dragged from her arms and murdered before her eyes; she then fled into the temple at Daphne, and was herself murdered there in the asylum. The two brothers, Seleucus Callinicus and Antiochus Hierax, then assumed the crown; but they seem to have divided the empire, and Antiochus obtained Asia Minor. . . . Ptolemy Euergetes, the third among the Ptolemies, and the last in the series that deserves praise, now rose in just indignation at the fate of his unhappy sister (Olymp. 133, 3) [B. C. 246]. He marched out with all the forces of his empire, and wherever he went the nations declared in his favour. . . . 'All the Ionian, Cilician, and other towns, which were already in arms to support Berenice,' joined Euergetes, and he traversed the whole of the Syrian empire. . . . He himself proceeded as far as Babylon. Media, Persia, and the upper satrapies, southern Chorassan and Sistan as far as Cabul, all of which belonged to Syria, submitted to him. He was equally successful in Asia Minor: the acropolis of Sardes, a part of Lydia, and Phrygia Major, alone maintained themselves. Even the countries on the coast of Thrace . . . were conquered by the Egyptians. . . . Seleucus Callinicus, in the meantime, probably maintained himself in the mountainous districts of Armenia, in Aderbidjan. 'His brother, Antiochus, deserted him, and negotiated with Ptolemy.' In the conquered countries, Ptolemy everywhere exercised the rights of a conqueror in the harsh Egyptian manner. . . . While he was thus levying contributions abroad, an insurrection broke out in Egypt, which obliged him to return." He, thereupon, divided his conquests, "retaining for himself Syria as far as the Euphrates, and the coast districts of Asia Minor and Thrace, so that he had a complete maritime empire. The remaining territories he divided into two states: the country beyond the Euphrates was given, according to St. Jerome on Daniel (xi. 7 foll.), to one Xanthippus, who is otherwise unknown, and western Asia was left to Antiochus Hierax. It would seem that after this he never visited those countries again. After he had withdrawn, a party hostile to him came forward to oppose him. . . . The confederates formed a fleet, with the assistance of which, and supported by a general insurrection of the Asiatics, who were exasperated against the Egyptians on account of their rapacity, Seleucus Callinicus rallied again. He recovered the whole of upper Asia, and for a time he was united with his brother Antiochus Hierax. . . . Ptolemy being pressed on all sides concluded a truce of ten years with Seleucus on the basis 'uti possidetis.' Both parties seem to have retained the places which they possessed at the time, so that all the disadvantage was on the side of the Seleucidae, for the fortified town of Seleucia, e. g., remained in the hands of the Egyptians, whereby the capital was placed in a dangerous position. 'A part of Cilicia, the whole of Caria, the Ionian cities, the Thracian Chersonesus, and several Macedonian towns likewise continued to belong to Egypt.' During this period, a war broke out between the brothers Seleucus and Antiochus. . . . The war between the two brothers lasted for years: its seat was Asia Minor. . . . 'Seleucus established himself in upper Asia, where the Parthians, who during the war between the brothers had subdued Sistan and lower Chorassan, were in the possession of Media, Babylonia and Persia.'" In the end, Antiochus was overcome, and fled into Thrace. "But there he was taken prisoner by a general of Euergetes, 'and orders were sent from Alexandria to keep him in safe custody'; for in the mean time a peace had been concluded between Seleucus and Ptolemy, by which the Egyptian empire in its immense extent was strengthened again." Antiochus Hierax then escaped and took refuge among the Gauls, but was murdered for the jewels that he carried with him. "Notwithstanding its successful enterprises, Egypt had been shaken by the war to its foundations and had lost its strength. . . . The empire was already in a state of internal decay, and even more so than that of Syria. The death of Euergetes [B. C. 221] decided its downfall. 'But in Syria too the long wars had loosened the connection among the provinces more than ever, and those of Asia Minor, the jewels of the Syrian crown, were separated from the rest. For while Seleucus was in Upper Asia, Achaeus, his uncle, availed himself of the opportunity of making himself an independent satrap in western Asia.' Seleucus did not reign long after this. He was succeeded by his son Seleucus Ceraunus (Olymp. 138, 2) [B. C. 227] who marched against the younger Achaeus, but was murdered by a Gaul named Apaturius, at the instigation of the same Achaeus (Olymp. 139, 1) [B. C. 224]. He had reigned only three years, and resided in western Asia. He was succeeded by his younger brother Antiochus, surnamed the Great. . . . Under Antiochus the Syrian empire revived again and acquired a great extent, especially in the south. Although he was not a great man, his courtiers, not without reason, gave him the surname of the Great, because he restored the empire. This happened at the time when Antigonus Doson [king of Macedonia] died. Achaeus, in Asia Minor, was in a state of insurrection; the satrap of Media was likewise revolting, and the Syrian empire was confined to Syria, Babylonia, and Persia. During this confusion, new sovereigns ascended the thrones everywhere. In Macedonia, Philip succeeded; in Egypt, Ptolemy Philopator; in Media, Molon; and in Bactria a consolidated Macedonian dynasty had already established itself."—B. G. Niebuhr, *Lect's on Ancient Hist., lect.* 103–104 (*v.* 3).

B. C. 224-187.—The reign of Antiochus the Great.—His early successes.—His disastrous war with the Romans.—His diminished kingdom.—His death.—Antiochus the Great first proved his military talents in the war against the rebellious brothers Molo and Alexander, the satraps of Media and Persia (B. C. 220). "He

next renewed the old contest with Egypt for the possession of Cœle-Syria and Palestine, and was forced to cede those provinces to Ptolemy Philopator, as the result of his decisive defeat at Raphia, near Gaza, in the same year in which the battle of the Trasimene lake [between Hannibal and the Romans] was fought (B. C. 217). Meanwhile, Achæus, the governor of Asia Minor, had raised the standard of independence; but after an obstinate resistance he was defeated and taken at Sardis, and put to death by Antiochus (B. C. 214). This success in the West encouraged Antiochus, like his father, to attempt the reconquest of the East, and with greater appearance at least of success. But a seven years' war (B. C. 212–205) only resulted in his acknowledgment of the independence of the Parthian monarchy (B. C. 205). The same year witnessed not only the crisis of the Hannibalic War, but the death of Ptolemy Philopator; and the opportunity offered by the latter event effectually withdrew Antiochus from direct participation in the great conflict. The league which he made with Philip [Philip V., king of Macedonia, who had then just concluded a peace with the Romans, ending the 'First Macedonian War'—see GREECE: B. C. 214–146], instead of being a well-concerted plan for the exclusion of the Romans from Asia, was only intended to leave him at liberty to pursue his designs against Egypt, while Philip bore the brunt of the war with Attalus [king of Pergamus, or Pergamum] and the Romans. During the crisis of the Macedonian War, he prosecuted a vigorous attack upon Cilicia, Cœle-Syria, and Palestine, while the Romans hesitated to engage in a new contest to protect the dominions of their youthful ward [Ptolemy V. Epiphanes, the infant king of Egypt, whose guardians had placed him under the protection of the Roman senate]. At length a decisive victory over the Egyptians at Panium, the hill whence the Jordan rises, was followed by a peace which gave the coveted provinces to Antiochus [see JEWS: B. C. 332–167], while the youthful Ptolemy was betrothed to Cleopatra, the daughter of the Syrian king (B. C. 198). It must not be forgotten that the transference of these provinces from Egypt, which had constantly pursued a tolerant policy towards the Jews, led afterwards to the furious persecution of that people by Antiochus Epiphanes, and their successful revolt under the Maccabees [see JEWS. B. C. 166–40]. The time seemed now arrived for Antiochus to fly to the aid of Philip, before he should be crushed by the Romans; but the Syrian king still clung to the nearer and dearer object of extending his power over the whole of Asia Minor. . . . He collected a great army at Sardis, while his fleet advanced along the southern shores of Asia Minor, so that he was brought into collision both with Attalus and the Rhodians, the allies of Rome. . . . Though the Rhodians succeeded in protecting the chief cities of Caria, and Antiochus was repelled from some important places by the resistance of the inhabitants, he became master of several others, and among the rest of Abydos on the Hellespont. Even the conquest of his ally Philip was in the first instance favourable to his progress; for the hesitating policy of the Romans suffered him to occupy the places vacated by the Macedonian garrisons." It was not until 191 B. C. that the fatuity of the Syrian monarch brought him into collision with the legions of Rome. He had formed an alliance with the Ætolians in Greece, and he had received into his camp the fugitive Carthaginian, Hannibal; but petty jealousies forbade his profiting by the genius of the great unfortunate soldier. He entered Greece with a small force in 192 B. C., occupied the pass of Thermopylæ, and entrenched himself there, waiting reinforcements which did not come to him. Even the Macedonians were arrayed against him. Early in the following year he was attacked in this strong position by the Roman consul Manius Acilius Glabrio. Despite the immense advantages of the position he was defeated overwhelmingly and his army almost totally destroyed (B. C. 191). He fled to Chalcis and from Chalcis to Asia; but he had not escaped the long arm of wrathful Rome, now roused against him. For the first time, a Roman army crossed the Hellespont and entered the Asiatic world, under the command of the powerful Scipios, Africanus and his brother. At the same time a Roman fleet, in co-operation with the navy of Rhodes, swept the coasts of Asia Minor. After some minor naval engagements, a great battle was fought off the promontory of Myonnesus, near Ephesus, in which the Syrians lost half their fleet (B. C. 190). . . . On land Antiochus fared no better. A vast and motley host which he gathered for the defense of his dominions was assailed by L. Scipio at Magnesia, under Mount Sipylus (B. C. 190), and easily destroyed, some 50,000 of its dead being left on the field. This ended the war and stripped Antiochus of all his former conquests in Asia Minor. Much of the territory taken from him was handed over to the king of Pergamum, faithful ally and friend of Rome; some to the republic of Rhodes, and some was left undisturbed in its political state, as organized in the minor states of Cappadocia, Bithynia and the rest. "As the battle of Magnesia was the last, in ancient history, of those unequal conflicts, in which oriental armies yielded like unsubstantial shows to the might of disciplined freedom, so it sealed the fate of the last of the great oriental empires; for the kingdom left to the heirs of Seleucus was only strong enough to indulge them in the luxuries of Antioch and the malignant satisfaction of persecuting the Jews. All resistance ceased in Asia Minor; that great peninsula was ceded as far as the Taurus and the Halys, with whatever remained nominally to Antiochus in Thrace; and, with characteristic levity, he thanked the Romans for relieving him of the government of too large a kingdom. . . . Never, perhaps, did a great power fall so rapidly, so thoroughly, and so ignominiously as the kingdom of the Seleucidæ under this Antiochus the Great. He himself was soon afterwards slain by the indignant inhabitants of Elymaïs at the head of the Persian Gulf, on occasion of the plundering of a temple of Bel, with the treasures of which he had sought to replenish his empty coffers (B. C. 187). . . . The petty princes of Phrygia soon submitted to the power and exactions of the new lords of Western Asia; but the powerful Celtic tribes of Galatia made a stand in the fastnesses of Mount Olympus." They were overcome, however, and the survivors driven beyond the Halys. "That river, fixed by the treaty with Antiochus as the eastern limit of Roman power in Asia, was respected as the present terminus of

their conquests, without putting a bound to their influence." Eumenes, king of Pergamus, "was justly rewarded for his sufferings and services by the apportionment of the greater part of the territories ceded by Antiochus to the aggrandizement of his kingdom. Pergamus became the most powerful state of Western Asia, including nearly the whole of Asia Minor up to the Halys and the Taurus, except Bithynia and Galatia on the one side, and on the other Lycia and the greater part of Caria, which went to recompense the fidelity of the Rhodians; and to these Asiatic possessions were added, in Europe, the Thracian Chersonese and the city of Lysimachia."—P. Smith, *Hist. of the World: Ancient, ch.* 27 (*v.* 2).

B. C. 150.—Conquest by the Parthians of Media, Persia, Susiana, Babylonia and Assyria. See Persia: B. C. 150–A. D. 226.

B. C. 64.—Pompeius in the East.—Syria absorbed in the dominion of Rome.—In 64, B. C. having finished the Mithridatic War, driving the Pontic king across the Euxine into the Crimea, Pompeius Magnus marched into Syria to settle affairs in that disordered region (see Rome: B. C. 69–63). He had received from the Roman senate and people, under the Manilian Law, an extraordinary commission, with supreme powers in Asia, and by virtue of this authority he assumed to dispose of the eastern kingdoms at will. The last of the Seleucid kings of Syria was deprived of his throne at Pompey's command, and Syria was added to the dominions of Rome. He then turned his attention to Judæa. —G. Long, *Decline of the Roman Republic, v.* 3, *ch.* 9–10.—See Jews: B. C. 166–40.

SELLASIA, Battle of.—The last and decisive battle in what was called the Kleomenic War—fought B. C. 221. The war had its origin in the resistance of Sparta, under the influence of its last heroic king, Kleomenes, to the growing power of the Achaian League, revived and extended by Aratos. In the end, the League, to defeat Kleomenes, was persuaded by Aratos to call in Antigonus Doson, king of Macedonia, and practically to surrender itself, as an instrument in his hands, for the subjugation of Sparta and all Peloponnesus. The deed was accomplished on the field of Sellasia. Kleomenes fled to Egypt; "Sparta now, for the first time since the return of the Hêrakleids, opened her gates to a foreign conqueror."—E. A. Freeman, *Hist. of Federal Govt., ch.* 7, *sect.* 4.

SEMITES, The.—"The 'Semitic Race' owes its name to a confusion of ethnology with philology. A certain family of speech, composed of languages closely related to one another and presupposing a common mother-tongue, received the title of 'Semitic' from the German scholar Eichhorn. There was some justification for such a name. The family of speech consists of Hebrew and Phoenician, of Aramaic, of Assyrian and Babylonian, of Arabian, of South Arabian and of Ethiopic or Ge'ez. Eber, Aram, and Asshur were all sons of Shem, and the South Arabian tribes claimed descent from Joktan. In default of a better title, therefore, 'Semitic' was introduced and accepted in order to denote the group of languages of which Hebrew and Aramaic form part. But whatever justification there may have been for speaking of a Semitic family of languages there was none for speaking of a Semitic race. To do so was to confound language and race, and to perpetuate the old error which failed to distinguish between the two. Unfortunately, however, when scholars began to realise the distinction between language and race, the mischief was already done. 'The Semitic race' had become, as it were, a household term of ethnological science. It was too late to try to displace it; all we can do is to define it accurately and distinguish it carefully from the philological term, 'the Semitic family of speech.'. . . There are members of the Semitic race who do not speak Semitic languages, and speakers of Semitic languages who do not belong to the Semitic race. . . . It is questionable whether the Phoenicians or Canaanites were of purely Semitic ancestry, and yet it was from them that the Israelites learned the language which we call Hebrew. . . . Northern Arabia was the early home of the Semitic stock, and it is in Northern Arabia that we still meet with it but little changed. . . . The Bedawin of Northern Arabia, and to a lesser extent the settled population of the Hijaz, may therefore be regarded as presenting us with the purest examples of the Semitic type. But even the Bedawin are not free from admixture."—A. H. Sayce, *The Races of the Old Testament, ch.* 4.—"The following is a scheme of the divisions of the Semitic race. It is based partly upon the evidence afforded by linguistic affinity, and partly upon geographical and historical distribution:

A.—Northern Semites.

I.	Babylonian:	a. Old Babylonian b. Assyrian c. Chaldæan
II.	Aramæan:	a. Mesopotamian b. Syrian.
III.	Canaanitic:	a. Canaanites b. Phœnicians
IV.	Hebraic:	a. Hebrews b. Moabites c. Ammonites d. Edomites

B.—Southern Semites.

I. Sabæans
II. Ethiopians
III. Arabs.

It should be said with regard to the foregoing classification, that it has been made as general as possible, since it is a matter of great difficulty to make clear-cut divisions on an exact ethnological basis. If a linguistic classification were attempted, a scheme largely different would have to be exhibited. . . . Again it should be observed that the mixture of races which was continually going on in the Semitic world is not and cannot be indicated by our classification. The Babylonians, for example, received a constant accession from Aramæans encamped on their borders, and even beyond the Tigris; but these, as well as non-Semitic elements from the mountains and plains to the east, they assimilated in speech and customs. The same general remark applies to the Aramæans of Northern Mesopotamia and Syria, while the peoples of Southern and Eastern Palestine, and in fact all the communities that bordered on the Great Desert, from the Persian Gulf to the Mediterranean, were continually absorbing individuals or tribes of Arabian stock. Finally, it must be remarked that in some sub-divisions it is necessary to use a geographical instead of a properly racial distinction; and that is, of course, to be limited chronologically. Thus, for instance, it is impossible to devise a single strictly ethnological term for the two great divisions of the Aramæans. It is now pretty generally admitted that the home of the Semitic race, before its separation into the historical divisions, was Northern Arabia. . . . The historical distribution of the several families is thus best accounted for. . . . While among the Southern Semites the various Arab tribes remained for the most part in their desert home for thousands of years as obscure Bedawin, and the Sabæans cultivated the rich soil of the southwest and the southern coast of Arabia, and there developed cities and a flourishing commerce, and the nearly related Ethiopians, migrating across the Red Sea, slowly built up in Abyssinia an isolated civilization of their own, those branches of the race with which we are immediately concerned, after a lengthened residence in common camping grounds, moved northward and westward to engage in more important enterprises. The Babylonians, occupying the region which the Bible makes known to us as the scene of man's creation, and which historical research indicates to have been the seat of the earliest civilization, made their home on the lands of the Lower Euphrates and Tigris, converting them through canalization and irrigation into rich and powerful kingdoms finally united under the rule of Babylon. Before the union was effected, emigrants from among these Babylonians settled along the Middle Tigris, founded the city of Asshur, and later still the group of cities known to history as Nineveh. The Assyrians then, after long struggles, rose to pre-eminence in Western Asia, till after centuries of stern dominion they yielded to the new Babylonian régime founded by the Chaldæans from the shores of the Persian Gulf. The Canaanites, debarred from the riches of the East, turned northwestward at an unknown early date, and while some of them occupied and cultivated the valleys of Palestine, others seized the maritime plain and the western slope of Lebanon. On the coast of the latter region they took advantage of the natural harbours wanting in the former, and tried the resources and possibilities of the sea. As Phœnicians of Sidon and Tyre, they became the great navigators and maritime traders for the nations, and sent forth colonies over the Mediterranean [see PHŒNICIA]. . . . Meanwhile the pasture lands between the Tigris and the Euphrates and between the southern desert and the northern mountains were gradually being occupied by the Aramæans, who advanced with flocks and herds along the Euphrates. . . . While the bulk of the Aramæans adhered to the old pastoral life among the good grazing districts in the confines of the desert, a large number, favoured by their intermediate position between urban and nomadic settlements, addicted themselves to the carrying trade between the East and the West. . . . This remarkable people, however, never attained to political autonomy on a large scale in their Mesopotamian home, to which for long ages they were confined. After the decline of the Hettite principalities west of the Euphrates [see HITTITES], to which they themselves largely contributed, they rapidly spread in that quarter also. They mingled with the non-Semitic Hettite inhabitants of Carchemish and Hamath, formed settlements along the slopes of Amanus and Anti-Lebanon, and created on the northeast corner of Palestine a powerful state with Damascus as the centre, which was long a rival of Israel, and even stood out against the might of Assyria. Thus the Aramæans really acted a more prominent political part to the west than they did to the east of the Euphrates, and accordingly they have been popularly most closely associated with the name 'Syria.' At the same time they did not abandon their old settlements between the Rivers. . . . As the latest of the historical divisions of the race to form an independent community, the Hebraic family made their permanent settlement in and about Palestine [see JEWS]. Their common ancestors of the family of Terah emigrated from Southern Babylonia more than two thousand years before the Christian era. It is highly probable that they were of Aramæan stock."—J. F. McCurdy, *History, Prophecy and the Monuments, bk.* 1, *ch.* 2 (*v.* 1).—"The Hebrews . . . divided the country of Aram [between the Mediterranean and the Euphrates] into several regions; 1st Aram Naharaim, or 'Aram of the two rivers,' that is, the Mesopotamia of the Greeks, between the Euphrates and the Tigris; 2d Aram properly so called, that is, Syria, whose most ancient and important city was Damascus; and 3d Aram Zobah, or the region in which in later times was formed the kingdom of Palmyra."—F. Lenormant and E. Chevalier, *Manual of the Ancient History of the East, bk.* 1, *ch.* 4.—"The Semitic home is distinguished by its central position in geography — between Asia and Africa, and between the Indian Ocean and the Mediterranean, which is Europe; and the rôle in history of the Semitic race has been also intermediary. The Semites have been the great middlemen of the world. Not second-rate in war, they have risen to the first rank in commerce and religion. They have been the carriers between East and West, they have stood between the great ancient civilizations and those which go to make up the modern world; while by a higher gift, for which their conditions neither in place nor in time fully account, they have been mediary between God and man, and proved the religious teachers of the world, through whom have come

its three highest faiths, its only universal religions."—Geo. Adam Smith, *Historical Geography of the Holy Land, p.* 5.—"If we ask what the Semitic peoples have contributed to this organic and living whole which is called civilization, we shall find, in the first place, that, in polity, we owe them nothing at all. Political life is perhaps the most peculiar and native characteristic of the Indo-European nations. These nations are the only ones that have known liberty, that have reconciled the State with the independence of the individual. . . . In art and poetry what do we owe to them? In art nothing. These tribes have but little of the artist; our art comes entirely from Greece. In poetry, nevertheless, without being their tributaries, we have with them more than one bond of union. The Psalms have become in some respects one of our sources of poetry. Hebrew poetry has taken a place with us beside Greek poetry, not as having furnished a distinct order of poetry, but as constituting a poetic ideal, a sort of Olympus where in consequence of an accepted prestige everything is suffused with a halo of light. . . . Here again, however, all the shades of expression, all the delicacy, all the depth is our work. The thing essentially poetic is the destiny of man; his melancholy moods, his restless search after causes, his just complaint to heaven. There was no necessity of going to strangers to learn this. The eternal school here is each man's soul. In science and philosophy we are exclusively Greek. The investigation of causes, knowledge for knowledge's own sake, is a thing of which there is no trace previous to Greece, a thing that we have learned from her alone. Babylon possessed a science, but it had not that pre-eminently scientific principle, the absolute fixedness of natural law. . . . We owe to the Semitic race neither political life, art, poetry, philosophy, nor science. What then do we owe to them? We owe to them religion. The whole world, if we except India, China, Japan, and tribes altogether savage, has adopted the Semitic religions. The civilized world comprises only Jews, Christians, and Mussulmans. The Indo-European race in particular, excepting the Brahmanic family and the feeble relics of the Parsees, has gone over completely to the Semitic faiths. What has been the cause of this strange phenomenon? How happens it that the nations who hold the supremacy of the world have renounced their own creed to adopt that of the people they have conquered? The primitive worship of the Indo-European race . . . was charming and profound, like the imagination of the nations themselves. It was like an echo of nature, a sort of naturalistic hymn, in which the idea of one sole cause appears but occasionally and uncertainly. It was a child's religion, full of artlessness and poetry, but destined to crumble at the first demand of thought. Persia first effected its reform (that which is associated with the name of Zoroaster) under influences and at an epoch unknown to us. Greece, in the time of Pisistratus, was already dissatisfied with her religion, and was turning towards the East. In the Roman period, the old pagan worship had become utterly insufficient. It no longer addressed the imagination; it spoke feebly to the moral sense. The old myths on the forces of nature had become changed into fables, not unfrequently amusing and ingenious, but destitute of all religious value. It is precisely at this epoch that the civilized world finds itself face to face with the Jewish faith. Based upon the clear and simple dogma of the divine unity, discarding naturalism and pantheism by the marvellously terse phrase: 'In the beginning, God created the heaven and the earth,' possessing a law, a book, the depository of grand moral precepts and of an elevated religious poetry, Judaism had an incontestable superiority, and it might have been foreseen then that some day the world would become Jewish, that is to say would forsake the old mythology for Monotheism."—E. Renan, *Studies of Religious History and Criticism, pp.* 154–160.

Primitive Babylonia.—"The Babylonians were . . . the first of the Semites to enter the arena of history, and they did so by virtue of the civilization to which they attained in and through their settlements on the Lower Euphrates and Tigris. . . . The unrivalled fertility of the soil of Babylonia was the result not only of the quality of the soil, but of the superadded benefits of the colossal system of drainage and canalization which was begun by the ingenuity of the first civilized inhabitants. Of the natural elements of fertility, the Euphrates contributed by far the larger share. . . . The . . . formations of clay, mud, and gypsum, comprising elements of the richest soil, are found in such profusion in Babylonia that in the days of ancient civilization it was the most fruitful portion of the whole earth with the possible exception of the valley of the Nile. It was roughly reckoned by Herodotus to equal in productiveness half the rest of Asia. . . . The rise of the Semites in Babylonia, like all other origins, is involved in obscurity. The earliest authentic records, drawn as they are from their own monuments, reveal this gifted race as already in possession of a high degree of civilization, with completed systems of national religion, a language already long past its formative period, and a stage of advancement in art that testifies to the existence of a wealthy class of taste and leisure, to whom their nomadic ancestry must have been little more than a vague tradition. The same records also show this Semitic people to have extended their sway in Western Asia as far as the Mediterranean coastland many centuries before Phœnicians or Hebrews or Hettites came before the world in any national or corporate form. Questions of deep interest arise in connection with such facts as these. It is asked: Did the Babylonian Semites develop the elements of their civilization alone, or did they inherit that of another race? . . . In the absence of direct evidence to the contrary, we are entitled to assume that the same race who in historical times gave proof of high mental endowments reached their unique level of intellectual attainment by a process of self-education. A contrary opinion is held by many scholars of high rank. I refer to the well-known theory that the Semitic Babylonians acquired their civilization from another people who preceded them in the occupation and cultivation of the country [see BABYLONIA, PRIMITIVE]. This hypothetical race is named Sumerian from the term Sumer, generally, but erroneously, supposed to be the designation of Southern Babylonia. With this in the Inscriptions is coupled the name of Akkad, another geographical term properly connoting Northern Babylonia. This appellation has given rise to the name 'Akkadian,'

used by most of these modern authorities to designate a supposed subdivision of the same people, speaking a dialect of the main Sumerian language. . . . The Sumerian theory has played a great rôle in linguistic and ethnological research during the last twenty years. The general aspect of the supposed language led at once to its being classed with the agglutinative families of speech, and the inevitable 'Turanian' conveniently opened its hospitable doors. . . . While we are . . . obliged, until further light shall have been cast upon the subject, to assume that the earliest type of Babylonian culture was mainly of Semitic origin, it would be rash to assert that people of that race were the sole occupants of the lower River country in prehistoric times, or that they received no important contributions to their development from any outside races. . . . It . . . remains for us to assume it to be possible that an antecedent or contemporanous people bore a small share with the Semites in the early development of the country, and that, as a result of their contact with the stronger race, they bequeathed to it some of the elements of the surviving religion, mythology, and popular superstition."—J. F. McCurdy, *History, Prophecy and the Monuments, bk.* 2, *ch.* 1 (*v.* 1).—"As to the ancient history of Babylon, it is well to learn to be patient and to wait. The progress of discovery and decipherment is so rapid, that what is true this year is shown to be wrong next year. . . . This is no discredit to the valiant pioneers in this glorious campaign. On the contrary it speaks well for their perseverance and for their sense of truth. I shall only give you one instance to show what I mean by calling the ancient periods of Babylonian history also constructive rather than authentic. My friend Professor Sayce claims 4000 B. C. as the beginning of Babylonian literature. Nabonidus, he tells us (Hibbert Lectures, p. 21), in 550 B. C. explored the great temple of the Sun god at Sippara. This temple was believed to have been founded by Naram Sin, the son of Sargon. Nabonidus, however, lighted upon the actual foundation-stone — a stone, we are told, which had not been seen by any of his predecessors for 3,200 years. On the strength of this the date of 3,200 + 550 years, that is, 3750 B. C., is assigned to Naram Sin, the son of Sargon. These two kings, however, are said to be quite modern, and to have been preceded by a number of so-called Proto-Chaldæan kings, who spoke a Proto-Chaldæan language, long before the Semitic population had entered the land. It is concluded, further, from some old inscriptions on diorite, brought from the Peninsula of Sinai to Chaldæa, that the quarries of Sinai, which were worked by the Egyptians at the time of their third dynasty, say six thousand years ago, may have been visited about the same time by these Proto-Chaldæans. 4000 B. C., we are told, would therefore be a very moderate initial epoch for Babylonian and Egyptian literature. I am the very last person to deny the ingeniousness of these arguments, or to doubt the real antiquity of the early civilization of Babylon or Egypt. All I wish to point out is, that we should always keep before our eyes the constructive character of this ancient history and chronology. To use a foundation-stone, on its own authority, as a stepping-stone over a gap of 3,200 years, is purely constructive chronology, and as such is to be carefully distinguished from what historians mean by authentic history, as when Herodotus or Thucydides tells us what happened during their own lives or before their own eyes."—F. Max Müller, *On the "Enormous Antiquity" of the East* (*Nineteenth Century*, 1891).—"Dr. Tiele rejects the name 'Accadian,' which has been adopted by so many Assyriologists, and is strongly indisposed to admit Turanian affinities. Yet he is so far from accepting the alternative theory of Halévy and Guyard, that this so-called Accadian, or Sumerian, is only another way of writing Assyrian, that he can scarcely comprehend how a man of learning and penetration can maintain such a strange position. He seems to consider a positive decision in the present stage of the inquiry premature; but pronounces the hypothesis which lies at the basis of the Accadian theory, namely, that the peculiarities of the cuneiform writing are explicable only by the assumption that it was originally intended for another language than the Assyrian, to be by far the most probable. He calls this language, which may or may not have been non-Semitic, 'Old Chaldee,' because what was later on called Chaldaea 'was certainly its starting-point in Mesopotamia.' The superiority of this name to 'Accadian' or 'Sumerian' is not very obvious, as the name 'Chaldee' is not found before the ninth century B. C., while the oldest title of the Babylonian kings is 'king of Sumir and Accad.' In the interesting account of the provinces and cities of Babylonia and Assyria, . . . two identifications which have found much favour with Assyriologists are mentioned in a very sceptical way. The 'Ur' of Abraham is generally believed, with Schrader, to be the 'El Mughair' of the Arabs. Dr. Tiele coldly observes that this identification, though not impossible, is not proved. Again, the tower of Babel is identified by Schrader either with Babil on the left side of the river, or with Birs Nimrud (Borsippa) on the right side. Dr. Tiele considers the latter site impossible, because Borsippa is always spoken of as a distinct place, and was too distant from Babylon for the supposed outer wall of the great city to enclose it. He also rejects Schrader's theory that the name Nineveh in later times included Dur Sargon (Khorsabad), Resen, and Calah, as well as Nineveh proper. The history is divided into four periods: 1. The old Babylonian period, from the earliest days down to the time when Assyria was sufficiently strong and independent to contend with Babylon on equal terms. 2. The first Assyrian period down to the accession of Tiglath-pileser II. in 745 B. C. 3. The Second Assyrian Period, from 745 B. C. to the Fall of Nineveh. 4. The New Babylonian Empire. In treating of the first period, Dr. Tiele makes no attempt to deal with the Deluge Tablets as a source of historical knowledge, putting them on one side apparently as purely mythical. He despairs of tracing Babylonian culture to its earliest home. The belief that it originated on the shores of the Persian Gulf seems to him uncertain, but he is not able to fill the gap with any other satisfactory hypothesis. Babylonian history begins for him with Sargon I., whom he regards as most probably either of Semitic descent or a representative of Semitic sovereignty. He is sceptical about the early date assigned to this king by Nabunahid, the thirty-eighth century B. C., and

is disposed to regard the quaint story of his concealment when an infant in a basket of reeds as a solar myth; but he is compelled to admit as solid fact the amazing statements of the inscriptions about his mighty empire 'extending from Elam to the coast of the Mediterranean and the borders of Egypt, nay, even to Cyprus.' So early as 1850 B. C., he thinks, the supremacy of Babylon had been established for centuries."—*Review of Dr. Tiele's History of Babylonia and Assyria* (*Academy, Jan.* 1, 1887).

Also in: *The Earliest History of Babylonia* (*Quarterly Rev., Oct.*, 1894, *reviewing* "*Découvertes en Chaldée, par Ernest de Sarsec*).

The First Babylonian Empire.—"It is with the reign of Hammurabi that the importance of Babylonia—the country owning Babel as its capital—begins. . . . Hammurabi (circ. 2250 B. C.) is the sixth on the Babylonian list [i. e. a list of kings found among the inscriptions recovered from the mounds of ruined cities in Mesopotamia]. The great majority of the inscriptions of his long reign of fifty-five years refer to peaceful works." As, for example, "the famous canal inscription: 'I am Hammurabi, the mighty king, king of Ka-dingirra (Babylon), the king whom the regions obey, the winner of victory for his lord Merodach, the shepherd, who rejoices his heart. When the gods Anu and Bel granted me to rule the people of Sumer and Akkad, and gave the sceptre into my hand, I dug the canal called "Hammurabi, the blessing of the people," which carries with it the overflow of the water for the people of Sumer and Akkad. I allotted both its shores for food. Measures of corn I poured forth. A lasting water supply I made for the people of Sumer and Akkad. I brought together the numerous troops of the people of Sumer and Akkad, food and drink I made for them; with blessing and abundance I gifted them. In convenient abodes I caused them to dwell. Thenceforward I am Hammurabi, the mighty king, the favourite of the great gods. With the might accorded me by Merodach I built a tall tower with great entrances, whose summits are high like . . . at the head of the canal "Hammurabi, the blessing of the people." I named the tower Sinmuballit tower, after the name of my father, my begetter. The statue of Sinmuballit, my father, my begetter, I set up at the four quarters of heaven.' . . . Rings bearing the legend 'Palace of Hammurabi' have been found in the neighbourhood of Bagdad, and presumably indicate the existence of a royal residence there."—E. J. Simcox, *Primitive Civilizations, v.* 1, *pp.* 282–283.—"The canal to which this king boasts of having given his name, the 'Nahar-Hammourabi,' was called in later days the royal canal, 'Nahar Malcha.' Herodotus saw and admired it, its good condition was an object of care to the king himself, and we know that it was considerably repaired by Nebuchadnezzar. When civilization makes up its mind to re-enter upon that country, nothing more will be needed for the re-awakening in it of life and reproductive energy, than the restoration of the great works undertaken by the contemporaries of Abraham and Jacob."—G. Perrot and C. Chipiez, *Hist. of Art in Chaldæa and Assyria, v.* 1, *p.* 40.—"After a reign of fifty-five years, Chammurabi [or Hammurabi] bequeathed the crown of Babylon and the united kingdoms of Babylonia to his son Samsu-iluna (B. C. 2209–2180). This ruler, reigning in the spirit of his father, developed still further the national system of canalization. . . . Five kings after Chammurabi, till 2098 B. C., complete the list of the eleven kings of this first dynasty, who reigned in all 304 years. The epoch made memorable by the deeds and enterprise of Chammurabi is followed by a period of 368 years, of the occurrences of which absolutely nothing is known, except the names and regnal years of another list of eleven kings reigning in the city of Babylon. . . . The foreign non-Semitic race, which for nearly six centuries (c. 1730–1153), from this time onward, held a controlling place in the affairs of Babylonia, are referred to in the inscriptions by the name Kassē. These Kasshites came from the border country between Northern Elam and Media, and were in all probability of the same race as the Elamites. The references to them make them out to be both mountaineers and tent-dwellers. . . . The political sway of the foreign masters was undisputed, but the genius of the government and the national type of culture and forms of activity were essentially unchanged. . . . Through century after century, and millenium after millenium, the dominant genius of Babylonia remained the same. It conquered all its conquerors, and moulded them to its own likeness by the force of its manifold culture, by the appliances as well as the prestige of the arts of peace. . . . The Babylonians were not able to maintain perpetually their political autonomy or integrity, not because they were not brave or patriotic," but because "they were not, first and foremost, a military people. Their energies were mainly spent in trade and manufacture, in science and art. . . . The time which the native historiographers allow to the new [Kasshite] dynasty is 577 years. . . . This Kasshite conquest of Babylonia . . . prevented the consolidation of the eastern branch of the Semites, by alienating from Babylonia the Assyrian colonists. . . . Henceforth there was almost perpetual rivalry and strife between Assyria and the parent country. Henceforth, also, it is Assyria that becomes the leading power in the West."—J. F. McCurdy, *History, Prophecy and the Monuments, bk.* 2, *ch.* 3, *and bk.* 4, *ch.* 1 (*v.* 1).—"The Kassites gave a dynasty to Babylonia which lasted for 576 years (B. C. 1806–1230). The fact that the rulers of the country were Kassites by race, and that their army largely consisted of Kassite troops, caused the neighbouring populations to identify the Babylonians with their conquerors and lords. Hence it is that in the tablets of Tel el-Amarna, the Canaanite writers invariably term the Babylonians the 'Kasi.' The 'Kasi' or Cush, we are told, had overrun Palestine in former years and were again threatening the Egyptian province. In calling Nimrod, therefore, a son of Cush the Book of Genesis merely means that he was a Babylonian. But the designation takes us back to the age of the Tel el-Amarna tablets. It was not a designation which could have belonged to that later age, when the Babylonians were known to the Israelites as the 'Kasdim' only. Indeed there is a passage in the Book of Micah (v. 6) which proves plainly that in that later age 'the land of Nimrod' was synonymous not with Babylonia but with Assyria. The Nimrod of Genesis must have come down to us from the time when the Kassite dynasty still reigned over Babylonia.

. . . Nimrod was not satisfied with his Babylonian dominions. 'Out of that land he went forth into Assyria, and builded Nineveh, and Rehoboth 'Ir (the city boulevards), and Calah and Resen.'. . . The city of Asshur had been long in existence when Nimrod led his Kassite followers to it, and so made its 'high-priests' tributary to Babylon. It stood on the high-road to the west, and it is not surprising, therefore, that the Kassite kings, after making themselves masters of the future kingdom of Assyria, should have continued their victorious career as far as the shores of the Mediterranean. We may conjecture that Nimrod was the first of them who planted his power so firmly in Palestine as to be remembered in the proverbial lore of the country, and to have introduced that Babylonian culture of which the Tel el-Amarna tablets have given us such abundant evidence."— A. H. Sayce, *The Higher Criticism, and the Verdict of the Monuments, ch.* 3.—It was during the Kasshite domination in Babylonia that Ahmes, founder of the eighteenth dynasty in Egypt, expelled the Hyksos intruders from that country; and "his successors, returning upon Asia the attack which they had thence received, subjugating, or rather putting to ransom, all the Canaanites of Judea, Phœnicia, and Syria, crossed the Euphrates and the Tigris [see EGYPT: ABOUT B. C. 1700–1400]. Nineveh twice fell into their power, and the whole Semitic world became vassal to the Pharaohs. The influence of Egypt was real though temporary, but in the reciprocal dealings which were the result of the conquests of the Tutnes [or Thothmes] and the Amenhoteps, the share of the Semites was on the whole the larger. Marriages with the daughters of kings or vassal governors brought into Egypt and established Asiatic types, ideas, and customs on the Theban throne. Amenhotep IV. was purely Semitic; he endeavoured to replace the religion of Ammon by the sun-worship of Syria. In 1887 were discovered the fragments of a correspondence exchanged between the kings of Syria, Armenia, and Babylonia, and the Pharaohs Amenhotep III. and IV. [see EGYPT: ABOUT B. C. 1500–1400]; all these letters are written in cuneiform character and in Semitic or other dialects; it is probable that the answers were drawn up in the same character and in the same languages. For the rest, the subjugated nations had soon recovered. Saryoukin I. had reconstituted the Chaldean empire; the Assyrians, ever at war on their eastern and western frontiers, had more than once crossed the Upper Euphrates and penetrated Asia Minor as far as Troad, where the name Assaracus seems to be a relic of an Assyrian dynasty. The Hittites or Khetas occupied the north of Syria; and when Ramses II., Sesostris, desired in the 15th century to renew the exploits of his ancestors, he was checked at Kadech by the Hittites and forced to retreat after an undecided battle. The great expansion of Egypt was stopped, at least towards the north. The Semitic peoples, on the contrary, were everywhere in the ascendant."—A. Lefèvre, *Race and Language, pp.* 205–206.

The Assyrian Empire.—"According to all appearance it was the Egyptian conquest about sixteen centuries B. C., that led to the partition of Mesopotamia. Vassals of Thothmes and Rameses, called by Berosus the 'Arab kings,' sat upon the throne of Babylon. The tribes of Upper Mesopotamia were farther from Egypt, and their chiefs found it easier to preserve their independence. At first each city had its own prince, but in time one of these petty kingdoms absorbed the rest, and Nineveh became the capital of an united Assyria. As the years passed away the frontiers of the nation thus constituted were pushed gradually southwards until all Mesopotamia was brought under one sceptre. This consummation appears to have been complete by the end of the fourteenth century, at which period Egypt, enfeebled and rolled back upon herself, ceased to make her influence felt upon the Euphrates. Even then Babylon kept her own kings, but they had sunk to be little more than hereditary satraps receiving investiture from Nineveh. Over and over again Babylon attempted to shake off the yoke of her neighbour; but down to the seventh century her revolts were always suppressed, and the Assyrian supremacy re-established after more or less desperate conflicts. During nearly half a century, from about 1060 to 1020 B. C., Babylon seems to have recovered the upper hand. The victories of her princes put an end to what is called the First Assyrian Empire. But after one or two generations a new family mounted the northern throne, and, toiling energetically for a century or so to establish the grandeur of the monarchy, founded the Second Assyrian Empire. The upper country regained its ascendency by the help of military institutions whose details now escape us, although their results may be traced throughout the later history of Assyria. From the tenth century onwards the effects of these institutions become visible in expeditions made by the armies of Assyria, now to the shores of the Persian Gulf or the Caspian, and now through the mountains of Armenia into the plains of Cappadocia, or across the Syrian desert to the Lebanon and the coast cities of Phœnicia. The first princes whose figured monuments—in contradistinction to mere inscriptions—have come down to us, belonged to those days. The oldest of all was Assurnazirpal, whose residence was at Calach (Nimroud). The bas-reliefs with which his palace was decorated are now in the Louvre and the British Museum, most of them in the latter. . . . To Assurnazirpal's son Shalmaneser III. belongs the obelisk of basalt which also stands in the British Museum. . . . Shalmaneser was an intrepid man of war. The inscriptions on his obelisk recall the events of thirty-one campaigns waged against the neighbouring peoples under the leadership of the king himself. . . . Under the immediate successors of Shalmaneser the Assyrian prestige was maintained at a high level by dint of the same lavish bloodshed and truculent energy; but towards the eighth century it began to decline. There was then a period of languor and decadence, some echo of which, and of its accompanying disasters, seems to have been embodied by the Greeks in the romantic tale of Sardanapalus. No shadow of confirmation for the story of a first destruction of Nineveh is to be found in the inscriptions, and, in the middle of the same century, we again find the Assyrian arms triumphant under the leadership of Tiglath Pileser II., a king modelled after the great warriors of the earlier days. This prince seems to have carried his victorious arms as far east as the Indus, and west as the frontiers of Egypt. And

yet it was only under his second successor, Saryoukin, or, to give him his popular name, Sargon, the founder of a new dynasty, that Syria, with the exception of Tyre, was brought into complete submission after a great victory over the Egyptians (721–704). . . . His son Sennacherib equalled him both as a soldier and as a builder. He began by crushing the rebels of Elam and Chaldæa with unflinching severity; in his anger he almost exterminated the inhabitants of Babylon, the perennial seat of revolt; but, on the other hand, he repaired and restored Nineveh. Most of his predecessors had been absentees from the capital, and had neglected its buildings. . . . He chose a site well within the city for the magnificent palace which Mr. Layard has been the means of restoring to the world. This building is now known as Kouyoundjik, from the name of the village perched upon the mound within which the buildings of Sennacherib were hidden. Sennacherib rebuilt the walls, the towers, and the quays of Nineveh at the same time, so that the capital, which had never ceased to be the strongest and most populous city of the empire, again became the residence of the king—a distinction which it was to preserve until the fast approaching date of its final destruction. The son of Sennacherib, Esarhaddon, and his grandson, Assurbanipal [long identified with the Sardanapalus of the Greeks; but Prof. Sayce now finds the Sardanapalus of Greek romance in a rebel king, Assur-dain-pal, who reigned B. C. 827–820, and whose name and history fit the tale], pushed the adventures and conquests of the Assyrian arms still farther. They subdued the whole north of Arabia, and invaded Egypt more than once. , . . There was a moment when the great Semitic Empire founded by the Sargonides touched even the Ægæan, for Cyges, king of Lydia, finding himself menaced by the Cimmerians, did homage to Assurbanipal, and sued for help against those foes to all civilization."—G. Perrot and C. Chipiez, *A History of Art in Chaldæa and Assyria, ch.* 1, *sect.* 5 (*v.* 1).—"The power of Assurbanipal was equal to the task of holding under control the subjects of Assyria at all points. He boasts of having compelled the king of Tyre to drink sea-water to quench his thirst. The greatest opposition he met with was in Elam, but this too he was able to suppress. . . . Assurbanipal says that he increased the tributes, but that his action was opposed by his own brother, whom he had formerly maintained by force of arms in Babylon. This brother now seduced a great number of other nations and princes from their allegiance. . . . The king of Babylon placed himself, so to speak, at their head. . . . The danger was immensely increased when the king set up by Assurbanipal in Elam joined the movement. It was necessary to put an end to this revolt, and this was effected for once without much difficulty. . . . Thereupon the rebellious brother in Babylon has to give way. The gods who go before Assurbanipal have, as he says, thrust the king of Babylon into a consuming fire and put an end to his life. His adherents . . . are horribly punished. . . . The provinces which joined them are subjected to the laws of the Assyrian gods. Even the Arabs, who have sided with the rebels, bow before the king, whilst of his power in Egypt it is said that it extended to the sources of the Nile. His dominion reached even to Asia Minor. . . . Assyria is the first conquering power which we encounter in the history of the world. The most effective means which she brought to bear in consolidating her conquests consisted in the transportation of the principal inhabitants from the subjugated districts to Assyria, and the settlement of Assyrians in the newly acquired provinces. . . . The most important result of the action of Assyria upon the world was perhaps that she limited or broke up the petty sovereignties and the local religions of Western Asia. . . . It was . . . an event which convulsed the world when this power, in the full current of its life and progress, suddenly ceased to exist. Since the 10th century every event of importance had originated in Assyria; in the middle of the 7th she suddenly collapsed. . . . Of the manner in which the ruin of Nineveh was brought about we have nowhere any authentic record. . . . Apart from their miraculous accessories, the one circumstance in which . . . [most of the accounts given] agree, is that Assyria was overthrown by the combination of the Medes and Babylonians. Everything else that is said on the subject verges on the fabulous; and even the fact of the alliance is doubtful, since Herodotus, who lived nearest to the period we are treating of, knows nothing of it, and ascribes the conquest simply to the Medes."—L. von Ranke, *Universal History: The Oldest Historical Group of Nations, ch.* 3.

The last Babylonian Empire and its overthrow.—The story, briefly told, of the alliance by which the Assyrian monarchy is said to have been overthrown, is as follows: About 626 or 625, B. C., a new revolt broke out in Babylonia, and the Assyrian king sent a general named Nabu-pal-usur or Nabopolassar to quell it. Nabu-pal-usur succeeded in his undertaking, and seems to have been rewarded by being made governor of Babylon. But his ambition aimed higher, and he mounted the ancient Babylonian throne, casting off his allegiance to Assyria and joining her enemies. "He was wise enough to see that Assyria could not be completely crushed by one nation, and he therefore made a league with Pharaoh Necho, of Egypt, and asked the Median king, Cyaxares, to give his daughter, Amytes, to Nebuchadnezzar, his son, to wife. Thus a league was made, and about B. C. 609 the kings marched against Assyria. They suffered various defeats, but eventually the Assyrian army was defeated, and Shalman, the brother of the king of Assyria, slain. The united kings then besieged Nineveh. During the siege the river Tigris rose and carried away the greater part of the city wall. The Assyrian king gathered together his wives and property in the palace, and setting fire to it, all perished in the flames. The enemies went into the city and utterly destroyed all they could lay their hands upon. With the fall of Nineveh, Assyria as a power practically ceased to exist." About 608 B. C. Nebuchadnezzar succeeded his father on the throne. "When he had become established in the kingdom he set his various captives, Jews, Phœnicians, Syrians, and Egyptians, at work to make Babylon the greatest city in the world. And as a builder he remains almost unsurpassed."—E. A. Wallis Budge, *Babylonian Life and History, ch.* 5.—"The Babylon of Nebuchadnezzar occupied a square of which each side was nearly fifteen miles in length, and was bisected by the

Euphrates diagonally from northwest to southeast. This square was enclosed by a deep moat, flooded from the river. The clay excavated in digging the moat, moulded into bricks and laid in bitumen, formed the walls of the city. These walls, more than 300 feet high and more than 70 thick, and protected by parapets, afforded a commodious driveway along their top of nearly 60 miles, needing only aerial bridges over the Euphrates river. The waters of the river were forced to flow through the city between quays of masonry which equaled the walls in thickness and height. The walls were pierced at equal intervals for a hundred gates, and each gateway closed with double leaves of ponderous metal, swinging upon bronze posts built into the wall. Fifty broad avenues, crossing each other at right angles, joined the opposite gates of the city, and divided it into a checkerboard of gigantic squares. The river quays were pierced by 25 gates like those in the outer walls. One of the streets was carried across the river upon an arched bridge, another ran in a tunnel beneath the river bed, and ferries plied continually across the water where the other streets abutted. The great squares of the city were not all occupied by buildings. Many of them were used as gardens and even farms, and the great fertility of the soil, caused by irrigation, producing two and even three crops a year, supplied food sufficient for the inhabitants in case of siege. Babylon was a vast fortified province rather than a city. . . . There is a curious fact which I do not remember to have seen noticed, and of which I will not here venture to suggest the explanation. Babylon stands in the Book of Revelation as the emblem of all the abominations which are to be destroyed by the power of Christ. But Babylon is the one city known to history which could have served as a model for John's description of the New Jerusalem: 'the city lying four square,' 'the walls great and high,' the river which flowed through the city, 'and in the midst of the street of it, and on either side of the river the tree of life, bearing twelve manner of fruits;' 'the foundations of the wall of the city garnished with all manner of precious stones,' as the base of the walls inclosing the great palace were faced with glazed and enameled bricks of brilliant colors, and a broad space left that they might be seen,—these characteristics, and they are all unique, have been combined in no other city."—W. B. Wright, *Ancient Cities, pp.* 41–44.—"Undoubtedly, one of the important results already obtained from the study of the native chronicles of Babylon is the establishment, on grounds apart from the question of the authenticity of the Book of Daniel, of the historical character of Belshazzar. The name of this prince had always been a puzzle to commentators and historians. The only native authority on Babylonian history—Berosus—did not appear to have mentioned such a person. . . . According to the extracts from the work of Berosus preserved for us in the writings of these authors, the following is the history of the last King of Babylon. His name was Nabonidus, or Nabonedus, and he first appears as the leader of a band of conspirators who determined to bring about a change in the government. The throne was then occupied by the youthful Laborosoarchod (for this is the corrupt Greek form of the Babylonian Lâbâshi-Marduk), who was the son of Neriglissar, and therefore, through his mother, the grandson of the great Nebuchadnezzar; but, in spite of his tender age, the new sovereign who had only succeeded his father two months before, had already given proof of a bad disposition. . . . When the designs of the conspirators had been carried out, they appointed Nabonidus king in the room of the youthful son of Neriglissar. . . . We next hear that in the seventeenth year of Nabonidus, Cyrus, who had already conquered the rest of Asia, marched upon Babylon [B. C. 538—see PERSIA: B. C. 549–521]. The native forces met the Persians in battle, but were put to flight, with their king at their head, and took refuge behind the ramparts of Borsippa. Cyrus thereupon entered Babylon, we are told, and threw down her walls. . . . Herodotus states that the last king of Babylon was the son of the great Nebuchadnezzar—to give that monarch his true name—for in so doing he bears out, so far as his testimony is of any value, the words of the Book of Daniel, which not only calls Belshazzar son of Nebuchadnezzar, but also introduces the wife of the latter monarch as being the mother of the ill-fated prince who closed the long line of native rulers. Such being the only testimony of secular writers, there was no alternative but to identify Belshazzar with Nabonidus. . . . Yet the name Nabonidus stood in no sort of relation to that of Belshazzar; and the identification of the two personages was, undoubtedly, both arbitrary and difficult. The cuneiform inscriptions brought to Europe from the site of Babylon and other ancient cities of Chaldæa soon changed the aspect of the problem. . . . Nabonidus, or, in the native form, Nabu naïd, that is to say, 'Nebo exalts,' is the name given to the last native king of Babylon in the contemporary records inscribed on clay. This monarch, however, was found to speak of his eldest son as bearing the very name preserved in the Book of Daniel, and hitherto known to us from that source alone. . . . 'Set the fear of thy great godhead in the heart of Belshazzar, my firstborn son, my own offspring; and let him not commit sin, in order that he may enjoy the fulness of life.'. . . 'Belshazzar, my firstborn son, . . . lengthen his days; let him not commit sin. . . .' These passages provide us, in an unexpected manner, with the name which had hitherto been known from the Book of Daniel, and from that document alone; but we were still in the dark as to the reason which could have induced the author to represent Belshazzar as king of Babylon. . . . In 1882 a cuneiform inscription was for the first time interpreted and published by Mr. Pinches; it had been disinterred among the ruins of Babylon by Mr. Hormuzd Rassam. This document proved to contain the annals of the king whose fate we have just been discussing—namely, Nabonidus. Though mutilated in parts, it allowed us to learn some portions of his history, both before and during the invasion of Babylonia by Cyrus; and one of the most remarkable facts that it added to our knowledge was that of the regency—if that term may be used—of the king's son during the absence of the sovereign from the Court and army. Here, surely, the explanation of the Book of Daniel was found: Belshazzar was, at the time of the irruption of the Persians, acting as his father's representative; he was commanding the Babylonian army and presiding over the

Babylonian Court. When Cyrus entered Babylon, doubtless the only resistance he met with was in the royal palace, and there it was probably slight. In the same night Belshazzar was taken and slain."—B. T. A. Evetts, *New Light on the Bible and the Holy Land, ch.* 11, *pt.* 2.—Cyrus the Great, in whose vast empire the Babylonian kingdom was finally swallowed up, was originally "king of Anzan in Elam, not of Persia. Anzan had been first occupied, it would appear, by his great-grandfather Teispes the Achaemenian. The conquest of Astyages and of his capital Ekbatana took place in B. C. 549, and a year or two later Cyrus obtained possession of Persia." Then, B. C. 538, came the conquest of Babylonia, invited by a party in the country hostile to its king, Nabonidos. Cyrus "assumed the title of 'King of Babylon,' thus claiming to be the legitimate descendant of the ancient Babylonian kings. He announced himself as the devoted worshipper of Bel and Nebo, who by the command of Merodach had overthrown the sacrilegious usurper Nabonidos, and he and his son accordingly offered sacrifices to ten times the usual amount in the Babylonian temples, and restored the images of the gods to their ancient shrines. At the same time he allowed the foreign populations who had been deported to Babylonia to return to their homes along with the statues of their gods. Among these foreign populations, as we know from the Old Testament, were the Jews."—A. H. Sayce, *Primer of Assyriology, pp.* 74–78.

SEMITIC LANGUAGES.—"There is no stronger or more unchanging unity among any group of languages than that which exists in the Semitic group. The dead and living languages which compose it hardly differ from each other so much as the various Romance or Sclavonic dialects. Not only are the elements of the common vocabulary unchanged, but the structure of the word and of the phrase has remained the same. . . . The Semitic languages form two great branches, each subdivided into two groups. The northern branch comprehends the Aramaic-Assyrian group and the Canaanitish group; the southern . . . includes the Arabic group, properly so called, and the Himyarite group. The name Aramaic is given to two dialects which are very nearly allied — Chaldean and Syriac. . . . The Aramaic which was spoken at the time of Christ was divided into two subdialects: that of Galilee, which resembled the Syriac pronunciation, and that of Jerusalem, of which the pronunciation was more marked and nearer to Chaldean. Jesus and his disciples evidently spoke the dialect of their country. . . . Syriac, in its primitive state, is unknown to us, as also Syro-Chaldean. . . . Assyrian is a discovery of this century. . . . To the Canaanitish group belong Phœnician, Samaritan, the languages of the left bank of the Jordan, notably Moabite, . . . and lastly, Hebrew. The first and the last of these dialects are almost exactly alike. . . . Arabic, being the language of Islam, has deeply penetrated all the Mussulman nations, Turkish, Persian, and Hindustani. . . . Himyarite reigned to the south of Arabic; it was the language of the Queen of Sheba, and is now well known through a great number of inscriptions, and is perhaps still spoken under the name of Ekhili in the district of Marah. . . . It is in Abyssinia that we must seek for the last vestiges of Himyarite. Several centuries before our era, the African coast of the Red Sea had received Semitic colonies."—A. Lefèvre, *Race and Language.*

SENA, The Druidic oracle of.—A little island called Sena — modern Sein — off the extreme western coast of Brittany, is mentioned by Pomponius Mela as the site of a celebrated oracle, consulted by Gaulish navigators and served by nine virgin priestesses.—E. H. Bunbury, *Hist. of Ancient Geog., ch.* 23, *sect.* 2 (*v.* 2).

SENATE, Canadian. See CANADA: A. D. 1867.

SENATE, French. See FRANCE: A. D. 1799 (NOVEMBER—DECEMBER).

SENATE, Roman.—"In prehistoric times, the clans which subsequently united to form cantons had each possessed a monarchical constitution of its own. When the clan governments were merged in that of the canton, the monarchs ('reges') of these clans became senators, or elders, in the new community. In the case of Rome the number of senators was three hundred, because in the beginning, as tradition said, there were three hundred clans. In regal times the king appointed the senators. Probably, at first, he chose one from each clan, honoring in this way some man whose age had given him experience and whose ability made his opinion entitled to consideration. Afterward, when the rigidity of the arrangement by clans was lost, the senators were selected from the whole body of the people, without any attempt at preserving the clan representation. Primarily the senate was not a legislative body. When the king died without having nominated his successor, the senators served successively as 'interreges' ('kings for an interval'), for periods of five days each, until a 'rex' was chosen. . . . This general duty was the first of the senate's original functions. Again, when the citizens had passed a law at the suggestion of the king, the senate had a right ('patrum auctoritas') to veto it, if it seemed contrary to the spirit of the city's institutions. Finally, as the senate was composed of men of experience and ability, the king used to consult it in times of personal doubt or national danger."—A. Tighe, *Development of the Roman Constitution, ch.* 3.—Of the Roman Senate as it became in the great days of the Republic — at the close of the Punic Wars and after — the following is an account: "All the acts of the Roman Republic ran in the name of

the Senate and People, as if the Senate were half the state, though its number seems still to have been limited to Three Hundred members. The Senate of Rome was perhaps the most remarkable assembly that the world has ever seen. Its members held their seats for life; once Senators always Senators, unless they were degraded for some dishonourable cause. But the Senatorial Peerage was not hereditary. No father could transmit the honour to his son. Each man must win it for himself. The manner in which seats in the Senate were obtained is tolerably well ascertained. Many persons will be surprised to learn that the members of this august body, all — or nearly all — owed their places to the votes of the people. In theory, indeed, the Censors still possessed the power really exercised by the Kings and early Consuls, of choosing the Senators at their own will and pleasure. But official powers, however arbitrary, are always limited in practice; and the Censors followed rules established by ancient precedent. . . . The Senate was recruited from the lists of official persons. . . . It was not by a mere figure of speech that the minister of Pyrrhus called the Roman Senate 'an Assembly of Kings.' Many of its members had exercised Sovereign power; many were preparing to exercise it. The power of the Senate was equal to its dignity. . . . In regard to legislation, they [it] exercised an absolute control over the Centuriate Assembly, because no law could be submitted to its votes which had not originated in the Senate. . . . In respect to foreign affairs, the power of the Senate was absolute, except in declaring War or concluding treaties of Peace, — matters which were submitted to the votes of the People. They assigned to the Consuls and Prætors their respective provinces of administration and command; they fixed the amount of troops to be levied every year from the list of Roman citizens, and of the contingents to be furnished by the Italian allies. They prolonged the command of a general or superseded him at pleasure. . . . In the administration of home affairs, all the regulation of religious matters was in their hands. . . . All the financial arrangements of the State were left to their discretion. . . . They might resolve themselves into a High Court of Justice for the trial of extraordinary offences."—H. G. Liddell, *Hist. of Rome, bk.* 4, *ch.* 35 (*v.* 1).

Also in: W. Ihne, *Hist. of Rome, bk.* 6, *ch.* 2. —See, also, Rome: B. C. 146; and Conscript Fathers.

SENATE, United States.—"The Senate is composed of two Senators from each State, and these Senators are chosen by the State Legislatures. The representation is then equal, each State having two Senators and each Senator having one vote; and no difference is made among the States on account of size, population, or wealth. The Senate is not, strictly speaking, a popular body, and the higher qualifications demanded of its members, and the longer period of service, make it the more important body of the two. The Senate is presumedly more conservative in its action, and acts as a safeguard against the precipitate and changing legislation that is more characteristic of the House of Representatives, which, being chosen directly by the people, and at frequent intervals, is more easily affected by and reflects the prevailing temper of the times. The Senate is more intimately connected with the Executive than is the lower body. The President must submit to the Senate for its approval the treaties he has contracted with foreign powers; he must ask the advice and consent of the Senate in the appointment of ambassadors, other public ministers and consuls, judges of the Supreme Court, and all other officers of the United States whose appointments have not been otherwise provided for. . . . The Senate has sole power to try all impeachments, but it cannot originate proceedings of impeachment. . . . In case a vacancy occurs when the State Legislature is not in session, the governor may make a temporary appointment; but at the next meeting of the Legislature the vacancy must be filled in the usual way. The presiding officer of the Senate is the Vice-President of the United States. He is elected in the same manner as the President, for were he chosen from the Senate itself, the equality of representation would be broken. He has no vote save when the Senate is equally divided, and his powers are very limited."—W. C. Ford, *The Am. Citizen's Manual, pt.* 1, *ch.* 1.

SEPTUAGINT, The.—"We have in the Septuagint, a Greek version of the Hebrew Old Testament, the first great essay in translation into Greek, a solitary specimen of the ordinary language spoken and understood in those days [at Alexandria 3d century B. C.]. There is a famous legend of the origin of the work by order of the Egyptian king, and of the perfect agreement of all the versions produced by the learned men who had been sent at his request from Judæa. Laying aside these fables, it appears that the books were gradually rendered for the benefit of the many Jews settled in Egypt, who seem to have been actually forgetting their old language. Perhaps Philadelphus gave an impulse to the thing by requiring a copy for his library, which seems to have admitted none but Greek books."—J. P. Mahaffy, *Story of Alexander's Empire, ch.* 14.

SERAPEUM, at Memphis.—"The Serapeum is one of the edifices of Memphis [Egypt] rendered famous by a frequently quoted passage of Strabo, and by the constant mention made of it on the Greek papyri. It had long been sought for, and we had the good fortune to discover it in 1851. Apis, the living image of Osiris revisiting the earth, was a bull who, while he lived, had his temple at Memphis (Mitrahenny), and, when dead, had his tomb at Sakkarah. The palace which the bull inhabited in his lifetime was called the Apieum; the Serapeum was the name given to his tomb."—A. Mariette, *Monuments of Upper Egypt, p.* 88.

SERAPHIM, OR "BLUE RIBBON," The order of the.—"There is no doubt whatever of the antiquity of this Order, yet it is very difficult to arrive at the exact date of the foundation. General opinion, though without positive proof, ascribes its origin, about the year 1280, to King Magnus I. [of Sweden], who is said to have instituted it at the persuasion of the Maltese Knights. Another account ascribes the foundation to Magnus's grandson, Magnus Erichson. . . . King Frederick I. revived the Order, as also those of the Sword and North Star, on the 28th April, 1748."—Sir B. Burke, *The Book of Orders of Knighthood, p.* 329.

SERBONIAN BOG.—"There is a lake between Cœlo-Syria and Egypt, very narrow, but exceeding deep, even to a wonder, two hundred furlongs in length, called Serbon: if any through ignorance approach it they are lost irrecoverably; for the channel being very narrow, like a swadling-band, and compassed round with vast heaps of sand, great quantities of it are cast into the lake, by the continued southern winds, which so cover the surface of the water, and make it to the view so like unto dry land, that it cannot possibly be distinguished; and therefore many, unacquainted with the nature of the place, by missing their way, have been there swallowed up, together with whole armies. For the sand being trod upon, sinks down and gives way by degrees, and like a malicious cheat, deludes and decoys them that come upon it, till too late, when they see the mischief they are likely to fall into, they begin to support and help one another, but without any possibility either of returning back or escaping certain ruin."— Diodorus (*Booth's trans.*), *bk.* 1, *ch.* 3.—According to Dr. Brugsch, the lake Serbon, or Sirbonis, so graphically described by Diodorus, but owing its modern celebrity to Milton's allusion (*Paradise Lost, ii.* 592–4), is in our days almost entirely dried up. He describes it as having been really a lagoon, on the northeastern coast of Egypt, "divided from the Mediterranean by a long tongue of land which, in ancient times, formed the only road from Egypt to Palestine." It is Dr. Brugsch's theory that the exodus of the Israelites was by this route and that the host of Pharaoh perished in the Serbonian quicksands.—H. Brugsch, *Hist. of Egypt, v.* 2, *app.*

SEVEN HILLS OF ROME, The.—"The seven hills were not occupied all at once, but one after the other, as they were required. The Palatine held the 'arx' of the primitive inhabitants, and was the original nucleus of the town, round which a wall or earthern rampart was raised by Romulus. The hill of Saturn, afterwards the Capitoline, is said to have been united, after the death of Titus Tatius, by Romulus; who drew a second wall or earthern rampart round the two hills The Aventine, which was chiefly used as a pasture ground, was added by Ancus Martius, who settled the population of the conquered towns of Politorium, Tellena, and Ficana upon it. According to Livy, the Cælian Hill was added to the city by Tullus Hostilius. The population increasing, it seemed necessary to further enlarge the city. Servius Tullius, Livy tells us, added two hills, the Quirinal and the Viminal, afterwards extending it further to the Esquiline, where, he says, to give dignity to the place, he dwelt himself. The city having reached such an extent, a vast undertaking was planned by the king, Servius, to protect it. A line of wall [the Servian Wall] was built to encircle the seven hills over which the city had extended."—H. M. Westropp, *Early and Imperial Rome, pp. 56–57.*

SEVEN WISE MEN OF GREECE.—"The name and poetry of Solon, and the short maxims, or sayings, of Phokylidês, conduct us to the mention of the Seven Wise Men of Greece. Solon was himself one of the seven, and most if not all of them were poets, or composers in verse. To most of them is ascribed also an abundance of pithy repartees, together with one short saying, or maxim, peculiar to each, serving as a sort of distinctive motto. . . . Respecting this constellation of Wise Men—who, in the next century of Grecian history, when philosophy came to be a matter of discussion and argumentation, were spoken of with great eulogy—all the statements are confused, in part even contradictory. Neither the number nor the names are given by all authors alike. Dikæarchus numbered ten, Hermippus seventeen: the names of Solon the Athenian, Thalês the Milesian, Pittakus the Mitylenean, and Bias the Prienean, were comprised in all the lists—and the remaining names as given by Plato were Kleobulus of Lindus in Rhodes, Myson of Chênæ, and Cheilon of Sparta. We cannot certainly distribute among them the sayings, or mottoes, upon which in later days the Amphiktyons conferred the honour of inscription in the Delphian temple: 'Know thyself,'—'Nothing too much,'—'Know thy opportunity,'—'Suretyship is the precursor of ruin.' . . . Dikæarchus, however, justly observed that these seven or ten persons were not wise men, or philosophers, in the sense which those words bore in his day, but persons of practical discernment in reference to man and society,—of the same turn of mind as their contemporary the fabulist Æsop, though not employing the same mode of illustration. Their appearance forms an epoch in Grecian history, inasmuch as they are the first persons who ever acquired an Hellenic reputation grounded on mental competency apart from poetical genius or effect—a proof that political and social prudence was beginning to be appreciated and admired on its own account."—G. Grote, *Hist. of Greece, pt. 2, ch. 29.*

The Treaties which ended the war.—The Peace of Paris and the Peace of Hubertsburg.—Negotiations for a peace between England, France, and Spain were brought to a close by the signing of preliminaries at Fontainebleau, November 3, 1762. In the course of the next month, a conference for the arrangement of terms between Prussia, Austria and Saxony was begun at Hubertsburg, a hunting-seat of the Elector of Saxony, between Leipsic and Dresden. "The definitive Peace of Paris, between France, Spain, England, and Portugal, was signed February 10th 1763. Both France and England abandoned their allies, and neither Austria nor Prussia was mentioned in the treaty." But it was stipulated that all territories belonging to the Elector of Hanover, the Landgrave of Hesse, and the Count of Lippe Bücheburg should be restored to them. "France ceded to England Nova Scotia, Canada, and the country east of the Mississippi as far as the Iberville. A line drawn through the Mississippi, from its source to its mouth, was henceforth to form the boundary between the possessions of the two nations, except that the town and island of New Orleans were not to be included in this cession. France also ceded the island of Cape Breton, with the isles and coasts of the St. Lawrence, retaining, under certain restrictions, the right of fishing at Newfoundland, and the isles of St. Peter and Miquelon. In the West Indies she ceded Grenada and the Grenadines, and three of the so-called neuter islands, namely, Dominica, St. Vincent, and Tobago, retaining the fourth, St. Lucie. Also in Africa, the river Senegal, recovering Goree; in the East Indies, the French settlements on the coast of Coromandel made since 1749, retaining previous ones. She also restored to Great Britain Natal and Tabanouly, in Sumatra, and engaged to keep no troops in Bengal. In Europe, besides relinquishing her conquests in Germany, she restored Minorca, and engaged to place Dunkirk in the state required by former treaties. Great Britain, on her side, restored Belle Isle, and in the West Indies, Martinique, Guadaloupe, Marie Galante, and La Desirade. Spain ceded to Great Britain Florida and all districts east of the Mississippi, recovering the Havannah and all other British conquests. British subjects were to enjoy the privilege of cutting logwood in the Bay of Honduras. . . . With regard to the Portuguese colonies, matters were to be placed in the same state as before the war. . . . By way of compensation for the loss of Florida, France, by a private agreement, made over to Spain New Orleans and what remained to her of Louisiana. The Peace of Hubertsburg, between Austria, Prussia, and Saxony, was signed February 15th 1763. Marie Theresa renounced all pretensions she might have to any of the dominions of the King of Prussia, and especially those which had been ceded to him by the treaties of Breslau and Berlin; and she agreed to restore to Prussia the town and county of Glatz, and the fortresses of Wesel and Gelders. The Empire was included in the peace, but the Emperor was not even named. . . . In the peace with the Elector of Saxony, Frederick engaged speedily to evacuate that Electorate and to restore the archives, &c.; but he would give no indemnification for losses suffered. The Treaty of Dresden, of 1745, was renewed."—T. H. Dyer, *Hist. of Modern Europe, bk.* 6, *ch.* 6 (*v.* 3).—"Of the Peace-Treaties at Hubertsburg, Paris and other places, it is not necessary that we say almost anything. . . . The substance of the whole lies now in Three Points. . . . The issue, as between Austria and Prussia, strives to be, in all points, simply 'As-you-were'; and, in all outward or tangible points, strictly is so. After such a tornado of strife as the civilised world had not witnessed since the Thirty-Years War. Tornado springing doubtless from the regions called Infernal; and darkening the upper world from south to north, and from east to west for Seven Years long;—issuing in general 'As-you-were'! Yes truly, the tornado was Infernal; but Heaven, too, had silently its purposes in it. Nor is the mere expenditure of men's diabolic rages, in mutual clash as of opposite electricities, with reduction to equipoise, and restoration of zero and repose again after seven years, the one or the principal result arrived at. Inarticulately, little dreamt on at the time by any bystander, the results, on survey from this distance, are visible as Threefold. Let us name them one other time: 1°. There is no taking of Silesia from this man; no clipping him down to the orthodox old limits; he and his Country have palpably outgrown these. Austria gives-up the problem: 'We have lost Silesia!' Yes; and, what you hardly yet know,—and what, I perceive, Friedrich himself still less knows,—Teutschland has found Prussia. Prussia, it seems, cannot be conquered by the whole world trying to do it; Prussia has gone through its Fire-Baptism, to the satisfaction of gods and men; and is a Nation henceforth. In and of poor dislocated Teutschland, there is one of the Great Powers of the World henceforth; an actual Nation. And a Nation not grounding itself on extinct Traditions, Wiggeries, Papistries, Immaculate Conceptions; no, but on living Facts,—Facts of Arithmetic, Geometry, Gravitation, Martin Luther's Reformation, and what it really can believe in:—to the infinite advantage of said Nation and of poor Teutschland henceforth. . . . 2°. In regard to England. Her Jenkins's-Ear Controversy is at last settled. Not only liberty of the Seas, but, if she were not wiser, dominion of them; guardianship of liberty for all others whatsoever: Dominion of the Seas for that wise object. America is to be English, not French; what a result is that, were there no other! Really a considerable Fact in the History of the World. Fact principally due to Pitt, as I believe, according to my best conjecture, and comparison of probabilities and circumstances.

For which, after all, is not everybody thankful, less or more? O my English brothers, O my Yankee half-brothers, how oblivious are we of those that have done us benefit! . . . 3°. In regard to France. It appears, noble old Teutschland, with such pieties and unconquerable silent valours, such opulences human and divine, amid its wreck of new and old confusions, is not to be cut in Four, and made to dance to the piping of Versailles or another. Far the contrary! To Versailles itself there has gone forth, Versailles may read it or not, the writing on the wall: 'Thou art weighed in the balance, and found wanting' (at last even 'found wanting')! France, beaten, stript, humiliated; sinful, unrepentant, governed by mere sinners and, at best, clever fools ('fous pleins d'esprit'),— collapses, like a creature whose limbs fail it; sinks into bankrupt quiescence, into nameless fermentation, generally into dry-rot."—T. Carlyle, *Hist. of Friedrich II., bk.* 20, *ch.* 13 (*v.* 9).—The text of the Treaty of Paris may be found in the *Parliamentary History, v.* 15, *p.* 1291, and in Entick's *Hist. of the Late War, v.* 5, *p.* 438.

The death and misery of the war summed up by Frederick the Great.—"Prussia enumerated 180,000 men, whom she had been deprived of by the war. Her armies had fought 16 pitched battles. The enemy had beside almost totally destroyed three large corps; that of the convoy of Olmutz, that of Maxen, and that of Fouquet at Landshut; exclusive of the garrison of Breslau, two garrisons of Schweidnitz, one of Torgau, and one of Wittenberg, that were taken with these towns. It was further estimated that 20,000 souls perished in the kingdom of Prussia by the ravages of the Russians; 6,000 in Pomerania; 4,000 in the New March and 3,000 in the electorate of Brandenbourg. The Russian troops had fought four grand battles, and it was computed that the war had cost them 120,000 men, including part of the recruits that perished, in coming from the frontiers of Persia and China, to join their corps in Germany. The Austrians had fought ten regular battles. Two garrisons at Schweidnitz and one at Breslau had been taken; and they estimated their loss at 140,000 men. The French made their losses amount to 200,000; the English with their allies to 160,000; the Swedes to 25,000; and the troops of the circles to 28,000. . . . From the general picture which we have sketched, the result is that the governments of Austria, France, and even England, were overwhelmed with debts, and almost destitute of credit; but that the people, not having been sufferers in the war, were only sensible of it from the prodigious taxes which had been exacted by their sovereigns. Whereas, in Prussia, the government was possessed of money, but the provinces were laid waste and desolated, by the rapacity and barbarity of enemies. The electorate of Saxony was, next to Prussia, the province of Germany that had suffered the most; but this country found resources, in the goodness of its soil and the industry of its inhabitants, which are wanting to Prussia throughout her provinces, Silesia excepted. Time, which cures and effaces all ills, will no doubt soon restore the Prussian states to their former abundance, prosperity, and splendor. Other powers will in like manner recover, and other ambitious men will arise, excite new wars, and incur new disasters. Such are the properties of the human mind; no man benefits by example."—Frederick II., *Hist. of the Seven Years War* (*Posthumous Works, v.* 3), *ch.* 17.

SHAHPUR.—One of the capitals of the later Persian empire, the ruins of which exist near Kazerun, in the province of Fars. It was built by Sapor I., the second of the Sassanian kings,

and received his name.—G. Rawlinson, *Seventh Great Oriental Monarchy, ch.* 4.

SHAKERS, The.—"From the time of the first settlements until the age of the Revolution, if there were any communistic societies founded, [in the United States] I have met with no account of them. The first which has had a long life, was that of the Shakers, or Shaking Quakers, as they were at first called, on account of their bodily movements in worship. The members of this sect or society left England in 1774, and have prospered ever since. It has now multiplied into settlements — twelve of them in New York and New England — in regard to which we borrow the following statistics from Dr. Nordhoff's book on communistic societies in the United States, published in 1875. Their property consists of 49,335 acres of land in home farms, with other real estate. The value of their houses and personal property is not given. The population of all the communities consists of 695 male and 1,189 female adults, with 531 young persons under twenty-one, of whom 192 are males and 339 females, amounting in all to 2,415 in 1874. The maximum of population was 5,069, a decline to less than half, for which we are not able to account save on the supposition that there are permanent causes of decay now at work within the communities. . . . The Shakers were at their origin a society of enthusiasts in humble life, who separated from the Quakers about the middle of the eighteenth century. Ann Lee, one of the members, on account of spiritual manifestations believed to have been made to her, became an oracle in the body, and in 1773 she declared that a revelation from heaven instructed her to go to America. The next year she crossed the sea, with eight others, and settled in the woods of Watervliet, near Albany. She preached, and was believed to have performed remarkable cures. From her . . . [was] derived the rule of celibacy. . . . She died in 1784, as the acknowledged head of the church; and had afterward nearly equal honors paid to her with the Saviour. Under the second successor of Ann Lee almost all the societies in New York and New England were founded; and under the third, a woman named Lucy Wright, whose leadership lasted nearly thirty years, those in Ohio and Kentucky. . . . After 1830 the Shakers founded no new society. Dr. Nordhoff gives the leading doctrines of the Shakers, which are, some of them, singular enough. They hold that God is a dual person, male and female; that Adam, created in his image, was dual also; that the same is true of all angels and spirits; and that Christ is one of the highest spirits, who appeared first in the person of Jesus and afterward in that of Ann Lee. There are four heavens and four hells. Noah went to the first heaven, and the wicked of his time to the first hell. The second heaven was called Paradise, and contained the pious Jews until the appearance of Christ. The third, that into which the Apostle Paul was caught, included all that lived until the time of Ann Lee. The fourth is now being filled up, and 'is to supersede all the others.' They hold that the day of judgment, or beginning of Christ's kingdom on earth, began with the establishment of their church, and will go on until it is brought to its completion. . . . In regard to marriage and property they do not take the position that these are crimes; but only marks of a lower order of society. The world will have a chance to become pure in a future state as well as here. They believed in spiritual communication and possession."—T. D. Woolsey, *Communism and Socialism, pp.* 51–56.

SHEBA.—"The name of Sheba is still to be recognised in the tribe of Benu-es-Sab, who inhabit a portion of Oman" (Southern Arabia).—F. Lenormant, *Manual of the Ancient Hist. of the East, bk.* 7, *ch.* 1.—See, also, Arabia: The ancient succession and fusion of Races.

SHEEPEATERS (Tukuarika). See American Aborigines: Shoshonean Family.

SHEKEL, The.—"Queipo is of opinion that the talent, the larger unit of Egyptian weight for monetary purposes, and for weighing the precious metals, was equal to the weight of water contained in the cube of $\frac{2}{3}$ of the royal or sacred cubit, and thus equivalent to 42.48 kilos, or 113.814 lbs. troy. He considers this to have been the weight of the Mosaic talent taken by the Hebrews out of Egypt. It was divided into fifty minas, each equal to 849.6 grm., or 13,111 English grains; and the mina into fifty shekels, each equal to 14.16 grm., or 218.5 English grains. . . . There appears to be satisfactory evidence from existing specimens of the earliest Jewish coins that the normal weight of the later Jewish shekel of silver was 218.5 troy grains, or 14.16 grammes."—H. W. Chisholm, *On the Science of Weighing and Measuring, ch.* 2.

SHERIFF.—SCIRGEREFA.—"The Scirgerefa is, as his name denotes, the person who stands at the head of the shire, 'pagus' or county: he is also called Scirman or Scirigman. He is properly speaking the holder of the county-court, scirgemot, or folcmot, and probably at first was its elected chief. But as this gerefa was at first the people's officer, he seems to have shared the fate of the people, and to have sunk in the scale as the royal authority gradually rose: during the whole of our historical period we find him exercising only a concurrent jurisdiction, shared in and controlled by the ealdorman on the one hand and the bishop on the other. . . . The sheriff was naturally the leader of the militia, posse comitatus, or levy of the free men, who served under his banner, as the different lords with their dependents served under the royal officers. . . . In the earliest periods, the office was doubtless elective, and possibly even to the last the people may have enjoyed theoretically, at least, a sort of concurrent choice. But I cannot hesitate for a moment in asserting that under the consolidated monarchy, the scirgerefa was nominated by the king, with or without the acceptance of the county-court, though this in all probability was never refused."—J. M. Kemble, *The Saxons in Eng., bk.* 2, *ch.* 5 (*v.* 2).

SHIRE.—SHIREMOOT.—"The name scir or shire, which marks the division immediately superior to the hundred, merely means a subdivision or share of a larger whole, and was early used in connexion with an official name to designate the territorial sphere appointed to the particular magistracy denoted by that name. So the diocese was the bishop's scire. . . . The historical shires or counties owe their origin to different causes. . . . The sheriff or scir-gerefa, the scir-man of the laws of Ini, was the king's steward and judicial president of the shire. . . . The sheriff held the shiremoot, according to Edgar's law, twice in the year. Although the ealdorman and bishop sat in it to declare the law secular and spiritual, the sheriff was the constituting officer."—*W. Stubbs, Const. SIAM.—"The people known to Europeans as the 'Siamese,' but who call themselves 'Thai,' that is 'Free Men,' have exercised the greatest civilising influence on the aboriginal populations of the interior. Within the historic period Siam has also generally held the most extensive domain beyond the natural limits of the Menam basin. Even still, although hemmed in on one side by the British possessions, on the other by the French protectorate of Camboja, Siam comprises beyond the Menam Valley a considerable part of the Malay Peninsula, and draws tribute from numerous people in the Mekong and Salwen basins. But this State, with an area about half as large again as that of France, has a population probably less than 6,000,000. . . . The inhabitants of Siam, whether Shans, Laos, or Siamese proper, belong all alike to the same Thai stock, which is also represented by numerous tribes in Assam, Manipur, and China. The Shans are very numerous in the region of the Upper Irrawaddi and its Chinese affluents, in the Salwen Valley and in the portion of the Sittang basin included in British territory. . . . The Lovas, better known by the name of Laos or Laotians, are related to the Shans, and occupy the north of Siam. . . . They form several 'kingdoms,' all vassals of the King of Siam. . . . The Siamese, properly so called, are centred chiefly in the Lower Menam basin and along the seaboard. Although the most civilised they are not the purest of the Thai race. . . . Siam or Sayam is said by some natives to mean 'Three,' because the country was formerly peopled by three races now fused in one nation. Others derive it from saya, 'independent,' sama, 'brown,' or samo, 'dark'. . . . The Siamese are well named 'Indo-Chinese,' their manners, customs, civil and religious institutions, all partaking of this twofold character. Their feasts are of Brahmanical origin, while their laws and administration are obviously borrowed from the Chinese. . . . About one-fourth of the inhabitants of Siam had from various causes fallen into a state of bondage about the middle of the present century. But since the abolition of slavery in 1872, the population has increased, especially by Chinese immigration. . . . The 'Master of the World,' or 'Master of Life,' as the King of Siam is generally called, enjoys absolute power over the lives and property of his subjects. . . . A second king, always nearly related to the first, enjoys the title and a few attributes of royalty. But he exercises no power. . . . British having succeeded to Chinese influence, most of the naval and military as well as of the custom-house officers are Englishmen."—É. Reclus, *The Earth and its Inhabitants: Asia, v.* 3, *ch.* 21.—The former capital of Siam was Ayuthia, a city founded A. D. 1351, and now in ruins. "Anterior to the establishment of Ayuthia . . . the annals of Siam are made up of traditional legends and fables, such as most nations are fond of substituting in the place of veracious history. . . . There are accounts of intermarriages with Chinese princesses, of embassies and wars with neighbouring States, all interblended with wonders and miraculous interpositions of Indra and other divinities; but from the time when the city of Ayuthia was founded by Phaja-Uthong, who took the title of Phra-Rama-Thibodi, the succession of sovereigns and the course of events are recorded with tolerable accuracy."—Sir J. Bowring, *Kingdom and People of Siam, v.* 1, *ch.* 2.—"For centuries the Siamese government paid tribute to China; but since 1852 this tribute has been refused. In 1855 the first commercial treaty with a European power (Great Britain) was concluded."—G. G. Chisholm, *The Two Hemispheres, p.* 523.

SIBERIA: The Russian conquest.—Siberia was scarcely known to the Russians before the middle of the 16th century. The first conquest of a great part of the country was achieved in the latter part of that century by a Cossack adventurer named Yermac Timoseef, who began his attack upon the Tartars in 1578. Unable to hold what he had won, Yermac offered the sovereignty of his conquests to the Czar of Muscovy, who took it gladly and sent reinforcements. The conquests of Yermac were lost for a time after his death, but soon recovered by fresh bodies of Muscovite troops sent into the country. "This success was the forerunner of still greater acquisitions. The Russians rapidly extended their conquests; wherever they appeared, the Tartars were either reduced or exterminated; new towns were built and colonies planted. Before a century had elapsed, that vast tract of country now called Siberia, which stretches from the confines of Europe to the Eastern Ocean, and from the Frozen Sea to the frontiers of China, was annexed to the Russian dominions."—W. Coxe, *Russian Discoveries between Asia and Am., pt.* 2, *ch.* 1.

SIBERIA.

Area.—Soil.—Recent Settlement.—"Of the magnitude of the Siberian country, probably the statement that its area is 5,500,000 square miles does not convey as graphic an idea to the mind of the reader as the excellent illustration, based on actual figures for the respective countries, which Mr. Kennan once gave: 'If it were possible,' he said, 'to move entire countries from one part of the globe to another, you could take the whole United States of America, from Maine to California and from Lake Superior to the Gulf of Mexico, and set it down in the middle of Siberia without touching anywhere the boundaries of the latter territory. You could then take Alaska and all the States of Europe, with the single exception of Russia, and fit them into the remaining margin like the pieces of a dissected map; and after having thus accommodated all of the United States, including Alaska, and all of Europe except Russia, you would still have more than 300,000 square miles of Siberian territory to spare; or, in other words, you would still leave unoccupied in Siberia an area half as large again as the Empire of Germany.' Not all this territory is equally valuable and well adapted for cultivation, or even habitation, but what there is left is still sufficient to inspire respect of any statistician who loves to dwell in magnitudes of things. According to Mr. Yadrintzeff, a Russian authority on the subject, more than one-fifth of the land can lend itself to cultivation, but even accepting the very conservative figures of Dr. Ballod, who estimates the area fit for cultivation at but one-tenth of the total area, we still get nearly 500,000 square miles, which is a little more than one-half the land in farms in the United States, and is approximately equal to the total area under actual cultivation in the United States in the census year 1890; moreover it is twice the area of the land devoted to the cultivation of cereals in this country during the same year. . . . The immigration to Siberia, which consisted almost exclusively of exiles and Cossacks until the latter half of this century and had not exceeded the figure of 20,000 per year during the eighties, received a sudden impulse during the present decade and rose from 60,000 in 1892 to 100,000 in 1895. . . . With the Government anxious to have the vast realm settled, and the prospective settlers helpless and poor, it was but natural for the former to take the initiative in its own hands and organize the immigration on a large scale. Accordingly the peasants starting for Siberia are informed beforehand by the Government agents as to the land they are going to receive, and the location it is situated in. On arriving at the place of destination they are allotted 15 dessiatines (40 acres) of land for each adult male, besides the right of grazing the cattle on the common pastures, and obtaining wood for fuel from the common forests. In addition to that, the peasants receive monetary loans from the Government on long terms, at the discretion of the local authorities. All that leads to the ever-growing influx of immigrants, which has to be checked by the Government, partly because of lack of facilities for the great numbers, partly for reasons more serious—I have in mind the complaints of the landlords in European Russia, who protest against the permission to emigrate given by the Government to the peasants, since it leads to a scarcity of agricultural laborers and a consequent rise in their wages. No peasant is allowed to leave his home, let alone emigrate to Siberia, without permission of the authorities."—U. S. Bureau of Statistics, *Monthly Summary of Commerce and Finance*.

Climate.—The Basin of the Amur.—"So vast a country as Siberia, subjected on one side to the climatic influences of the Atlantic, on the other to those of the Pacific, and stretching from south to north over nearly one third of the distance from the equator to the arctic pole, must evidently be diversified in climate. The cold Siberia has temperate regions, which the colonists of the northern provinces call 'Italies.' Compared with Europe however, Siberia, as a whole, may be looked upon as a country of extreme temperatures.—its heats relatively fierce, its colds intense. With justice, the word 'Siberia' has become synonymous with country of winds and of frost, for it is in eastern Siberia that the pole of frigidity oscillates in winter. . . . There, in great part, is prepared the elements of the climate of western Europe. By the effect of the general movement of the atmosphere, which blows alternately from the north-east to the south-west and from the south-west to the north-east, maritime Europe and Siberia make continual exchanges: one sends humidity and soft temperatures, the other gives cold airs and clear skies.

"Of all the regions of Siberia, the basin of the Amur and the neighboring coast are those which promise to have some day the greatest political importance. Bathed by the sea of Japan, pushed southward between Mongolia and Korea, and bordering on China in the neighborhood of that 'great wall' which the Middle Kingdom raised formerly for defence against the barbarians, the valleys of the Amur,—those of its affluents from the south and the hills of Chinese Manchuria,—represent, in the face of the peoples of the extreme Orient, the military power of a nation of a hundred millions of men. There, moreover, is the only part of its coast by which the vast Russian empire touches a sea which is freely open, during almost the whole year, to the broad ocean. The ships which sail from the ports of Manchuria have no Bosphorus or Sound to pass, and are not obliged to manoeuver, during eight months among icebergs, like the vessels of Archangel. . . . What fails to Russian Manchuria is a civilized population, enriched by agriculture, industry and trade. . . . The connection between Vladivostok and Kronstadt is more fictitious than real. The chain of cities and of Russian country which will unite them later is broken by large void spaces throughout the eastern part, and is likely to complete itself slowly; for mountains, bare rocks, lakes and marshes fill most of the basin of the Amur, and many regions, still unexplored in that vast extent of country, are waiting for the travellers who shall describe the surface and discover the hidden riches. We may say that, in Asia, the tzar possesses yet but the framework of his empire. . . . Of the four great rivers of Siberia the Amur has the least extensive basin, but it promises to become the most important for navigation, although it is inferior in that respect at the present day to the rivers of the basin of the Obi or Ob, all the towns on which are in frequent communication by steamers. . . . The regions of the Amur have the advantage of a climate more temperate than that of the remainder of Siberia."—É. Reclus, *Nouvelle Géographie Universelle, tome 6, ch. 4 (tr. from the French)*.

SIBUZATES, The. See AQUITAINE: THE ANCIENT TRIBES.

SIBYLS.—SIBYLLINE BOOKS.—"Tarquinius [Tarquinius Superbus, the last of the kings of Rome] built a mighty temple, and consecrated it to Jupiter, and to Juno, and to Minerva, the greatest of the gods of the Etruscans. At this time there came a strange woman to the king and offered him nine books of the prophecies of the Sibyl for a certain price. When the king refused them, the woman went and burnt three of the books, and came back and offered the six at the same price which she had asked for the nine; but they mocked at her and would not take the books. Then she went away and burnt three more, and came back and asked still the same price for the remaining three. At this the king was astonished, and asked of the augurs what he should do. They said that he had done wrong in refusing the gift of the gods, and bade him by all means to buy the books that were left. So he bought them; and the woman who sold them was seen no more from that day forwards. Then the books were put into a chest of stone, and were kept under ground in the Capitol, and two men were appointed to keep them, and were called the two men of the sacred books."—T. Arnold, *Hist. of Rome, ch.* 4.—"Collections of prophecies similar to the Sibylline books are met with not only among the Greeks, but also among the Italians—Etruscans as well as those of Sabellian race. The Romans had the prophecies of the Marcii ('Carmina Marciana,' Hartung, 'Religion der Römer,' i. 139); prophetic lines ('sortes') of the nymph Albunea had come down to Rome from Tibur in a miraculous manner (Marquardt, 'Röm. Alterth., iv. 299). There existed likewise Etruscan 'libri fatales' (Livy, v. 45; Cicero, 'De Divin., i. 44, 100), and prophecies of the Etruscan nymph Begoe (quæ artem scripserat fulguritorum apud Tuscos. Lactant, 'Instit.,' i. 6, 12). Such books as these were kept in the Capitol, together with the Sibylline books, in the care of the Quindecemveri sacris faciundis. They are all called without distinction 'libri fatales' and 'Sibylline' books, and there seems to have been little difference between them."—W. Ihne, *Hist. of Rome, bk.* 1, *ch.* 8, *foot-note* (*v.* 1).—"Every schoolboy is familiar with the picturesque Roman legend of the Sibyl. It is variously told in connection with the elder and the later Tarquin, the two Etruscan kings of Rome; and the scene of it is laid by some in Cumæ, where Tarquinius Superbus spent the last years of his life in exile—and by others in Rome. . . . The original books of the Cumæan Sibyl were written in Greek, which was the language of the whole of the south of Italy at that time. The oracles were inscribed upon palm leaves; to which circumstance Virgil alludes in his description of the sayings of the Cumæan Sibyl being written upon the leaves of the forest. They were in the form of acrostic verses. . . . It is supposed that they contained not so much predictions of future events, as directions regarding the means by which the wrath of the gods, as revealed by prodigies and calamities, might be appeased. They seem to have been consulted in the same way as Eastern nations consult the Koran and Hafiz. . . . The Cumæan Sibyl was not the only prophetess of the kind. There were no less than ten females, endowed with the gift of prevision, and held in high repute, to whom the name of Sibyl was given. We read of the Persian Sibyl, the Libyan, the Delphic, the Erythræan, the Hellespontine, the Phrygian, and the Tiburtine. With the name of the last-mentioned Sibyl tourists make acquaintance at Tivoli. . . . Clement of Alexandria does not scruple to call the Cumæan Sibyl a true prophetess, and her oracles saving canticles. And St. Augustine includes her among the number of those who belong to the 'City of God.' And this idea of the Sibyls' sacredness continued to a late age in the Christian Church. She had a place in the prophetic order beside the patriarchs and prophets of old."—H. Macmillan, *Roman Mosaics, ch.* 3.—"Either under the seventh or the eighth Ptolemy there appeared at Alexandria the oldest of the Sibylline oracles, bearing the name of the Erythræan Sibyl, which, containing the history of the past and the dim forebodings of the future, imposed alike on the Greek, Jewish, and Christian world, and added almost another book to the Canon. When Thomas of Celano composed the most famous hymn of the Latin Church he did not scruple to place the Sibyl on a level with David; and when Michel Angelo adorned the roof of the Sixtine Chapel, the figures of the weird sisters of Pagan antiquity are as prominent as the seers of Israel and Judah. Their union was the result of the bold stroke of an Alexandrian Jew."—A. P. Stanley, *Lect's on the Hist. of the Jewish Church, lect.* 47 (*v.* 3).

SICILIES, The Two. See TWO SICILIES.

SICILY: The early inhabitants.—The date of the first known Greek settlement in Sicily is fixed at B. C. 735. It was a colony led from the Eubœan city of Chalcis and from the island of Naxos, which latter gave its name to the town which the emigrants founded on the eastern coast of their new island home. "Sicily was at this time inhabited by at least four distinct races: by Sicanians, whom Thucydides considers as a tribe of the Iberians, who, sprung perhaps from Africa, had overspread Spain and the adjacent coasts, and even remote islands of the Mediterranean; by Sicels, an Italian people, probably not more foreign to the Greeks than the Pelasgians, who had been driven out of Italy by the progress of the Oscan or Ausonian race, and in their turn had pressed the Sicanians back toward the southern and western parts of the island, and themselves occupied so large a portion of it as to give their name to the whole. Of the other races, the Phœnicians were in possession of several points on the coast, and of some neighbour-

ing islets, from which they carried on their commerce with the natives. The fourth people, which inhabited the towns of Eryx and Egesta, or Segesta, at the western end of the island, and bore the name of Elymians, was probably composed of different tribes, varying in their degrees of affinity to the Greeks. . . . The Sicels and the Phœnicians gradually retreated before the Greeks. . . . But the Sicels maintained themselves in the inland and on the north coast, and the Phœnicians, or Carthaginians, who succeeded them, established themselves in the west, where they possessed the towns of Motya, Solus, and Panormus, destined, under the name of Palermo, to become the capital of Sicily."—C. Thirlwall, *Hist. of Greece, ch.* 12.

Also in: G. Grote, *Hist. of Greece, pt.* 2, *ch.* 22. —E. A. Freeman, *Hist. of Sicily, ch.* 2.—See, also, Œnotrians.

Phœnician and Greek colonies.—"Sicilian history begins when the great colonizing nations of antiquity, the Phœnicians and the Greeks, began to settle in Sicily. . . . It was a chief seat for the planting of colonies, first from Phœnicia and then from Greece. It is the presence of these Phœnician and Greek colonies which made the history of Sicily what it was. These settlements were of course made more or less at the expense of the oldest inhabitants of the island, those who were there before the Phœnicians and Greeks came to settle. . . . Phœnician and Greek settlers could occupy the coasts, but only the coasts; it was only at the corners that they could at all spread from sea to sea. A great inland region was necessarily left to the older inhabitants. But there was no room in Sicily, as there was in Asia, for the growth of great barbarian powers dangerous to the settlers. Neither Phœnician nor Greek was ever able to occupy or conquer the whole island; but neither people stood in any fear of being conquered or driven out, unless by one another. But instead of conquest came influence. Both Phœnicians and Greeks largely influenced the native inhabitants. In the end, without any general conquest, the whole island became practically Greek. . . . Carthage at a later time plays so great a part in Sicilian history that we are tempted to bring it in before its time, and to fancy that the Phœnician colonies in Sicily were, as they are sometimes carelessly called, Carthaginian colonies. This is not so; the Phœnician cities in Sicily did in after times become Carthaginian dependencies: but they were not founded by Carthage. We cannot fix an exact date for their foundation, nor can we tell for certain how far they were settled straight from the old Phœnicia and how far from the older Phœnician cities in Africa. But we may be sure that their foundation happened between the migration of the Sikels in the 11th century B. C. and the beginning of Greek settlement in the 8th. And we may suspect that the Phœnician settlements in the east of Sicily were planted straight from Tyre and Sidon, and those in the west from the cities in Africa. We know that all round Sicily the Phœnicians occupied small islands and points of coast which were fitted for their trade, but we may doubt whether they anywhere in Eastern Sicily planted real colonies, cities with a territory attached to them. In the west they seem to have done so. For, when the Greeks began to advance in Sicily, the Phœnicians withdrew to their strong posts in the western part of the island, Motya, Solous, and Panormos. There they kept a firm hold till the time of Roman dominion. The Greeks could never permanently dislodge them from their possessions in this part. Held, partly by Phœnicians, partly by Sikans and Elymians who had been brought under Phœnician influence, the northwestern corner of Sicily remained a barbarian corner. . . . The greatest of all Phœnician settlements in Sicily lay within the bay of which the hill of Solous is one horn, but much nearer to the other horn, the hill of Herkte, now Pellegrino. Here the mountains fence in a wonderfully fruitful plain, known in after times as the Golden Shell (conca d'oro). In the middle of it there was a small inlet of the sea, parted into two branches, with a tongue of land between them, guarded by a small peninsula at the mouth. There could be no better site for Phœnician traders. Here then rose a Phœnician city, which, though on the north coast of Sicily, looks straight towards the rising sun. It is strange that we do not know its Phœnician name; in Greek it was called Panormos, the All-haven, a name borne also by other places. This is the modern Palermo, which, under both Phœnicians and Saracens, was the Semitic head of Sicily, and which remained the capital of the island under the Norman kings. . . . Thus in Sicily the East became West and the West East. The men of Asia withdrew before the men of Europe to the west of the island, and thence warred against the men of Europe to the east of them. In the great central island of Europe they held their own barbarian corner. It was the land of Phœnicians, Sikans, and Elymians, as opposed to the eastern land of the Greeks and their Sikel subjects and pupils. . . . For a long time Greek settlement was directed to the East rather than to the West. And it was said that, when settlement in Italy and Sicily did begin, the earliest Greek colony, like the earliest Phœnician colony, was the most distant. It was believed that Kyme, the Latin Cumæ in Campania, was founded in the 11th century B. C. The other plantations in Italy and Sicily did not begin till the 8th. Kyme always stood by itself, as the head of a group of Greek towns in its own neighbourhood and apart from those more to the south, and it may very well be that some accident caused it to be settled sooner than the points nearer to Greece. But it is not likely to have been settled 300 years earlier. Most likely it was planted just long enough before the nearer sites to suggest their planting. Anyhow, in the latter half of the 8th century B. C. Greek settlement to the West, in Illyria, Sicily, and Italy, began in good earnest. It was said that the first settlement in Sicily came of an accident. Chalkis in Euboia was then one of the chief sea-faring towns of Greece. Theokles, a man of Chalkis, was driven by storm to the coast of Sicily. He came back, saying that it was a good land and that the people would be easy to conquer. So in 735 B. C. he was sent forth to plant the first Greek colony in Sicily. The settlers were partly from Chalkis, partly from the island of Naxos. So it was agreed that the new town should be called Naxos, but that Chalkis should count as its metropolis. So the new Naxos arose on the eastern coast of Sicily, on a peninsula made by the lava. It looked up at the great hill of Tauros, on which Taormina now stands. The

Greek settlers drove out the Sikels and took so much land as they wanted. They built and fortified a town, and part of their walls may still be seen. . . . Naxos, as the beginning of Greek settlement in Sicily, answers to Ebbsfleet, the beginning of English settlement in Britain."—E. A. Freeman, *The Story of Sicily, ch.* 1–4.

Also in: The same, *Hist. of Sicily, ch.* 3–4 (*v.*1).

B. C. 480.—Carthaginian invasion.—Battle of Himera.—During the same year in which Xerxes invaded Greece (B. C. 480), the Greeks in Sicily were equally menaced by an appalling invasion from Carthage. The Carthaginians, invited by the tyrant of Himera, who had been expelled from that city by a neighbor tyrant, sent 300,000 men it is said, to reinstate him, and to strengthen for themselves the slender footing they already had in one corner of the island. Gelo, the powerful tyrant of Syracuse, came promptly to the aid of the Himerians, and defeated the Carthaginians with terrible slaughter. Hamilcar the commander was among the slain. Those who escaped the sword were nearly all taken prisoners and made slaves. The fleet which brought them over was destroyed, and scarcely a ship returned to Carthage to bear the deplorable tidings.—C. Thirlwall, *Hist. of Greece, ch.* 15.

Also in: G. Grote, *Hist. of Greece, pt.* 2, *ch.* 43.

B. C. 415-413.—Siege of Syracuse by the Athenians.—Its disastrous failure. See Syracuse: B. C. 415–413.

B. C. 409-405.—Carthaginian invasion.—The quarrels of the city of Egesta, in Sicily, with its neighbors, brought about the fatal expedition from Athens against Syracuse, B. C. 415. Six years later, in the same protracted quarrel, Egesta appealed to Carthage for help, against the city of Selinus, and thus invited the first of the Hannibals to revenge terribly the defeat and death of his grandfather Hamilcar, at Himera, seventy years before. Hannibal landed an army of more than one hundred thousand savage mercenaries in Sicily, in the spring of 409 B. C. and laid siege to Selinus with such vigor that the city was carried by storm at the end of ten days and most of its inhabitants slain. The temples and walls of the town were destroyed and it was left a deserted ruin. "The ruins, yet remaining, of the ancient temples of Selinus, are vast and imposing; characteristic as specimens of Doric art during the fifth and sixth centuries B. C. From the great magnitude of the fallen columns, it has been supposed that they were overthrown by an earthquake. But the ruins afford distinct evidence that these columns have been first undermined, and then overthrown by crowbars. This impressive fact, demonstrating the agency of the Carthaginian destroyers, is stated by Niebuhr." From Selinus, Hannibal passed on to Himera and, having taken that city in like manner, destroyed it utterly. The women and children were distributed as slaves; the male captives were slain in a body on the spot where Hamilcar fell—a sacrifice to his shade. A new town called Therma was subsequently founded by the Carthaginians on the site of Himera. Having satisfied himself with revenge, Hannibal disbanded his army, glutted with spoil, and returned home. But three years later he invaded Sicily again, with an armament even greater than before, and the great city of Agrigentum was the first to fall before his arms. "Its population was very great; comprising, according to one account, 20,000 citizens, among an aggregate total of 200,000 males—citizens, metics, and slaves; according to another account, an aggregate total of no less than 800,000 persons; numbers unauthenticated, and not to be trusted further than as indicating a very populous city. . . . Its temples and porticos, especially the spacious temple of Zeus Olympus—its statues and pictures—its abundance of chariots and horses—its fortifications—its sewers—its artificial lake of near a mile in circumference, abundantly stocked with fish—all these placed it on a par with the most splendid cities of the Hellenic world." After a siege of some duration Agrigentum was evacuated and most of its inhabitants escaped. The Carthaginians stripped it of every monument of art, sending much away to Carthage and destroying more. Hannibal had died of a pestilence during the siege and his colleague Imilkon succeeded him in command. Having quartered his army at Agrigentum during the winter, he attacked the cities of Gela and Kamarina in the spring, and both were believed to have been betrayed to him by the tyrant of Syracuse, Dionysius, who had then just established himself in power. A treaty of peace was presently concluded between Dionysius and Imilkon, which gave up all the south of Sicily, as well as Selinus, Himera, and Agrigentum, to the Carthaginians, and made Gela and Kamarina tributary to them. The Carthaginian army had been half destroyed by pestilence and the disease, carried home by its survivors, desolated Carthage and the surrounding country.—G. Grote, *Hist. of Greece, pt.* 2, *ch.* 81–82, *with foot-note.*
